Aluminographic Printing.—In 1898 it was demonstrated that lithographic printing could be done commercially on rotary presses by the use of aluminum plates instead of the lithographic stone. About 1880 a great deal of money was expended by press-manufacturers in the effort to introduce such machines for printing from zinc plates, but zinc proved a failure. When aluminum was produced cheaply it was thought of as perhaps a proper metal, and after experiments by various persons, who claim the credit for the dis-

covery, it was made adaptable to lithographic work, the method being termed aluminography, or alumography, or sometimes algraphy. In order to get the needed porosity, the method is to take a sheet of very pure rolled aluminum, and grind off the surface that has been hardened by the rolling, thus getting at the porous interior, which is very similar in its properties to the lithographic stone. Another method is to form an aluminum surface by electrodeposition. The aluminum plate has the advantage over the stone of lightness, of requiring very much less space for storage, and of being available for longer runs without reproducing the design. The lithographic stone is so cumbersome that the storing is an item of importance, as a large lithographic house has to handle a vast number of stones. The aluminum plates occupy only one-fiftieth the space and are one-one-hundredth the weight of the stone. The cost of the metal is but 38 cents a pound, and a pound gives a very large surface. Bulk for bulk, it is cheaper than brass. The sheets used are only about a thirty-second of an inch in thickness, and they can be drawn upon, transferred to, and manipulated generally as is the stone. The plates are etched by phosphoric acid to prevent the ink from spreading beyond the limits of the design, and may be cleaned off after using by a preparation of nitric acid. The fact that aluminum is almost non-corrodable is one of the largest elements in the success that has attended the use of the metal in lithography. The flexibility of the plate adapts it naturally to rotary printing, and the Hoes, Huber, Scott, Aluminum Press and Plate Company, and others have built special printing-machines to accommodate them. The Scott flat-bed lithographic machine handles either the stone or the aluminum plate; the others are for aluminum plates only. These machines are replacing former lithographic presses with considerable rapidity, though the majority of lithographic work is still done from stone.

The trade is indebted largely for the adaptation of aluminum in this way to Joseph Scholz, of Mayence, and the Strecker-Scholz process of preparing the plates is much used in the United States, though the Huber Press Company has a special method, and the Aluminum Press and Plate Company also has a method based on the Mullaly patents.

Printing from Zinc.—The use of zinc for lithographic printing gave us the word zincography, but that process was generally considered a complete failure. However, the American Lithographic Company did not give up experimenting with this metal, and in 1899 several gentlemen connected with that concern took out a series of patents on a zinc plate obtained by electrodepositing the zinc on another metal surface, as copper. One of the reasons why aluminum proved a good material is that it is obtained by electrodeposition in the manufacture. Zinc deposited in the same way constitutes a good material for lithographic work, though it is more corrodable than aluminum. The new method of handling the zinc provides for depositing it on tubes that are slipped on and off the cylinders of the printing-press. The process is being used with considerable success.

Patent Blankets.—The earlier forms of printing-machines all employed a soft surface or packing between the hard material of the press proper and the tympan, on which to make the impression of the type. Without such a soft surface the weak machines used prior to 1830 would not have been able to produce enough pressure of the paper against the type to print prop-

erly. As stronger and heavier presses were manufactured, there was a tendency to use harder printing surfaces, and what is known as hard packing was generally substituted for the rubber or felt blankets that were absolutely necessary to early printing. The process of change was gradual. At first a few thicknesses of paper were placed over the rubber, then hard cardboard, then the rubber was discarded, and finally the trade came to using the hardest cardboard it could get, and putting very little of that between the iron and the type, in the endeavor to secure an unyielding surface. Because of these changes pictorial printing reached a higher plane of development, and the overlaying of illustrations became a fine art, the lights and shades of the woodcuts or photoengraved plates being brought out by very delicately cut and pasted thicknesses of tissue-paper.

Within a few years a tendency to return to softer surfaces for printing has been manifested, as illustrated printed matter has increased so fast that the expense of overlaying the forms for printing constituted a serious item of expense. In the endeavor to get rid of this costly labor different styles of wire spring blankets have been introduced, and also corrugated rubber blankets, to be used on the surface of printing cylinders and on platens, surmounted by a sheet of thin celluloid or very hard cardboard. Severy, Allen, and Rhodes have each taken out patents in this field, and introduced springy blankets that are adapted to certain classes of work. The yielding of the springs or rubber takes up a part of the irregularities of the plates or cuts in the form, and reduces the necessity for "make-ready."

The opponents of this new spring-blanket theory assert that there is a loss in effect in the heavy shadows of fine illustrations, and that if the quality is reduced at the same time as the cost, one might as well go back to the old-fashioned rubber blanket, which, when covered with hard cardboard, produced pretty good printing with little "make-ready."

Mechanical Overlays.—Other innovations looking to the saving of labor in overlaying consist in mechanically produced overlays. The Dittman, De Vinne-Bierstadt, and Humphrey & Upham processes have each attracted much attention within a year or two. Dittman takes a print on paper with full inking, dusts it with common flour, lets the flour that adheres swell with the moisture of the printing-ink, and then bakes the sheet to toughen it. The swelling exaggerates the dark parts of the print, and, when the sheet is pasted on the printing surface, serves to bring up the darker portions of an illustration to advantage. The De Vinne-Bierstadt method is based on the swelled gelatin process of the photoengraver. A print is taken on a thin sheet of transparent celluloid and dusted with plumbago to thicken the lines. This is then exposed in a photographer's printing-frame over a film of gelatin, which is afterward swelled in the parts not made insoluble by the light. From the gelatin a plaster-of-Paris mold is made, and from this a flexible reverse in gutta-percha. The gutta-percha is backed with paper and becomes the overlay, being thickest in the dark parts of the illustration. The Humphrey & Upham method is adapted only to duplicating overlays. The original overlay is cut by hand in reverse, and from this a gutta-percha impression is taken that becomes the overlay. All these overlays are in use, but no one of them is at this date used extensively.

Illustrating and Engraving.—Wood-engraving was the common method of producing illus-

trations for printing up to 1875, when photoengraving began to supersede it. The woodcuts of the latter half of the nineteenth century were often made with great artistic skill, although the highest class of engraving before 1875 was generally done on steel at great cost. The modern photomechanical processes of engraving produce results that are both better and cheaper than the hand-work on wood and steel, and have not only replaced them, but have caused probably hundreds of times as many illustrations to be produced now as were made fifty years ago. The great mass of illustrations used to-day are made by the half-tone process, or by zinc etching. In zinc etching the drawing is transferred by photography to a zinc plate, which is powdered and then etched with acid, to secure the relief necessary for printing. In producing half-tone work, an India-ink-brush sketch, called a "wash-drawing," is photographed, or a photograph is taken direct from nature, on a gelatin film containing a bichromate. Since gelatin is made insoluble and becomes hardened by the action of light, the portions of the film that are kept dark in the printing-frame may be swelled by water, while the remainder is unswelled. Thus a surface may be produced that is irregular in height according to its lights and shadows. In commercial use the process is to expose a negative to the picture to be copied through an interposed, finely ruled glass screen, and then develop the negative. A prepared metal plate is exposed so that the light passes through the negative, after which the exposed metal plate is etched and becomes a printing-plate made up of a series of minute dots that vary in strength according to the lights and shades, giving an artistic picture in a form best calculated for reproduction on a printing-press. Though made mechanically, the half-tone requires much judgment in handling to secure the best results, and it is much improved by hand-work in cutting out the high lights of an engraving by rendering the vignetting more delicate, etc.

The half-tone has reached its highest perfection in what is known as the three-color process of illustration. This consists in taking three photographs of a subject, and making from each a half-tone printing-plate. One photograph is taken as far as possible in yellow light, another in blue light, and the third in red light. The plates so obtained are printed one at a time, each in its appropriate color, and superposed, the resultant picture possessing theoretically all the colors of nature. Though there are many mechanical difficulties in the way of carrying out this method of color printing, and though its results are not quite true to nature, yet the process is a pronounced success, and is coming into larger use every day. The best results have been obtained by manufacturing a fourth plate to be printed in photo-brown, and that serves to outline and emphasize the picture where it can be helped in this manner.

Stereotyping and Electrotyping.—Stereotyping is the reproduction of type-forms or engravings, etc., in a metal alloy that is principally composed of lead. The art originated some time during the eighteenth century, but was not commonly practised until 1812. For many years it was the best commercial method of duplicating forms for printing, but within recent years it has been superseded to a great degree in the book, magazine, and job-printing field by electrotyping, which secures better results at a slightly increased cost. In newspaper work stereotyping has come into greatly increased use since the introduction of rotary presses. These use curved stereotype

plates made by the paper process, which can be produced very rapidly. In newspapers of great circulation, in order to get an edition printed as promptly as possible, the type pages are duplicated by stereotyping three or four or even eight or ten times, and placing the plates on as many fast presses. In this way it is possible, in several of the larger newspaper plants, to deliver 500,000 to 1,000,000 completed newspapers within an hour after the last line of the last page is in type.

Electrotyping is a process of reproducing type or other incised printing surface by taking an impression in wax, and placing this wax mold, covered with black lead, in a solution of copper, and depositing thereon by electrodeposition a film or shell of copper that is a duplicate of the original form. This thin shell is backed with an alloy that is mostly lead, and may then be mounted for printing. The process is generally used for reproducing pages of books, magazines, etc., of which further editions may be required, and for which the type could not be kept standing; also for the duplication of half-tones and other plates used for illustrations. It has been brought to a high degree of perfection, the greatest improvement in recent years being the stimulation of the electrodeposition by the use of a dynamo. By means of this, plates can be made in an hour, a great advantage in the case of publications desiring to include late news.

Books and Periodicals Devoted to Printing.—The literature of printing includes several thousand volumes, the finest collection in America being that of the Typothetæ Library in New York. In England the best collection of rare works bearing on typography is said to be the John Rylands Library, in Manchester. As a rule, the books pertaining to the printer's craft have been issued more for love of the art than for profit, and only a few have had extensive circulation. Probably the three most successful books issued to the trade in America during the past generation were De Vinne's *Price List*, MacKellar's *American Printer*, and Harpel's *Typograph*. In the year 1900 Paul Nathan issued a book from the Lotus Press, entitled *How to Make Money in the Printing Business*. This deals entirely with the business side of printing, and contains much common-sense advice as to the methods to be pursued to insure success. Among other recent books are Theo. L. De Vinne's *Printing Types*, and *Correct Composition*, F. Horace Teall's *Proof-Reading*, C. S. Partridge's *Electrotyping*, Ernest Knauff's *Drawing for Printers*, and Edward S. Ralph's *Job Composition*. The Inland Printer has also issued several *brochures* by Charles H. Cochrane.

In England the second and third sections of John Southward's *Modern Printing* appeared recently, and also a catalogue of the William Blades collection, being a bibliography of what William Blades, a once famous English printer, considered the best books on the history of printing; also a *brochure* on *Printing Machinery* by William Powrie.

The first periodical published solely in the interest of the printer's art, so far as the writer can learn, was the German publication *Journal für Buchdruckerkunst*, by Dr. Johann H. Meyer, begun in 1834, and continued a great many years. New York had a similar publication as early as 1858—*The Printer*, published by John Greason. Since that date perhaps fifty papers have existed for various periods and catered to the trade in the United States. The most important of these dead and gone periodicals was Rowell's *American Newspaper Reporter*, which began in 1867, and

was issued weekly for about twenty years. Among the papers now devoted to the interests of the trade are the following: The *Inland Printer*, published in Chicago, is a monthly as thick as any of the popular magazines, and having much larger pages. It is gotten up in a style creditable to the art it represents. The reading-matter is largely technical, being divided into departments devoted to presswork, machine composition, job-composition, the employing printer, the artisan, the proofroom, newspaper gossip, patents, process engraving, etc. The *American Printer*, a monthly, is published in New York city by the Oswald Publishing Company. It excels as a specimen of high-class typography and presswork, and is beautifully illustrated. The pages are 9 × 12 inches, and the letterpress serves to illustrate the perfection of linotype composition. Much space is devoted to the interests of the proprietors of printing-offices and exchange of views. The *National Printer-Journalist* of Chicago is the organ of the National Editorial Association, and caters principally to the newspaper publishers, though it has departments relating strictly to the technical side of printing. It gives very complete reports of the meetings of the editorial associations, and of similar gatherings in the trade.

The newspaper side of printing-trade papers is represented in New York city by 4 weeklies—the *Journalist*, *Newspaper Maker*, *Newspaperdom*, and the *Fourth Estate*. The *Typographical Journal* is the official organ of the International Typographical Union, and gives the news and gossip pertaining to the progress of the art from the union workman's view-point. There are perhaps a dozen other minor trade publications identified with the printing industry in the United States.

The best known English printing-trade papers are the *British Printer* and the *British and Colonial Printer and Stationer*. Those in Germany are *Allgemeiner Anzeiger für Druckereien* and *Zeitschrift für Deutschland's Buchdrucker*.

Printing-Trade Organizations.—There are organizations of both employees and employers in the printing trade in most civilized countries. In the United States the workmen's organizations are known as unions, and the proprietors as typothetæ (type-placers, which is the best rendering that can be had in Greek for typesetters). The unions grew out of fraternal benefit orders, that brought the men into closer acquaintance, causing them gradually to formulate and carry out combinations for increasing their wages. The Typothetæ was brought into being largely because the demands of the unions necessitated organized opposition by proprietors in order to retain control of their printing-plants. The Typographical Union was organized about fifty years ago, principally by newspaper compositors, and gradually developed into a very powerful combination. The pressmen's union was instituted a few years later, and one after another unions were formed in the different branches of the trade. Of these the International Typographical Union is the largest and most influential, comprising about 40,000 members, and disbursing a large amount annually in benefits to sick members, and also maintaining a home for incapacitated printers.

Within a few years the following-named unions in the trade have organized together as the Allied Printing Trades Council of New York and Vicinity: Typographical Union No. 6, German-American Typographia No. 7, Hebrew-American Typographical Union No. 83, Local No. 1 International Brotherhood of Bookbinders, Bohemian Typographical Union No. 131, Mailers' Union No. 6, the Adams, Cylinder, and Web Press Printers'

Association No. 51, Stereotypers' Union No. 1, Photoengravers' Union No. 1, Type-Founders' Union No. 1, Eccentric Association of Engineers and Firemen, and the Feeders', Helpers', and Job-Pressmen's Union No. 23. The principal object of this combination of unions is the promotion of the sympathetic strike as a means of bringing employers to terms. Any union in the Allied Trades Council which is striking for wages, or any legitimate purpose, has the right and power to call out any or all the other unions in the council to assist in enforcing the demands. The combination has thus become very powerful, and would be more so were it not that almost half the workmen in the country, especially in the smaller towns, are non-union, and afford support to employers in time of strike. In 1886 the International Printers' Protective Fraternity was organized in Wisconsin—a sort of opposition union to the Typographical Union, its members being opposed to strikes, and settling all difficulties by arbitration. It has local branches in large cities, its principal strength being in the Western States.

The Typothetæ grew out of a meeting of master printers held in New York city in 1863. It existed in an informal way for twenty years, at times being practically lifeless; but in 1883 it reorganized permanently, and in 1892 became an incorporated body and acquired property. Similar organizations sprang up in other cities, and in 1887 there were fourteen, mostly known as Typothetæ, though some of them assumed the title of master printers' associations. In 1887 a demand by the unions for a reduction of hours caused a call to be issued for a convention of all these organizations and master printers generally in Chicago, to decide on some concerted action in opposition. As a result, the United Typothetæ of America was formed, which at this date includes 39 subordinate organizations, the total membership being about 1,000 firms.

The United Typothetæ of America holds yearly conventions at different cities. Important trade questions are discussed, and committees are appointed to carry out desired objects. While the typothetæ organizations were originated in opposition to the unions of working men, they are not as they exist at present distinctly antagonistic. The avowed objects of the typothetæ are rather the securing of every good for the printing trade, the settlement of differences by arbitration, the maintenance of prices, etc. The members are mostly the larger firms in the book- and job-printing industry, but many newspapers are represented, as well as a considerable number of firms in the trades allied to printing.

About 1885 the New York Typothetæ set the fashion of celebrating the anniversary of Benjamin Franklin's birth, Jan. 17, by a banquet. These banquets have become an annual social feature in the trade, and are held in most of the cities where there are typothetæ. In some cases the employees dine with the employers at such gatherings, which are utilized to promote good feeling in the trade.

PROTESTANT EPISCOPAL CHURCH IN THE UNITED STATES. A summary of the statistics of Church progress in the year shows the following: The number of dioceses within the United States is 60; missionary jurisdictions within the United States and their possessions, 21; missionary jurisdictions in foreign lands, 9; clergy, 5,022; parishes and missions, 6,614; bishops consecrated, 1; priests ordained, 161; deacons, 147; candidates for holy orders, 471; postulants, 250; lay readers, 2,069; baptisms, 59,566; confirmations, 45,093; communicants, 743,622; Sun-

day-school teachers, 46,940; Sunday-school pupils, 439,112; parochial and industrial school teachers, 1,764; parochial and industrial school pupils, 24,802; contributions, \$14,544,917.

The General Convention met in San Francisco in October. Action was taken by which six new missionary jurisdictions were formed: Salina, Porto Rico and Vieques, Honolulu, and the Philippine Islands within the territory of the United States, and Cuba and Hankow in foreign countries. The diocese of Massachusetts was divided, and a new diocese was formed under the (provisional) name of Western Massachusetts. The following missionary bishops were elected: Olympia, the Rev. Frederick William Keator; North Dakota, the Rev. Cameron Mann, D.D.; Philippine Islands, the Rev. Charles Henry Brent; Porto Rico and Vieques, the Rev. William Cabell Brown, D.D.; Hankow, the Rev. James Addison Ingle. The appointment of missionary bishops for the jurisdictions of Honolulu, Salina, and Cuba was left with the House of Bishops, who will make appointments in the recess.

The General Convention deferred to future action the erection of provinces, the term of the presiding bishop, and the alteration in the legal name of the Church. The convention passed what may be called permissive resolutions: one to allow the use in public of the marginal readings; the other, as to the power of bishops to take under their care congregations not belonging to the Church without insisting on the use of the Prayer-Book. Several new committees were created, notably those on the translation of bishops, on the relation of capital and labor, and on conferring with the other religious bodies in regard to marriage and divorce. The erection of the sees of Honolulu and Porto Rico and Vieques are noteworthy, as they were formed through the friendly cooperation of the Bishops of Honolulu and Antigua, who resigned their former jurisdiction over these islands.

Missions.—The entire receipts of the Domestic and Foreign Missionary Society for the fiscal year ended Aug. 31 were \$998,904.47. The total amount at the discretion of the board for the work for which it made itself responsible was \$531,137.50, of which \$456,864.32 came from contributions, \$69,693.18 from legacies designated by the testators for either domestic or foreign missions or for the use of the society, and \$4,580 from legacies unused, received the previous year. As the appropriations for the year amounted to \$610,983.15, this made a deficit in meeting the appropriations, which deficiency of \$102,719.36 (including \$22,873.71 to Sept. 1, last year) was temporarily covered by the reserve deposit, amounting to \$109,120.81, set aside several years ago to meet the payments during the early months of the year when the contributions are few, and the board, at the end of the fiscal year, had left only \$6,401.45 of the reserve deposits with which to protect its obligations falling due within the next six months. The increase of contributions, compared with those of the previous year, was \$17,039.99, but there was a decrease in the amount received from legacies of \$112,454.41. The number of parishes and missions contributing—112 more than the year before, and more than in any previous year—was 4,075, and the Lenten offering from Sunday-schools, amounting to more than \$104,000, was the largest yet made. The number of schools contributing was 3,467, a gain of 129, compared with the previous year. The total of appropriations for the fiscal year 1901-1902 was announced in May to the Church as \$610,000, subject to slight increase to meet special

opportunities or emergencies during the year, but the action of the board in making its appropriations was qualified by a resolution which provided that if, at the close of the year ending Sept. 1, 1901, there should be a deficit of not less than \$100,000, a reduction at the board's discretion on all appropriations for the coming year could be made, and a proportionate reduction for any smaller deficit, this reduction to apply proportionately only for the nine months beginning Jan. 1, 1901. By subsequent action it was determined not to put this resolution into effect before March 1, 1902.

The amount available for domestic mission specials (including a balance from 1900 of \$97,387.34) was \$662,947.62. The payments on account of white mission work were \$165,074.47; of Indian, \$62,899.86; of colored, \$73,365.50; specials were \$109,442.47; portion of Woman's Auxiliary united offering of 1898 applied to appropriations for domestic missions, \$15,027.23; legacy expenses (half), \$701.60; half amount paid to annuitants, \$926; half cost of administration and collection, \$22,309.91; half cost of printing reports of the board, Spirit of Missions for the clergy, pamphlets and leaflets for gratuitous distribution, \$11,071.66; legacies for investment, \$114,528.63; legacies paid to certain bishops, etc., at their discretion, \$2,300; making the total of payments on account of domestic missions and specials, \$577,647.33, and leaving available for domestic missions and specials at the close of the fiscal year a balance of \$85,300.29. The salaries of the bishops and the stipends of the missionaries in the 17 districts that are exclusively missionary were paid, and assistance was given in 40 dioceses. The general missionary to the Swedes, 2 missionaries among deaf-mutes in the West and South, 3 missionaries in Porto Rico, and 2 in the Philippines also were supported, the society being responsible, in all, for the salaries of 16 missionary bishops and the stipends of 694 clergymen, 147 laymen, and 212 women.

The total amount for the fiscal year applied upon the mission work in foreign lands was \$320,023.57, but \$81,180.77 of this was received as specials to be paid over and above appropriation or to be invested permanently. The statement of appropriations and resources for the year is as follows: Balance of appropriations on Sept. 1, 1900, unpaid, \$42,930.39; appropriations to Sept. 1, 1901, \$278,765.63. Assets to Sept. 1, 1900, \$31,493.54; received for foreign missions, \$115,751.40; one-half general offerings, \$94,798.85; designated legacies, \$15,993.32; undesignated legacies, \$12,299.23.

The reports of the missionary bishops give abundant ground for hope and confidence.

Church work among the Indians is maintained in 13 States and Territories. There are working in this field 49 clergymen, 86 laymen, and 129 women, making a total of 168 workers. Of these, 28 are Indian clergymen. In Alaska 4 new churches were built this year, and the contributions amounted to \$6,394; 64 persons were baptized and 64 confirmed. For mission work among the Indians \$62,899.66 was paid out by the board.

Advancement in the mission work among the deaf-mutes in the West and South, among the Swedes, and among the colored people of the South is reported. For the work of evangelization and education among the latter \$73,365.50 was expended this year.

The work of the Church in Porto Rico is established at three centers—San Juan, Ponce, and Vieques. At San Juan the Rev. James H. Van Buren, appointed as missionary to Porto Rico,

has bought for \$12,000 a lot on which to erect a church, and the people of San Juan have raised \$2,000 for that purpose. The attendance upon Sunday services has averaged 65 persons, and there are about 35 communicants, one-fifth of whom are colored. At Ponce are about 70 communicants, 50 of whom are colored, and there are 40 colored children in the Sunday-school. At Vieques are about 70 communicants. Bishop Peterkin early in the year confirmed 19 persons in Porto Rico.

Two missionary priests for the work in the Philippines were appointed in May. A chapel lot in Manila has been bought and paid for, and a pledge of \$20,000 for the erection of buildings has been made. The Order for Holy Matrimony has been translated into the Tagal tongue—the first office of the Prayer-Book to be so translated. This work is important, as, since the establishment of civil marriage, very large numbers of the people seek the American chaplains and missionaries for the ceremony. The statistics of the Philippines mission for the year show 7 confirmations and 81 communicants. The Bishop of Shanghai, as bishop-in-charge of the Philippine Islands, made a visitation there.

The Church in Liberia has continued to maintain its quota of good works, although, on account of the rebellious attitude of two heathen tribes toward the Government, the work of some of the interior stations had to be suspended. In the year 2 deacons were ordained, 4 postulants, and 8 candidates for holy orders were admitted, 16 lay readers were licensed, 9 additional catechists and teachers were commissioned, 3 churches were consecrated, 314 persons were baptized, and 136 confirmed; there were 1,710 communicants, of whom 1,012 are aborigines, the Sunday-school pupils numbered 1,832, the day-school and boarding-school pupils were 1,262, and the contributions amounted to \$2,794.17.

In China the outlook is encouraging. Since the political troubles of 1900 the work of evangelization has been resumed on stronger lines than before. In Wuchang street-preaching services have been established with remarkable success, a chapel has been completed, another begun, and two new stations where regular services are held, and also a training-school for day-school teachers, have been opened. A new feature of the year was the holding of a teachers' institute. A new house at Wuhu has been opened, and new stations at Wusieh, Lang-Lo, and Chang-Chow. A hospital at Nganking has been completed; work for women has been begun at Hankow, where extensive building operations have gone on during the year, and a church there has been consecrated. In March 155 boys and young men applied for admission to St. John's College, five miles out of Shanghai; but there was accommodation for only 50. Many of the applicants were sons of distinguished officials in China. The number of students enrolled is more than 220. Other statistics show that 194 persons were baptized, 147 confirmed, the communicants number 1,204, contributions amounted to (Mexican) \$2,500.06, and 1 priest and 4 Chinese deacons were ordained. The translation of the Bible has been continued, various tracts have been written, the first half of a commentary on the Psalms has been printed, and an elaborate work on ancient history, prepared at the request of the Viceroy of Hupeh, has issued from the press. All these are in the Chinese tongue.

The Church in Japan is winning its way to the confidence of the people. Statistics for the Japan mission give: Natives baptized, 323, of whom 204

were adults; confirmed, 207; communicants, 1,697; day-school pupils, 1,505; boarding-school pupils, 223; Sunday-school pupils, 1,786; contributions, \$6,087.54 (Mexican dollars). One priest was ordained, 5 native candidates for holy orders were admitted, 2 churches were consecrated, a night-school and 2 hospital dispensaries were opened, and land was bought and buildings put up. As one result of a meeting of the bishops of the Church in Japan, the bishops issued a joint pastoral letter to all their communicants, urging them to daily prayer for Christian unity. Since then the representatives of all the missions in Japan, except the Roman Catholic, have published a letter to the same effect. In the past year the Middle School of St. John's College achieved the unique distinction of having its graduating class admitted into the Government institutions at the head of all competitors, passing 100 per cent. of its candidates.

The Church in Haiti is now established at 22 points, in charge of 12 native priests. The baptisms in the year numbered 110; confirmations, 55; communicants, 544; Sunday-school pupils, 288; day-school pupils, 234; contributions, \$2,233. Three new mission stations were opened.

The Mexican Church is slowly strengthening in numbers and influence. It closed the year entirely freed from debt; the number of its clergy has been increased by 5, 1 deacon has been ordained, the baptisms were 79 and the confirmations 108; the offerings amounted to \$1,454, and the number of communicants was 763. A committee of the House of Bishops was appointed at the convention with power (under certain conditions) to arrange a concordat or covenant with the Mexican Church, and, when satisfied with the concordat, and subject to such conditions, to consecrate not more than 2 bishops for the church in Mexico. A standing committee of the board has been appointed on Mexican work.

The statistics of the chaplaincies in Europe show: Clergy, 12; organized chaplaincies, 9; baptisms, 64; confirmations, 123; communicants, 1,777; and contributions, \$98,621.

The receipts of the American Church Missionary Society amounted to \$64,458.32; the cash on hand Sept. 1, 1900, was \$10,282.65; the disbursements were \$66,581.35; and the cash balance Sept. 1, 1901, was \$8,159.62. The disbursements for Brazil for missions were \$19,704.74; for specials, \$977.30; for church building, \$14,220.72; for insurance, \$350. The Brazil mission shows constant growth and reports 1 priest ordained, 3 candidates for holy orders, 2 postulants, 1 church consecrated, 158 baptisms, 97 confirmations, 488 communicants, 34 Sunday-school teachers, 465 Sunday-school pupils, 3 parish-school teachers, 50 parish-school pupils, and \$3,666 contributed. By a change of title authorized by the General Convention, Bishop Kinsolving takes the title of Bishop of Southern Brazil.

For Cuba the disbursements were: For missions, \$8,568.66; for specials, \$116.50; for church at Bolondron, \$1,797.52; for Matanzas orphanage, \$5,231.98. The mission in Cuba has been placed in the charge of the Bishop of Porto Rico and Vieques. Five clergymen are laboring there in 5 mission districts, who in the year baptized 36 persons. There are 256 communicants and 250 Sunday-school pupils. Reports from the orphanage at Matanzas indicate that unless contributions for its maintenance greatly increase it must be closed.

The Society for Promoting Christianity among the Jews reports that much interest in it has been shown and much good-will toward it. The

collections and contributions amounted to \$7,551.86; the total of expenditures was \$12,535.33; and a cash balance of \$103.85 remains in the treasury. The society maintains 2 mission stations, with 3 lay missionaries; 71 children were this year enrolled in its New York school.

The summary of work accomplished in the year by the Woman's Auxiliary and its junior department, in which 2,611 parishes and missions took part, shows: Contributions in money, \$205,665.59; and boxes valued at \$191,772.46. Of the total of \$397,438.05 the junior department gave money and boxes to the amount of \$33,828.47. In addition to these contributions from the Woman's Auxiliary in the past year, the following amounts from the united offerings of 1892, 1895, and 1898 have come into the treasury of the board toward its appropriations: For stipend of the Missionary Bishop of Alaska, \$3,000; for support of a new missionary bishop, \$106; for woman workers in

the domestic field, \$15,021.23; in the foreign field, \$5,927.39. The united offering of 1901 will be designated: half to general missions and half to woman workers.

The American Church Building Fund Commission reports that in the year past, according to \$4,600 were made to 27 churches, and loans to the amount of \$3,846 to 5 churches. The contributions to the permanent building fund were \$11,060.12; interest on loans and investments, \$1,510.52; loans returned by parishes and missions, \$31,674.10; investment loans returned, \$9,000. The fund now amounts to \$367,218.13.

On Aug. 6, 1901, the venerable Frederick William Taylor, D. D., Archdeacon of Springfield, rector of St. Paul's Pro-Cathedral, Springfield, and president of the standing committee of the diocese of Springfield, having been duly elected bishop coadjutor of the diocese, was consecrated bishop.

Q

QUEBEC, a province of the Dominion of Canada; area, 228,900; population in 1901, 1,645,572. Capital, Quebec.

Government.—The province began the year 1901 with a Liberal Government strongly entrenched in position as the result of a recent election. The nominations for the new Assembly were made Nov. 30, and the polling was on Dec. 7, 1900. The issues turned mainly upon the popular approval of the Lieutenant-Governor's selection of Simon Napoleon Parent as successor in the Liberal premiership to the late Hon. F. G. Marchand. Despite some slight changes, the ministry was practically the same, while the Conservative Opposition, led by the Hon. E. J. Flynn, was admittedly weak—21 to 51. Mr. Parent, who had been mayor of Quebec since 1894, member of the Legislature since 1890, and Commissioner of Crown Lands since 1897, appealed to the people upon the general record of the late ministry—its economy in financial administration, its alleged change of deficits into surpluses, its reform in educational methods and management, its establishment of free text-books for the primary classes, its general progressiveness and freedom from corruption. His own personal popularity was one of the chief factors in what followed. The Opposition platform and policy were described in an address which Mr. Flynn issued to the electors, in which he declared that no new question or program was submitted to the people; that the contest was brought on prematurely and simply "to take advantage of the wave of popular favor which carried Sir Wilfrid Laurier into power; that the tenure of the Legislature elected in 1897 was being cut short without constitutional reason and at a bad season of the year; and that the Government had not lived up to their promises and the expectations of the people. The Conservative press followed this up with the charge that Mr. Parent was simply "snatching a verdict" at a time of the year when discussion was difficult and the country was still vibrating with the great Liberal victory in the recent Dominion elections. On nomination day 31 Liberals were elected by acclamation, and no Conservative. On Dec. 7 the remaining constituencies were polled, with a total result of 65 Liberals, 7 Conservatives, and 2 seats to be yet heard from. Messrs. Nantel, Hackett, and Atwater were defeated, and not an English Conservative elected. The Government, which was

thus so triumphantly sustained in the last month of the dying year, faced the opening of the new century as follows: Premier and Commissioner of Lands, Forests, and Fisheries, S. N. Parent; Attorney-General, H. Archambault; Commissioner of Agriculture, F. G. M. Déchène; Commissioner of Colonization and Mines, A. Turgeon; Provincial Treasurer, H. T. Duffy; Commissioner of Public Works, Lomer Gouin; without portfolio, G. W. Stephens and J. J. Guerin.

Legislation.—The Legislature was opened on Feb. 15 by Chief-Justice Sir L. E. U. Cassutt, in the absence, through illness, of Lieut.-Gov. the Hon. L. A. Jetté. The initial procedure was the unanimous election of Henri Benjamin Rainville as Speaker of the Assembly, after which a speech from the throne was read. The following are its important passages:

"Our fellow countrymen from this province who went to the war in the South African republics have, like their comrades in arms from the other sections of Canada, by their bravery, coolness, and manly endurance, won the admiration of their leaders and of the old regiments with which they came in contact.

"My Government has continued to devote special attention to the question of the fisheries. The ownership of those situated in the Gulf of St. Lawrence has been the subject of discussion with the Government of Canada. But nothing has been neglected to preserve the rights which the highest courts of the empire recognize as belonging to this province, and there is every reason to hope that this question will soon be decided in a manner satisfactory to us.

"A new book for primary instruction in the Catholic public schools has been prepared under the direction of the Government, and has been approved by the Catholic Committee of the Council of Public Instruction. This book will be distributed gratuitously to all the schools of the province desirous of obtaining it, and may come into use at the beginning of the next school year.

"The ordinary receipts for the past fiscal year show a surplus over all expenditure, both ordinary and extraordinary.

"My Government has succeeded in placing a building at the disposal of Laval Normal School, which will enable that institution to continue, under more favorable conditions, to carry out the useful and important task devolving upon it in our educational system.

"Agriculture in the province has reached a degree of prosperity hitherto unheard of, and my Government has been pleased and will continue in future to hold itself at the disposal of farmers, to second their efforts and encourage agricultural activity within the measure of our resources. Colonization has been energetically and successfully carried on, and a strong impetus has been given to the settlements of our public lands. The disastrous fire in Hull, which destroyed the courthouse, the registry office and notaries' safes, entailed the loss of documents of great importance. My Government at once subscribed a sum of \$25,000 for the unfortunate victims of the conflagration, and a bill will be laid before you for replacing the lost titles and documents.

"In view of the sufferings entailed by industrial conflicts, my Government has decided to place before you a measure for the purpose of facilitating conciliation or arbitration in difficulties between employers and workmen. The experience of the past three years has shown that the change in the organization of the departments of Lands, Forests and Fisheries, and Colonization and Mines, far from facilitating the working of these branches of the public service, has given rise to needless complications in the administration of affairs. To remedy this, you will be called upon to adopt a measure which, while removing existing difficulties, will allow of a considerable saving being effected by the suppression of one of those departments."

The Hon. E. J. Flynn spoke more than an hour, and criticized the Government program for its omissions as well as for its general character. In the fisheries question he trusted that none of the rights of the province would be sacrificed. He wanted to know who was going to pay for the free text-books, doubted the existence of an actual surplus, expressed dissent from the statement that agriculture was unprecedentedly prosperous, questioned the advisability of abolishing the colonization department, and inquired about the position of the Government on the subject of abattoirs and railway subsidies. On March 28 the Legislature was prorogued after a session of thirty-three days, during which the Assembly voted 24 times and sent 158 measures to the Council. The latter body submitted 24 measures to the Assembly.

Finances.—The Hon. H. T. Duffy, Provincial Treasurer, delivered his annual statement on March 7. He first summed up the condition of affairs during the five years preceding Mr. F. G. Marchand's accession to power in 1897, in order to show the difficulties which that gentleman had to face in managing the provincial finances. During that period, he said, the public debt increased by \$3,869,081; the funded debt increased by \$9,021,334; there was a yearly average deficit of \$291,481, and a total deficit of \$1,457,408; there were increased taxes amounting to \$2,262,452, and increased interest charges of \$123,082. In the first year of the new Government, ending June 30, 1898, the total deficit was reduced from \$984,043 to \$213,030; the second year there was a surplus of \$15,179; in the third year the surplus was \$36,612. This, he said, resulted from economy and involved no increased taxes. For the last year, ending June 30, 1900, the ordinary receipts were \$4,451,578, and the ordinary expenditure \$4,428,385. The chief items of increase in the receipts over the preceding year were in lands, forests, and fisheries, \$256,126; mines, \$7,835; law fees, \$5,552; direct taxes on commercial corporations, \$13,972; lunatic asylums, \$32,473. The first item was mainly owing to the increased de-

mand for timber, and especially for pulp-wood. The principal increases in expenditure were \$9,535 for legislation; \$16,221 for civil government; \$17,111 for the administration of justice; \$63,743 for public instruction; \$18,341 for agriculture; \$45,000 for colonization; lands, forests, and fisheries, \$28,135. There had been revenue decreases from the Dominion of Canada of \$41,145; from licenses, \$20,307; and from succession duties, \$17,130. The reductions in expenditure were mainly in connection with the debt, and amounted to \$20,263. The Treasurer intimated that there was a steady decrease in the amount received from the succession tax, and that it might be necessary to copy the English legislation under which transfers of property by donation within a certain period of the owner's death are regarded as transmissions by inheritance. The estimated revenue for the year ending June 30, 1902, was \$4,321,761, and the expenditure \$4,267,643. According to the official figures published at a later period, the actual receipts up to June 30, 1901, amounted to \$4,816,210. The expenditures included \$1,549,275 upon the public debt, \$235,596 upon legislation, \$278,307 upon civil government, \$534,114 upon the administration of justice, \$427,589 upon public instruction, \$147,555 upon public works and buildings, \$199,217 upon agriculture, \$138,425 upon lands, forests, and fisheries, \$189,390 upon colonization and mines, \$345,000 upon lunatic asylums, \$123,318 upon railway subsidies, and \$528,208 upon miscellaneous matters and services. The total expenditures were \$4,756,002. The funded debt of the province on June 30, 1900, was \$35,072,027. On June 30, 1901, according to the official statement, it was \$26,072,419.

The Hon. Mr. Flynn briefly criticized the budget. Any little surplus that existed was due to the sale of water-powers and other infringements upon capital. The Conservative administration in 1896 had been severely criticized because they had spent \$3,978,424, and yet the present Government had voted for 1900-1901 ordinary expenditures of \$4,510,000, and a total amount of \$4,899,435. Special warrants, which the Liberal party and the members of the present ministry had once denounced, were now being issued to an alarming extent. The appropriations for the coming year he considered insufficient, and this was proved by the increase in the warrants, while the revenues were being swelled by such extraordinary means as the sale of timber limits, water-powers, and the seigneurie of Mingan for \$447,804.

Reorganization of Departments.—On March 18 the Hon. Mr. Gouin introduced his measure for the abolition of the Department of Colonization and Mines, the limiting of the number of ministers to 6 instead of 7, the change of designation from that of commissioner to minister, the transference of colonization matters to the Department of Public Works, and of Mines to the Crown Lands Department. The measure was warmly debated, and finally passed on March 25 after some amendments by the Legislative Council. Under its terms, the title of "commissioner" was abolished, and the Lieutenant-Governor was authorized to appoint 6 ministers, as follows: 1. A minister charged with the administration of justice, and designated as Attorney-General. 2. A minister with the attributions mentioned in Act 705 and following of the Statutes, designated as Provincial Secretary. 3. A minister charged with presiding over the Treasury Department, designated as Provincial Treasurer. 4. A Minister of Colonization and Public Works. 5. A Minister of Agriculture. 6. A Minister of Lands, Mines, and Fisheries.

Montreal Power Company.—The most widely discussed measure of the session was that incorporating the Montreal Light, Heat, and Power Company. The promoters of the bill were some of the foremost citizens of Montreal. The capital was to be practically unlimited, and the object was said to be a monopoly of the lighting and heating power in Montreal and its vicinity. The present capital was \$1,000,000, but the promoters wanted power to increase it indefinitely, and refused to accept five, ten, or twenty millions, which were successively proposed. They would not tell the committee what concerns it was proposed to amalgamate, and finally the clause relating to capital passed, as well as the following: "The company may amalgamate or consolidate with any corporation in the stock or bonds of which it is authorized to invest. . . . The company may, in the city of Montreal, or at any place in the province of Quebec, within a radius of 100 miles from the said city, enter upon and construct under or over the streets and public highways all such pipes, lines, conduits, and other constructions as may be necessary for the purpose of its business." The measure became law despite varied and mighty protests from Montreal and its citizens.

Public Health.—A measure went through the Assembly on March 6, and eventually became law, which amended and consolidated the existing laws as to public health and constituted a permanent sanitary service for the province. By its terms a provincial Board of Health is formed, composed of 7 persons, to be appointed by the Government, and of whom at least 4 men are to be physicians of five years' practise or more. This body has power to appoint an inspector of health, analysts, a sanitary engineer, a statistician, and other necessary officers. Its duties are the special study of medical and vital statistics in the province, the investigation of sanitary conditions, causes of diseases and death, epidemics, and the effect of employment, habits, and environment upon the people; and it has power to make sanitary by-laws. Local boards of health were to be organized and particulars registered.

Agriculture.—The annual report of the Department of Agriculture, presented to the Legislature in February, 1901, indicated a progressive condition of affairs. An investigation had been made, under instructions from the department, into the making of cheese in the province, with a view to ascertaining why higher prices should be paid for English Cheddar cheese than for the Canadian article. Two or three cents a pound difference in the price would mean a matter of \$2,000,000 to the agricultural community. The commissioners visited the dairy school and some of the cheese factories in the province, and then studied the methods of operation and work in England. The result was an elaborate presentation of the reasons for the existing superiority, and the expression of an opinion that no insuperable obstacles existed to an improvement in Quebec manufacture. Canadian and American cheese were found to bring a lower price in England than English cheese; Quebec a lower price than Ontario cheese. The commissioners advised the appointment of a skilled and scientific cheese-maker to instruct the farmers of the province on certain points. According to the official figures for 1899, there were then in the province 404 creameries, 1,192 cheese factories, and 307 creameries and cheese factories combined. During the past few years there had been a steady increase in the production of cheese and butter.

Fruit-growing was dealt with at some length,

and Mr. D  ch  ne expressed praise in the excellent exhibit made at Paris and in the awards carried off by Quebec producers. The minister also drew attention to the admitted suitability of Canadian horses for cavalry, and to the fact that, in spite of this, the Dominion had furnished only 3 per cent. of the horses required by the Imperial Government in South Africa. The agricultural societies and farmers' clubs in the province numbered 596 in 1900, with a membership of 59,440. Their receipts were \$95,423 for the year ending Dec. 31, 1899.

Lands, Forests, and Fisheries.—The total revenue of this department for the year was \$1,299,371, exceeding by \$234,172 the highest annual receipts since confederation. The expenditures were \$150,500. Out of 222,000,000 acres of Crown lands in the province, only 22,000,000 acres had so far been alienated. Of this latter total, 11,240,721 acres had been sold and patented and 10,679,000 conceded as seigneuries. During the year 1899-1900 162,740 acres were granted to settlers for the total sum of \$73,908, while 1,999 acres of free grants were given, and 7,500 acres to parents of 12 children. Timber limits were sold during the year by auction for \$394,604. The Belgo-Canadian Company, which in 1898 had purchased 743 square miles, were now ready to carry on a large pulp business at Shawnigan Falls.

An important matter that was settled during the year was the dispute between the Government and the Labrador Company, involving the title to some land on the north shore of the St. Lawrence, near the Mingan Islands group. Under the terms of the settlement, \$26,000 came into the treasury, together with a yearly rental of \$1,000 for fishing privileges for fifteen years in certain waters fronting the Seigneurie de Mingan.

Immigration.—In the year ending June 30, 1900, \$124,000 had been expended on the construction or repair of 561 miles of roads, including 16,289 feet of bridges and culverts. While positive figures were impossible to give, the Hon. Mr. Turgeon believed that there was a large and constantly growing element of returned emigrants from the United States, and a consequent increase in the formation of new settlements and extension of old ones. The returns of the Fitchburg Railway and its connecting lines from July 1, 1899, to June 30, 1900, showed the return or repatriation of 8,241 persons. The immigration agents' reports indicated a substantial increase in arrivals from Europe generally. In the twelve months, 2,942 immigrants were registered at Montreal. The arrivals at Quebec numbered 4,686.

Education.—According to the report for the year ending June 30, 1901, there were 4,147 Roman Catholic elementary schools under the control of the commissioners, and 113 under the control of trustees, and 51 independent; 644 Protestant elementary schools under the control of the commissioners, 220 in charge of trustees, and 5 independent; 398 Roman Catholic model schools and academies under the control of the commissioners, 1 in charge of trustees, and 243 independent; 58 Protestant model schools and academies under the control of the commissioners, 18 in charge of trustees, and 4 independent academies. There were 19 Roman Catholic classical colleges, similar to the Ontario collegiate institutes. The number of pupils in the Roman Catholic elementary schools was 171,824; the average attendance was 118,490; the average salary of male lay teachers with diplomas was \$242; of females, \$111. The number of pupils in the Protestant elementary schools was 27,598; the average attendance was

20,049; the average salary of lay male teachers with diplomas was \$663, and of females \$152. The number of pupils in Roman Catholic model schools and academies was 102,855; the average attendance was 85,097; the average salary of male lay teachers with diplomas was \$487, and of females \$130. The number of pupils in the Protestant model schools and academies was 8,976; the average attendance was 7,330; the average salary of male lay teachers with diplomas was \$830, and of females \$291.

In the Roman Catholic classical colleges there were 2,171 pupils in the commercial course and 3,666 in the classical course. The average attendance was 5,361. The number of Protestants in the Roman Catholic elementary schools was 724; those attending the Catholic model schools and academies numbered 15,194. The Roman Catholic pupils in Protestant elementary schools numbered 2,187, and in the Protestant model schools and academies 419. Including elementary, model, and normal schools, universities, colleges, academies, and schools for the deaf and dumb, and art and design, there were 5,958 schools in the province, 2,215 male teachers, 8,640 female teachers, and 322,761 pupils. The Government expenditure upon schools in 1899-1900 was \$449,950. A new normal school for girls was opened at Montreal. The French pupils learning English in the schools of the province numbered 73,506, and the English pupils learning French 24,608.

Public Works.—The payments to railways between July 1, 1899, and June 30, 1900, amounted to \$90,276 in cash and land subsidies converted into cash. Of this total, \$10,000 went to the South Shore Railway, \$59,181 to the Great Northern Railway, and \$21,095 to the Pontiac and Pacific Junction Railway. The total mileage of railways in the province was 3,387. Of the \$10,696,230 granted by the province in railway subsidies to June 30, 1900, \$7,742,243 had been paid, \$2,287,802 had lapsed, been transferred, or aban-

doned, and \$666,183 remained to be paid when earned.

Mines.—Mr. J. O. Valski, Inspector of Mines, advised the commissioner in March, 1901, that "the mining industry continues to develop regularly in this province, without, however, presenting any very striking new features. The most important operations have been in asbestos, copper, mica, chrome, and iron, and an increase in the output of these has to be reported. The working population has augmented, and it is noteworthy that in certain districts wages have been raised 25 per cent. by the mining companies." The gross value of the minerals utilized was \$2,546,076 for the year running from Jan. 1, 1900, to Jan. 1, 1901, and the number of persons employed 5,400, with about \$1,300,000 received in wages for ten months' work.

Prisons and Asylums.—In the year 1899-1900, the number of prisoners in the province was 4,626, of whom 3,787 were men and 839 women, an increase of 256 over the preceding period. The inspectors gave reasons for this change. "For the last year or two especially, thieves, swindlers, tramps, and all who have any interest whatsoever in hiding from justice, seem to have gathered together in one city [Montreal], and have doubtless largely contributed to filling our prisons." Another cause was the activity of the police in Montreal against disreputable women. The prisoners under sixteen, however, decreased in a most marked manner, numbering 56 against 74 in 1898. There were 1,468 convictions for drunkenness, against 2,167 in the previous year. The expenditures for maintenance were \$116,602, an increase of \$11,819. There were 3 reformatory schools for boys and 2 for girls, costing for maintenance \$34,780. The 5 industrial schools cost \$27,722.

In the asylums of the province the number of inmates in 1899 was 2,981, and the cost of maintenance \$314,157. The percentage of cures was reported as smaller than in the preceding year.

R

REFORMED CHURCHES. I. Reformed Church in America (Dutch).—The Committee on the State of Religion reported the following statistics of this Church to the General Synod in June: Number of churches, 651; of ministers, 723; of families, 62,111; of communicants, 110,898, showing a net gain of 999 for the year; received during the year by confession, 5,428; number of Sunday-schools, 912; amount of contributions for all benevolent objects, \$380,811; for congregational purposes, \$1,196,131; showing an increase for the year of \$53,765 in benevolent contributions, and of \$105,748 in those for congregational purposes.

The Board of Education had aided 77 students, against 90 in the previous year. Its total receipts had been \$22,791, and its disbursements \$20,545. A bequest of \$1,483 had been received, and the Educational fund had been increased by a legacy of \$3,500. The board had begun the year free from debt, had been able to care for all its students, and to grant the full amount recommended to the several institutions, and closed the year in a sound financial condition.

The total investments of the Widows' fund amounted to \$108,698; the income account was \$12,635; and the disbursements had been \$11,213. Two hundred and nineteen churches had contributed to the fund.

The endowment of the Disabled Ministers' fund

had been increased to \$67,593. Only 294 of the 643 churches were contributing to it. The receipts from contributions and interest, \$6,826, had been insufficient to meet the demands upon the board, and its treasury was \$500 in arrears.

The Board of Publication reported sales during the year to the amount of \$26,000.

The 675 Christian Endeavor Societies, senior and junior, had contributed \$34,047 to the various causes of the Church.

Nine hundred and twelve Sunday-schools were reported, including 157 in the classis of Arcot, India, with 123,804 pupils enrolled. Their contributions to Church benevolences amounted to \$23,139.

The contributions to the General fund of the Board of Domestic Missions had been \$26,369, or \$2,273 more than in the previous year. This fund is applied to the salaries of classical missionaries, and for the erection and furnishing of churches and parsonages of the student missionary, Indian, and Kentucky mountaineer missions.

The Board of Foreign Missions reported that while the receipts—exceeding \$173,000—had been the largest in its history, severe retrenchments had been necessary in its appropriations for the regular work of the missions. This was largely because a considerable number of the gifts had been made for specific objects, leaving the amount generally available less than was actually needed.

For the future avoidance of this disproportion in the designation of gifts, the Synod recommended to givers that they see that the regular work is fully provided for before giving to objects outside of the appropriations, and that when they give to such special objects, they allow the board more liberty in applying their gifts. The board having declined to accept any of the "exemplary damages" collected by the American consul for losses sustained in the Chiang-Chiu field, China, its action was cordially approved by the General Synod. The Synod also gave its approval to a proposed union of native churches in south India on a plan described in a memorial from the Synod of Arcot.

The receipts of the Woman's Board of Foreign Missions for the year had been \$31,500.

The General Synod met in its ninety-fifth annual session at New Brunswick, N. J., June 5. The Rev. Denis Wortman, D.D., was chosen president. The special Committee on the Finances of the Theological Seminary at New Brunswick, which was appointed in 1897 in view of the seminary's loss of income on account of the declining rate of interest, reported concerning its labors to increase its endowments and to obtain gifts for its current expenses. The sum of \$91,059 had been secured. The endowments of the seminary amounted to \$463,000. Reports were also made of the Western Theological Seminary, at Holland, Mich., and of the seminary in the Arcot Mission, India. Committee reports were presented on revision of the baptismal forms and of the forms of ordination. In the baptismal form a change was approved in the order of the prefaces of the forms for infants and for adults, and an option was given for the omission of a paragraph which was essentially a repetition. The report on the forms for ordination was approved, and the proposed changes were sent down to the classes. The publication of a year-book was authorized. The Synod, declaring itself ever "in the front in every moral cause and in hearty sympathy with every movement tending to the suppression of vice and the uplifting of humanity," bade "Godspeed to all the societies and organizations working in behalf of temperance reform, and especially to the Woman's Christian Temperance Union and the Antisaloon League." The Committee on Systematic Benevolence reported that about 150 churches had availed themselves of the offers made through the permanent committee, and that there had been a gain of 211 in the number of churches contributing to the missionary and other benevolent causes. A committee was appointed to meet a similar committee of the Christian Reformed Church for the purpose of providing against harmful competition in establishing churches by the two denominations. In a resolution commending the American Sabbath Union, the Synod urged upon members the utmost caution in their personal use of the day, and deprecated "such spasmodic action as would bring the laws into disrepute."

II. Reformed Church in the United States (German).—The Almanac for the Reformed Church in the United States for 1902 gives statistics of this Church, of which a summary follows: Number of synods, 8; of classes, 58; of ministers, 1,107; of congregations, 1,688; of communicants, 248,929; of confirmed members, 197,416; of unconfirmed, 127,541; of students for the ministry, 200; of baptisms during the year, 13,377 of infants and 1,745 of adults; of confirmations, 11,898; amount of contributions, \$270,288 for benevolent and \$1,303,241 for congregational purposes. In a general survey of the progress of this Church dur-

ing the nineteenth century, the Rev. Z. A. Yearick represents in a summary view of the general results of its activity during the last quarter of that century, that the General Synod, organized in 1863, continued supervision over the Reformed Church. The six district synods of the United States numbered 8, the 44 classes to 58; the number of members advanced 73 per cent., that of confirmed members 25 per cent., the membership 70 per cent., and the annual contributions to benevolence 147 per cent. Hence the benevolences of the Church increased almost twice as fast as the membership. Great strength was added to the Church in particular localities. The first educational institution was founded in 1825. At the close of the century the Church had 20 such institutions, of which 5 were theological and 15 literary, 3 of the latter being exclusively for the education of women, all of them together being attended by nearly 2,000 students. The first Church paper was started in 1828; there are now, including English, German, Sunday-school, and college periodicals, 33 publications. Three orphans' homes are supported, at an annual cost of about \$18,000, where more than 1,200 orphans have been educated and trained. The valuation of the endowments and properties of these institutions is more than \$175,000. Two deaconesses' homes and hospitals were founded during the last decade of the century. Other benevolences are a Ministerial Relief Society—the oldest charitable institution of the Church—and the David Stein Memorial Home for Disabled Ministers and their Widows, the combined property of which is valued at \$59,000. The foreign mission, in Japan, was established in the last quarter of the century. Its central station is in the city of Sendai. Twenty-six missionaries have been sent out, of whom 18 are still at work, assisted by Dr. Oshikawa, one of the earliest Japanese Christian converts, and a large number of ordained and unordained native helpers. The mission has many preaching stations, a theological school, a literary institution for boys, and a seminary for girls. Steps had been taken for establishing a mission in China, 2 missionaries had been commissioned and started on their way, and a station selected, when the "Boxer" disturbances broke out.

The meeting of the General Board of Home Missions was held in Pittsburgh, Pa., April 9 to 11. Five of the churches under the care of the board had become self-supporting. Additional care had been found advisable in the calling Hungarian ministers by being more exact in requiring proper certificates of dismissal from their Church authorities in Hungary, and other evidences of their good standing at home. The classes were requested to adopt certain measures looking to making the consideration of home missions a more important feature in their transactions. A proposal to institute a conference of all the home missionary field workers of the various churches to consider questions of fields and methods was referred, with a request that they consider it, to the Home Mission Committee of the American section of the Alliance of Reformed Churches.

Of 133 home missions of this Church, 99 were under the General Board and 34 under the German boards. Five missions had become self-supporting during the year, 3 new Hungarian missions had been organized, and 2 additional pastors had been called from Hungary.

RELIGIOUS STATISTICS OF THE WORLD. In a summary of the religious statistics of the world given in a *Beilage* to the *Allgemeine Zeitung* in January, 1901, it is estimated that there are in Europe 384,500,000 Christians,

6,600,000 Mohammedans, and 6,500,000 Jews; in all America, 126,400,000 Christians, while the numbers of Jews and heathen are not estimated; in Asia, 12,600,000 Christians, 100,500,000 Mohammedans, 200,000 Jews, and 667,800,000 pagans; in Africa, 4,400,000 Christians, 36,000,000 Moslems, 400,000 Jews, and 91,000,000 heathen; in Oceania, 9,700,000 Christians, 24,700,000 Moslems, and 4,400,000 heathen.

Of Catholic, Protestant, and Greek Christians, the estimates are: In Great Britain, 5,400,000 Catholics and 37,700,000 Protestants; in France, 37,700,000 Catholics and 700,000 Protestants; in Germany, 18,600,000 Catholics and 32,700,000 Protestants; in Russia, 8,300,000 Catholics, 3,100,000 Protestants, and 73,800,000 of the Greek Church; in Austria, 33,800,000 Catholics, 4,100,000 Protestants, and 3,300,000 Greeks; in Italy, 60,000 Protestants out of a total population of 31,160,000; in Spain and Portugal, 10,000 Protestants out of 22,700,000; in Scandinavia, 10,000 Catholics and 9,290,000 Protestants; in Belgium and Holland, 7,990,000 Catholics and 2,710,000 Protestants; and in the Balkan States, 1,900,000 Catholics, 4,130,000 Protestants, and 12,400,000 Greeks; in all Europe, 167,500,000 Catholics, 94,410,000 Protestants, and 89,500,000 Greeks; in the United States, 62,300,000 Protestants and 9,900,000 Catholics; and in the whole world, 240,000,000 Catholics, 163,300,000 Protestants, and 98,300,000 Greeks, or—according to the author of the computation—a total of 501,600,000 Christians in a population of 1,544,509,000.

RHODE ISLAND. (See under UNITED STATES.)

ROMAN CATHOLIC CHURCH. By an apostolic letter dated Jan. 23, 1900, but not published until a year later, Pope Leo XIII extended the privileges of the jubilee to all countries for any six months in the following year, giving the faithful who were unable to visit Rome in 1900 an opportunity of gaining at home the indulgences of the Holy Year. In every country the greatest advantage was taken of the opportunity. In nearly every city under Christian government processions were formed and visits made by thousands to the churches prescribed by the ordinary. This extension of the jubilee, though by no means regarded as a matter of course, is in accordance with the traditional practise of the Holy See for many centuries. The final ceremony at the Holy Door was performed on Saturday, Jan. 12, when Mgr. Della-Volpe, major-domo of his Holiness, directed the filling up of the space in the wall outside the door with bricks and a slab of marble, after placing in the masonry a bronze casket containing 12 gold, 30 silver, and 60 bronze medals, and 2 parchments containing an account of the transactions of the jubilee.

The Pope, on April 15, created 12 new cardinals, an addition of about one-fifth to the Sacred College, which thereupon became filled. They were Mgr. Saumiatelli-Zabarella, titular Patriarch of Constantinople; Mgr. Gennari, Archbishop of Lepanto; Mgr. Della-Volpe, Major-Domo to his Holiness; Mgr. Cavagnis, Secretary of the Congregation of Extraordinary Ecclesiastical Affairs; Mgr. Tripepi, Under-Secretary of State at the Vatican; Mgr. Dell' Olio, Archbishop of Benevento; Mgr. Boschi, Archbishop of Ferrara; Mgr. Bacilieri, Bishop of Verona; Mgr. Ribaldi, Bishop of Pavia; Mgr. Martinelli, Papal Delegate to the United States; Mgr. Knioz de Kolziesko Puzyna, Archbishop of Cracow; and Mgr. Skrebensky, Archbishop of Prague. Their elevation raised the number of members of the Sacred College to 67 for the first time in a good many years. Ten out

of the 12 were Italians, making 40 Italians in the college altogether. The majority of Italians at the beginning of Leo XIII's pontificate was 12, and it has never since exceeded that number.

The persecution of the regular clergy in France was the occasion of much perturbation at the Vatican during the year. When the associations bill was before the Legislature, his Holiness expressed his grief to those around him, and publicly in his letter to Cardinal Richard, Archbishop of Paris; when it passed he consoled and advised its victims in a letter to the superiors-general of the religious orders, and entered a formal and vigorous protest with the French Government in a diplomatic note which the Cardinal Secretary of State consigned to the French ambassador to the Holy See. One feature of his letter to the superiors-general was the complete absence of instruction as to the policy they should pursue with regard to authorization. The matter was left entirely to themselves. In conversation with such of the superiors-general as appealed to him personally, he declared that their discretion must determine their conduct. He made it clear, however, that the jurisdiction of the orders must be dependent upon the Holy See, and that submission to the secular bishops (ordered by the law) must be only in such points as those over which the ordinary had previously had control.

The address of the Duke of Norfolk to the Pope, on the occasion of the visit of the English pilgrims in December of 1900, in which his Grace expressed the hope that his Holiness might regain his temporal power, was taken up by the socialist press of Italy as a grave insult to the Quirinal by a supposedly friendly power. Although it was made the subject of an interpellation in the Italian House of Deputies, the ministry refused to treat it as an international incident, and after considerable fluttering in the socialist dovecote, the incident was closed.

The important utterances of the Holy See for the year were as follow: The encyclical above referred to, extending the jubilee; an encyclical on the social question, Jan. 18; a letter to the citizens of Como, approving their efforts to show public honors to Alessandro Volta, the electrician and discoverer of the voltaic current; an apostolic letter regulating the management of religious communities which profess simple vows; a letter of commendation to the Society of St. Vincent de Paul; a letter to the University of Glasgow, answering an invitation to take part in the jubilee celebration of the institution; an apostolic letter on the devotion of the Rosary; an apostolic letter addressed to the hierarchy of England, condemning the false tenets of liberal Catholicism and rationalism; a brief of commendation to the Benedictines of Solesmes in recognition of their labors for the restoration of the Gregorian chant; a brief conferring upon St. Bernard's Seminary, at Rochester, N. Y., the right of granting degrees in philosophy and theology; and an allocation at the consistory at which the cardinals were created, addressed principally to the Italian clergy, urging them to resist the passage of a divorce bill about to be introduced into the Italian Parliament. In December the Pope appointed a special pontifical commission for the consideration of all questions connected with Bible studies, to consist of Cardinal Parocchi, as president, Cardinals Segna and Vives, and 11 consultants chosen from different countries of the world.

The Sacred Congregation of Rites, in May, issued a new formula for blessing the lilies in honor of Saint Antony of Padua, and in August issued a decree announcing that the privilege accorded

to Pustet of Ratisbon, giving him exclusive authority to publish the Medicean edition of the Gregorian chant, had expired. The significance of this last decision, read in connection with the papal brief to the Benedictines at Solesmes, is that it practically revokes the authorization given to the Ratisbon edition, and paves the way for a recognition of the results of the labors of the Benedictines for the restoration of pure Gregorian chant as the authorized form of chant to be used in all the Catholic churches in Christendom.

The Pope, in August, took steps toward the reorganization of the Girolamite College in Rome, which was founded by Nicholas V about a hundred years ago for the benefit of the Croats. Pope Leo XIII turned the college over to the Croatian bishops, for use as an ecclesiastical seminary. Inasmuch as Nicholas V's bull erecting it refers to it as a hospice for Dalmatian and Slovenian pilgrims, and some present-day Dalmatians are Italians, they appealed to the prefect of Rome to prevent the execution of the papal decree. On Aug. 29 a band of Italian Dalmatians invaded the institute with the avowed intention of resisting the papal bull, and the Italian Government appointed an administrator of the institute. Then Austria, under whose patronage the institute had been since its foundation, sent a strongly worded note to Italy, demanding the withdrawal of the administrator and the Dalmatians. They were withdrawn, and the institution turned over again to the Pope.

Preparations for the celebration of the silver pontifical jubilee were begun late in the year, for, in spite of the alarming newspaper reports, the Pope's health during the year was uniformly good. His present reign of nearly twenty-four years (twenty-three years ten months and eleven days to Dec. 31) makes it the sixth in order of duration. The popes who have reigned longer are St. Peter (33-67), thirty-four years six months; Pius IX (1848-78), thirty-one years seven months twenty-two days; Pius VI (1775-98), twenty-four years six months fourteen days; Adrian I (771-95), twenty-three years ten months twenty-seven days; and Sylvester I (314-37), twenty-three years ten months twenty-four days.

The statue of St. John Baptist de la Salle, the most recently canonized saint, was lifted to its niche in St. Peter's in October. It is the work of the sculptor Aureli, and is about 18 feet high. Its niche is in the right wall of the principal nave. The statues in St. Peter's are arranged in accordance with the symbolism of the immense temple. The altar, in the very heart of the edifice, stands upon the body of Peter; around it are the bodies and relics of the 12 apostles, as if gathered in a perpetual council about their head; around these is a wider crown formed of the great founders and foundresses who have raised up religious families in the Church; finally, St. Peter of Alcantara and St. Theresa stand at the door, as it were, to remind Christians of the spirit of prayer and mortification with which they should enter the house of God.

United States.—By a decision of the Department of the Interior, rendered in May, Indian children belonging to a Government school were permitted to attend a private or denominational school if their parents so chose. This decision was reached only after a long agitation by Catholic missionaries. It had been made by Mr. Browning, Commissioner of Indian Affairs under Cleveland, at a time when the Catholic schools were also Government schools. The withdrawal of Government aid put the schools on a private

footing, and prevented the Indian children from attending them.

Pope Leo XIII in July addressed a letter to Cardinal Gibbons, commending the University of Washington for the progress it had made, and mentioning the means by which its library could be greatly increased.

The third annual conference of the Catholic colleges of America met April 10 at Chicago, and was addressed by Cardinals Martinelli and Gibbons. The association adopted a set of resolutions calling to the attention of American bishops the need of founding and developing Catholic high schools and of working in concert toward securing recognition from the state of the work being done in the parochial schools.

Mgr. Scalabrini, Bishop of Piacenza, sailed from Italy to the United States in August to examine into the religious condition of his countrymen in this country. Following him came 25 nuns of Piacenza to take charge of the schools he was to found.

In August were received papal briefs erecting the new diocese of Altoona, Pa., to be composed of the counties of Westmoreland, Fayette, Indiana, Blair, Cambria, Somerset, Huntington, Bedford, and Clinton. Mgr. Eugene Jarvey was named as bishop of the new diocese, and was consecrated in September.

Right Rev. Michael Wigger, Bishop of the diocese of Newark, N. J., died Jan. 6. He was succeeded in his episcopate by Right Rev. John J. O'Connor, previously vicar-general of the diocese. At the same time Mgr. William H. O'Connell, rector of the North American College, Rome, was elected to succeed the late Bishop Healy as Bishop of Portland, Me.

The Catholic population of the United States at the close of 1901 was 10,774,987, a growth of 645,312 during the year. There were in the United States 13 archbishops, 80 bishops, 11,987 priests, 6,127 churches with resident priests, 3,518 missions with churches, and 1,774 chapels.

Of Porto Rico the Catholic population was 1,012,400; of the Philippines, 6,565,998; of Hawaii, 33,000; and of Cuba, 1,600,000.

England.—The address of the Duke of Norfolk to the Holy Father was considered important enough to stir the British public to some indignation over what it stigmatized as "a wanton attack on a friendly power." In spite of the standing of the speaker, something might have been born over the newspaper discussion of it, had not the Queen's death put the matter out of the public mind. The national regret over the loss of its ruler was voiced in pastoral letters on the subject from the cardinal archbishop and the bishops of every Catholic diocese in England.

The royal declaration against popery then took the center of interest, and held it until a temporary disposal of it was made at the close of the session of Parliament. The declaration which his Majesty was required to make upon his accession was framed in the reign of Charles II, when religious animosities were unusually bitter. It runs as follows:

"I do solemnly and sincerely, in the presence of God, profess, testify, and declare that I do believe that in the sacrament of the Lord's Supper there is not any transubstantiation of the elements of bread and wine into the body and blood of Christ, at or after the consecration thereof by any person whatsoever; and that the invocation or adoration of the Virgin Mary or any other saint, and the sacrifice of the mass as they are now used in the Church of Rome, are superstitious and idolatrous. And I do solemnly, in

the presence of God, profess, testify, and declare that I do make this declaration and every part thereof in the plain and ordinary sense of the words read unto me, as they are commonly understood by English Protestants, without any evasion, equivocation, or mental reservation whatsoever, and without any dispensation, already granted me for this purpose by the Pope or any other authority or person whatsoever, or without any hope of any such dispensation from any person or authority whatsoever, or without thinking that I am or can be acquitted before God or man or absolved of this declaration or any part thereof, although the Pope or any other person or persons or power whatsoever should dispense with or annul the same, or declare that it was null or void from the beginning."

Even before his Majesty's recital of it, strong protest against the declaration was made by the Catholics of the empire. Why the ruler should be less free than the subject to choose his religion, or be obliged to undergo a religious test for office unnecessary in any other case, seemed sufficiently inexplicable; but, granting the necessity of safeguarding the Protestant succession, it seemed gratuitous for the King to single out for insult one religion out of the many professed by his subjects, and stigmatize it as idolatrous. It imposed an indignity upon 10,000,000 Catholics, and upon the King himself, whose honor and veracity it questioned. Since the only remedy was by act of Parliament, Edward VII, like the gentleman he was, made the taking of the declaration as inoffensive as possible, by repeating the words in an undertone audible only to the Lord Chancellor. When Parliament met, the agitation broke out afresh. The Catholic peers sent a protest to the Lord Chancellor; and it was joined by similar protests from the Catholic hierarchy of England, Scotland, Ireland, Wales, Canada, Australia, India, Malta, Jersey, and the Straits Settlements. A resolution was introduced into the Canadian Parliament, praying that the King reform the offensive declaration by omitting all expressions offensive to the religious belief of any of his subjects, and was passed by a vote of 125 to 19. The Australian Parliament, and that of Malta, passed similar resolutions. Then the House of Commons woke up, after Mr. Balfour had ingeniously tried to side-track the affair by pointing out that the offensive declaration would not have to be taken again during the present reign, and consented to the appointment of a joint committee to revise the declaration. In the meantime Lord Broye had introduced a bill into the Lords abolishing the declaration. The upper house was not prepared for such a radical step and fell in with the Balfour plan. A select committee of the House of Lords was finally settled on, and reported in June in favor of a modification of the declaration. The amended formula, however, met with little favor, since it retained a statement of the King's disbelief in transubstantiation, the sacrifice of the mass, and the "adoration" of the Virgin Mary. When the Lords went into committee of the whole on the bill, it was seen that a modification of the declaration was impracticable, unless the house should adopt the suggestion of one of the Catholic peers and make it read "I renounce the Pope and all his works." Any promise to maintain the Protestant religion, said the Archbishop of Canterbury, would give immediate point to the question "Which Protestant religion?" The one by law established? But there were two—one for England and one for Scotland—and besides it was not intended to prevent the sovereign from being or becoming a Methodist, a Wesleyan, or a Con-

gregationalist. The only point in the declaration was that it excluded Catholics, or was designed to; for as a test it was useless. Finally after half a dozen sessions of the house had been devoted to the question, the Catholic members still objecting to the amendment, it was dropped for the session.

By its judgment in the so-called Cockerton case the Court of the Queen's Bench decided that the functions of the local city, town, and borough boards of education were limited to controlling and supporting elementary schools, under the existing acts of Parliament. To provide for the secondary schools a bill was introduced into the House of Commons establishing new educational authorities, to whose hands all secondary education was to be entrusted. The feature of the measure of greatest interest to Catholics was its provision for the support of denominational schools on the same basis as non-sectarian institutions. Its conscience clause contained the stipulation that the time for religious worship or for any lesson on a religious subject should be conveniently arranged for the purpose of allowing the withdrawal of any scholar therefrom. The bill underwent considerable tinkering in committee, and was dropped for the session to give way to more pressing measures. The Government committed itself, however, to the passage of a bill containing as its main feature the support of denominational schools.

The time-worn demand for better religious facilities for Roman Catholic sailors in the navy came up again in the debate in the house preceding the report of the committee on supply. Beyond extorting the annual promise of the Government that provision would be made toward putting Catholic chaplains in the navy on the same footing as regards rank, pay, and proportionate representation with their brethren of the Established Church, nothing was accomplished. No Catholic chaplains are allowed on board ship, and the "shore system," by which the men while in port are supposed to be able to attend to their religious duties ashore, has proved a failure owing to a natural disinclination of their commanders to give them shore leave denied to their comrades. In addition to this, many of the priests receiving pay from the British Government for acting as shore chaplains in distant ports—like Alexandria, Port Said, and Indian ports—are unable to speak or understand English and can be of little practical assistance even to those who are fortunate enough to have access to their ministry.

As a polite atonement for the enforced insult of the accession declaration, the King invited a deputation of the Catholic hierarchy of England to visit him, and was unusually gracious to the idolaters. The subject of the declaration was not raised, but the King later expressed his hope that provision for its elimination might shortly be made.

The campaign against Catholicism in France woke the islands of Jersey and Guernsey from half a century of sleep and induced them to adopt two measures of persecution. By the first the members of religious orders exiled from France were prohibited from landing in the islands. The second provided that no school which had not obtained a certificate of efficiency for the year ending Sept. 30, 1899, should share in the education grant. Of the 9 Catholic schools in the islands, 8 were excluded by the provisions of the bill, although 7 of them had obtained the certificates before the measure was introduced.

As a mark of special favor to the Catholics of England, Leo XIII obtained from the authorities of the Church of Toulouse the cession of the ven-

erable body of St. Edmund, king and martyr, and sent it, in the custody of Mgr. Merry del Val, to the new cathedral at Westminster. Until its shrine should be prepared, the relic was entrusted to the Duke of Norfolk, Earl Marshal of England. St. Edmund was King of East Anglia, 855-870; taken prisoner by the Danes, and beheaded. He was buried in the abbey church of Bury St. Edmund's. Here his body remained until 1217, when, after the defeat of a part of the confederate army at Lincoln by the earl marshal, Louis (afterward Louis VIII of France), who led the French forces, purloined the sacred relic, and carried it out of the country. Two or three years later the prince carried the body with him to the south of France on his expedition to quell the Albigenses, and deposited it in the Basilica of St. Sernin at Toulouse.

Bishop Brindle, D. S. O., the famous army chaplain, was appointed in November to the see of Nottingham.

In consequence of the erection of a cathedral at Westminster on a larger scale, the Holy See increased the number of its canons from 11 to 18, and assigned to them the same canonical dress as that used at St. Peter's at Rome.

Ireland.—As a sort of afterthought to the outcry made in all parts of the empire against the accession declaration, the Irish members in the House of Commons turned their attention to the removal of another relic of anti-Catholic legislation—the Catholic disabilities acts, of the reign of William III and George III. In so far as they affected the laity and secular clergy, these acts had long been repealed, but certain of the regular clergy, the Jesuits by name, and several other orders by description, were still treated as outside the protection of the law. In Ireland none of these communities could hold or receive realty, and while no attempt had been made in a generation to enforce the law as regards property purchased, that bequeathed to a religious community, a church, or a regular clerk was often diverted from its legatee by a zealous or intolerant relative of the donor. The judgment of the master of the rolls in the case of *Doolan vs. Cahill*, which came before him in April, gave point to the contention of the Irish members for the repeal of the penal statutes. In this case the testator bequeathed £500 to a Capuchin church, and the master had no option but to set aside the bequest as illegal, the whole course of decisions having established the principle that the order had no legal existence. In a later case (*Roche vs. McDermott*, decided in May), the master of the rolls gave the same pronouncement "with reluctance that amounted to positive disgust." The bill introduced by the Irish members was cleverly side-tracked by Mr. Balfour, although no member of the House of Commons could be found to oppose it.

Better progress was made, however, in the quarter-century-old agitation for an Irish Catholic university. Early in March Earl Cadogan, Lord Lieutenant of Ireland, received a deputation from the Royal University, and, in compliance with their unanimous request, presented the question so strongly to the Government that in April a royal commission was appointed to inquire into and report on the whole field of Irish university education. The commission began its sittings in September, and the Bishop of Limerick, its first witness, showed that the population of Ireland was 74.3 per cent. Catholic, 13 per cent. Episcopalian, and 10 per cent. Presbyterian. The commission made a searching inquiry into the entire question, and at the end of the year was ready

to rise and report. What legislation should follow its report was uncertain, but the friends of an Irish Catholic university were gratified at the results of the year's work.

Canada.—The Delpit marriage case was decided in March in the Superior Court of Montreal, overturned what had been the ruling law of a century or more in the province of Quebec. The decision was, that a marriage of two Catholics solemnized before a Protestant minister was valid. Under the French law of the province, it was impossible for a religious officer to marry persons both of whom professed a different religion from his own. The question, therefore, in the Delpit case was of the construction of the Canadian statute, which made all religions equal. The case was appealed to the Privy Council.

Australia.—In October Mgr. Kelly, rector of the Irish College at Rome, was appointed coadjutor to Cardinal Moran, Archbishop of Sydney, with the right of succession.

Bishop Crane, of Sandhurst, Victoria, died Oct. 26.

New Zealand.—The foundation-stone of the great new Cathedral of Christchurch was laid Feb. 11 with appropriate ceremonies.

France.—The attack upon religious orders in France, which had been made at the beginning of the Waldeck-Rousseau Government and continued unabated in every subsequent session of the Chamber of Deputies, culminated June 22, 1901, in the passage of the associations bill, which had been introduced into the Chamber the year before. The measure was one of confiscation and secularization—confiscation of the property of the regular congregations by making it impossible for them to hold it, and secularization of the religious orders by forbidding them to stay in France unless they should give up their distinctive religious privileges as orders and become subject to the jurisdiction of the French bishops, who are the paid servants of the state.

The measure as finally passed provided substantially that no order could exist or hold property in France unless within six months from the passage of the act it should apply for authorization. Should it apply, it might be successful or not in getting its certificate, as the Deputies should be in a lenient or stringent mood at the time of the application. If it were successful, it must submit its finances to Government inspection and keep a list of its members, with their public and private history, for the information of the prefect. Further clauses provided that no congregation should be authorized which should not be subject to the jurisdiction of the ordinary, who must himself accept the obligation thus imposed on him. And by Article XIV all congregations or members thereof were forbidden to direct educational establishments, or to teach therein.

Besides destroying the Jesuit and Assumptionist schools, the bill had a deeper object. It aimed to destroy in the orders which should remain in France the centralization of authority which was of the essence of their being. To do this the orders were made subject to the bishops, and to complete the assurance of autonomy in each establishment, each house of each of the orders was directed to apply for authorization as though it were a separate congregation. As to the second demand, it is entirely at variance with the actual principle of the regular clergy, uniformity of discipline, centralization of authority, and obedience to a single superior. The first, so long as the bishop should assume no more control than that commonly possessed by the ordinary over regular clergy in his diocese, the Pope re-

fused to forbid. He had no objection to episcopal control within the limits prescribed, he said. But the point was, that the law expected and demanded more. It wished to separate the houses of the orders from their head, and to make them dependent for control, and even for existence, on the will of their own paid servants.

The result of the passage of the law was the exile of most of the great religious orders of France. Rather than apply on the terms prescribed they left the country by thousands, settling in Italy, Canada, England, Germany, and Austria. Of 12,176 houses, only 416 applied for authorization, the remainder preferring to surrender their homes and property at once to being robbed of it piecemeal while under a ban which prevented them from carrying on their work.

With their appetites nicely whetted by this success, the socialists took another step toward the destruction of the Church in France by refusing to pass the annual budget of worship, from which are paid the salaries of the priests and bishops. It was not until Waldeck-Rousseau had clearly explained that their opposition was premature, and that the design was to enlarge the responsibility of the bishops while making them dependent on the state, that he forced the budget through the house.

A third opportunity came in the discussion of the Chinese indemnity loan bill, by which it was proposed to commute the instalments of the indemnity of \$53,000,000 which China had agreed to pay to France by means of a loan. Of the indemnity, about \$6,000,000 belonged to the religious orders, and this part it was proposed not to raise by a loan, but to leave it dependent on China's leisurely payments. In a word, France purposed to guarantee all the indemnity except that going to the orders. To this, however, the Premier demurred again, showing that it was necessary for France to protect in China congregations whose property it was confiscating at home in order to preserve French spheres of influence in disputed territory; and by using all the party machinery, the Premier succeeded in having the indemnity loan include the orders.

Mgr. Isoard, Bishop of Annecy, died Aug. 3.

Nine vacant sees were filled during the year. Mgr. Bonnefoy, Bishop of La Rochelle, was transferred to the archiepiscopate of Aix, Canon Le Camus succeeding him. Abbé Bouquet was appointed to Mende, M. Ricard to Angoulême, Abbé Andrien to Marseilles, Abbé Delamaire to Périgueux, Abbé Lacroix to Farentaise, Abbé Dubois to Verdun, and Abbé Canappe to Guadeloupe.

Austria.—The anticlericalism which agitated France so greatly throughout the year found echoes in the countries in the southern tier of Europe, more or less strong in direct ratio with the strength of the socialist parties. In Austria the outbreak came in April, when his Highness the Archduke Francis Ferdinand became protector of the Austrian Catholic Schools Association. Since Catholicism is the state religion of the dual monarchy, it is difficult to see the basis for the socialist uproar which followed the archduke's act. Dr. Menger, the leader of the German progressivist party in the Reichstag, moved immediately for the repeal of the paragraph of the criminal law which provided for the punishment of any one uttering offensive language toward a member of the imperial family. Without the repeal of the act, he said, it would be impossible for him to express his opinion of the archduke's action. The Prime Minister successfully urged the defeat of the motion.

A further indication of the anticlerical spirit

was given in May in Budapest. The university there is Catholic, but on the ground that it was an institution of the state, the Minister of Public Instruction prohibited the display of the crucifix in the lecture-rooms. The Catholic students thereupon hung wooden crosses on the doors of the lecture-rooms, when the liberal students attempted to tear them down. In the disorderly scenes which ensued considerable injury was done to person and property, but the Catholics, outnumbering their opponents, had the best of the physical argument, and shortly afterward the offensive prohibition was withdrawn.

Italy.—The Quirinal and the Vatican continued during the year their state of armed neutrality, though the House of Deputies and the ministerial branches of the Government kept up their attacks on the Holy See and its supporters. The incident of the College of San Girolamo, ending as it did with Austrian intervention, did not add to the good temper of the Socialist party, which gave vent at different times to curious manifestations of "loyalty." One of these occurred in Messina, where in March a boy from the Salesian elementary school replied to a question set in a Government examination by describing Garibaldi as an adventurer. Two or three days later the Salesians of Messina received a document from the superintendent of studies, informing them that he revoked the authorization granted to the Salesian College to keep open *ginnasio* and elementary schools, and that the facts of the case had been referred to the council of the province for action. The college contained 300 scholars, and it was closed because one of the boys thought Garibaldi an adventurer. A week later, in Luino, a town on Lake Maggiore, the socialist corporation expunged from the catechism all explanation or reference to the tenth commandment of the decalogue, "which is of a nature," it naively explains, "to generate in the minds of the children aversion and contempt for an entire class of persons." The entire class of persons are the socialists, and the tenth commandment forbids the coveting of our neighbor's goods.

As an additional blow to the Vatican, an attempt was made to revive the semidefunct "XX Settembre," the anniversary of the fall of the temporal power. Some thousands of the boys in the Government schools at Rome were to be marshaled outside the walls, and led to a sham assault on the breach. The assault was more of a sham than was anticipated. It had to be given up because only 76 boys attended.

A greater and farther reaching evil, however, was the general dissemination of licentious literature by the socialists during the year. The most private parts of the black theology of St. Alphonsus were published in a Roman paper whose scope and standing are indicated by its name, the *Ass*, with lewd pictures and still lewder letterpress. The *Swan*, another of these publications, was brought before the court at Ancona, and its publication enjoined.

Spain and Portugal.—Anticlericalism was contagious. Nearly every country of Europe became infected with it in the year, except Germany, where it would be *non grata* if only for the reason that it originated in France. In Spain it was confined to licentious attacks upon the clergy, though these were carried to such an extent that the Spanish hierarchy carried to the upper house of the legislature the demands of Catholics generally. The provisions of their demands, which were finally granted, were that the higher grades of education should include an obligatory course of religious and moral lectures; that the liberty

of teaching be established with a view of enabling the religious associations to take part in the education of all classes; that all public demonstrations of the Catholic religion should be permitted, and duly protected; that prelates should be allowed to supervise the education given; and that religious associations should be included in the concordat with Rome in the future.

In Portugal, however, the strife was fiercer and the results less happy. The Portuguese Government in April ordered the Jesuits and other religious orders to leave the country, as the result of a number of anti-Jesuit riots in Oporto and elsewhere. After 10 convents had been closed by the authorities and their occupants expelled, the Government relented, and prescribed conditions under which the orders might become "authorized." Six months was allowed for authorization, expiring Oct. 18. The orders were to hand up a copy of their statutes, and apply for official recognition. Nearly all complied, and when the anti-conventual clamor had died down, the Government announced that it recognized and approved all the orders. This put an end for the time being to the anticlerical agitation in both countries, though signs were not wanting that the socialists would renew their efforts at the earliest opportunity.

Missionary Countries.—The Holy Father, in March, made the following appointments to fill vacancies in the missionary hierarchy: To be Vicar-Apostolic of Aden and Arabia, with residence at Aden, the Rev. Father Chrysostom (John Bigel), O. S. F. C., vice Bishop Lasserre, O. S. F. C., resigned; to be Vicar-Apostolic of South Manchuria, the Rev. Maria Felix Choulet, vice Bishop Guillon, massacred at Mukden last July; to be Vicar-Apostolic of Senegambia (including the British colony of Gambia), the Rev. Father Alphonsus Kunemann, vice Bishop Bulon, deceased. Also his Holiness has erected the mission of the New Hebrides into a prefecture-apostolic, and appointed the Rev. Victor Douceret its first prefect.

By an enactment of the council of the Governor-General, made May 1, native Christians in India were relieved of the inheritance and succession duties with respect to property of those dying intestate, thus placing them on an equality before the law with members of native religions.

Most Rev. Paul Goethals, Archbishop of Calcutta, died July 3.

ROOSEVELT, THEODORE, twenty-sixth President of the United States, born in New York city, Oct. 27, 1858. He was born in his father's house, No. 28 East Twentieth Street. For two hundred and fifty years New York has been the native soil of the Roosevelts. Since they made their beginnings in the colonies, they have been represented frequently in public life. Theodore's boyhood was passed chiefly in the city of his birth. His health was not rugged, and the ordinary games of boys were beyond his strength. Perceiving the necessity for a vigorous constitution, he set himself to the task of getting one. From this purpose he seems never to have swerved, and by the time he was ready to enter Harvard College he had begun to be robust. His energies were directed to bodily exercise, to study, and to all the social advantages that Boston afforded him. Although conspicuous in no single athletic sport, he was energetic in a variety, sparring and horsemanship being among them. His knowledge of sparring, besides the general benefit that it was to him, proved at least upon one later occasion in the West of particular service, and enabled him most successfully to surprise a typical saloon bully who had attempted to take liberties with him. His favorite study was political his-

tory, and he read *The Federalist* with especial interest. He was an editor of the *Harvard Advocate*, in whose columns he published his own opinion in print. Besides politics, he continued an interest in natural history, which had been begun in those boyhood days when he was in search of health, and studied the natural history of the country neighborhood near Oyster Bay. He graduated in 1880, with sufficiently high honors to make him a member of the Phi Beta Kappa society. Upon leaving college he traveled in Europe, and climbed the Matterhorn. On his return he studied law in the office of his uncle, Robert B. Roosevelt. There was a political revolt in his Assembly district, the party in revolt chose him as their candidate, and he was elected. He was the youngest Assemblyman in New York, and was twice reelected, serving the terms of 1882, 1883, and 1884, and becoming the leader of the minority. One of the chief measures in which he played a leading part was abolishing the fees in the office of the register and county clerk. Through an investigation that he originated, it came to light that the county clerk took \$82,000 a year in fees, and that the sheriff pocketed about \$100,000. Through him also was abolished the power of the New York board of aldermen to confirm or reject the mayor's appointments, and he secured the passage of the civil-service reform law of 1884. Besides these achievements he put through the antitenement cigar-factory bill. In 1884 he was sent to the Republican National Convention, where he supported Mr. Edmunds. The same year he joined the National Guard, beginning as lieutenant in the Eighth Regiment, and ending as captain. His service in the militia extended over four years. In 1884 Mr. Roosevelt declined to join that movement of Republicans which elected Mr. Cleveland, thereby incurring the enmity of some of his former friends. He now returned to the West, and became a ranchman at Medora on the Little Missouri. His experiences in the Rocky mountains made a picturesque episode in his life, and added to his knowledge and his love of the American people. From these years he also drew the inspiration and the material for his books about Western life. Mr. Roosevelt returned to the East in 1886 and became a candidate for mayor of New York. He had accepted an independent nomination, and was accepted by the Republican party. He was defeated by Mr. Hewitt, but he polled relatively a larger vote than any Republican candidate up to that time. In 1889 he was appointed by President Harrison a member of the United States Civil-Service Commission. Mr. Roosevelt added 20,000 places to the scope of the reform law, and so admirable was his work altogether that President Harrison has said of it: "If he had no other record than his service as an employee of the Civil-Service Commission, he would be deserving of the nation's gratitude and confidence." Mr. Cleveland, on succeeding Mr. Harrison as President, retained Roosevelt, and thus his work continued until May 1, 1895, when he resigned to become president of the police board of New York city. Here he set himself to the cleaning of the corruption and the blackmail with which he found the department rotten. His measures produced the natural outcry of rage from the politicians, with whose pockets he began materially to interfere, and his enforcement of the excise law was for a while looked upon unfavorably by many of his friends. His midnight visits to all sorts of streets and haunts, in order that he might be able to see how his orders were being carried out, came to be liked more than they were feared;

while his instant recognition and rewarding of any bravery shown by a policeman in the course of duty still more endeared him to the force. On April 6, 1897, he was again called to Washington, this time to serve as Assistant Secretary of the Navy, and in this office he spent one year and one month. On May 6, 1898, he resigned the office, to take active service in the war with Spain. With Leonard Wood as colonel and himself as lieutenant-colonel, the First Cavalry Regiment of United States Volunteers was organized. Owing partly to the unusual and picturesque *personnel* of the enlisted men, comprising young fellows from Newport and cowboys from the West, this regiment, popularly known as Rough Riders, became one of

THEODORE ROOSEVELT'S HOUSE AT OYSTER BAY.

the best known in the war. They had a brilliant part in the battle of San Juan Hill. In that year he received the Republican nomination for Governor of New York, and was elected by a plurality of 17,786. In 1900 he was nominated and elected Vice-President on the ticket with Mr. McKinley. On Friday, Sept. 6, 1901, President McKinley was shot at Buffalo; he died on Saturday, the 14th of the same month. At Buffalo, that day, at the residence of Mr. Wilcox, Elihu Root, Secretary of War, requested, for reasons of weight connected with the administration of the Government, that Mr. Roosevelt take the oath as President at once. Mr. Roosevelt replied: "I shall take the oath of office in obedience to your request, sir, and in doing so it shall be my aim to continue absolutely unbroken the policy of President McKinley, which has given peace, prosperity, and honor to our beloved country." In the presence of all the Cabinet, save the Secretary of State and the Secretary of the Navy, the oath was taken, Judge Hazel of the United States district court administering it. The new President hereupon said: "In order to help me keep the promise I have taken, I would ask all the Cabinet to retain their positions at least for some months to come. I shall rely upon you, gentlemen, upon your loyalty and fidelity, to help me." A few days later, in Washington, President Roosevelt made clear his desire that no changes should occur in the Cabinet. The same day that he took the oath, President Roosevelt issued the following:

"MILBURN HOUSE, BUFFALO, Sept. 11, 1901.

"By the President of the United States, A Proclamation:

"A terrible bereavement has befallen our people. The President of the United States has been struck down; a crime committed not only against the chief magistrate but against every law-abiding and liberty-loving citizen. President McKinley crowned a life of largest love for his

fellow men, of most earnest endeavor for their welfare, by a death of Christian fortitude; and both the way in which he lived his life and the way in which, in the supreme hour of trial, he met his death will remain forever a precious heritage of our people. It is meet that we, as a nation, express our abiding love and reverence for his life, our deep sorrow for his untimely death.

"Now, therefore, I, Theodore Roosevelt, President of the United States of America, do appoint Thursday next, Sept. 19th, the day in which the body of the dead President will be laid in its last earthly resting-place, as a day of mourning and prayer throughout the United States. I earnestly recommend all the people to assemble on that day in their respective places of divine worship, there to bow down in submission to the will of Almighty God, and pay out of full hearts their homage of love and reverence to the great and good President, whose death has smitten the nation with bitter grief."

His acts as President belong to the history of the country, and will be recorded in other articles in this work. At the Yale Bicentennial, in October, 1901, he received the degree of LL. D. His published writings are: *The Naval War of 1812* (2 vols., 1882); *Hunting Trips of a Ranchman* (1885); *Thomas Hart Benton* (1887); *Gouverneur Morris* (1888); *Essays on Practical Politics* (1888); *Ranch Life and the Hunting Trail* (1888); *The Winning of the West* (4 vols., 1889-1896); *Brief History of New York City* (1891); *The Wilderness Hunter* (1893); *American Ideals, and Other Essays* (1897); *The Rough Riders* (1899); *Oliver Cromwell* (1900); and *The Strenuous Life* (1901); besides occasional articles contributed to other volumes, or to periodicals.

In 1881 Mr. Roosevelt married Miss Alice Lee, of Boston. After being a widower several years he married Miss Edith Kermit Carow. He is the father of six children, the eldest being the daughter of his first wife.

He is a member of the following organizations: Union League Club, Republican Club, Harvard Club, St. Nicholas Society, Naval and Military Order of the Spanish-American War, Holland Society, Seawanhaka Corinthian Yacht Club, Century Association, New York Genealogical and Biographical Society, and D. K. E. college fraternity.

ROUMANIA, a kingdom in eastern Europe. The legislative power is vested in a Senate of 120 members, elected for eight years, and a Chamber of Deputies containing 183 members, elected for four years. The reigning King is Carol I, born April 20, 1830, a son of Prince Karl of Hohenzollern-Sigmaringen, elected Domn of Roumania in 1866 and proclaimed King on March 26, 1881. The Cabinet formed on July 20, 1900, was composed at the beginning of 1901 of the following members: President of the Council and Minister of Finance, P. P. Carp; Minister of Justice, T. Maioresco; Minister of Foreign Affairs, A. Marghiloman; Minister of War, Gen. J. Lahovary; Minister of the Interior, C. Onalesco; Minister of Public Instruction and Worship, Constantin C. Arion; Minister of Agriculture, Industry, Commerce, and Domains, Nicolas Filipesco.

Area and Population.—The area of the kingdom is estimated at 50,720 square miles. The population, according to the provisional results of the census of December, 1899, was 5,912,520, consisting of 2,994,896 males and 2,917,624 females. There were 5,469,036 Roumanians, 171,063 foreigners, and 272,421 inhabitants not under foreign protection. The number of marriages in 1899 was 50,033; of births, 250,318; of deaths, 164,900; ex-

cess of births, 85,418. The population of Bucharest, the capital, was 282,071; of Jassy, 78,067; of Galatz, 62,678; of Braila, 58,392. Although education is free and compulsory by law, schools have not been provided in many places. In 1899 only 11.6 per cent. of the population could read and write. The University of Bucharest in 1900 had 81 professors and 2,210 students, and the University of Jassy had 33 professors and 420 students.

Finances.—The revenue was estimated for the financial year 1900 at 228,376,000 lei, or francs, and expenditure at the same figure. For 1901 the revenue was estimated to reach 245,325,400 lei, and expenditure was estimated at 238,278,376 lei. The budget estimate of revenue for 1902 was 227,203,000 lei, of which 46,570,000 lei came from direct taxes, 59,710,000 lei from indirect taxes, 55,930,000 lei from monopolies, 23,363,000 lei from the Ministry of Agriculture, Commerce, and Domains; 17,220,000 lei from the Ministry of Public Works, 10,185,000 lei from the Ministry of the Interior, 3,679,000 lei from the Ministry of Finance, 1,253,000 lei from the Ministry of War, 600,000 lei from the Ministry of Public Instruction and Worship, 202,000 lei from the Ministry of Foreign Affairs, 431,000 lei from the Ministry of Justice, and 8,060,000 lei from various sources. The expenditure for 1902 was estimated by the Minister of Finance at the same figure as the revenue, 227,203,000 lei, of which the charges of the public debt absorb 91,270,238 lei, the Council of Ministers, 64,628 lei, the Ministry of War 41,560,609 lei, the Ministry of Finance 31,195,666 lei, the Ministry of Worship and Public Instruction 23,451,251 lei, the Ministry of the Interior 16,772,237 lei, the Ministry of Public Works 5,020,824 lei, the Ministry of Justice 6,124,030 lei, the Ministry of Agriculture, Commerce, and Domains 5,940,190 lei, the Ministry of Foreign Affairs 1,692,820 lei, and supplementary credits 1,100,317 lei.

The public debt amounted on March 31, 1900, to 1,451,497,307 lei, more than half of which is represented by railroads and other profitable public works, and the rest to cover deficits. A new loan of 15,000,000 lei was arranged in 1900 with a syndicate that obtained a concession of the monopoly in cigarette paper. The Government arranged to part with its shares of stock in the National Bank. The circulation of notes of the bank at the beginning of 1901 was 121,730,000 lei, and the cash on hand 50,875,000 lei. The gold coined by the Roumanian mint since 1867 has been 3,805,800 lei; silver, 82,700,000 lei in nominal value; bronze, 5,345,000 lei. No gold had been coined since 1884, nor silver since 1894, when it was decided in 1901 to begin a new coinage. The bank in purchasing the Government holdings, which amounted to 4,000,000 lei, one-fifth of the total stock, obtained a prolongation of its charter, which would expire in 1912, to 1920, on condition that the share of the state in the net profits shall be 30 instead of 20 per cent. The act sanctioning the transfer of the stock to the bank was passed by the Chamber on Feb. 5, 1901.

The Army.—Every Roumanian at the age of twenty-one draws lots to determine whether he shall enter the permanent army or the territorial infantry or cavalry. The peace strength of the permanent army is 3,280 officers and 60,000 men, with 11,930 horses and 390 guns. The strength of the territorial army is about 72,000 men, with 7,500 horses, in time of peace, and 168,000 men, with 32,604 horses, in war. The period of active service is three years in the permanent army and five years in the territorial army, and the members of both remain in their respective reserves until they are thirty years old.

The Roumanian navy is gradually being strengthened. The English-built cruiser *Elisabeta* has a displacement of 1,320 tons, a beam of armor $3\frac{1}{2}$ inches thick, and an armament consisting of 4 6-inch and 8 rapid-fire guns. Other vessels are a training ship, 7 gunboats, 6 coast guards, and 6 first-class and 2 second-class torpedo boats. Four armored vessels will be built in Roumania.

Commerce and Production.—Corn was planted on 2,025,058 hectares in 1900, wheat on 1,830,980 hectares, barley on 439,735 hectares, oats on 254,831 hectares, and rye on 164,299 hectares, while vineyards occupied 148,046 hectares, prunes 69,972 hectares, and tobacco 4,220 hectares. The wheat-crop in the same year was 19,897,406 hectoliters, the crop of barley 5,136,201 hectoliters, the crop of oats 3,060,172 hectoliters, that of rye 2,109,924 hectoliters. The crop of corn in 1899 was 9,768,700 hectoliters, the tobacco-crop was 11,951 quintals, the wine production 2,060,817 hectoliters, and the yield of prunes 2,067,731 hectoliters. Colza was planted on 248,434 hectares in 1900, yielding 2,715,303 hectoliters; flaxseed was grown on 13,240 hectares, yielding 91,567 hectoliters; and the production on 4,966 hectares sown to hemp in 1899 was 10,703 quintals of fiber and 26,111 hectoliters of seed. There were 643,770 hectares of grass, producing 6,473,000 quintals of hay. The area of the Government forests is 921,664 hectares, and their annual product is worth 2,338,310 lei. The total area of forests is 2,774,048 hectares. There were 670,909 horses, 2,138,315 cattle, 6,847,825 sheep, and 1,079,312 hogs in 1897. Coal is mined and an inferior quality of petroleum is obtained. The Government possesses salt-mines, which are worked by convict labor. Various ores and minerals are found in the Carpathians, and in 1895 the mining laws were changed so as to admit foreign capital.

The total value of imports in 1899 was 333,267,938 lei, and of exports 149,119,657 lei. The imports of cereals were 9,388,910 lei, and exports 97,116,900 lei; imports of textiles 130,987,296 lei, and exports 4,347,433 lei; imports of metals and metal manufactures 76,366,291 lei, and exports 4,163,556 lei; imports of hides and leather 11,400,162 lei, and exports 2,660,753 lei; imports of mineral fuel 9,034,742 lei, and exports 8,197,096 lei; imports of minerals, glass, and pottery 8,166,113 lei, and exports 280,835 lei; imports of oil, wax, etc., 6,397,048 lei, and exports 47,187 lei; imports of colonial products 19,110,594 lei, and exports 17,938 lei; imports of fruit 4,530,553 lei, and exports 6,105,422 lei; imports of animal products 4,815,148 lei, and exports 6,885,682 lei; imports of live animals 2,131,679 lei, and exports 4,270,437 lei; imports of chemicals 11,367,995 lei, and exports 2,176,975 lei; imports of dyes and colors 4,498,093 lei, and exports 167,355 lei; imports of wood and timber 4,244,891 lei, and exports 8,114,372 lei; imports of paper 6,587,354 lei, and exports 130,347 lei; imports of drugs 5,299,515 lei, and exports 37,713 lei. The values in lei of imports from and exports to the principal foreign countries in 1899 are given in the following table:

COUNTRIES.	Imports.	Exports.
Austria-Hungary	95,671,659	38,443,995
Germany	91,065,175	9,669,738
Great Britain	60,041,587	10,568,793
Belgium	10,502,804	44,113,742
Italy	16,457,278	11,264,723
France	22,164,962	5,600,965
Turkey	13,310,080	13,585,072
Russia	7,292,600	5,895,030
Netherlands	4,623,726	4,359,405
Bulgaria	4,070,025	3,329,929
Switzerland	3,683,249	10,700
United States	1,776,710	41,273

Navigation.—There were 26,246 vessels, of 5,701,177 tons, entered at Roumanian ports during 1899, and 25,876, of 5,200,487 tons, were cleared. The merchant marine consisted of 382 vessels in 1899, of 69,072 tons, and of these 55, of 12,785 tons, were steamers. The number of vessels cleared from the Sulina mouth of the Danube in 1899 was 1,056, of 1,070,367 tons.

Railroads, Posts, and Telegraphs.—There were 1,932 miles of railroad belonging to the Government in 1900, and 432 miles were being constructed or surveyed. The gross receipts in 1899 were 46,197,750 lei, and the operating expenses 37,500,000 lei. The total capital expenditure was 717,627,000 lei.

The number of letters that passed through the post-office in 1899 was 12,566,288; of postal cards, 8,273,018; of newspapers, etc., 29,220,893.

The length of telegraph-lines in 1899 was 4,300 miles, with 11,100 miles of wire. The number of messages transmitted in that year was 2,238,049. There were 885 miles of telephone-lines and 3,310 miles of wire. The number of conversations in 1899 was 913,046.

Political Events.—The Chamber and Senate in the beginning of January, 1901, agreed to a commercial convention that had been made with Greece containing a favored-nation clause which after April 1, 1903, can be terminated in nine months on notice being given by either party. Commercial treaty relations between the two countries were broken off in 1887 in consequence of a controversy over the will of a wealthy man named Zappa. Since then Greek products have paid under the general tariff an average duty of 10 per cent. on entering Roumania, while Roumanian goods under the Greek general tariff have paid from 30 to 145 per cent. *ad valorem* to be admitted into the Greek market, to the decided disadvantage of the Roumanian milling and timber interests. Under the new treaty Roumania has the advantage in trade, as Greek imports into Roumania are small, and in compensation the Roumanian Government grants to Greek educational and religious establishments in Roumania the rights of corporate bodies, provided these rights are exercised subject to Roumanian laws, but such corporations are not allowed to hold real estate in Roumania.

The program of financial reform proposed by the Government was rejected by the Chamber, and consequently on Feb. 8 the Carp Cabinet tendered its resignation to the King, who on Feb. 9 commissioned Cantacuzene to form a new ministry. The Conservatives had still a majority in Parliament. After the defeat of the Cantacuzene Cabinet in July, 1900, it was believed that the new combination brought about by Carp would be able to carry through the financial measures which, although exceedingly unpopular, appeared to be the only means of extricating the Government from the financial difficulties in which it had been floundering for several years. Carp, however, soon found himself at odds with a section of the majority, and the Committee of the Chamber appointed to study the question of new taxation condemned the ministerial plan. The problems to be solved were to restore the equilibrium in the finances without crushing the people with fresh imposts, to introduce indispensable economic reforms, and to put an end to the odious persecution of the Jews. The crisis had been brought about by the action of the Old Conservatives under Cantacuzene, with whom the group of Tony Jonesco acted in concert, in practically renouncing the compact existing with the Junimists, or Young Conservatives, of whom Carp was

the leader. The unpopularity of the proposed new taxes and of the disposal by the Government of state property was the chief cause of the dissensions among the Conservatives. The Liberals under Sturdza at the same time profited by the popular discontent over heavier taxation and started a vigorous agitation in the country, denouncing the Government especially for alienating the property of the state. Cantacuzene was unable to form a ministry, and two sections of the Conservative party, being confronted with the prospect of a Liberal *régime* under Sturdza, concluded to make up their differences. On Feb. 13 Carp withdrew his resignation and resumed the direction of the administration on the understanding that the Government scheme of taxation would be approved by the Chamber. This expectation was not realized. The committee of the Chamber again condemned the tax scheme, and on Feb. 26 Carp once more tendered the resignation of the Cabinet to the King after the Chamber by 75 votes to 74 had rejected his financial policy. Sturdza formed a Cabinet on Feb. 27, as follows: President of the Council, Minister of Foreign Affairs, and Minister of War *ad interim*, Demeter Sturdza; Minister of the Interior, M. Aurelian; Minister of Justice, C. J. Stoicesco; Minister of Public Works, Joan Bratiano; Minister of Public Instruction, Spiro Haret; Minister of Finance, G. D. Palladi; Minister of Domains, M. Missir. The formation of a Liberal ministry entailed the dissolution of the Chamber and the election of a new one. Sturdza pronounced against new taxation and proposed to bring about the equilibrium of the budget by various economies amounting to 20,000,000 lei. If these should not suffice he would consent to increase taxation to the extent of 5,000,000 lei, whereas Carp had proposed a comparatively slight reduction of expenditure and the imposition of several new taxes calculated to produce a surplus of 6,000,000 or 7,000,000 lei. The Old Conservatives objected to some of the proposed imposts, especially to a tax on licenses for professions. The harmony which was apparently reestablished was broken again when Carp, replying to complaints raised by Sturdza against the Old Conservatives for having practised obstruction when he was Prime Minister in the last Liberal Cabinet, declined to accept responsibility for their past conduct. Parliament was dissolved on March 1, and the elections began on March 26. The new Chambers met on April 6. The new Minister of Finance made the budget balance at 218,500,000 lei, reducing expenditures from 245,325,000 lei in the previous year. Retrenchments amounting to 25,000,000 lei were effected by cutting down salaries and pensions and reducing expenses in all the departments. Every one had to sacrifice something. The King voluntarily surrendered a proportionate share of the civil list. The war budget was cut down 5,600,000 lei, which caused 12 generals on the active list to resign. No new taxation was proposed, but existing taxes were increased so as to produce 6,000,000 lei more. The session was closed on April 10, immediately after the adoption of the budget. An extraordinary session of Parliament was opened on June 27, the object of which was the settlement of several questions touching the situation and the defenses of the country, the amendment of the public instruction law, and the ratification of the extradition treaty with Austria. Extraordinary credits amounting to 72,500,000 lei were voted by the Chamber, but annulled by the Senate. The interest on the public debt was met out of the ordinary revenue. Among the retrenchments which the Government decided upon was the reduction

of the annual grant to the Roumanian schools in Macedonia from 400,000 lei to 215,000 lei, the Cantacuzene ministry having in 1899 reduced it to the former figure from 500,000 lei, to which it had grown from the original modest subsidy of 10,000 lei. Apart from motives of economy, the relaxation of the Roumanian propaganda in Macedonia and Epirus emphasized the good understanding that had been established with Greece, in sign of which King Carol had a meeting at Abbazia in Austria with the King of the Hellenes in May. The Vlachs in Turkey were as thoroughly Hellenized as any of the Christian races before an active propaganda was begun to reattach them in thought and language to their nationality in Roumania. The *entente* with Greece was confirmed by a visit of Roumanian students to Athens. Negotiations for a new commercial treaty with Turkey were begun in April. The crops in 1901 were disappointing, being below the average, but maize turned out to be a good crop, and a profitable one on account of the short crop in the United States. The financial year closed with a deficit of about 30,000,000 lei. Of the loan of 175,000,000 lei contracted by the Cantacuzene ministry, realizing 156,000,000 lei, 137,000,000 lei only had been expended, leaving 19,000,000 lei to cover the expense of the public works in progress, which was a sufficient sum.

RUSSIA, an empire in northern Europe and Asia. The throne is hereditary in the dynasty of Romanoff-Holstein-Gottorp. The legislative, executive, and judicial powers are vested in the Emperor, called the Czar, who is assisted by a Cabinet of Ministers, each of whom has charge of an executive department; by a Council of State, which examines and passes upon projects of legislation submitted by the ministers; by a Ruling Senate, which watches over the judicial administration; and by a Holy Synod, which directs ecclesiastical affairs.

The reigning Emperor is Nicholas II, born May 18, 1868, who succeeded his father, Alexander III, on Nov. 1, 1894. The heir presumptive is the Grand-Duke Michael, brother of the Czar, born Dec. 4, 1878. The members of the Committee of Ministers at the beginning of 1901 were as follows: Minister of the Imperial House and Imperial Domains, Gen. W. Friedericksz; Minister of Foreign Affairs, Count Lamsdorff, appointed in 1900; Minister of War, Gen. Kuropatkin; Minister of the Navy, Vice-Admiral P. P. Tyrtoff; Minister of the Interior, M. Sipyaghin, appointed in 1899; Minister of Public Instruction, M. Bogolepoff; Minister of Finance, S. J. Witte; Minister of Justice, N. V. Muravieff; Minister of Agriculture and State Domains, A. S. Yermoloff; Minister of Ways and Communications, Prince M. J. Khilkoff; Comptroller-General of the Empire, Lieut.-Gen. Lobko; State Secretary for Finland, W. K. de Plehwe; Procurator-General of the Holy Synod, K. P. Pobedonostseff; President of the Committee of Ministers, J. N. Durnovo. The Grand-Dukes Vladimir Alexandrovich, Alexis Alexandrovich, and Michael Nicolaievich are members of the Committee of Ministers, as are also M. Frisch, president of the Department of Legislation; M. Solsky, president of the Department of State Economy; and M. Selifontoff, president of the Department of Civil and Ecclesiastical Affairs in the Council of State; and Privy-Councilor T. J. Philippoff. Peter Vannovsky succeeded M. Bogolepoff as Minister of Public Instruction on April 7, 1901.

Area and Population.—The area of the Russian Empire is 8,447,234 square miles, exclusive of 293,018 square miles of internal waters. Accord-

ing to the census of 1897 the total population in that year was 128,932,173, of whom 106,154,607 were in European Russia, including Finland and Poland, and 22,697,469 in the Asiatic dominions. There were 46,447,963 males and 47,767,452 females in European Russia, 4,764,007 males and 4,691,936 females in Poland, 4,891,054 males and 4,357,641 females in the Caucasus, 2,954,559 males and 2,772,531 females in Siberia, and 4,158,980 males and 3,562,704 females in Central Asia. A partial enumeration of the Jews of the western and southwestern provinces indicates that they constitute over 11 per cent. of the town population, in Odessa as much as 35 per cent., and about 11 per cent. of all the population of Poland, their total number exceeding 4,000,000. The number of marriages in European Russia in 1896 was 809,847; of births, 4,634,809; of deaths, 3,063,047; excess of births, 1,571,762. The birth-rate shown in that year was 47.2 per mille in European Russia and Poland, 46.5 in Siberia, 37 in the Caucasus, and 33.3 in Finland; death-rate, 32.5 in Siberia, 31.8 in European Russia and Poland, 21.2 in the Caucasus, and 19.5 in Finland. The net emigration of Russians from 1856 to 1888 was 1,146,052, and during that period there was a net immigration of foreigners into Russia of 2,304,717. In recent years the Russian emigrants, including Jews, exceed the foreign immigrants. The immigration of Russians into the United States from 1873 to 1897 was 722,472. In 1898 the number of passengers and emigrants who entered Russia was 4,051,684, and the number who departed was 4,066,757. The cities with over 75,000 population were: St. Petersburg, 1,267,023; Moscow, 988,614; Warsaw, 638,209; Odessa, 405,041; Lodz, 315,209; Riga, 256,197; Kiev, 247,432; Kharkov, 174,846; Vilna, 159,568; Saratov, 137,109; Kazan, 131,508; Ekaterinslav, 121,216; Rostov, 119,889; Astrachan, 113,001; Tula, 111,048; Kishinev, 108,796; Nizhni Novgorod, 95,124; Nikolaiev, 92,060; Samara, 91,672; Minsk, 91,494; Voronezh, 84,146.

Finances.—The ordinary revenue for 1899 was 1,673,313,062 rubles, and expenditure 1,468,221,000 rubles, leaving a surplus of 205,090,062 rubles. The extraordinary revenue was 179,202,000 rubles, and the extraordinary expenditure 318,730,000 rubles. Since 1894 only money raised by loans and deposits in the imperial bank are classed as extraordinary receipts, military contributions from Turkey and Khiva having been transferred to the ordinary revenue; and expenditure on state railroads, except the building of new lines, and on harbors, and for the rearmament of the army and the accumulation of reserves of food, are now classed as ordinary expenditures. The revenue has increased 76 per cent. in ten years, the increase being due largely to receipts from the railroads acquired by the Government, which receipts were 347,529,144 rubles in 1899, against 49,318,360 rubles in 1890, the revenue of the Government from private railroads having on the other hand declined in this time from 38,747,012 rubles to 10,641,104 rubles. The Government monopoly of the sale of spirits is another new source of revenue, yielding 10,837,937 rubles in 1895, when it was first introduced, and 110,755,669 rubles in 1899. The import duties have been adjusted so as to produce a third larger accession of revenue, realizing 219,276,055 rubles in 1899, against 142,160,527 rubles in 1890. The receipts from excise, domains, monopolies, and taxation, both direct and indirect, have all increased. The yield of direct taxes in 1899 was 43,543,000 rubles from land and forests, 61,073,000 rubles from trade licenses, and 16,730,000 from the tax of 5

per cent. on incomes from capital; indirect taxes, 310,297,000 rubles from excise on spirits, 38,893,000 rubles from tobacco, 67,523,000 rubles from sugar, 33,009,000 rubles from naphtha, matches, and other excisable articles, and 219,276,000 rubles from customs; of duties, 39,322,000 rubles from stamps, 30,391,000 rubles from transfer duties, and 26,542,000 rubles from passports, railroad taxes, etc; of monopolies, 4,271,000 rubles from mines, 15,418,000 rubles from the mint, 28,793,000 rubles from the post-office, 18,276,000 rubles from telegraphs and telephones, and 110,756,000 rubles from the sale of spirits; of Government domains, 16,664,000 rubles from rent, 48,108,000 rubles from forests, 347,529,000 rubles from railroads, 12,103,000 rubles from Government mines, 13,852,000 rubles from capital and banking, and 1,812,000 rubles from private railroads; of sales of domains, 1,191,000 rubles; of redemption of land, 40,552,000 rubles from liberated serfs and 54,945,000 rubles from Crown peasants; of miscellaneous sources, 8,830,000 rubles from railroad debts, 33,561,000 rubles from Crown debts, 16,614,000 rubles from municipalities, 6,195,000 rubles from military contributions, and 7,549,000 rubles from various sources. The expenditure in 1899 for the public debt was 275,755,000 rubles, of which 107,633,000 rubles were for railroad debt; for the Ministry of War, 333,579,000 rubles, including 5,230,000 rubles for the Transcasian Railroad; for the Ministry of Finance, 237,233,000 rubles, including 9,150,000 rubles for the introduction and extension of the Government monopoly of the sale of spirits, 76,239,000 rubles for expenses of the sale of spirits, and 1,000,000 rubles for loans to railroad companies, etc; for Ministry of Ways and Communications, 288,187,000 rubles, including 206,950,000 rubles for the operation of the Government railroads and 43,767,000 rubles for new feeding lines and extensions; for the Comptroller-General, 7,383,000 rubles, of which 3,631,000 rubles were for railroads; for the higher institutions of the state, 3,193,000 rubles; for the Holy Synod, 21,247,000 rubles; for the Ministry of the Imperial House, 12,984,000 rubles; for the Ministry of Foreign Affairs, 5,537,000 rubles; for the Ministry of the Navy, 83,612,000 rubles; for the Ministry of Agriculture and State Domains, 37,157,000 rubles; for the Ministry of the Interior, 81,633,000 rubles; for the Ministry of Public Instruction, 29,127,000 rubles; for the Ministry of Justice, 44,829,000 rubles; for the Government studs, 2,117,000 rubles. The expenditure due to railroads, not including extraordinary expenditure on new lines, amounted in 1899 to 358,211,866 rubles. The extraordinary revenue in 1899 was 178,779,000 rubles from loans, 2,895,000 rubles of perpetual deposits at the Bank of Russia, and various other receipts which make the total 183,849,000 rubles. The extraordinary expenditures were 102,508,000 rubles for building new railroads and purchasing rolling-stock, 150,175,000 rubles for the conversion of the debt, 5,600,000 rubles for assistance to the population in famine, and 63,251,000 rubles for the state bank, etc., making the total 321,534,000 rubles. There was an excess of the total receipts, ordinary and extraordinary, over expenditures in 1899 amounting to 84,104,802 rubles. For the ten years ending with 1899 there was a surplus every year of the ordinary revenue over expenditure while the excesses of extraordinary expenditures over receipts amounted for the whole period to 1,324,250,051 rubles, a deficit more than covered by the accumulated surplus of 1,361,609,709 rubles in the ordinary budget, which left a net surplus of 37,359,658 rubles.

The estimates of revenue for 1900 were 120,365,517 rubles from direct taxes, 641,142,300 rubles from indirect taxes, 84,802,850 rubles from stamps, 173,687,800 rubles from royalties, 422,748,423 rubles from railroads and domains, 578,139 rubles from sales of domains, 77,717,000 rubles from redemption of lands, 66,941,018 rubles from reimbursement of railroad and other loans, and 5,762,633 rubles of miscellaneous receipts; total ordinary revenue, 1,593,745,680 rubles. For 1901 the estimates were 127,172,905 rubles from direct and 652,310,800 rubles from indirect taxes, 88,916,724 rubles from stamps, 227,999,900 rubles from royalties, 465,335,362 rubles from domains, 573,291 rubles from sales of domains, 88,906,500 rubles from land redemption, 72,917,197 rubles from reimbursement of loans, and 5,963,327 rubles from various sources; total ordinary revenue, 1,730,096,006 rubles. The total ordinary expenditure was estimated at 1,608,199,771 rubles for 1900 and 1,656,652,556 rubles for 1901. To balance the budget and meet extraordinary expenditure, calculated at 149,187,332 rubles in 1900 and 131,829,450 rubles in 1901, the sum of 160,641,423 rubles must be found in 1900 and 56,886,000 rubles in 1901. The extraordinary expenditures are 25,195,258 rubles on the Siberian Railroad and 3,418,524 rubles on works connected with it in 1900 and 7,277,269 rubles on the railroad and 3,078,131 rubles on works connected with it in 1901, 30,573,550 rubles on other railroads in 1900 and 31,974,050 rubles in 1901, 85,000,000 rubles for loans to private railroads in 1900 and 82,000,000 rubles in 1901, and 5,000,000 rubles for propination in 1900 and 7,500,000 rubles in 1901.

The budget estimates for 1901 balance with a total of 1,788,482,006 rubles, of which 131,829,450 rubles are for extraordinary expenditure. Every Russian budget since 1888 has shown a large surplus of ordinary receipts over expenditures, and in this one the predicted surplus is the largest that has appeared, amounting to 273,443,450 rubles. The greatest increase of revenue under any one head is 51,000,000 rubles in receipts from the spirit monopoly, which is to be introduced in 21 more provinces and territories. The next largest increase is in Government railroads, including the newly opened Transbaikalian line in Siberia and the Murghab branch of the Transcasian line to the frontier of Afghanistan. In customs a decrease of 21,000,000 rubles was foreseen, which was attributed to the development of native industries and the cessation in the construction of new works and the importation of machinery. The excess of 56,886,000 rubles in extraordinary expenditures over receipts is provided for out of the reserve resources of the treasury, the free balance, which is thereby reduced from 123,000,000 rubles to about 66,000,000 rubles. The extraordinary and additional expenditure covered by this reserve fund in 1900 was 160,000,000 rubles for the extraordinary outlay provided in the budget and 62,000,000 rubles on account of the crisis in the far East. The credits granted in 1900 and 1901 do not represent the whole of the expense caused by the Chinese complications, and the material damage caused by the Chinese outbreak of 1900 are far greater, including losses sustained by the Eastern Chinese Railroad, by trade and industry, by the money market, and in consequence of the withdrawal of the laboring population from productive occupations. The depressed condition of industry and the embarrassed state of the money market at home and abroad made it difficult to compile a budget in which the expense of putting on a war footing 200,000 troops and transporting many of them over enormous

distances was provided for without recourse to a loan. It was done by keeping down expenditures, which have increased in the last six years at the rate of 125,000,000 rubles a year. Notwithstanding various retrenchments, the increase shown in the budget of 1901 was still large. The increase in naval estimates was kept down to 6,000,000 rubles by postponing construction. The normal credit for the navy was increased 10,000,000 rubles by a decree issued in August, 1900. The loans to private railroads on the security of their bonds include a large advance to the Chinese Eastern Railroad Company for the restoration of the line through Manchuria. The stock of gold in Russia was diminished 74,000,000 rubles in 1900 owing to stringency in the international money markets, the troubles in China, etc. The amount of gold in the treasury and in circulation at the end of that year was still 1,492,000,000 rubles, exceeding the amount of paper in circulation by 225,500,000 rubles.

The state debt was increased in the ten years between 1890 and 1900 by 893,971,568 rubles and the annual amount of interest to be paid by 35,485,584 rubles, but annuities decreased in the decade by 15,894,520 rubles and the increase in the annual debt charge was only 19,591,064 rubles, or 2.2 per cent. The conversion or redemption was effected between 1889 and 1899 of 75,000,000 rubles paying 6 per cent., 65,174,900 rubles paying 5½ per cent., 2,723,983,616 rubles paying 5 per cent., 346,462,107 rubles paying 4½ per cent., 43,447,300 rubles paying 4 per cent., and 571,326,901 rubles of treasury obligations, making a total of 3,825,394,833 rubles. The cost of conversion and redemption operations was 72,724,063 rubles. New loans were concluded at 4 per cent. for the nominal amount of 3,198,531,806 rubles, of which the Government received 2,964,951,171 rubles, the cost of emission being 212,051,063 rubles. The state debt on Jan. 1, 1900, consisted of 534,912,750 rubles of 3 per cent., 148,382,812 rubles of 3½ per cent., 61,516,000 rubles of 3.79 per cent., 85,247,400 rubles of 3.80 per cent., 2,316,663,229 rubles of 4 per cent., 247,370,000 rubles of 4½ per cent., 151,851,500 rubles of 5 per cent., and 32,859,315 rubles of other loans, making the total loans 3,578,803,007 rubles, and of treasury bonds bearing from 3 to 6 per cent. interest the sum of 2,646,292,984 rubles; total debt, 6,225,095,992 rubles. The cash in the treasury on Jan. 1, 1900, was 216,727,000 rubles. The debts due to the Government at the same date were 252,886,063 rubles of military obligations, 255,648,137 rubles from railroads, 1,486,017,970 rubles from peasants for redemption of lands, 106,493,507 rubles from local treasuries, 122,894,029 rubles from the nobles' land bank, and 164,724,722 rubles from various debtors; total, 2,388,664,431 rubles. The funds in the treasury for famine relief, pensions, and other purposes amounted to the additional sum of 375,410,489 rubles.

The amount of paper currency in circulation in January, 1901, was 630,000,000 rubles; amount of gold in the treasury and bank, 1,492,300,000 rubles; amount of silver, 222,800,000 rubles. Interest on Russian *rentes* is subject to a coupon tax of 5 per cent. The large loans raised in recent years have been taken mainly in France. On Dec. 17, 1900, an imperial ukase was issued decreeing that foreigners not domiciled in Russia who hold Russian Government securities shall receive the full interest, without the deduction of 5 per cent. for the coupon tax. On May 12 the Minister of Finance announced a loan of 424,000,000 francs at 4 per cent. in order to replace in the imperial treasury the sums spent in 1900

in advances to railroad companies and to provide for similar advances in 1901. These bonds can not be redeemed before 1916 and are exempt from all duties and taxes imposed by the Russian Government. The loan was readily taken in Paris, the issue price being 98½.

The Army.—The active army on the peace footing is estimated at 42,000 officers and 1,000,000 men. The war strength of Russia is supposed to be at least 75,000 officers and 4,500,000 men. Infantry regiments, having in time of peace a normal strength of 70 officers and 1,867 men, can be raised in war to 79 officers and 3,945 men; cavalry regiments from 32 officers and 779 men with 585 horses, have in war 30 officers and 673 men with 676 horses; heavy field-batteries from 207 to 259, light ones from 179 to 227, and mountain batteries from 149 to 301 men, the 4 guns in peace being increased to 8 for every field-battery. The empire is divided into 13 military districts, the army into 31 corps. There is 1 corps of guards and 1 of grenadiers; 2 corps are in the Caucasus district, 2 in the district of Turkestan, a corps is in the Irkutsk, and 1 in the Amur district of Siberia; there are 2 cavalry corps; and the army corps are distributed in the districts of St. Petersburg, Finland, Vilna, Warsaw, Kiev, Odessa, Moscow, Kazan, and the Don. There are 52 infantry divisions and 23 brigades and 1 battalion of rifles, besides 8 rifle battalions in Finland; 25 divisions and 2 brigades of dragoons, including 2 divisions of guards and 6 divisions of Cossacks; 492 batteries, of which 305 are light, 98 heavy, 26 howitzer, 15 mountain, and 48 horse artillery; and 29 battalions of sappers each with a telegraph company, 7 battalions of railroad troops, 8 pontoon battalions, 12 fortress sapper companies, 11 submarine mining companies, 6 fortress balloon detachments, and 7 fortress telegraph detachments. The infantry weapon is a new rifle having 5 cartridges in the magazine. The field-artillery have steel breechloaders having a range of 4,150 yards for the heavy guns, 4,480 yards for the light, and the mountain guns have a range of 4,700 yards, the howitzers one of 3,600 yards for shell and shrapnel.

The Navy.—The Baltic fleet in the beginning of 1901 consisted of 7 first-class and second-class battle-ships, 2 of the second class, 7 coast-defense vessels, 1 armored cruiser, 11 belted and protected cruisers, 30 gunboats, and 8 old ironclads and armored gunboats. There were building 6 first-class and 2 second-class battle-ships, 1 coast-defense vessel, 1 armored cruiser, 7 protected cruisers, and 2 gunboats. The turret-ships *Oslia-bia*, *Peresviet*, and *Pobieda*, launched in 1898 and 1899, have a displacement of 12,674 tons, 10 inches of Harveyized armor at the water-line, engines of 18,000 horse-power, making 18 knots, and an armament of 4 10-inch guns in turrets, 11 6-inch quick-firers (10 in casemates and 1 in the bow), and 20 3-inch quick-firers. They have a much greater cruising radius than the *Poltava*, *Petro-pavlovsk*, and *Sevastopol*, launched in 1894 and 1895, which have a displacement of 10,960 tons, 16-inch armor, engines of 10,600 horse-power, giving a speed of 17½ knots, and an armament consisting of 4 12-inch breechloaders and 12 6-inch, 20 3-inch, and numerous smaller quick-firing guns. A newer type is that of the *Brodino*, *Alexander III*, and *Orel*, of 13,400 tons, having a complete belt of 11-inch Harvey armor, engines of 16,300 horse-power, and an armament of 4 12-inch guns in turrets fore and aft, 12 6-inch quick-firers coupled in turrets on the broadside, 20 3-inch quick-firers below, and many smaller ones. The *Tsarevich* and *Suvaroff*, of 13,100 tons, are like

these except in size. The Retwisan, a vessel of 12,700 tons, with 10-inch armor, has the same armament and the same steam-power and speed. The Potemkin Tavrichesky, of 12,480 tons, is a slower vessel more heavily protected and armed, being an improved Trisvititelia, which was launched in the Black Sea in 1893 and has the most complete protection of any vessel afloat, and of much greater weight than the Harvey armor of the newer vessel. The beginning of a strong Black Sea fleet was the construction of the still formidable barbette ships Ekaterina II, Tchesme, and Sinop, of 10,180 tons, launched in 1886 and 1887. The Dvenadsat Apostolov, Pobiedonosetz, Trisvititelia, and Rostislav, all remarkable vessels, with 8 gunboats, completed the fleet as it existed in the beginning of 1901, the Potemkin Tavrichesky not being finished, nor two armored cruisers that were in hand. The Russian armored cruisers are as varied and striking in design as the battle-ships. The Rurik, launched in 1892, has a displacement of 10,900 tons, with a powerful quick-firing armament, besides 4 8-inch guns, and a coal capacity sufficient for a cruise of 20,000 miles. The older Pamiat Azova has been newly armed with 6-inch quick-firers. The Rossia, of 12,130 tons, launched in 1896, is surpassed by the Gromovoi, of 12,336 tons, which will have 4 8-inch quick-firers and 16 6-inch, 24 3-inch, and 24 smaller ones. The Bayan, of 7,800 tons, carrying 2 8-inch, 8 6-inch, 20 3-inch, and 7 smaller quick-firers, is designed to steam 21 knots an hour, 1 knot better than the Rossia and the Gromovoi. The protected cruisers Aurora, Diana, and Pallada, built on the Neva in 1899, displace 6,500 tons, carry 8 6-inch, 20 3-inch, and 8 smaller quick-firers, and with engines of 11,610 horse-power can steam 20 knots. A speed of 23 knots is expected from the Bogatyr and Askold, built in Germany, the Waryag, built in the United States, and four more of the same class to be built in Russia, all of 6,500 tons, armed with 12 6-inch, 12 3-inch, and 6 smaller quick-firers, and having engines of 20,000 horse-power. The novel torpedo-cruiser Novik, of 3,000 tons, built at Elbing, and her sister, the Boyarin, built at Copenhagen, carry each 7 4.7-inch guns and have a speed of 25 knots. There were 21 destroyers completed and 13 building at the beginning of 1901; 45 first-class torpedo-boats were completed and 6 were not yet ready; and there were 41 of the second and 101 of the third class. Of submarine boats none were in existence, but there was a plan to build 50. The torpedo-craft can pass by rivers and canals between the Baltic and the Black Sea. A ship canal is projected for the passage of the larger vessels, which would enable Russia to concentrate the two separate fleets. Sebastopol has been converted into a strong naval port. Treaty covenants stand in the way of the free entrance of Russian war-vessels from the Black Sea into the Mediterranean, and Turkish forts guard the passage. The Baltic fleet can operate in winter only by the aid of ice-cutting steamers. An ice-free naval port is being made at Libau and another is projected on the coast of Lapland. The complications in China caused the best part of the fleet to be despatched to the East, where, having Port Arthur as an alternative base, the fleet is not ice-locked in winter at Vladivostok. A Russian volunteer fleet, by a contract made in 1892 for ten years, receives a subsidy of 600,000 rubles a year on condition of making a certain number of voyages with passengers and mails from Odessa to Vladivostok and intermediate ports. The managers also undertook to build 4 fast cruisers of from 8,000 to 10,000

tons, and have accordingly built the St. Petersburg, Kherson, Moskva, and last the Smolensk, which makes 20 knots. A new port for naval and commercial purposes was opened at Kherson on July 28. The channel of the Dnieper was deepened to permit the navigation of vessels of 17 feet draft. A canal with a depth of 18 feet is planned to connect the Sea of Azov with Rostov.

Commerce and Production.—Of the land area of Russia proper, 1,100,405,967 acres, 36.7 per cent. of the whole, 403,609,583 acres, belong to the Government or to the imperial family, 385,422,924 acres, or 35 per cent., have been allotted to the emancipated serfs, and 311,373,460 acres, or 28.3 per cent., to private owners or to municipalities or other corporations. Of the state and imperial domains, 68.3 per cent. is fit for cultivation; of the peasants' lands, 90.4 per cent.; of the private estates and other lands, 85.6 per cent. Of the total area, 317,710,554 acres, or 28.9 per cent., are arable; 162,387,035 acres, or 14.7 per cent., are orchard, meadow, and pasture; 410,116,113 acres, or 37.3 per cent., are forest; and 210,192,265 acres, or 19.1 per cent., are waste land or occupied with roads, buildings, etc. In the private and corporate estates 31.2 per cent. of the land is arable, 18.8 per cent. orchard and grass land, 35.6 per cent. forest, and 14.4 per cent. waste, roads, etc. The total area of Poland is 29,931,076 acres, of which 1,807,050 acres, or 6 per cent., are property of the state or the Czar, of which 94.9 per cent. is tilled; 12,233,732 acres, or 40.9 per cent., are owned by peasants, who till 94.6 per cent. of their land; and 15,890,294 acres belong to private owners, towns, etc., 92.9 per cent. being tilled. The arable land of Poland, 15,931,912 acres, is 53.2 per cent. of the whole, while orchard, meadow, and grazing lands, 5,421,207 acres, are 18.1 per cent., forests cover 6,763,337 acres, or 22.6 per cent., and 1,814,620 acres, or 6.1 per cent., are unfit for tillage or used for roads, etc. The area under crops in the European provinces of Russia in 1899 was 180,613,000 acres; in Poland, 12,538,000 acres; in northern Caucasia, 10,129,000 acres. The crops of the Russian provinces in 1900 were 531,683,000 pounds of wheat, 1,285,243,000 pounds of rye, 249,462,000 pounds of barley, 660,845,000 pounds of oats, 228,683,000 pounds of buckwheat, millet, corn, peas, etc., and 1,026,678,000 pounds of potatoes; crops of Poland, 32,767,000 pounds of wheat, 104,860,000 pounds of rye, 24,476,000 pounds of barley, 45,400,000 pounds of oats, 14,065,000 pounds of various crops, and 515,722,000 pounds of potatoes; crops of northern Caucasia, 94,374,000 pounds of wheat, 11,623,000 pounds of rye, 35,537,000 pounds of barley, 15,317,000 pounds of oats, 29,095,000 pounds of various grains and pulse, and 22,599,000 pounds of potatoes. Siberia in 1899, as far as reports were received, produced 75,552,000 pounds of wheat, 47,333,000 pounds of rye, 68,101,000 pounds of oats, 12,437,000 pounds of other grain crops, and 28,241,000 pounds of potatoes. The production of the steppes was 24,819,000 pounds of wheat and nearly as much of other cereals. The total wheat-crop of the Empire in 1899 was 754,545,000 pounds; the rye-crop, 1,413,667,000 pounds; the crop of oats, 881,954,000 pounds; the crop of barley, 301,600,000 pounds; the crop of potatoes, 1,504,123,000 pounds. In Russia and Poland 4,004,642 acres under flax in 1899 produced 357,369 tons of fiber and 17,304,357 bushels of seed, and 1,813,034 acres under hemp produced 217,380 tons of fiber and 19,675,262 bushels of seed. There were 250,675 acres of vineyards in Transcaucasia, producing 17,043,000 gallons of wine, and 10,265 acres planted to tobacco yielded 3,392 tons, while 12,830 tons were grown on 29,-

400 acres in the Kuban. The hay-crop of the empire was 48,504,938 tons from 92,402,813 acres, Russia proper producing 32,790,862 tons. There were in 1898 in European Russia 17,004,300 horses, 24,425,300 cattle, 119,800 camels, 38,140,300 sheep, 1,364,200 goats, and 9,148,800 pigs; in Poland, 1,185,700 horses, 2,838,300 cattle, 3,227,100 sheep, 8,900 goats, and 1,229,500 pigs; in Asiatic Russia, 6,012,000 horses, 5,560,000 cattle, 1,143,000 camels, 20,818,000 sheep, 1,245,400 goats, and 633,800 pigs; in the Caucasus, 1,152,000 horses, 4,590,000 cattle, 16,300 camels, 12,604,000 sheep, 571,000 goats, and 956,000 pigs. The Government forests in 1900, at an expense of 8,600,000 rubles, produced 48,900,000 rubles of revenue. The production of gold in the Russian Empire was 38,792 kilograms; of platinum, 6,240 kilograms; of silver, 5,943 kilograms; of lead, 238 tons; of zinc, 5,580 tons; of copper, 6,495 tons; of pig iron, 2,206,000 tons; of rolled iron, 580,000 tons; of steel, 1,149,000 tons; of coal, 12,051,000 tons; of naphtha, 8,210,000 tons; of salt, 1,474,000 tons.

The production of Siberia has increased very much since the construction of the railroad, which had 11 per cent. more traffic in 1900 than in 1899. The quantity of cereals transported over the line in 1900 was 633,000 tons, of which more than a third was consumed in Siberia, a fifth was eaten by the mining population of the Urals, a somewhat smaller quantity was shipped into European Russia, over an eighth was sent to Baltic ports and thence to Great Britain, and a smaller quantity was shipped to western Europe by way of Archangel. The total does not include the large amount of grain shipped eastward by the water-routes. Wheat constitutes more than half the cereal crops of Siberia, most of it being grown on the rich soil of Semipalatinsk. The cultivation of rye and oats is declining, also that of the famous wheat of the Ichym and Kurgan districts, whence cattle are now shipped to St. Petersburg and butter to the same place or to southern Russian ports for export. The number of cattle carried by rail in 1900 was 9,705. Salt meat is sent to Moscow and St. Petersburg for the use of the army. Only a fifth of the iron and steel imported into Siberia in 1900, a tenth of the sugar, and a third of the manufactures, went by rail. The quantity of tea shipped over the railroad in 1900 was 57,500,000 pounds. It comes from China by caravan to Kiachta on the border of Mongolia and passes through Irkutsk. A vast quantity of tea is still transported through Siberia by sledges in winter and by water during the summer, and much that goes over the railroad is transshipped at the first river port. The Obi and Irtys are navigable almost to their sources, and the Obi and Yenesei are connected by a canal. The cultivation of tea in the Transcaucasian territory is being rapidly extended with Government assistance. Good crops have been harvested in the vicinity of Batum, and plantations have been started on the Black Sea coast and in Mingrelia. Large numbers of Russian settlers, particularly the Molokanis, who do not believe in war, settled into Transcaucasia and Transcaspiia, where they were free from molestation on the part of the authorities and from military conscription. In the summer of 1901, when it was reported that the law of compulsory military service would be applied in these territories, many of them petitioned for permission to emigrate to America.

The total value of imports of merchandise in 1899 was 642,778,000 rubles, and of exports 626,479,000 rubles. In the general reports are included, since 1894, with the trade by way of the European frontiers of Russia, the trade with Fin-

land and the exports from the ports of northern Caucasasia on the Black Sea, many of which are destined for Europe. The trade over the other Asiatic frontiers is not included. The imports of food products were 73,441,000 rubles, and exports 317,000,000 rubles in value; imports of raw and partly manufactured articles was 301,376,000 rubles, and exports 249,900,000 rubles; imports of animals were 1,802,000 rubles, and exports 17,300,000 rubles; imports of manufactured goods were 217,856,000 rubles, and exports 17,400,000 rubles. The export of wheat was 34,466,000 hundredweight; of rye, 19,559,000 hundredweight; of barley, 24,019,000 hundredweight; of oats, 9,197,000 hundredweight; of corn, 9,224,000 hundredweight; of peas, 1,927,000 hundredweight; of flour, 2,895,000 hundredweight; of other cereal products, 9,876,000 hundredweight. The export of eggs was 1,685,000,000 in number, valued at 28,645,000 rubles. The value of oil-cake exported was 15,957,000 rubles. The quantity of raw naphtha exported was 367,570 hundredweight; of illuminating oil, 21,927,300 hundredweight; of lubricating oil, 3,383,000 hundredweight; of petroleum waste, 1,181,100 hundredweight; total mineral oils, 26,858,970 hundredweight. The value of cereal exports was 259,022,000 rubles; of fish and caviare, 4,161,000 rubles; of dairy-products, 7,780,000 rubles; of spirits, 779,000 rubles; of sugar, 8,754,000 rubles; of various food-products, 7,947,000 rubles; of timber and wood manufactures, 53,595,000 rubles; of platinum, mercury, etc., 3,608,000 rubles; of oil-seeds, 27,507,000 rubles; of flax, 55,747,000 rubles; of hemp, 9,798,000 rubles; of tallow, 392,000 rubles; of bristles, hair, and feathers, 11,138,000 rubles; of wool, 6,639,000 rubles; of furs, 6,714,000 rubles; of naphtha and naphtha products, 31,678,000 rubles; of metal manufactures, 1,614,000 rubles; of woollen goods, 1,545,000 rubles; of cotton goods, 1,364,000 rubles. The imports of machinery in 1899 were 99,435,000 rubles in value; of raw cotton, 53,053,000 rubles; of raw metals, 46,256,000 rubles; of metal manufactures, 45,071,000 rubles; of coal and coke, 30,668,000 rubles; of wool and yarn, 26,860,000 rubles; of tea, 19,085,000 rubles; of gums and resins, 13,896,000 rubles; of fish, 13,562,000 rubles; of wine, beer, and spirits, 13,327,000 rubles; of chemicals, 13,028,000 rubles; of colors, 12,618,000 rubles; of cotton goods, 9,791,000 rubles; of other textile goods, 11,947,000 rubles; of leather, hides, and skins, 11,600,000 rubles; of raw silk and yarn, 10,646,000 rubles; of fruits and nuts, 8,034,000 rubles; of coffee, 6,127,000 rubles; of clocks and watches, 3,808,000 rubles; of grain, flour, and rice, 2,636,000 rubles; of tobacco, 2,628,000 rubles. The imports and exports over the Asiatic frontiers not included in the above figures amounted in 1898 to 66,510,000 and 23,773,000 rubles respectively. The imports of food products from Asiatic countries were 36,106,000 rubles in value, and exports to them 7,717,000 rubles; imports of raw and partly manufactured articles were 15,787,000 rubles, and exports 2,903,000 rubles; imports of animals were 2,153,000 rubles, and exports 574,000 rubles; imports of manufactured goods were 12,464,000 rubles, and exports 12,570,000 rubles. Chief among the imports were tea for 24,496,000 rubles, textiles for 5,578,000 rubles, machinery for 4,716,000 rubles, dried fruits for 4,431,000 rubles, cotton for 4,017,000 rubles, rice for 3,250,000 rubles, animals for 2,153,000 rubles, and silk for 2,123,000 rubles. Among exports to Asiatic countries the leading articles were naphtha for 21,260,000 rubles, grain for 16,125,000 rubles, cotton goods for 9,023,000 rubles, sugar for 6,309,000 rubles, oil-seeds for

3,021,000 rubles, manganese ore for 3,021,000 rubles, woolen goods for 1,235,000 rubles, and metal manufactures for 653,000 rubles.

The values in rubles of the imports from and exports to the various foreign countries in 1898 are given in the following table:

COUNTRIES.	Imports.	Exports.
Germany.....	202,171,000	179,436,000
Great Britain.....	114,082,000	139,906,000
France.....	27,102,000	68,594,000
Netherlands.....	9,777,000	72,257,000
Austria-Hungary.....	23,922,000	42,416,000
Italy.....	10,171,000	54,608,000
United States.....	50,059,000	3,014,000
Belgium.....	23,608,000	28,788,000
China.....	40,293,000	634,000
Egypt.....	22,636,000	6,727,000
Turkey.....	6,867,000	14,072,000
Denmark.....	5,249,000	9,357,000
Roumania.....	1,874,000	12,675,000
Other countries.....	75,915,000
Total.....	562,013,000	780,899,000

The imports by the European frontiers in 1898 were 541,500,000 rubles in value; by the Asiatic frontiers, 55,400,000 rubles; from Finland, 20,600,000 rubles; total merchandise imports, 617,500,000 rubles. The exports by the European frontiers were 675,600,000 rubles; by the Asiatic frontiers, 23,800,000 rubles; to Finland, 33,300,000 rubles. The imports of precious metals were 131,489,000 rubles, and exports 4,868,000 rubles.

A crisis in Russian industry, following on a period of extraordinary expansion, began in the latter half of 1899 and still continued in 1901. During the period of activity enormous amounts of capital were invested in new enterprises, a great part of it French and Belgian capital, and when the depression set in some of these enterprises were arrested before their plant was finished. The scarcity and dearness of coal and naphtha checked manufacturing in general. In the cotton industry the price of the raw material was increased by a sudden increase of the duties. The iron industry, which had been stimulated by the demand for railroad material and, after the construction of new railroads, for iron goods of all descriptions in the country which they opened up, saw the demand gradually diminish. The Government orders by which this industry had been fostered, as well as by high protective tariffs, ceased. The furnaces and factories still went on producing and piling up goods for which there was no market. The high profits of prosperous years, permitting in many cases dividends of 40 or 50 per cent., had caused an inflation in the value of the shares, which now shrank to such an extent as to ruin a great number of small investors and to cause the failure of banks which had loaned money on these securities. The commercial banks in Russia had played a large part in starting and furthering a vast number of industrial enterprises which now suffered in the general depression. All securities fell in value except those of railroads and land banks. The banks, the Ministry of Finance having refused them permission to resort to their reserve funds or to issue new shares, were unable to give any support to the enterprises which they had taken a direct part in starting. The shares of the Belgian companies fell to a half and even a tenth of their former value. Many factories and blast-furnaces were closed and mortgage and discount banks failed, as well as industrial companies. The firms of individuals and partnerships had been converted into joint-stock companies on an enormous scale during the speculative fever, and when the bubble burst the deluded purchasers of the shares

blamed the Government or looked to the Government to furnish relief, so dependent is everybody in Russia on the Government. Recent harvests have been bad, and the harvest of 1901 was insufficient. In some parts of Russia the people have suffered partial famine year after year, and their situation has grown steadily worse. The cattle become fewer, and the land yields poorer returns on account of exhaustive methods of tillage. Famines in consequence occur with greater frequency and more disastrous and lasting results. Although forty years have passed since the emancipation of the serfs and much has been done to improve their material well-being, their condition in most parts of the empire is such as to cause serious apprehension. Among the measures adopted in favor of the peasantry were the abolition of the poll-tax, the diminution and the partial remission and postponement of the annual redemption payments, the establishment of the Peasants' Bank, and the encouragement of migration. The advantages conferred by a diminution of direct exactions were, however, neutralized to a great extent by an increase in indirect taxes on articles of primary necessity through the protective duties levied for the advantage of the manufacturing class. Although arrears of the redemption payments amounting to great sums have been remitted from time to time, these arrears have grown nevertheless without abatement, amounting in 1901 to at least \$55,000,000. Since the emancipation in 1861 the Government has spent \$475,000,000 in redeeming from the proprietors 89,500,000 acres of agricultural land, which was turned over to 90,000 communes.

The foreign commerce in 1901 showed a slight increase over that of 1900, exports being much larger in value, while imports decreased. Of the exports over 56 per cent. consisted of grain and other agricultural food products, 38 per cent. of raw materials, and 2½ per cent. of cattle and poultry. Of the imports 15 per cent. consisted of provisions, 53 per cent. of raw materials and partly finished manufactures, and 31 per cent. of manufactured goods. The increase of exports, although most pronounced in foodstuffs and unmanufactured products, is distributed over every branch of the export trade.

Navigation.—The number of vessels in the foreign trade entered at White Sea ports during 1899 was 668, of 331,000 tons; at Baltic ports, 5,643, of 3,721,000 tons; at ports of the Black Sea and the Sea of Azov, 4,161, of 4,636,000 tons; total number, 10,472, of 8,688,000 tons. The total number cleared was 10,423, of 8,677,000 tons. The number of vessels that visited Russian ports of the Caspian Sea in 1898 was 20,114, against 19,407 in 1897. The number that visited the ports of Vladivostok and Nikolaievsk in 1898 was 384. The number of coasting vessels that visited ports of the White Sea, the Baltic, and the Black Sea was 47,552 in 1898, and 19,171 visited ports of the Caspian Sea.

The merchant navy on Jan. 1, 1899, consisted of 2,143 sailing vessels, of 254,116 tons, and 657 steamers, of 299,724 tons. On Jan. 1, 1899, there were 2,294 sailing vessels, of which 586, of 78,745 tons, belonged in the Baltic, 396, of 22,149 tons, in the White Sea, 773, of 54,535 tons, in the Black Sea and the Sea of Azov, and 539 in the Caspian Sea; and the number of steamers was 604, of which 95, of 19,053 tons, belonged in the Baltic, 33, of 5,028 tons, in the White Sea, 263, of 142,512 tons, in the Black Sea and the Sea of Azov, and 213 in the Caspian.

Railroads, Posts, and Telegraphs.—In 1900 there were 34,485 miles of railroads in operation,

of which 32,764 miles were under the direction of the Ministry of Ways and Communications, 20,111 miles being the property of the Government, 1,791 miles in Finland and mostly belonging to the Government of the grand duchy, 9,591 miles the property of companies, 2,310 miles isolated lines, and 752 miles local railroads. The connected network is formed by 28 lines, besides which there are 7 unconnected lines. The receipts in 1899 from 26,689 miles were 494,639,000 rubles. In 1898 the gross receipts from 24,645 miles were 465,741,008 rubles; expenses of operation, 277,576,194 rubles; net receipts, 188,164,814 rubles; number of passengers carried, 83,708,100; tons of freight, 118,106,000. The cost of construction of the lines belonging to the Government was 2,870,288,752 rubles. The gross receipts of railroads managed by the Government was 322,356,627 rubles in 1898; expenses, 188,160,062 rubles; net receipts, 134,196,565 rubles; interest paid on capital borrowed for the purchase of railroads by the Government, 109,298,623 rubles; net revenue, 24,897,942 rubles. The cost of construction of lines belonging to companies was 1,755,473,310 rubles, the fixed charge for interest was 44,055,116 rubles, the gross receipts were 143,384,381 rubles, and the working expenses were 89,416,132 rubles, leaving a net profit of 9,813,033 rubles. The Government incurred a loss of 30,000,000 rubles in 1889, when three-fourths of the railroad network was owned and managed by companies enjoying subsidies and guarantees, and their expropriation has converted this annual loss into a gain. The great Siberian Railroad is completed to the Chinese frontier, whence it will be carried to Vladivostok through Manchuria, the route originally selected through Russian territory having presented great engineering difficulties in the section between Sryatensk on the Shilka and Pokrovskoye on the Amur and in the valley of the Amur. The company formed to construct and manage the Manchurian Railroad consists of representatives of the Russian Government and Chinese associates selected by the Government of China. Starting from the frontier village of Nagadan, the route passes through Kharbin to Grodekovo and thence to Vladivostok. Engineering difficulties are encountered in the passage across the valley of the Sungari which are not insuperable. Construction of the main line, however, was postponed, while the branch to Dalny and Port Arthur, ports leased from China, was pushed until the antiforeign outbreak in northern China compelled a cessation of the work in 1900. The road was completed from the south as far as Mukden, 295 miles, and on 235 miles in other sections the rails were laid. Parts of the railroad were torn up by the Chinese insurgents and Manchurian robbers before Russia poured troops into Manchuria. The damage done was repaired under military supervision, and the building of the railroad was resumed. The northern section of the line to Port Arthur was completed in the spring of 1901 as far as the Sungari river. The eastern railroad to Vladivostok was pushed forward under the protection of 50,000 soldiers, and was expected to be completed before 1904. American material was used on all the eastern divisions of the Siberian railroad system. The free port privileges of Vladivostok were abolished from Jan. 1, 1901. In central Asia the Kushk Railroad has been extended to Chatil Ducteran, the extreme point of Russian territory in the direction of Herat, and a branch is being made through Penjeh toward Maruchak. The line from Tashkend to Orenburg was begun in the autumn of 1901.

The post-office in 1898 handled 363,584,732 internal and 45,358,024 foreign letters and postal cards, 15,629,911 internal and 602,196 foreign money-letters, 60,951,870 internal and 19,926,963 foreign book packets, 188,519,102 internal and 7,616,464 foreign periodicals, 4,286,702 internal and 285,309 foreign parcels, and 3,823,363 internal postal orders. The receipts were 26,876,409 rubles and expenses 32,069,350 rubles.

The telegraph-lines on Jan. 1, 1899, had a length of 93,052 miles, with 271,024 miles of wire. The number of messages transmitted in 1898 was 19,217,238. The length of telephone-wire was 35,300 miles, and the number of conversations in 1898 was 103,426,088. Late in 1898 the long-distance wire between St. Petersburg and Moscow was ready.

Tariff War with the United States.—The United States tariff act of 1897 provided that if any country gave, either directly or indirectly, a bounty or grant on the export of any article subject to duty, an additional duty equivalent to such bounty shall be charged on its importation into the United States. Russian sugar was accordingly specially taxed at rates equal to the bounties, ranging from $\frac{3}{4}$ to $\frac{1}{2}$ ruble per pound of 36 pounds. When the Russian Government protested that it paid no bounties, the additional duties were, on April 20, 1900, suspended until inquiries could be made. After ten months they were reimposed at enhanced rates. The Russian Government retorted by applying the maximum tariff to American iron, steel, hardware, machinery, and other articles, which had long enjoyed the minimum Russian tariff. This involved an increase of 30 to 50 per cent. in duties and affected about one-fourth of the American exports to Russia, the annual value of the exports thus brought under the general tariff being about \$2,500,000. The Russian exports of sugar to the United States have been insignificant, but production and exportation of sugar have increased rapidly in the last few years. For a short period the Russian Government paid a direct bounty on exported sugar. In 1895 the Government superseded a syndicate in the control of the industry. A prohibitory duty was then imposed on all foreign sugar and an excise duty of 1.75 ruble was levied on all crystallized sugar manufactured. The Government determined for each year the quantity of sugar which manufacturers shall freely put upon the market, and the quantity which must be kept as a reserve to be sold when prices rise above a fixed limit. The surplus beyond these fixed quantities can either be exported, in which case the excise duty will be refunded, or it can be sold in the domestic market on payment of double excise duty. The maximum price for home consumption is always much higher than the cost of production, assuring profits sufficient to cover losses on exports. The price for home consumption in the Kiev market is often three times the export price. Not knowing how much he can sell at these remunerative prices in addition to the fixed quantity of 60,000 pounds which he is free to sell, each manufacturer is encouraged to increase his production, and thus the exportation of a surplus not absorbed in Russia is stimulated. Exports are further encouraged by allowing one manufacturer to transfer to another his rights to sell sugar up to a fixed limit in the domestic market without paying double excise duty, so to secure such transfers some of the manufacturers pay premiums to others to induce them to export their quota. The United States Treasury officials, in March, 1901, withdrew the privilege extended to Russian war-ships

of obtaining provisions from bonded warehouses without payment of duty for the reason that Russia did not grant the same privilege to American war-ships. The question whether the Russian system of sugar rebates acted as a bounty, as the United States Government finally decided, was brought up in the Brussels Sugar Conference of 1898, where it was contended that the limitation of the supply of sugar on the home market, aided by a fixed remunerative selling price, stimulated production, and that the unsold sugar must be exported at less than the cost of production. It was calculated by one of the delegates that it operates as an indirect bounty of 17.60 francs per 100 kilograms. The Russian delegate declared that Russia paid no bounty, but simply refunded the excise duty, and that the Russian legislation was designed to hinder overproduction.

Popular Disturbances.—Industrial depression, monetary stringency, agricultural distress, vexatious Government regulations, and official maladministration produced discontent among all classes of society in 1901 when the foreign policy of Russia had attained brilliant successes and the empire seemed to have entered on a new career of greatness and expansion. In January, 1901, began a movement among the students more general and more desperate and determined than any that had preceded it. The agitation spread not only among the students of all the universities, but among the townspeople, and the laboring class far and wide showed their sympathy with the students by taking part in their demonstrations. This was very unusual in Russia, where in previous revolts of the students against the university authorities the mob has usually encouraged and helped the police and showed animosity against the students. A secret organization among students with ramifications in all the universities was discovered by the police long before any open demonstrations took place. The object was to secure more liberal university statutes and the abolition of the temporary regulations of 1899. A congress of the secret league was held at Odessa, and when the delegates from all universities were arrested the Government believed it had checked the movement at the start. The obnoxious statutes were not altered, and the application of the temporary regulations at Kiev gave the movement a great impetus. In Kiev the university council condemned some law students to the *carcer*, or university jail, with the object of intimidating the whole student body, and students of law more particularly because the latter had objected to taking lectures on international law from a professor of criminal law, and the Governor-General on hearing of their complaints had forbidden this incompetent professor to lecture on that subject. The students met in the hall and invited the rector to come and discuss with them the abolition of the punishment of *carcer*, but he sent for the military, who entered the hall and took the names of 500 students. These were tried before a special court composed of representatives of the university, the police, the army, and the judiciary, and 138 were condemned to be sent into the ranks of the army for one, two, or three years, the only punishment provided by the law of 1899 for cases of insubordination among the students brought before such a tribunal. The military and judicial delegates voted against this kind of penalty, but the university delegates and those of the Ministry of the Interior prevailed. In consequence of the disturbance the Governor-General of Kiev proclaimed a state of siege. In Moscow, where the general strike of the students began in 1899, stu-

dents interrupted lectures, attempted to create disturbances, distributed proclamations, and committed all the usual acts of revolt, for which 300 of them were cited for discipline. The demands of the Russian students were only for somewhat more liberal statutes, some changes in the rules for examinations, the removal of a professor here and there, better treatment by the police, and the annulment of the statute requiring them to wear uniforms. They wished to return to the statutes of 1863 which were changed in 1884 for the stringent and galling regulations that have been resented by the students ever since their enactment. The professors have under the new order become officials of the Government whose tenure of office depends on maintaining discipline. The police regard students as a dangerous and revolutionary class who are hatching conspiracies for the overthrow of the Government, and they look for promotion if they show zeal against such enemies of the state. When the Cossacks are called out these use their knouts unmercifully on the uniformed students wherever they are found, and the students defend themselves by stabbing the horses. Public sympathy, which was averted from the students when nihilism was rife, has turned in their favor. The persecution of the Jews, the Roman Catholics, and the Russian sectaries was felt to be of a piece with the university regulations, and the trammels and vexations of the administration to be a cover for corruption. When everybody felt now the pinch of hard times the Government was held responsible. Discontent with the laws and their administration, which formerly was confined to a section of the students and professors, now extended to the commercial class, the working men, the peasants, and the landed proprietors. In the Moscow disturbances the tradespeople and the factory hands, instead of pelting and striking the students as on former occasions, attempted to rescue them from the police. At Kharkov student demonstrations were treated in the same manner as at Kiev. The fermentation in the universities began long before any open demonstration occurred. Bulletins were printed in the various universities and, in spite of the vigilance of the police, were widely distributed, usually by young girls. Nothing more revolutionary was demanded than free activity and liberty of thought. Even the universities of the Baltic provinces were now sufficiently Russianized to take part in the movement. In St. Petersburg the troubles were more serious than in the other cities. When the first manifestation was made by the students 13 of the ringleaders were sent to serve in the army and 30 were expelled. The Kiev students who had been sent to the army refused at first to take the military oath, and the military authorities were unwilling to accept them. M. Bogolepoff and M. Sipyaghin, the Ministers of Education and the Interior, and M. Pobedonostseff were determined to take the most stringent measures to check the movement which seemed to be spreading from the students into other ranks of society and threatened to lead to revolution. Governments that yield are governments that fall was the opinion of the Minister of the Interior. M. Witte, the Minister of Finance, and Gen. Vannovsky were rather in favor of conciliatory measures, and so the students believed the Czar to be. On Feb. 27 Peter Karpovich, a former student who had written from Berlin for permission to complete his studies at the University of St. Petersburg and met with a refusal, shot and fatally wounded M. Bogolepoff with a revolver. In Moscow students and workmen together erected barricades, smashed win-

dows, overturned street-cars, and held possession of the streets for five days. The Governor-General, the Grand-Duke Sergius, whose palace was attacked, did not venture out. The whole police force was powerless, and a large force of troops had to be brought in to restore order. In St. Petersburg on March 4 students, male and female, gathered in the Kazan Cathedral and interrupted the services with cheers for the Czar. In the succeeding days disturbances took place in St. Petersburg, in Kharkov, and in Moscow, and correspondence was discovered connecting them. Authors, professors, and physicians were arrested, as well as students, in St. Petersburg. In Kharkov a sotnia of Cossacks surrounded an assemblage of students and arrested some, but on the same evening a crowd of them made a demonstration in front of a newspaper office, and another crowd in the theater, so that soldiers were called out to help the police. On March 8 a large meeting of students of both sexes was held in the hall of the University of Moscow in spite of the warnings of the police, and violent speeches were made. The police drove them into a neighboring house, kept the men there overnight, and in the morning took 53 to jail, and on March 10 made 463 more arrests after the students had broken windows in several streets. The tumults continued, and fresh arrests were made daily. In Odessa, after a disorderly outbreak, many students were arrested as the result of the discovery of incriminating documents. On March 17 about 3,000 students assembled in St. Petersburg on the Nevsky Prospect before the Kazan Cathedral to celebrate the memory of the woman student Veterova who died in Peter-Paul fortress. Printed circulars passed from hand to hand. When a student read an appeal enumerating the demands of the students the police and the Cossacks charged into the crowd. The students took refuge in the church, throwing stones and other objects at the police and Cossacks, and unfolded banners containing various devices, which were snatched from their hands by the police. A sharp fight took place on one side of the cathedral, and when the commander of the Cossacks was wounded by a blow from a hammer his men dismounted and, plying their whips savagely, closed in on a part of the crowd, while the rest fled into the church, disturbing the religious service that was going on with their shouts until the police entered and expelled them. There were 26 policemen and Cossacks wounded, and there were arrested 339 male and 377 female students, and 44 others. The work-people from the factories in the suburbs set out for the town, but could not force their way through the strong guards that were posted at the entrances. The Czar wished to go to the Kazan square to speak to the students about their grievances, but was restrained by the ministers. The students while in the cathedral smoked cigarettes, whistled, and threw things at the holy images to show that they wished no longer to belong to the Orthodox Church. This was on account of the excommunication of Count Leo Tolstoi recently pronounced by the Holy Synod. Several hundred students had signed a protest against it and a petition that they also be excommunicated. The proclamations scattered by the students were not confined to their particular grievances, such as the temporary regulation consigning them to service in the army. Some were of revolutionary import, calling for the overthrow of the corrupt officials, and even the autocracy of the Czar, and demanding liberty and free government. Many working men participated in the demonstration. The police were unable to dis-

cover here, and still more at Moscow, whether the working men had indoctrinated the students with European socialism or whether it was the students who were stirring up discontent among the working men. It required two regiments of Cossacks, a squadron of gendarmes, and the whole police force of the city to quell the disorder in St. Petersburg, and the fighting lasted from morning till late in the night. The students had only sticks to defend themselves, and in the crowds on the Nevsky Prospect that were brutally assailed by the police with sabers and by Cossacks with knouts were the usual Sunday promenaders. On March 22 an attempt was made upon the life of the reactionary procurator of the Holy Synod, M. Pobedonostseff, who was shot at by a petty official, who had been chosen by lot to avenge the excommunication of Count Tolstoi and the oppressive treatment of the students. A fresh revolutionary movement was dreaded, and it was expected to break out among the workmen rather than among the students. Troops were stationed so as to appear immediately whenever any concourse or suspicious movement occurred at any of the mills in the vicinity of the capital, and the operatives were no longer permitted to enter the city. Threatening letters were received by several of the ministers. At a Cabinet council it was decided to proceed leniently with the students. Although the law for drafting refractory students into the army would not be revoked, it would no longer be put in force for a time. It was also resolved to revise the university statutes. Gen. Vannovsky succeeded M. Bogolepoff as Minister of Education, and his aim was supposed to be to replace the statutes of 1884, which treat professors and students alike as suspects, by more liberal statutes framed on those of 1863. An almost complete amnesty was ultimately extended to the students who were mixed up in the disturbances. It was decided to exclude women henceforth from lectures on medicine and pedagogy. A private person gave a vast sum to endow a separate woman's university in Moscow. An edict was issued restricting the number of Jewish students in the universities to 2 per cent. of the whole number.

The authors of Russia protested in foreign newspapers against the savage treatment of street crowds, and for that their society for mutual assistance was closed by the prefect of St. Petersburg. Senators and professors published in a foreign newspaper an appeal to the Czar in which they pointed out the evil consequences that had resulted from the measures taken in the last forty years to repress student outbreaks, thousands of vigorous and earnest spirits converted into the revolutionary foes of a Government that had blasted their chosen careers by preventing them from completing their studies, and accused the Ministry of Education of distorting every reform in university education which the Czar ordered. The law forbidding a collective petition to the Emperor they considered oppressive, as all interest in public activity and loyal cooperation is deadened if in an autocracy the voice of his subjects can not reach the sovereign. Gen. Vannovsky was appointed Minister of Education on April 7, and the task was entrusted to him of thoroughly reorganizing and renovating the Russian universities, in which work the cooperation of the nation and the assistance of parents was requested in the Emperor's rescript. The new Minister of Education consulted the faculties of all the universities as to the changes that were desirable in the statutes and regulations governing higher education. He desired to get expert opinions as

to whether the rector and other high officials* of the universities should be nominated or elected; as to the steps to be taken to induce the students to work with greater zeal, and to bring about better relations between professors and students; as to the advisability of permitting or establishing students' societies, and of setting up university courts and courts of honor among the students; as to arrangements for teaching and examining the students; and as to the powers to be exercised by the inspectors, the faculties, and the professors. It was recognized that the changes introduced in 1884 placed in the hands of officials of the central administration powers which properly belong to the boards of faculty and to the individual professor. The universities were invited to express their views on the proper competence of the various authorities controlling higher education. The perturbation among the students ceased when it was seen that Gen. Vannovsky was bent on introducing a real reform. Amnesty was granted to the students undergoing punishment for the part they took in the disturbances. Those who were rusticated or expelled were allowed to return and those enrolled in the army were recalled, to the equal satisfaction of the students and the military authorities.

Many thousands of workmen were thrown out of employment by the closing of factories. The Government decided to give them free passage over the railroads to their own villages. A part of them were, however, turned out from the great industrial centers into the neighboring rural districts, and much lawlessness resulted. Arson became frequent in various parts of the empire. Socialistic manifestations took place among the work-people in Poland and in Odessa, Kharkov, St. Petersburg, Moscow, and other Russian cities. Students were found in disguise among the workmen. Wholesale arrests were made in St. Petersburg and elsewhere, and in domiciliary visits evidence was discovered of a socialistic revolutionary propaganda carried on all over the country. Persons of high position, rank, wealth, or reputation were implicated and arrested. Others escaped abroad.

Finland.—The grand duchy of Finland when united to Russia in 1809 preserved by grant of the Czar its constitutional form of government. Its legislative body is composed of representatives of Four Estates; the knighthood and nobility, the clergy, the citizens, and the peasants. Laws are prepared by the State Secretariat of Finland in St. Petersburg and submitted to the Four Estates, whose unanimous consent is necessary for amendments to the Constitution or new taxes. The Czar in Finland bears the title of Grand Duke. The Governor-General is Gen. N. Bobrikoff. The grand duchy has its own customs, with modifications recently imposed, its own monetary system, and its state railroads. In 1890 the postal administration was placed under the control of the Russian Minister of the Interior. The military system was independent, and Finnish soldiers were not compelled to serve outside of the grand duchy until obligatory service for five years was introduced in 1899 in accordance with the recommendations of a Russian military commission, against the protest of the Parliament and people.

The population was estimated in 1898 at 2,637,130, divided into 1,304,289 men and 1,332,841 women and composed of 2,269,375 Finns, 357,300 Swedes, 7,425 Russians, 1,850 Germans, and 1,180 Lapps. Helsingfors, with Sveaborg, had 85,041 inhabitants. The number of marriages in 1898 was 20,611; of births, 89,106; of deaths, 45,751; excess of births, 43,355.

The revenue for 1899 was estimated at 88,508,916 marks, or francs, including 27,572,513 marks from previous years and 3,000,000 marks from the reserve fund. Expenditure was equal to the revenue, including a balance of 21,959,570 marks left over. Of the revenue 5,871,620 marks were derived from direct and 31,398,000 marks from indirect taxes. The expenditure for civil administration was 10,550,832 marks; for public worship and education, 8,797,188 marks; for the army, 7,557,899 marks; for railroad construction, 14,839,056 marks; for the public debt, 5,070,756 marks. The debt, bearing 3 and 3½ per cent. interest, amounted on Jan. 1, 1900, to 115,028,841 marks.

Lakes cover a ninth of the surface of the country. The crop of rye in 1898 was 4,577,967 hectoliters; of wheat, 56,059 hectoliters; of barley, 2,018,328 hectoliters; of oats, 6,712,649 hectoliters; of potatoes, 5,967,731 hectoliters; of flax, 1,694 tons; of hemp, 695 tons. There were 306,890 horses, 118,781 reindeer, 1,484,965 cattle, 1,080,028 sheep, and 224,480 pigs. The Government forests, covering 14,035,067 hectares, yielded a revenue of 2,250,666 marks, less 645,948 marks for working expenses. The production of iron ore in 1898 was 69,140 tons; of pig iron, 26,679 tons; of bar iron, 23,140 tons. The total value of imports in 1899 was 251,000,000 marks, and of exports 184,900,000 marks. The imports of cereals were 53,300,000 marks in value; of iron and iron manufactures, 18,300,000 marks; of machinery, 18,300,000 marks; of woolen manufactures, 12,100,000 marks; of cotton and cotton manufactures, 11,800,000 marks; of sugar, 8,400,000 marks; of coffee, 7,900,000 marks. The exports of timber were 98,200,000 marks; of butter, 23,600,000 marks; of paper and paper pulp, 17,700,000 marks; of iron and iron manufactures, 3,600,000 marks. The imports from and exports to different countries had in marks the following values:

COUNTRIES.	Imports.	Exports.
Russia.....	86,300,000	54,900,000
Germany.....	81,400,000	16,600,000
Great Britain.....	41,400,000	54,300,000
Denmark.....	11,500,000	14,800,000
Sweden and Norway.....	14,100,000	7,100,000
France.....	4,300,000	13,900,000
Spain.....	2,100,000	7,500,000
Other countries.....	10,000,000	15,800,000
Total.....	251,000,000	184,900,000

The number of vessels entered at the ports of Finland during 1899 was 8,185, of 1,998,893 tons, of which 5,469, of 851,428 tons, were Finnish; 693, of 103,426 tons, were Russian; and 2,023, of 1,044,039 tons, were foreign. The number cleared was 8,208, of 2,004,928 tons, of which 5,548, of 865,275 tons, were Finnish; 635, of 93,157 tons, were Russian; and 2,025, of 1,046,496 tons, were foreign. The mercantile marine consisted on Jan. 1, 1900, of 2,020 sailing vessels, of 271,338 tons, and 261 steamers, of 47,008 tons. The length of railroads belonging to the Government on Jan. 1, 1899, was 2,477 kilometers. The number of passengers carried in 1898 was 5,595,914; tons of freight, 1,888,871; capital cost, 217,231,085 marks; receipts, 22,004,274 marks; expenses, 14,385,844 marks. The number of letters and postal cards that passed through the post-office in 1898 was 15,126,163; parcels, 2,922,149; newspapers, 14,792,267; registered letters, 1,129,376; receipts were 2,838,361 marks, and expenses 2,346,761 marks.

In February, 1901, an order came from State-Secretary Plehwe for the delivery of the Finnish Government archives, which would be preserved

henceforth in the public archives at St. Petersburg. The Finnish officials declined to give them up without express permission from the Finnish Senate, but subsequently yielded. On Feb. 18, the anniversary of the promulgation of the manifesto of 1899 announcing that laws dealing with questions affecting imperial interests would be made by the Russian Government after taking the opinion of the Finnish Estates, popular demonstrations and disturbances took place in Helsingfors which had for their consequence the suppression or suspension of many Finnish and Swedish newspapers and the removal of the chief provincial and police officials, who were replaced by Russian military officers in direct violation of the constitutional principle that the administration of Finland shall be carried on with the assistance of native authorities only. The Imperial Government had, however, already made it clear that no provisions of the Finnish Constitution should stand in the way of the Russification of Finland. The military reform scheme, which was the chief cause of the conflict, was modified by the Russian Council of State, mainly on financial grounds presented by M. Witte. The new military service law for Finland, signed by the Czar on July 11, 1901, deprives the Finnish army of its national character, but does not require Finnish conscripts to serve or Finnish battalions to be incorporated in Russian regiments except those stationed in Finland or in the military district of St. Petersburg. Finns who are not required to fill up the Finnish regiments will be assigned to such Russian regiments, and Russians may be assigned to the Finnish regiments, described as regiments the ranks of which are preferably filled up by natives of Finland, and thereby they acquire Finnish citizenship. Russian officers who get commissions in these regiments which are substituted for the national army of Finland have the status of Finnish citizens while so serving. The office of commander-in-chief of the Finnish army is abolished, as well as the Finnish staff, and the command of all the Finnish troops is transferred to the commander-in-chief of the Russian regiments stationed in Finland. Officers and non-commissioned officers in Finnish regiments must possess a complete knowledge of the Russian language. These regiments may in peace or war be required to serve outside of Finland, either in Russia or abroad. The administration of the Finnish troops is transferred from the Finnish Senate to the Russian Ministry of War, who will fix the annual contingent of troops to be raised in Finland. For the immediate future Finns will not be drafted into Russian regiments, and the burden of military service in Finland will be lessened rather than increased, the number of recruits annually called up for service being diminished. Except the battalion of Finnish life guards and the regiment of dragoons, all the Finnish regiments were disbanded, and in 1901, instead of a contingent of 2,000 recruits, only 500 were called for. The Finnish Senate voted on Aug. 1 for the promulgation of the army law with only 4 dissenting voices out of 14. The Senators appointed by the Czar on the recommendation of Gen. Bobrikoff, the Russian Governor-General, no longer represent Finnish patriotic opinion. A deputation bringing an address in March from 92,000 persons in all parts of Finland was not received by the Senate, the address, calling upon the Senators to resist the military law and the introduction of the Russian customs tariff, being considered seditious. The majority of the Senators held that the decision of the Czar in imperial matters was final. In accepting the

military law the Senate addressed a memorandum to the Czar soliciting his assurance that the political institutions of Finland would be maintained. The Czar replied that the occasion was not suitable for new assurances as to the maintenance of the local institutions, of which his loyal subjects could not be in doubt; that the dissemination of disquieting apprehensions pointed rather to the necessity of maintaining public order by means of administrative measures. The Senators who voted against the promulgation of the military law were summarily dismissed for failure to comply with the Czar's orders. A law is promulgated in Finland by being read from the church pulpits. Most of the Lutheran pastors petitioned the Senate to be excused on conscientious grounds from publishing the military law. In every case where the law was read out from the pulpit the congregation sought to prevent its legal promulgation by leaving the church in a body. The Finnish Diet protested against the Czar's edicts, and the terms of the protest were embodied in a petition signed by 470,000 persons, in which the various infringements on the fundamental laws of the grand duchy that the military service law contains are detailed and declaring that the law would never be recognized as legal and binding by the Finnish people, who could not cease to remain a nation.

Dependencies.—Bokhara, in central Asia, became a vassal state in consequence of a holy war proclaimed against Russia by Muzaffereddin, the late Amir, in 1866. When peace was concluded Russia annexed the province of Syr Daria, and on Sept. 24, 1873, a new treaty was concluded by which the Amir accepted the suzerainty of Russia and agreed to admit no foreigner to his dominions not provided with a Russian passport. Seyid Abdul Akhad Khan, the present Amir, born March 26, 1859, succeeded to the throne on Nov. 12, 1885. The Russian resident is W. J. Ignatieff. The area is about 92,000 square miles, with a population estimated at 1,250,000. The city of Bokhara has 75,000 inhabitants. The Amir has an army of 11,000 men. The products of the country are grain, fruits, silk, tobacco, and hemp. The extension of the Russian Transcaspien Railroad to Tashkend traverses Bokhara, passing near the capital. Russian merchants pay a duty of 2½ per cent. ad valorem on both imports and exports.

The khanate of Khiva was invaded by a Russian force in 1872 on the ground that the Khivans had aided Kirghiz rebels. Seyid Mohammed Rahim, the Khan, born in 1845, succeeded his father in 1865. By the treaty of Aug. 25, 1873, the Khan renounced the right to enter into treaty relations with foreign powers or with neighboring rulers. The area is about 22,500 square miles, and the population is estimated at 800,000, half of it consisting of nomadic Turcomans. The war indemnity of 2,750,000 rubles exacted by Russia is being paid in annual instalments, in raising which the Khan frequently incurs the wrath of his subjects and must invoke the aid of Russian troops. His own force is about 2,000 men. Khiva exports annually about 50 tons of raw silk and 8,000 tons of cotton.

By a treaty with China, Port Arthur and Talienwan, with the adjacent country, were leased for a period of twenty-five years, which can be extended by mutual agreement. A ukase of Aug. 28, 1899, created this territory into a Russian province called Kwang-Tung. The civil authority and the command of the military and naval forces is entrusted to the Administrator-General, Vice-Admiral Alexieff. Chinese military forces have

been withdrawn from the leased territory and from a neutral zone adjacent, but Chinese jurisdiction is continued in the neutral territory, and in the leased territory Chinamen accused of crime must be handed over to the nearest Chinese official to be dealt with according to Chinese law. Port Arthur has been made a naval port for the Russian fleet, closed to the merchant and war-vessels of foreign nations, but not to Chinese war-

vessels. The harbor is being enlarged and naval docks are being constructed. A fortified naval port has been established also at Talienwan in a reserved corner of the harbor, the rest of which is an open commercial port. The new Russian town of Dalny at the southern extremity of the port is the terminus of the Manchurian Railroad to Mukden and Bedune, and is connected with Niuchuang by railroad.

S

SALVADOR, a republic of Central America. The legislative power is vested in the National Assembly, a single chamber of 42 members, elected for each annual session by universal adult male suffrage. The President is elected by the direct popular vote for four years. Gen. Tomas Regalado was elected President for the term beginning March 1, 1899, and Dr. Prudencio Alfaro was elected Vice-President. The Cabinet at the beginning of 1901 was composed of the following members: Minister of Foreign Affairs and Justice, Dr. Francisco A. Reyes; Minister of the Interior, War, and Marine, Dr. Ruben Rivera; Minister of Public Charity and Education, Dr. J. Trigueros; Minister of Finance, Public Credit, and Public Works, Dr. F. A. Novoa.

Area and Population.—The republic has an area of 7,225 square miles and a population officially estimated in 1894 at 803,534, all of Indian or mixed race except about 20,000 whites descended from Spanish settlers and recent immigrants.

Finances.—The duties on imports and exports provide the bulk of the revenue. Excise duties, stamps, the gunpowder monopoly, the road tax, and registration fees are other sources. In 1898 the revenue was \$4,609,630, and the expenditure \$5,266,638.

The foreign debt, amounting to £726,420, was assumed in 1899 by the Salvador Railroad Company, which exchanged its securities for the Government bonds and undertook to complete the railroad to San Salvador, the capital, receiving from the Government a subsidy of £24,000 a year. The internal debt, on which the interest is 4 per cent., exceeds \$9,000,000.

Commerce and Production.—The cultivation of the soil is the main occupation of the people. Coffee is the most valuable product. The growing of cotton is encouraged by a bounty from the Government of \$1 on every centner exported. Indigo, sugar, rubber, balsam of Peru, and tobacco are other products. There are 180 mines and quarries, and the mineral resources include gold, silver, copper, iron, and mercury. Commercial statistics were not published by the Government after 1896, but in 1900 a decree was issued for the reestablishment of the statistical bureau. The coffee-crop in 1901 was unusually large. The indigo-crop was also abundant.

Railroads and Telegraphs.—The railroad from the port of Acajutla to Santa Anna and Ateos was extended to San Salvador by the English company that assumed the old railroad debt, which completed the work in May, 1900. Other lines are under construction.

There are 1,850 miles of telegraph-wires.

SALVATION ARMY. This organization, now world-wide, for religious and philanthropic work among the classes which are not reached by the churches, was begun by the Rev. William Booth, a Methodist local preacher, in 1865, as the East London Mission among the poor of the

English metropolis. The name was soon changed to "Christian Mission," and in 1878 the designation "Salvation Army" was adopted, and a military form of organization was instituted, with military discipline and military titles. The Salvation Army was established in the United States in 1880, and its introduction into France in the same year was the beginning of its operation in other than English lands. In 1890 Mr. Booth published his book *In Darkest England and the Way Out*, a study of the conditions of the poor in England, and of possible remedies for its evils, and sketched an extensive and comprehensive scheme for the relief of the suffering he had found to exist. The publication was followed by the contribution of liberal sums for carrying out the plans proposed, and a considerable number of them have been put into successful operation. Forty-six countries are now occupied by the Salvation Army, while its officers preach in 31 languages and its periodicals are published in 20 languages. By a decision recently given by the highest German courts, it has been placed among the religious societies recognized as such by the state and entitled to protection. The Salvation Army is most important in Great Britain, and next in America. It had in the United States, in October, 1901, 735 corps or posts, with 3,025 officers and other laborers, and 207 social institutions for the working classes, giving daily accommodation to more than 8,000 persons; while between 30,000 and 60,000 persons were recorded annually as publicly professing conversion. The receipts reported through the national headquarters in New York city for the year ending Sept. 30, 1901, were: For the General fund, \$82,634; for social and relief branches (dealing only with institutions in Greater New York and departmental expenses for national oversight), \$76,070; for the property section, \$29,177; for the Harvest Festival of 1900, \$22,536; on account of the Self-Denial fund, \$42,836; for the National Funeral fund, \$5,195; for the Disabled Officers' fund, \$17,707; for the Indian Mission and Famine fund, \$2,407; for the Winter Relief fund, \$12,878. The assets and liabilities were balanced at \$1,249,345, and the accounts of the trade department at \$80,548. The social institutions and agencies for the benefit of working people, the poor, and the unfortunate include, in the principal cities, shelters for homeless men in 24 cities; shelters for homeless women in New York, Chicago, Boston, and San Francisco; homes for clerks and artisans; homes for girls working in stores and offices; homes for children in New York and San Francisco and on the farm colony in Colorado; rescue homes for fallen women in New York, St. Louis, St. Paul, Grand Rapids, Detroit, and other cities; maternity homes in Philadelphia and Chicago; slum posts for visitation and meetings in New York (where 20 officers are set apart for work of this character), Boston, Chicago, Philadelphia, Providence, Cincinnati, Cleveland, and St. Louis; slum

crèches or day nurseries for children in New York, Cincinnati, and Chicago; cheap-food depots and cent meals; cheap clothing and second-hand stores, which are operated in Chicago, Philadelphia, Newark, N. J., Jersey City, Brooklyn, Boston, and other cities, have been very successful; salvage brigades for the collection of household and office wash; wood-yards; employment bureaus; Knights of Hope for prison visitation and ex-criminals; winter relief; medical relief, including free dispensaries; summer outings for the poor; Christmas and Thanksgiving dinners; Missing Friends and Inquiry Department; and farm colonies. Three of these farm colonies have been established—at Fort Amity, Col., where the tract consists of 25,000 acres and great success has been attained in raising cantaloups, sugar-beets, and other crops; Fort Romie, in California; and Fort Herrick, in Ohio.

The report of similar benevolent work in England for the twelve months ending with December, 1900, mentions 188 food depots and shelters for men and women, providing 14,041 sleeping accommodations, at which 3,946,000 beds and 6,137,000 meals were supplied during the year; 60 workshops and salvage brigades for temporary employment of persons out of work, where 48,512 persons were given work; 36 labor bureaus, at which 6,367 persons found situations; 17 children's homes and day nurseries, sheltering 23,425 children; 12 farm colonies, occupying 25,562 acres of land and having 650 colonists, including men, women, and children; 132 slum posts; 11 homes for ex-criminals, supplying 382 accommodations, and through which 1,626 ex-criminals passed during the year, with 1,393 "satisfactory" cases; 94 rescue homes for fallen women, with accommodations for 1,937, sought during the year by 5,158 girls, 3,449 of whom proved satisfactory cases; 1,604 missing persons found during the year; and 59 other social institutions. These 609 institutions were cared for by 2,294 officers and other laborers. It is represented that at least 20 per cent. should be added to these figures on account of recently opened institutions from which returns were not complete. The total income of the Salvation Army is represented to be considerably more than £1,000,000 sterling a year, and its voluntary workers to number several hundred thousand persons.

SAMOA, a group of islands in the Pacific, formerly a kingdom under the joint protection and control of Germany, the United States, and Great Britain, divided by treaty in 1900 between Germany and the United States. Islands lying west of the meridian of longitude 171° east of Greenwich belong to Germany and islands lying east of that meridian to the United States. The Samoan act guaranteeing the independence and neutrality of the islands was signed at a conference at Berlin in 1889. The arrangement, though attended with much friction and general dissatisfaction, endured till after the death of King Malietoa Laupepa, in 1898. Trouble arose over the succession, and a joint commission recommended the abolition of the kingship. In November, 1899, Great Britain made an agreement with Germany renouncing all political rights over the islands of Savaii and Upolu in favor of Germany and over the island of Tutuila in favor of the United States. This was subject to its acceptance by the United States, which was signified in January, 1900.

The German Islands.—Savaii has an area of about 660 square miles and an estimated population of about 14,000; Upolu an area of 340 square miles and a population of 18,000. Both

islands are mountainous and have a fertile volcanic soil well supplied with water, as are the small islands adjacent. About 200 New Zealanders and British and 150 Germans, besides many Americans, Frenchmen, and other foreigners, resided on the islands when the Germans took possession. Apia, the seaport and trading center, had a municipality with a German at its head under the condominium. This official, Dr. Soli, was appointed Governor when the German protectorate was established. The inhabitants are a branch of the Polynesian race. They profess Christianity, part of them the Catholic and part the Protestant faith, and some are Mormons, but they are still influenced by heathen superstitions. The expenditures of the administration were estimated in 1900 at 252,000 marks and the local receipts at 200,000 marks, the Imperial Government contributing 52,000 marks.

Tutuila.—The island of Tutuila, which came into the possession of the United States in accordance with the Anglo-German agreement, has an area of 54 square miles and about 3,800 inhabitants. Manua and the other small islands in the American part of the group have an area of 25 square miles and probably 2,000 inhabitants. Tutuila is mountainous, exceedingly fertile, well wooded, and in its scenery and vegetation, its natural resources, and the character of its people, it is the most interesting, attractive, and promising island of the Samoan group. American traders and missionaries have long been active in the islands. American interests were relatively more important before the commercial expansion of New Zealand and the development of the copra trade by the Germans. The political interest of the United States Government in the islands began when the King was induced in 1872 to cede to the United States the harbor of Pago Pago for a naval and coaling station, less with a view to its immediate utilization than with that of preventing an impregnable natural stronghold within cruising distance of the American coasts from falling into the hands of another naval power. Under the joint protectorate it was provided that an American citizen should fill the office of chief justice in Samoa. The decision of Chief-Justice William Chambers in favor of the claim of Malietoa Tanu to the throne and against that of the ex-rebel Mataafa, although the latter had the strongest party among the natives, precipitated the civil strife of 1898. It was then that the American naval authorities first occupied Pago Pago. This landlocked harbor on the southern side of the island is the only safe one in Samoa, the best and most capacious in the Pacific, and one of the most defensible and suitable for a naval base in all the world. Commandant B. F. Tilley was appointed administrator of the American islands. Civil government was established in every part, but the native customs were not disturbed, nor the authority of the native chiefs.

All cases tried by native magistrates are reviewed by the High Court, and the native governors and other officials make careful reports to the administrator. A census taken of the population of the American islands in March, 1901, showed a total population of 5,800, a slight increase over the population in 1871. Infant mortality is excessive owing to the ignorance of the people, who since the American occupation have received medical advice and treatment for the first time and are subject to sanitary laws which are likely to lessen mortality. No intoxicating liquors are allowed to be sold to either natives or whites in Tutuila and Manua.

SANTO DOMINGO, a republic in the West Indies, occupying the eastern part of the island of Haiti. The Congress is a single chamber of 24 members, elected by direct qualified suffrage for two years. The President is chosen by an electoral college and serves four years. Gen. Juan I. Jimenez was elected President of the republic and Horacio Vasquez Vice-President for the term ending in 1903. The Cabinet at the beginning of 1901 consisted of the following secretaries of state: Interior and Police, Gen. J. Pichardo; Foreign Affairs, Enrique Henriquez; Justice and Public Instruction, S. E. Valverde; Fomento and Public Works, Gen. T. Cordero; Finance and Commerce, J. de J. Alvarez; War and Marine, Gen. T. D. Morales; Posts and Telegraphs, Gen. J. R. Vidal.

Area and Population.—The area is estimated at 18,045 square miles, and the population at 610,000, mostly of mixed white, Indian, and negro blood. Spanish is the language of the country, but in the towns many speak French or English. There are about 300 elementary schools, with 10,000 pupils in attendance.

Finances.—The revenue in 1895 was \$1,382,500, and expenditure \$1,351,250. In 1896 the revenue was \$1,545,450; in 1897, \$1,601,294; in 1898, \$1,550,294. In 1897 the foreign debt was converted into £2,736,750 of 2½-per-cent. bonds and £1,500,000 of 4-per-cent. bonds, both classes secured on the customs duties and other revenues, the collection of which was placed under the control of the Santo Domingo Improvement Company of New York. The Government of Gen. Jimenez was dissatisfied with the arrangement made with this company, and on April 1, 1899, default was made in the payment of interest. In 1901 the Government took the collection of duties into its own hands. Other foreign debts amount to £107,310, and there are internal debts of which \$2,845,550 are payable in gold and \$10,126,629 in silver.

Commerce and Production.—The imports in 1897 were valued at \$1,702,568 in gold, and exports at \$4,675,939; in 1898 the imports at \$1,696,280, and exports at \$5,789,997; in 1899 the imports at \$1,669,994, and exports at \$4,166,617. The export of sugar in 1898 was 49,300 tons, and in 1899 it was 50,963 tons; the export of mahogany was 929,980 feet in 1898 and 833,273 in 1899; the export of logwood was 2,182 tons in 1898 and 972 tons in 1899; the export of tobacco was 7,535 tons in 1898 and 3,999 tons in 1899; the export of coffee was 2,616,908 pounds in 1898 and 3,386,886 pounds in 1899; the export of cacao was 7,578,438 pounds in 1898 and 5,807,640 pounds in 1899. The export of bananas in 1898 was 469,000 bunches. The exports of hides, wax, honey, divi-divi, and rum are less important. The chief imports are cotton goods, hardware, and provisions. The United States has the largest share in the trade, the other West India islands have a good part, and of the imports, Spain and France contribute a large portion, while of the exports Germany and Great Britain take a valuable share. The number of vessels that were entered at Puerta Plata in 1899 was 162, of 157,106 tons.

Railroads, Posts, and Telegraphs.—There are 116 miles of railroad in operation, and new lines and extensions have been begun.

The post-office in 1898 handled 396,941 pieces of internal and 238,897 pieces of foreign mail-matter.

The length of telegraph-lines completed is 430 miles, and others are under construction.

SERVIA, a monarchy in southeastern Europe. The legislative power is vested in a single cham-

ber, called the Skupshtina, containing 1,898 members, elected by all adult male Servians who pay 15 dinars a year of direct taxes. The reigning King is Alexander I, born Aug. 14, 1876, who succeeded on March 6, 1899, to the throne upon the abdication of his father, Milan I, and assumed the royal authority on April 13, 1893. On Aug. 5, 1900, he married Draga Maschin, born Sept. 23, 1867. The Cabinet in the beginning of 1901 was composed as follows: President of the Council and Minister of Foreign Affairs, Alexa S. Yovanovich; Minister of the Interior, Laza Popovich; Minister of Justice, Nastas Antonovich; Minister of Finance, Dr. Mika M. Popovich; Minister of War, Lieut.-Col. M. Vassich; Minister of Public Works, Lieut.-Col. Andreas Yovanovich; Minister of Commerce, Agriculture, and Industry, D. Spassich; Minister of Public Instruction and Worship, P. Marinkovich.

Area and Population.—The area of Servia is 19,050 square miles. The population in 1895 was 2,312,484, mainly a farming people, only 13.3 per cent. of the total being dwellers in towns. There were 2,083,482 Serbs, 159,510 Roumanians, 46,212 gipsies, 6,437 Germans, 5,048 Jews, 3,731 Slavs of various races, 1,962 Magyars, and 6,102 others.

Finances.—The revenue in 1901 was estimated at 74,018,070 dinars, or francs, of which 28,220,000 dinars were derived from direct taxes, 6,336,400 dinars from customs, 4,380,000 dinars from excise, 3,390,000 dinars from law courts, 20,148,970 dinars from monopolies, 9,496,500 dinars from public works, and 2,046,200 dinars from other sources. The expenditure was estimated at 73,992,543 dinars, of which 1,200,000 dinars were for the civil list, 20,095,150 dinars for interest on the public debt, 1,560,000 dinars for dotations, etc., 454,310 dinars for the Skupshtina, 406,500 dinars for general credits, 2,950,365 dinars for pensions and subventions, 1,792,228 dinars for the Ministry of Justice, 1,802,715 dinars for the Ministry of Foreign Affairs, 9,246,869 dinars for the Ministry of Finance, 17,602,700 dinars for the Ministry of War, 3,401,031 dinars for the Ministry of Instruction and Worship, 3,588,929 dinars for the Ministry of the Interior, 8,044,847 dinars for the Ministry of Public Works, 1,486,547 dinars for the Ministry of Commerce and Agriculture, and 360,352 dinars for the court of accounts. The revenue collected in 1899 was 72,100,000 dinars, exceeding the estimates of 3,300,000 dinars. The budget for 1902 makes the revenue 72,820,000 dinars and the expenditures 72,815,000 dinars, a saving in expenditures of 1,175,542 dinars. The army budget, although containing a special appropriation of 1,700,000 dinars for armaments, is 3,000,000 dinars less than in 1901 and over 5,000,000 dinars less than in 1900.

The public debt on Jan. 1, 1900, amounted to 424,725,713 dinars, 351,551,993 dinars being the converted loan of 1895 paying 4 per cent. interest, 29,445,000 dinars the lottery loan of 1881, 9,795,500 dinars the loan of 1886, 3,750,000 dinars the Russian loan, 10,424,500 dinars loans secured on the tobacco and salt monopolies, 844,500 dinars a loan for a local railroad, 8,314,720 dinars a loan from the Bank of Servia, and 10,980,000 dinars a loan raised in 1899 at 5 per cent. There was in addition a floating debt formed by deficits year after year, which in 1901 amounted to 44,000,000 dinars.

The Army.—The active army, according to the estimate for 1901, consists of 661 officers and 14,000 men in the infantry, 101 officers and 1,400 men in the cavalry, 270 officers and 4,000 men in the artillery, 65 officers and 1,000 men in the engineers, and 151 officers and 800 men in the

train, sanitary corps, etc.; total, 22,448 officers and men. By mobilizing the reserves the strength can be brought up to 110,245 men in the 5 divisions, 14,863 independent cavalry, mountain, siege, and fortress artillery, pioneers, railroad troops, etc., and 35,643 depot troops; total, 160,751 men. The first ban of the militia contains 126,610 men and the second 66,005, making the total fighting strength 353,366 men. A scheme of army reform approved by the Skupshtina in 1901 reduces the period of service with the colors to eighteen months for the infantry while retaining the two years' period for the cavalry and artillery. The army consists of the regular national army, divided into 3 bans and comprising all able-bodied Servians between the ages of twenty and forty-five, and the Landsturm, comprising all between the ages of seventeen and twenty and the ages of forty-five and fifty. This Landsturm adds to the military strength of the nation a new reserve which in case of mobilization is destined for garrison duty. Students have to serve in the army only six months. A superior council of war was created by royal decree on Sept. 4, 1901, consisting of the Minister of War and 9 members, appointed for three years, whose duty it is to study and report on all matters concerning the organization, formations, and armament of the army, works of fortification, and schemes of mobilization which are laid before the council.

Commerce and Communications.—The soil of Servia is divided into farms owned by the cultivators, most of them from 10 to 30 acres in size. There were 293,421 owners in 1897. Corn occupied 448,334 hectares, grass 355,051, wheat 279,743, oats 100,087, prunes 97,971, barley 14,940, vines 60,000, hemp 8,198, tobacco 1,500, and flax 956 in 1897. The export of wheat in 1899 was 355,559 quarters; of barley, 103,822 quarters; of corn, 121,150 quarters. The export of dried prunes was 40,529 tons, and nearly as great a quantity was consumed in the distillation of prune brandy. The fruit is also exported fresh and made into preserves. Sheep, pigs, and cattle are exported in large numbers. There are 481,213 acres of forest from which barrel staves are obtained for export to the wine districts of Hungary and France. Flour-mills, breweries, and a few other manufactories exist, and to encourage their multiplication the Skupshtina voted in 1898 to give for new industrial enterprises free sites, exemption from customs duties and taxation, facilities for the purchase of fuel, a 25 per cent. reduction in freight rates, and a preference in the allotment of public contracts. Coal, iron, lead, zinc, quicksilver, antimony, asbestos, and copper are found, and concessions have been granted for gold-mining.

Political Events.—The Skupshtina met on Jan. 12, 1901, and listened to a speech from the throne, in which the King's marriage, an expected heir, the Czar's friendship, good relations with Austria, Turkey, and other states, and ridance from the former Government which had brought the country to the verge of anarchy, and from ex-King Milan, who had quit Servia forever, were described as omens of a better future, and the budget of 1901 was praised as clearing the way by serious and important economies for the restoration of the equilibrium of the public finances. A bill was passed for the reform of the judiciary, making judges irremovable and entrusting their selection to a board composed of the supreme court judges, the Minister of Justice, and the dean of the juristic faculty of the university, which shall propose their names to the King for appointment. The southwestern part

of the state copper-mines at Majdanpek were granted to King Alexander as a token of the devotion of his people. When King Milan died he was buried in Austrian ground, according to his last wish, although King Alexander begged to have his father's remains brought to Belgrade.

A Metropolitan named by Servia, Nicéphorus, was accepted by the Porte and consecrated in Constantinople on Feb. 3. On Feb. 18 the Cabinet was reconstructed. The Prime Minister took the portfolio of Justice, relinquishing that of Foreign Affairs to Dr. Michael Vuich. Nicola Stefanovich became Minister of the Interior. Mika Popovich was appointed Minister of Commerce *ad interim*. Of the new ministers one was a Radical and one a Progressist. The change facilitated the transition to a Radical Cabinet with a distinctly Russophil policy, and was viewed therefore with displeasure in Vienna. The Austro-Russian *entente* for the maintenance of the *status quo* in the Balkan peninsula was not involved in any change of Government in Servia or the other Slav states. Whatever racial bonds and political gratitude and sympathy are felt in Servia for Russia, the country must remain on good terms with Austria-Hungary, on which it is economically dependent. The King and his ministers consulted with the leading men of all parties about a new Constitution to be framed on liberal lines, guaranteeing complete freedom of elections, liberty of the press, freedom of thought, conscience, and religion, and the right of assembly and of association. The security of officials in the tenure of their offices, as well as the life tenure of judges, was one of the proposals of the Yovanovich Cabinet. The reorganization of the army was another. A revision of the income tax and a new administrative partition of Servia were also in the program.

On April 3 a further transformation of the Cabinet took place. Dr. Michael Vuich was made Minister-President; Peter Velimirovich, Minister of Public Works; Dragutin Stamenkovich, Minister of Justice. The Cabinet was now composed of 4 Radicals, 4 Progressists, and 2 neutral members. The new Constitution was promulgated on April 19. A Grand Skupshtina was not summoned to construct the new Constitution, as the existing Constitution prescribed, because such an assembly would waste valuable time. The King preferred to grant the Constitution to the people, and considered that in so doing he was the more bound to respect it scrupulously forever. The ministers formally tendered their resignations and were reappointed. The King in a proclamation said he was resolved that the new Constitution should establish regular relations between the legislative and the executive power and secure a permanent system of government based on strict legality and civil liberty. The Constitution settles the form of government, the powers of the King and of the state, the rights of subjects, and the working of the national representation, but it leaves details to be arranged by legislation. The power of the executive is far more extensive than under the last Constitution, that of 1888, yet it can not be exercised summarily by the method of decrees, as the Constitution of 1869 allowed, but only by regular legislation accepted and approved by the King, the Senate, and the Chamber of Deputies. In the Chamber the intelligent classes have a greater proportional representation than the Constitution of 1888 gave them. The Senate, which is a new institution in Servia, consists of the Crown Prince, if of full age, the Metropolitan of Servia, the Bishop of Nish, 30 members nominated for life by the King, and 18 members elected by the people, 1 in each rural

electoral district and 2 in Belgrade, the payment of 45 dinars in taxes giving the right to vote, while candidates must have property on which they pay 200 dinars a year in direct taxes and have the age of forty years. It is the business of the Senate to revise and improve the laws elaborated in the Chamber of Deputies. Special and class tribunals are henceforth forbidden in Servia. For the Chamber of Deputies the electoral qualifications are the same as they have been for the Skupshtina under both of the former Constitutions. To be elected one must be thirty years old and pay 60 dinars of taxes.

On May 10 M. Marinkovich and Lieut.-Col. Vassich resigned from the Cabinet, and the King appointed Prof. Kovatchevich Minister of Public Worship and Education and Col. Yankovich Minister of War. This reduced the number of Progressists by half, leaving only half as many of them as there were Radicals. King Alexander and the Servian people were disappointed in their expectation that Queen Draga was about to give birth to a child, the mistake having arisen through an erroneous medical diagnosis. The first elections for the Skupshtina under the new Constitution took place on Aug. 4. The result was a striking victory for the Government and the section of the Radical party supporting it. In a house of 130 members the Ministerialists won 110 seats, 84 of them belonging to Radicals and 26 to Progressists, while the Opposition consisted of 14 Independent Radicals and 6 Liberals. The senatorial elections were held on Aug. 18. The elective Senators hold their seats for six years. The Liberals, who were opposed from the beginning to a second chamber, took no part in the voting, and the other parties manifested little interest. Every one of the elected belonged to the ministerial wing of the Radical party. The King had already nominated the life members, taking them from the Radicals of the Vuich and Milovanovich section and from the Progressists in something like the same proportion in which they were represented in the Cabinet. The Skupshtina was opened on Oct. 20. Acts of violence committed by Albanians upon the Serbs of Old Servia were spoken of as regrettable in the speech from the throne and more sharply censured in the address in reply. The Macedonian committee, which had extended its operations to the northern frontiers of Albania, stirred the resentment of the Mohammedans of Novi Bazar, who made no distinction between the different kinds and races of Christians. The local authorities were indulgent toward the Albanian population, which ordinarily is peaceful and industrious, but who now were discontented with the Turkish Government because instead of the tithes a heavier tax had been imposed requiring an eighth of the produce of the soil and the increase of flocks and herds. Quarrels had also arisen between the Albanians and the Montenegrins inhabiting the Servian frontier. The Porte immediately took energetic measures when the troubles broke out. (See TURKEY.) The Servian Government took no active steps, being anxious to avoid misunderstandings that might arise at such a delicate point of the frontier, but prepared for an emergency by preparing to send reinforcements to the frontier guard.

SEVENTH-DAY BAPTIST CHURCH.—

The statistical reports of this Church made to the General Conference in August, 1901, give the following footings: Number of churches, 116, of which 84 made reports; of ministers and missionary pastors, 122; of licentiates, 2; of members reported, 9,257; of Sabbath-keeping residents, 10,-

575; amount of money raised for all purposes, including personal gifts, \$50,409. Of the churches, 2 were in England, 1 in Shanghai, China, 2 in Holland, 1 in Denmark, 1 in Germany, and 2 in Africa. Sixty-nine reporting out of the 88 Sabbath-schools returned 6,354 members, with about \$2,291 as the amount of money raised. The Young People's Societies of Christian Endeavor reported 2,036 general and 811 junior members, with total contributions of \$1,879. The Education Society returned receipts and expenditures of \$2,501, a principal account of \$6,316, and endowment funds of \$43,961. The denominational institutions concerning which reports were made include Salem College, Milton College, Wis., Alfred University, N. Y., and the Theological Institution. The Tract Society had received \$15,451 and had a permanent fund of \$4,400. The society maintained a publishing house at Plainfield, N. J., and branch offices at Columbus, Ga., Peticoadiac, New Brunswick, and Milton Junction, Wis.; published a newspaper and Sunday-school helps; assisted in the publication of a paper at Haarlem, Holland; and was engaged in the publication and circulation of tracts. The Missionary Society had received \$15,308, and returned permanent and other funds and property approaching \$50,000 in value. Besides local home missions and the special work of evangelists and "student quartets" (76 workers in all), it returned 4 missionaries and 11 native helpers at Shanghai, China, 2 native workers on the Gold Coast in Africa, and 2 workers at Haarlem and Rotterdam, Holland. An industrial mission had been opened in Africa by the Sabbath Evangelizing and Industrial Association, which had received \$12,259, and had stationed 2 agents at Cholo, British Central Africa. The Woman's Board, formed in 1881, had assisted in the support of missionaries in the work of the Tract Society, and in the cause of education.

The Seventh-Day Baptist Memorial fund, applied to educational and benevolent objects, amounted to \$325,739.

The ninety-ninth General Conference met in Alfred, N. Y., Aug. 28. The Rev. Earl P. Saunders was chosen president. The Committee on Denominational History reported progress in collecting the publications of Seventh-Day Baptist people and supplying them to institutions, and gathering and preserving manuscripts, documents, portraits, etc. In view of the next year being the one hundredth anniversary of the General Conference, a special program was prepared for a centennial celebration to be held by the conference meeting at Ashaway, R. I.

SOUTH AFRICA. With the conquest of the two Boer republics the whole of South Africa becomes British territory excepting the coast regions belonging to Portugal in the east and west and the unproductive sphere of Germany in the southwest. British South Africa thus expanded has an area of about 1,000,000 square miles, of which 700,000 square miles are south of the Zambesi, for the most part already provided with civilized institutions and exceedingly productive, and 300,000 square miles are a promising region of great natural agricultural and mineral wealth extending from the Zambesi northward to the boundaries of German East Africa and the Congo Independent State. The export trade of South Africa in 1898 amounted to £25,730,000, of which £20,528,000 stand for minerals.

Cape Colony.—The colony of the Cape of Good Hope has had responsible government since 1872. The legislative power is vested in a Legislative Council of 23 members elected for seven years and a House of Assembly of 95 members elected

for five years. The electoral franchise is possessed by adult males who occupy house property of the value of £75 or receive a salary of £50 a year, and are able to write their names, occupations, and addresses on the register. There were 119,748 registered voters in 1899. The Governor, appointed by the Crown, appoints ministers from the majority party in the Cape Parliament. The Governor in 1901 was Sir Walter F. Hely-Hutchinson. The ministry was composed as follows: Prime Minister and Treasurer, Sir Gordon Sprigg; Colonial Secretary, T. L. Graham; Attorney-General, R. Rose-Innes; Commissioner of Public Works, Dr. J. W. Smart; Secretary of Agriculture, Sir Pieter Faure; without portfolio, J. Frost.

The colony, including Pondoland and British Bechuanaland, annexed in 1894 and 1895, has an area of 275,775 square miles. The colony proper and Griqualand West, having an area of 206,613 square miles and 366,618 European and 663,252 colored inhabitants in 1891, contain 77 divisions. East Griqualand, Tembuland, the Transkei, Wal-fish Bay, British Bechuanaland, and Pondoland, having comparatively few white inhabitants, are governed as native territories. The number of marriages registered in the colony in 1899 was 8,506; of births, 14,966 Europeans and 38,777 colored; of deaths, 6,687 Europeans and 30,200 colored. The number of arrivals by sea in 1899 was 26,510, and of departures 28,381.

The revenue of the colonial Government from all sources in 1899 was £8,781,212, of which £2,358,674 came from taxation, £3,469,019 from services, £321,074 from the colonial estate, £168,807 from fines, stores issued, etc., and £2,317,434 from loans. The total expenditures were £8,190,124, of which £1,310,446 were for the public debt, £2,036,944 for railroads, £307,715 for defense, £538,438 for police and prisons, £182,389 for the civil establishment, and £1,265,599 under the loan acts. The expenditures voted for 1901 were £6,888,352.

The Cape mounted rifles, whose normal strength is 1,003 officers and men, is the only colonial military force except the Cape police, numbering 1,990 officers and men, and the volunteers, who in 1898 numbered 6,953. A garrison is kept at the naval fortress of Simons Bay by the Imperial Government, which expended £306,308 for military and £200,000 for naval purposes in 1898.

The value of imports of merchandise into Cape Colony in the year ending June 30, 1899, was £14,561,373; total imports, including specie, £19,207,549; exports of colonial produce, £22,831,386; total exports, £23,662,538. The exports of gold were £13,815,683, against £15,394,442 in 1898, £10,991,926 in 1897, £8,252,543 in 1896, and £7,975,637 in 1895. The exports of diamonds from 1867 to 1899 have amounted to £92,013,567. In 1899 the diamond exports were £4,135,583, against £4,566,897 in 1898, £4,454,000 in 1897, £4,646,487 in 1896, and £4,975,637 in 1895. The value of wool exported in 1899 was £2,183,904; of ostrich feathers, £842,000; of Angora hair, £779,899; of copper ore, £446,985; of hides and skins, £408,282; of grain and meal, £22,487; of wine, £19,224. The imports of textile fabrics and clothing in 1899 were valued at £3,941,838; of articles of food and drink, £3,704,745. The total value of imports for the year ending June 30, 1900, was £22,800,026, including £2,640,068 of specie, against £4,646,628 in 1899. The exports were £9,848,472, showing an increase of about £2,500,000 in diamonds and a decrease of £4,000,000 in gold.

The number of vessels that entered at ports of Cape Colony during 1899 was 1,118, of 3,324,147

tons, besides 1,304 coasting vessels, of 4,213,079 tons; cleared in the foreign trade, 1,070 vessels, of 3,175,855 tons; cleared coastwise, 1,302, of 4,257,976 tons. The merchant marine of the colony on Jan. 1, 1900, consisted of 31 steamers, of 5,483 tons, and 6 sailing vessels, of 453 tons.

The Government up to Dec. 31, 1899, had expended £20,930,573 in the construction of railroads. There were 1,990 miles completed and 500 miles building in the Government system, outside of which there were 400 miles of private lines. The average cost per mile of the Government lines was £10,517. The number of passengers carried in 1899 was 11,006,870; tons of freight, 1,260,038; gross earnings, £2,792,975; working expenses, £1,830,321. The net earnings in 1900 were 6½ per cent. on the capital.

There were 7,360 miles of telegraph-lines in the colony on Jan. 1, 1900. The number of messages in 1899 was 2,582,451; receipts, £148,059; expenses, £156,666.

The Cape Parliament was not convened in 1901. Most of the colony was under martial law, which was extended eventually to Cape Town and the other seaports and embraced the whole colony. Many of the members of Parliament who belonged to the Afrikaner Bond were either fugitives from the country or under arrest or unseated in consequence of conviction for treason or sedition. Still the Progressive party could count only on a bare majority which would disappear if free elections were held for the vacant seats. A large proportion of the voters were fighting in the field on one side or the other. Mr. Rose-Innes resigned the attorney-generalship in May to accept a post in the civil government of the Transvaal Colony. As no provision had been made for public expenditure after June 30 the Governor by advice of the ministers issued warrants for the levying of taxes, relying on a bill of indemnity. Parliament was prorogued repeatedly.

Natal.—Members of the Legislative Council in Natal are nominated for ten years by the Governor with the advice of the ministers. There are 12 members, 1 of whom represents Zululand, which was annexed to the colony in 1897. The Legislative Assembly contains 39 members, 2 of them representing Zululand. The members are elected for four years by adult males qualified by the possession of real estate worth £50 or paying £10 rent or having an income of £96. There were 11,115 electors in 1898. The Governor is Col. Sir Henry Edward MacCallum, who entered on his duties in March, 1901. The ministry at the beginning of 1901 was composed as follows: Premier and Minister of Lands and Works, Lieut.-Col. Sir A. H. Hime; Attorney-General and Minister of Education, H. Bale; Secretary for Native Affairs, F. R. Moore; Colonial Secretary, C. J. Smythe; Treasurer, W. Arbuckle; Minister of Agriculture, H. D. Winter.

The colony, with the province of Zululand, has an area of 35,019 square miles. The population in 1898 consisted of 53,688 Europeans, 61,103 East Indians, and 787,574 Kaffirs; total, 902,365.

The revenue for the year ending June 30, 1899, was £2,081,349, and expenditure £1,914,724. The revenue from railroads was £1,053,411; from customs, £436,917; from the native hut tax, £135,409; from the post-office, £59,403; from port and wharf dues, £56,290; from sales of public lands, £46,890; from stamps and licenses, £33,629; from excise, £28,293; from telegraphs, £26,623. The expenditure on railroads was £677,755; on public works, £168,470. The expenditure out of loans was £381,047. The amount of the public debt on June 30, 1899, was £9,019,143. The de-

fensive forces are the mounted police, numbering 659, who cost the Government £172,287 in 1899, and 1,151 volunteers, for whom the Government contributed £46,095.

The main crop of the colony is sugar, raised by European planters with native and Indian labor. Tea has been planted on 2,666 acres. The Europeans cultivate altogether only 157,370 acres, although 7,000,000 acres in the colony proper have been conveyed by grant or purchase to Europeans and 1,750,000 acres sold to settlers on instalments, leaving only 1,153,400 acres still belonging to the Government besides 2,500,000 acres reserved for the natives. The area tilled by natives is 360,232 acres; by Indians, 24,725 acres. In Zululand, 200,000 acres of the total area of 6,700,000 acres have been alienated. Corn is grown extensively by the natives, and the colony produces wheat and other cereals. The total value of imports in 1899 was £5,359,259, and of exports £1,325,197. The chief exports were wool of the value of £608,711; gold, £402,696; coal, £155,043; sugar, £147,499; hides and skins, £65,157; bark, £57,885; Angora hair, £39,964. During 1899 there were 734 vessels, of 1,397,306 tons, entered and 716, of 1,381,346 tons, cleared. The merchant marine comprised 14 sailing vessels, of 699 tons, and 14 steamers, of 2,495 tons. There are 591 miles of Government railroads, built at a cost of £7,267,588; receipts in 1899 were £940,100, and expenses £628,942. On July 26, a railroad 77 miles in length from Durban to Port Shepstone on the south coast was opened. A line from Pietermaritzburg to the border of Cape Colony near Riverside was approved by Parliament. The Natal Parliament met on May 17. A loan of £3,000,000 for improving Durban harbor and for railroads and other public works was authorized. War expenditure for the coming year was estimated at £850,000. The colony would pay £360,000 for the volunteers. The total expenditure, estimated at £4,384,335, included £1,500,000 out of loans for reproductive works.

Bechuanaland Protectorate.—The territory between the Molopo and the Zambesi rivers, having an area of about 213,000 square miles and 200,000 population, is a protectorate governed by the native chiefs under the supervision of a British Resident Commissioner. Palachwe, the town of Khama, the principal chief, has 25,000 inhabitants. The natives raise cattle and cultivate the ground. Spirits are not permitted to be sold. The revenue in 1897 was £47,511, and expenditure £88,448. The hut tax is collected by the native chiefs. The mounted police in 1897 numbered 12 officers and 115 men, and the native police 60.

Rhodesia.—The territories administered by the British South Africa Company, which obtained a royal charter in 1889, are brought under the control of the Colonial Office in London by the order in Council of Nov. 25, 1898, which confers also the beginnings of representative government. A Resident Commissioner is appointed by the British Secretary of State for the Colonies, whose approval is necessary for the appointment of the company's administrators and judges and the members of the Executive Council, of whom not fewer than 4 are nominated besides the Resident Commissioner and the administrators of Matabeleland and Mashonaland. The Legislative Council is composed of the same officials, 5 members nominated by the company and approved by the Secretary of State, and 4 members elected by the registered voters. Estimates of revenue and expenditure are submitted by the administrator to the Legislative Council, and when sanctioned

by that body must be referred to the High Commissioner. Ordinances passed by the administrator and Legislative Council go into operation after they receive the approval of the High Commissioner, but they may be revoked by order of the Secretary of State at any time within a year. There is a Secretary of Native Affairs, and natives enjoy the same legal rights as whites except that they may not obtain arms, ammunition, or liquor. Lands are reserved for them, and if these are taken by the company for mining purposes, new locations must be found for the tribes that are dispossessed. The military police are under the direction and control of the High Commissioner. The Resident Commissioner in 1901 was Lieut.-Col. Sir Marshal J. Clarke, and the company's administrator in Mashonaland was W. H. Milton.

The river Zambesi forms the boundary between Northern Rhodesia and Southern Rhodesia. In Southern Rhodesia, comprising Mashonaland and Matabeleland, are the settlements of whites and the mines that attracted them. Its area is estimated at 192,000 square miles. Matabeleland, with a native population of 148,000, had 8,835 European settlers in 1900, and Mashonaland, with 302,000 natives, had 3,130. The high plateaus in the latter province are believed to be adapted for European pastoral and agricultural settlements. The gold-fields of Rhodesia, extending through both provinces, are estimated to have an area of 5,240 square miles. There were 220 mining companies in 1900, but the amount of gold produced up to the end of that year did not exceed 166,000 ounces. A company has been formed to dig coal in Wankies, near the Zambesi river, where the coal-fields have an extent estimated at 400 square miles. Besides Salisbury, the capital, Buluwayo, Umtali, Victoria, Gwelo, Enkeldoorn, Melsetter, and Rusapo have been organized as townships. The Rhodesian Railroad, being the continuation from Vryburg to Buluwayo of the railroad from Kimberley, earned £99,290 net in 1898, exclusive of the subsidies of £20,000 from the Imperial Government and £10,000 from the British South Africa Company. The line is to be extended first to the Wankies coal-fields and the falls of Zambesi, afterward through Northern Rhodesia to Lake Tanganyika, and ultimately it is planned to carry it through German territory into British East Africa to connect with a line continued up the Nile through the Egyptian Soudan to Uganda, thus giving continuous rail communication from Cape Town to Alexandria. A branch of the Rhodesian Railroad is to be constructed from Buluwayo south to Gwanda, 80 miles, to be extended later to Tuli. The railroad from Beira, on the coast of Portuguese East Africa, to the frontier station of Umtali was continued in the spring of 1899 to Salisbury. A line from Salisbury to Buluwayo is under construction. A railroad 300 miles long beyond the Victoria Falls is proposed, to tap a country rich in copper and pass through coal-fields.

The Rhodesian post-office in the financial year 1900 forwarded 610,510 letters and postal cards to points in South Africa and 223,847 to places beyond seas, 207,982 newspapers, books, and parcels altogether, and 29,840 registered letters and parcels; revenue, £18,167; expenditure, £26,122. The telegraph-lines have a length of 3,451 miles; number of paid despatches in 1900 sent and received, 146,009; receipts, £25,300; expenses, £24,745. The British South Africa Company obtains its revenue from mining, trading, and professional licenses, business stands, and the postal and telegraph services. The revenue for the year ending

March 31, 1901, was estimated at £426,800, and the expenditure at £781,317, inclusive of supplementary estimates. The authorized capital of the company is £5,000,000, of which £4,375,000 have been issued, besides which there are £1,250,000 of debentures. Of a total expenditure by the Government of Southern Rhodesia of £729,922 in 1900, native affairs took £227,257, the military and police £205,532, and mines and public works £101,530. The Chartered Company advanced £363,543, the hut tax yielded £73,938, stamps and licenses £118,409, posts and telegraphs £42,277, sales of stands and farms £12,617, customs £40,591. For the war in the Transvaal and the defense of the border Rhodesia contributed to the imperial forces 1,500 men, an eighth of the total European population. The Government took extra measures to maintain the supplies of food and the mining requisites in order to avoid the necessity of discharging both white and native workmen, which would have a specially disastrous effect on the native mind. The main problem in the development of Rhodesia is the labor supply. The attempt to compel the Matabeles to work proved a failure. Laborers brought from Portuguese Africa and other East African countries as far as Abyssinia are worked in chain-gangs and no further supply can be obtained. The Nyasaland administration will not allow laborers to be recruited in its territory. The Legislature in July, 1901, passed an immigration bill to provide for and regulate the importation, management, and disposal of laborers. It is proposed to bring coolies from India and from China under Government restrictions as to their return. In Mashonaland £400,000 of gold was produced in 1901, and treble that amount was expected in 1902.

Northern Rhodesia is the enormous tract of country between the Zambesi and the confines of the Congo State and German East Africa and between the Portuguese possessions on the east and the west coasts of Africa south of the equator; only the British protectorate of Central Africa, south and west of Lake Nyasa is excluded. Extensive regions are unexplored or but little known. The British Central Africa Protectorate by arrangement with the Imperial Government has undertaken to protect with its armed forces Europeans in Northeastern Rhodesia, which for administrative purposes is separated from Northwestern Rhodesia and has its present seat of administration at Fort Jameson, on the Tanganyika plateau, where Robert E. Codrington is Administrator. The area of Northwestern Rhodesia is estimated at 120,000 square miles, with a native population of 256,000 and not over 130 Europeans. The telegraph has been extended from the Zambesi at Zomba to Kassanga on the German shore of Lake Tanganyika. In Northeastern Rhodesia are elevated plateaus where Europeans can live in comfort and rear cattle and cultivate grain and European fruits, as well as coffee, and where there are native fiber plants that could be utilized. Gold has been found in the south, and near Lake Nyasa are coal deposits.

Northwestern Rhodesia is nearly coextensive with Barotseland, the great kingdom established by a Kaffir horde from the south. It is well populated, has an abundance of water, and is adapted for grazing and for the cultivation of rice, cereals, coffee, and rubber. The company's administrator is Major R. T. Coryndon, who has his headquarters at Lialui, the kraal of the Barotse king.

Orange River Colony.—The Orange Free State was declared to be annexed to the British Empire by a proclamation issued on May 24, 1900,

receiving the name of the Orange River Colony. The places under British control were under military rule in the beginning of 1901, and wherever British dominion was not upheld by arms the republican Government still had authority, although it had no fixed seat of government. The British Government appointed Sir Alfred Milner, High Commissioner of South Africa and previous to this time Governor of Cape Colony, to be Governor of both the Transvaal and the Orange River colonies, and as Lieutenant-Governor of the Orange River Colony under him Brig-Gen. H. J. Goolt-Adams was appointed. Civil government was promised as soon as military and political conditions should permit. The Lieutenant-Governor as well as the Governor was to be assisted by an Executive Council, composed of the principal officials and perhaps additional members. The British authorities proposed to disturb the local laws and customs as little as possible, to consult local opinion, and as soon as the conditions should warrant to introduce constitutional self-government, in the meantime creating municipalities at Bloemfontein and other towns, leaving to local authorities their usual administrative powers, and in making appointments to administrative offices to give the preference to men born in the country.

The President of the Orange Free State, elected in 1896 for the term ending Feb. 19, 1901, was M. T. Steyn; Vice-President, J. B. Hertzog.

The area is estimated at 48,326 square miles. The population at the census of 1890 was 207,503, of whom 77,716 were white and 129,787 colored. Of the whites 51,910 were born in the Free State, 21,116 in Cape Colony, 1,002 in the Transvaal, 860 in Natal, 56 in Griqualand West, 2,549 in Europe, and 214 in other parts of the world. The revenue in 1898 was £799,758, including £408,578 from railroads; expenditure, £956,752, including £508,478 for railroads. Under republican law every burgher between the ages of sixteen and sixty was obliged to take up arms when summoned by the field-cornet, or captain of his district. The strength of this militia in 1899 was estimated at 22,314 men, all of whom took the field against the British.

The surface of the country consists of rolling plains which are excellent for pasturage but subject to drought and unsuitable for agriculture. Less than 1 per cent. of the soil is tilled. The production of diamonds in 1898 was 307,148 carats, valued at £1,508,661. There are valuable coal-mines, and gold has been found. The total imports in 1898 were £1,190,932, and exports £1,923,425 in value. The railroad, running from Norval's Pont, on the Orange river, through Bloemfontein to Viljoens Drift, on the Vaal river, connecting there with the Transvaal system, was built by the Cape Government and transferred in 1897 to the Government of the Orange Free State, which undertook to pay £1,800,000. The total cost of the railroads, which have a length of 392 miles, was £2,771,945. The telegraph-lines have a length of 1,480 miles, with 1,700 miles of wire, not including 420 miles of railroad telegraph, with 1,119 miles of wire. The public lands have an aggregate area of 5,500,000 acres. Sir David Barbour, who examined the financial resources of the country for the British Government, estimated the normal revenue at £756,000 and the normal expenditure at £491,000 for administration, leaving an average surplus of about £250,000, which would be reduced to £150,000 by the expenses of a loan of £2,000,000 to be raised in order to pay compensation in Cape Colony and Natal and to repair the ravages of war. The British Govern-

ment will have to support the constabulary almost entirely and can never, according to this report, recover any of the war expenses from the Orange River Colony. The receipts of the British military administration from the date of the occupation to June 30, 1901, were £402,925, and the expenditure £386,038. The purely civil revenue was £301,800 and the expenditure £217,974. The receipts from quit rents were £11,823; from customs, £151,000; from licenses and stamps, £28,000; from the native poll-tax, £10,100; from the post-office, £43,636. A commission was appointed in October, 1901, to inquire into the working of the Free State laws with reference to the leasing of Government farms upon conditions of personal occupation, the burghers not being the owners of the land; also to report on the conditions under which farms are held by whites and natives in the Moroka district and on prospecting, developing, and working mines on Government land. A royal commission which was appointed to study the question of the resettlement of the land in the republics after the restoration of peace suggested the confiscation of the Boer farms or the compulsory sale of private lands for settlement. Another plan was for the Government to buy up and foreclose the mortgages on the farms, which in many cases amount to 50 per cent. or more of the value. The object is to plant loyal British settlements in the midst of the hostile Dutch population which should be numerous enough to give a majority of votes when self-government is restored. The conditions of farming are so precarious in South Africa, owing to drought, locusts, rinderpest, and other dangers, and the conditions of life are so wild and monotonous, that practical British farmers could not exist there and Canadians and Australians saw no inducements. A few hundred men applied to the land commission, but their object was to obtain grants of land to speculate with, for they had no experience in farming nor desire to become farmers. The commissioners suggested offering £150 as a loan or gift to every British settler. The British Government recognized later that the resettlement of the land even by the Boers would necessitate financial aid from the British Government. Lord Kitchener and Sir Alfred Milner, in treating with Gen. Botha for peace, promised that money should be given them to replace the buildings that the British troops had burned and the breeding stock they had driven away. Mr. Chamberlain would only agree to loaning them the money, and as the Boers were unwilling to become debtors of the British Government, subject to eviction at any time, this and the question of amnesty to the Cape rebels were the points on which peace negotiations broke down in the spring of 1901. An outbreak of virulent rinderpest spread through the Orange River and Transvaal colonies in the autumn of 1901. The public lands of the Orange Colony were about 150,000 acres in extent. An experiment in settling discharged soldiers as military colonists was tried in the vicinity of Bloemfontein. They were provided with seed, tools, and live stock, and no rent was charged during the experimental period.

The Transvaal.—After the capture of Pretoria, the capital, by the British army the South African Republic was declared to be annexed to the British dominions under the name of the Transvaal Colony by a proclamation issued on Sept. 1, 1900. Sir Alfred Milner was then appointed Governor of the Transvaal Colony and the Orange River Colony and replaced as Governor of Cape Colony by Sir Walter Hely-Hutchinson, previous to that Governor of Natal. A con-

stitution for the new colony was promised as early as circumstances would permit, and municipal government was expected to mitigate military rule in Johannesburg, Pretoria, and other towns. President S. J. P. Kruger, who was elected in 1898 for the fourth consecutive term, lasting till May 12, 1903, departed for Europe to seek the intervention of foreign powers; yet the republic still asserted its existence, Vice-President Schalk Burger assuming the presidential authority and acting in conjunction with Commandant-General Louis Botha and other commandants in the field and with President Kruger and State-Secretary F. W. Reitz in Europe.

The area of the Transvaal is 119,139 square miles. The white population was officially estimated in 1898 at 245,397, and the native population at 748,759. The revenue of the republican Government in 1898 was £3,983,560, and expenditure £3,971,473. In 1899 the revenue raised with the aid of war-taxes was £4,500,000. The military force, comprising under the law the entire adult male population, was estimated in 1899 at 29,279.

The Transvaal, solely a pastoral country prior to the discovery of gold in 1884, led all other countries in the production of gold when war broke out with Great Britain in October, 1899. The production, only £10,096 in 1884 and £6,010 in 1885, grew to £967,416 in 1888, £5,480,498 at the end of the next five years, £7,667,152 in 1894, £8,569,555 in 1895, £8,603,821 in 1896, £11,476,260 in 1897, and £16,044,135 in 1898. The total production from the first opening of the mines until regular operations were stopped by the war was £82,465,000 in value. The amount of gold accessible on the Witwatersrand has lately been estimated at £2,871,000,000 sterling, giving a net profit of £730,000,000. The only limit to the exploitation of the Rand is supposed to be the ultimate depth at which mining can be carried on. Gold may yet be discovered in large quantities in the eastern and western extensions of the Rand and in the quartz reefs of other parts of the Transvaal. The Klerksdorp, Heidelberg, and Barberton mines have been profitably worked, but are not so productive as those on the Rand. The Transvaal Government charged a fixed annual license fee for each claim, the claims being bounded by vertical lines. No other tax was imposed save the indirect taxes paid by the mining community, until in 1898 a tax of 5 per cent. was levied on profits. The license tax operated to the advantage of the richer mines, so that Johannesburg paid 1.7 per cent. of its output and Heidelberg 33 per cent. On land leased from the Government 2½ per cent. of the gold output was paid. Sir David Barbour, who was commissioned to inquire into the financial circumstances of the Transvaal and Orange River colonies and to suggest measures by which their revenue and expenditure could be placed on a satisfactory footing and the extent to which they may be fairly asked to contribute toward the cost of the war, recommended the conversion of this into a 7-per-cent. tax on profits. He proposed a 3-per-cent. tax on the profits of joint-stock companies other than mining companies. Discoveries of new gold-mines he would encourage by opening areas to prospectors without their being required to obtain the consent of the owners and by lightening the heavy license fees. There were about 80,000 Kaffirs employed in the Rand mines, whose average wages were £3 a month, five-eighths of which they spent for pleasures and ornaments and the rest they carried away to buy a wife and settle in their own homes unless they were robbed or

cheated out of it on the way. The sale of liquor to Kaffirs was forbidden by the Transvaal law, yet enough of it was sold to make many Johannesburg millionaires and hundreds of them wealthy. European clothing, gay belts, caps, cravats, and other wares of flimsy make, largely imported from Germany, were a source of riches to other traders. The stores which catered to the whites did a large aggregate business also. The wages of the white laborers averaged £30 a month. When the republican Government restricted mining to 12 mines the business of Johannesburg proportionally diminished, and it ceased altogether when the British took the city. The merchants fear that the English will introduce the compound system as it exists at Kimberley, where the blacks are confined in their quarters and purchase everything from the company's stores. The pass and labor laws which the Volksraad made in 1898 and 1899 at the request of the mining companies of the Rand prescribed flogging for being found without a pass and for every offense that a Kaffir could commit, and made the penalty for breaking their labor contract and running away specially severe. Lord Kitchener, acting High Commissioner, in June, 1901, ordered that lashes should no longer be inflicted without a magistrate's order, and abolished flogging for slight offenses, yet for being at large without a pass the penalty was increased from £5 fine or two months' imprisonment to £10 fine or three months' imprisonment and 25 lashes. The difficulty of obtaining labor is the principal one that mine owners have to contend with in South Africa. Before the war wages were so high that low-grade ores could not be worked, so high even for high-grade ores that the mine owners determined to reduce them 33½ per cent., which could not be done unless they had power to compel laborers to work for less than they were willing to take. The great majority of black men, even when willing to work above ground, have an insuperable objection to going below ground. Latterly the main supply of labor was obtained from certain tribes in Mozambique and other Portuguese territories. The Transvaal Government refused to coerce the natives in its own dominions to work in the mines as the mine owners endeavored to get it to do.

Diamonds have since 1897 been found in the Transvaal in formations similar to those of Kimberley. Silver, copper, lead, tin, and other minerals have been discovered in promising deposits. Iron is found in proximity to coal-beds, and these are, next to gold, the most important resource of the country, as they are estimated to contain within reach 60,000,000,000 tons of coal.

The agricultural possibilities of the Transvaal are great excepting in some barren regions. The strip extending from Pretoria westward to Zee-rust contains 10,000 square miles of well-watered land of inexhaustible fertility, growing wheat, tobacco, oranges, and fruit of every kind. There are other districts similar to this in climate and productive capacity. Northeast of Pietersburg, in a semitropical climate, German settlers have had flourishing plantations of sugar-cane, tobacco, coffee, bananas, pineapples, and oranges. Maize is a common product throughout South Africa. Sheep and cattle have been the main reliance of the Boers, and ostriches and goats have been raised. Agriculture has been carried on principally by the Kaffirs. The Transvaal has always been obliged to import foodstuffs.

The length of railroads in the Transvaal is 774 miles; of telegraphs, 2,200 miles, with 5,650 miles of wire. A dependency of the Transvaal is the

native district of Swaziland, inhabited by about 50,000 natives of the Zulu race, governed by their own paramount chief, while a commissioner of the South African Republic was at the head of the general administration, collecting a revenue of £35,000 and having a police force of 110 men. There were about 1,200 white settlers who had obtained grazing farms from the Swazi chiefs. The Swazi number about 60,000. In the Transvaal proper there are believed to be actually more than 1,000,000 Kaffirs and in the Orange River Colony 150,000. Of the Transvaal natives about 750,000 live under their own chiefs in the bush veld and the low country of the Zoutpansberg, the Lydenburg district, and other parts in the northeast and north of the Transvaal, and in recent times they have been little interfered with except by military expeditions to compel them to pay the hut tax or when they have been dispossessed of land wanted by the whites. About 140,000 have settled on Boer farms throughout the Transvaal, where they cultivate their gardens and keep their own cattle, and in lieu of rent perform the farm labor for their masters. The domestic servants are held under the apprenticeship laws which no longer exist in the Cape Colony, where whites and blacks are legally equal, though as a matter of fact the Transvaal natives, and still more those of the Orange Free State, whose legal status is not quite as servile as in the Transvaal, have had more practical freedom and better chances of prosperity than the Cape and Natal natives, and the Boers have been kinder masters to the natives employed in their houses and have dealt more justly with the great body of the natives than the Cape Colonists or the newcomers from Europe. All the special and oppressive legislation introduced in the Transvaal since 1884 has been at the bidding of the Uitlanders, and avowedly designed for the mine owners and other employers who came in search of wealth after the opening of the Rand in 1885. About 100,000 natives are employed as domestic servants in the towns of the Transvaal by Uitlanders as well as Boers. Very few are willing to work in the gold-mines, which formerly drew their supply of labor from Cape Colony, Natal, and Zululand, and subsequently from Portuguese territory. The contract labor laws passed in Cape Colony at the behest of the Kimberley mine owners and other capitalists are more oppressive than the labor acts that the Rand capitalists were able to obtain from the Volksraad, and in modifying these, the British Government, while reducing the flogging penalties, added some of the compulsory features of the Cape legislation.

The revenue of the South African Republic from customs was £1,289,000 in 1897 and £1,067,000 in 1898. Sir David Barbour's plan is to reduce the heavy duties on beer, jam, and other British products; to increase those on wine, tea, and coffee; and to make the duty on spirits imported from South African colonies 10s. a gallon, the same as on spirits from over sea, to impose an excise duty of the same amount on spirits distilled in the Transvaal, and to allow spirits to be sold to natives. The hut and poll taxes, which yield but little, should be made lower and strictly collected, and the poll-tax of 10s. on male adult whites abolished. The share of the Transvaal Government in the National Bank and the Netherlands Railroad produced £254,000 a year, and 85 per cent. of the surplus receipts of the railroad £668,000, including £316,000 of customs duties collected by the company. The true revenue of the Transvaal for 1898 was found to be £3,341,920, and the true expenditure £3,476,845.

Omitting war expenditure, secret service, and foreign missions, Sir David Barbour reckoned the normal expenditure at £2,607,000, to which he added £225,000 as the interest on a loan of £5,000,000. To pay for damages done to Natal and Cape Colony and to repair the devastation in the Transvaal the loan may be £7,000,000. The South African constabulary is to consist of 10,000 men, 4,000 of whom will be paid by the Imperial Government, leaving 6,000 to be maintained by the Transvaal at a cost of £1,500,000, which raises the annual expenditure to £4,332,000, leaving a deficit of £865,000, which it is proposed to meet by imposing a tax of 10 per cent. on the profits of the gold-mining industry. This tax, together with a proper enforcement of the mining licenses and contracts for leased mines, would yield from the start £550,000. As the wealth of the Transvaal depends almost entirely on its gold-mines, the bulk of taxation must necessarily fall on them either directly or indirectly. The import duties on articles used for mining purposes and on mealies supplied by the companies to the colored laborers fall directly on the mines, and those levied on articles used by the white employees fall indirectly, making the wages for white labor 30 per cent. of the total cost of working the mines. The abolition of the dynamite monopoly will save the mining companies £600,000 a year, and great gain will accrue from reducing freight rates when all the railroads become the property of the state. The customs receipts under the republican Government fell from £1,355,000 in 1896 to £1,000,000 in 1898. The expenditure on education is reduced by the English expert from £267,000 a year to £200,000; on local police, from £352,000 to £250,000; on railroads, from £359,000 to £25,000.

The stocks, bonds, and other securities belonging to the Transvaal Government have a face value of £1,825,000, consisting mainly of shares of the Netherlands Railroad. The mining rights in Government land at Johannesburg may be worth £2,750,000 at present valuations and much more if they are carefully investigated and sold to the highest bidder. Mining areas may yet be found elsewhere on state lands, of which there are 11,000,000 acres. The republican Government through defects in the mining laws wasted its most important asset, which is the Government right of mining and disposing of gold and other minerals. From an industry that could declare dividends of £5,000,000 the state derived a direct revenue of not more than £150,000. The laws were framed to benefit the owners of the land, but the whole benefit was ultimately obtained by large capitalists. Mining on the Witwatersrand is essentially capitalist mining, as a very heavy expenditure is necessary before a claim can be profitably worked. The capitalists bought out the owners of lands where they desired to sink mines, and thereby were able to select the most promising claims and to reserve the mining rights to other parts of the farm which might contain gold by placing these spots under cultivation before the area was proclaimed, and thus opened to the public for mining purposes, and even then the owner had a prior right to select claims and received a share of the license fees collected from prospectors and diggers. Any outsiders who selected claims on such a farm had to buy out or combine with each other so as to unite a sufficient number of claims to make a Transvaal mine and to invest a large capital, in the meantime paying the high license rates on all the claims. The capitalist who had purchased the fee simple, and thereby acquired the special

mining rights and privileges which the Transvaal law intended to preserve for the Boers, was therefore usually able to get hold of any good claims discovered on the farm without paying much money. Sir David Barbour proposed to reduce the privileges granted to owners of the land, to lower the fees paid by prospectors, and to sell the mineral rights in state lands known to contain gold or charge a rent contingent on profits. The proceeds of such sales Sir David Barbour proposed to lay aside as the Transvaal contribution toward the extinction of the debt incurred by Great Britain for the prosecution of the war. The war loans amounted in the beginning of 1901 to £55,000,000; and that whole sum might be charged against the Transvaal and Orange River colonies, but a loan of £7,000,000 will probably have to be raised with imperial guarantee by the one and £2,000,000 by the other before they can be rehabilitated, and neither will have sufficient revenue for some years to come to pay its own expenses. No surplus revenue in the Orange River Colony can be foreseen, but after two years from the conclusion of peace the Transvaal may be able to set aside something from additional taxes on the mines and the existing claims of the state against them properly enforced and from revised customs, stamp, license, and excise taxes. Aside from mineral lands the public lands of the new colonies are not likely to be salable. It is impossible to determine what part of the British war debt can ever be recovered from the annexed republics, probably nothing from the Orange River Colony, and if the Transvaal Colony can bear a part or the whole of the debt it will have to be imposed by degrees.

The scheme of government planned for the new colonies by Mr. Chamberlain was direct administration by the Crown for an indefinite period, to be followed ultimately by self-government. Municipal self-government would be established early, and the old laws and customs are to be maintained as far as practicable, the officials of the late Government being retained in office. The two new colonies were to have one governor-in-chief, with a lieutenant-governor for the Orange River Colony, where fewer radical changes would be necessary than in the Transvaal. The rearrangement of the boundaries, giving the southeastern parts of the Transvaal to Natal, could only be settled after civil government had been reestablished for some time. On Oct. 18, 1900, Sir Alfred Milner was appointed High Commissioner for South Africa, the office being made independent of that of Governor of Cape Colony, and was commissioned Governor of the new colonies for the purpose of inaugurating civil government. In case of his death or absence the senior military officer commanding in South Africa was to be High Commissioner, and in the event of the death or departure of Lord Roberts the High Commissioner was empowered to act in his place as administrator of the conquered territories for the time being. Sir Alfred Milner was authorized to invite the officers administering the several colonies and protectorates in South Africa to send representatives to confer with him as High Commissioner on all subjects of common interest. Failing other means of concerted action for which legislation might be necessary in the several colonies, he in his central position as High Commissioner should be enabled to set in motion and to further the union and consolidation of South Africa in regard to some of the most important interests which affect its component parts. The Cape ministry admitted the necessity in the existing condition of affairs for the sepa-

ration of the offices of High Commissioner and Governor of Cape Colony, but hoped that it would be only temporary, and that Cape Colony would retain its former preeminent position justified by its size, population, extensive seaboard, and material interests, and that in the future federal union of all British South Africa the supreme head of the commonwealth would be located in Cape Town.

When Lord Kitchener assumed command of the British forces in South Africa on Nov. 29, 1900, Gen. Christian de Wet, who had sustained a defeat at Bothaville, rallied his forces on the Dornberg, east of Winburg, and Commandant Hertzog assembled a force at the same time in the southwest corner of the Orange River Colony. It was known to the British that they contemplated an invasion of Cape Colony, where they expected to be joined by large numbers of Dutch colonials. Commandant-Gen. Botha at the same time collected a force of 5,000 men in the eastern Transvaal with the probable intention of invading Natal and advancing upon Durban. De Wet with the main invading column planned to advance south by way of De Aar, Hertzog to proceed to Lamberts Bay, where, according to the English account, a ship from Europe was expected to land volunteers, guns, and ammunition; both forces were then to join in an attack on Cape Town. If the Cape and Natal Afrikaners rose with spirit and unanimity against the British the republican generals expected to wrest from them, if not their sea base, their lines of communication with the base, which would place the great British army in South Africa at their mercy. Helpless for offensive operations the British were already, because Lord Roberts, in the belief that the war was ended and the mass of the Boer population ready to accept British sovereignty and settle down to the pursuits of peace if they could only be protected from the solicitation and coercion of the irreconcilable firebrands whose forces were reduced to roving guerrilla bands, had in fulfilment of his promise of protection given to the burghers who surrendered after the fall of Bloemfontein and Pretoria placed garrisons in the richest districts of both republics as well as on the railroads, and all the effective troops that were not so employed were needed to convoy supplies to these scattered garrisons. Some of the convoys and even garrisoned posts were successfully attacked by the Boers, and the British troops, worn out by a severe campaign, lacking horses, and often deprived of food supplies by the active commandoes, had all they could do to hold their positions. The total strength of the Boer forces was never known to the British. The population of the republics was probably underestimated from the beginning. Their fighting strength was perhaps 50 per cent. greater than was reported by the British intelligence department, which had no useful military map of the seat of war until at an advanced stage of the campaign the Transvaal Government map that was in the custody of a Swiss printer was obtained by bribery. The number of foreign volunteers, the adherence of the majority of the Uitlander population to the republican cause, the almost unanimous sympathy of the colonial Dutch and of a considerable proportion of the British colonials for the Boers, all came as surprises to the British generals and statesmen. The assemblage of considerable Boer forces in the field with guns, horses, and ample supplies about the time that President Kruger reached Europe was a new surprise. Lord Kitchener, however, on taking command abandoned the policy of pro-

tecting the surrendered burghers, evacuated all posts away from the railroads excepting the Thabanchu line protecting Cape Colony, built fortifications along the railroads to permit the withdrawal of a large part of the troops guarding communications, and by these measures set free troops for field operations, which were supplemented by numerous irregular mounted corps that were enlisted to fight guerrillas with their own tactics. In evacuating the country Lord Kitchener established central refuge camps along the railroad lines where surrendered burghers could live under effective military protection. He also instituted the policy of devastating the adjacent districts and bringing into the camps the families of burghers still under arms, the members of which were for a time purposely starved as a means of compelling the fathers to surrender, until the Minister of War placed his interdict on this barbarous expedient.

The earliest peace negotiations took place before the occupation of Pretoria. Gen. Chris Botha asked Sir Redvers Buller in Natal what terms Lord Roberts would offer. Gen. Buller suggested to the commander-in-chief definite terms which made no distinction between officers and men. Lord Roberts replied from Johannesburg on June 3, 1900, that his terms were unconditional surrender, but that troops that surrendered arms and horses and signed a pledge not to fight again would be allowed to return to their homes with the exception of those who had commanded portions of the republican forces, or who had taken an active part in the policy that brought about the war, or who had been guilty of, or parties to, wanton destruction of property, or had committed acts contrary to the usages of war, the principal officers to be detained until decision was made as to their disposal.

After the capture of Pretoria and the flight of Paul Kruger to Europe Field-Marshal Lord Roberts, the British commander-in-chief, called upon Commandant-Gen. Louis Botha in the cause of humanity to refrain from further resistance, as the war could only be prolonged for a few weeks in the face of the overwhelming British force, and there would therefore be no loss of honor for the Boers in laying down their arms after their gallant struggle. Botha asked for a week's armistice to enable him to telegraph to President Kruger and to call the commanders of his scattered forces to a council of war. Lord Roberts would not agree to a cessation of operations, but offered to make no farther advance northward or eastward for five days if the Boers would refrain from attacking. The acting commandant-general replied on June 15, 1900, that it was impossible to accept an armistice which permitted movements of British troops in all directions in the South African Republic except east of Elands River Station and north of the Volksrust and Johannesburg Railroad. Lord Roberts, in answer to a complaint of Commandant De Wet against the destruction of farmhouses and the eviction of their occupants, wrote on Aug. 3, 1900, that soldiers had been shot from farmhouses flying the white flag and railroad and telegraph lines had been cut; therefore he had found it necessary to burn down farmhouses at or near which such deeds had been perpetrated, and should continue to do so, the misdeeds of burghers being thus the cause of women and children being rendered homeless. Sir Redvers Buller, when opening the railroad to Delagoa Bay, promised protection to burghers who remained neutral, but burned or destroyed homesteads whenever patrols were attacked or telegraph-lines cut, and Lord Roberts in a communication to

Gen. Botha justified such action, to which the Boer commandant-general replied on Aug. 30, 1900, that British troops had destroyed the homes of well-disposed families and seized their provisions and stock, driving women and children out into the veld to tramp for miles in search of food and shelter, saying that he expected the British commander-in-chief to make an end to these barbarous actions, exceeding the teachings of civilized warfare, and also to the robberies of small roving bands of so-called scouts, who could not expect to be treated as prisoners of war when they fell into his hands. The houses destroyed often contained only women and children and in no case did bodies of burghers hide themselves in these houses, as the commandoes were all on the other side of the railroad. Lord Roberts replied on Aug. 23 that the Boers destroyed the property of burghers who had taken the oath of neutrality when they refused to violate their oath, and that he would punish all who did violate their oath and confiscate their property. On Sept. 2 he informed Gen. Botha of his proclamation ordering the destruction of all farms within a radius of 10 miles of any attempt to injure the railroad or wreck trains, saying that the war was degenerating into guerrilla operations which he felt bound to prevent. Gen. Botha replied that whatever the Boers accomplished must necessarily be done by insignificant bodies as compared with the British forces, and that it was necessary to split up the commandoes more and more in order to oppose the robber patrols which under Lord Roberts's command go about everywhere to seize the cattle and provisions on the farms; the burgher forces were organized and commanded exactly as they had been from the beginning of the war and in accordance with the laws of the country; and as to farm burning by the British troops, houses had been burned down or blown up with dynamite and women and children turned out of them without food or covering in all parts of the country wherever the British troops had gone, not along the line of the railroad alone. Lord Roberts, replying on Sept. 7, 1900, intimated that he recognized no regular warfare except in the constantly diminishing area occupied by the army under Gen. Botha's personal command, and that in the other territories of the republics he would adopt the measures prescribed by the customs of war as applicable in dealing with irregular and irresponsible guerrilla operations, measures ruinous to the country, entailing endless suffering on its inhabitants which would necessarily become more and more rigorous. Gen. Botha replied on Oct. 17, 1900, that although such barbarous actions as the blowing up of private dwellings and the removal of all food from the families of fighting burghers in a spirit of revenge against them for merely doing their duty according to law were done with the approval of Lord Roberts and on his special instructions, he would himself continue to carry on the war in the same humane manner as hitherto, yet if he were compelled to take reprisals the responsibility would rest with the British commander. Lord Roberts replied that whatever the organization of the burgher forces might be their tactics were those of guerrilla warfare, which he would be compelled to repress by the exceptional methods approved among civilized nations. Lord Roberts subsequently tried to impress upon the Boer generals the duty of providing for the homeless women and children. He relaxed the work of destruction and let burghers who took the oath of neutrality return to their farms in the districts protected by British troops. Some of these rejoined their commandoes, and when the districts

were evacuated by the British the only safety for burghers who would not give active aid to the Boers was inside the British lines.

Mr. Chamberlain on Dec. 7, 1900, proposed to issue a proclamation announcing that, while annexation was irrevocable, the inhabitants would be accorded full liberty, equal laws, and the enjoyment of their property, and on Dec. 10, 1900, he asked whether it would be possible to offer terms to those leaders who were excepted from the general amnesty previously proclaimed or to send emissaries possessing influence to convey these offers. Sir Alfred Milner, with the concurrence of Lord Roberts, thought that such a proclamation would be regarded as a sign of weakness and that to send emissaries to the Boer commandoes would do more harm than good. On Dec. 13 Mr. Chamberlain pointed out the desirability of making it clear not only to the Boers, but to the British public, that the Imperial Government was doing all that was possible to stop the war consistent with the interests of the loyalists in South Africa and with the necessity of avoiding the charge of weakness, and that the continuation of the war was forced upon the Government by the refusal of the Boer leaders to accept the generous terms that had been offered to them. Burghers who surrendered to the British and took the oath of allegiance when British forces occupied their districts were commandeered by the Boers when the British were compelled to retire, and whenever they fell into the hands of the British later they were severely punished as traitors, as were also all colonists and British subjects who actively assisted the Boers. The Boers adopted rigorous measures also to prevent the burghers from surrendering, and threatened to confiscate their property and burn their houses. Commandant-Gen. Botha ordered all field-cornets to make a list of the burghers who had laid down their arms and taken an oath of neutrality, and on their refusal to rejoin their commandoes to send them to jail and to seize their movable property for commando purposes, making an inventory of the property taken and leaving enough for the support of the family. Passes and permits given by the enemy to burghers who had surrendered must be returned, and such burghers as were not fit for military service must be compelled to take a new oath declaring that the oath of neutrality was taken without sanction of their military officers and was null and void.

Lord Kitchener, who succeeded to the command-in-chief of the British forces in South Africa when Lord Roberts returned to England to become commander-in-chief of the British army, at the instance of Sir Alfred Milner began to form local peace committees among the Boers who surrendered, and on Jan. 5, 1901, issued a proclamation telling burghers who gave up their arms that they would be allowed to live with their wives and families at the centers on the railroad under military protection. Each district would have its central refuge camp. Breaking the oath of neutrality would not be considered criminal unless done voluntarily, and leaders would be well treated if they had not violated the rules of war. Cattle remaining in military possession at the end of the war would be distributed among those who had suffered through surrendering voluntarily, and all would be allowed to return to their farms. Sir Alfred Milner framed a proclamation which Lord Kitchener did not think it advisable to issue while the Boers were successfully invading Cape Colony. He let it be known that he would receive an officer from the Boers proposing peace or would meet Gen. Botha at any

time. A peace committee of burghers went out to see Botha. Ex-President Pretorius also went out in the hope of inducing the Boer commanders to give up the struggle, but he found Louis Botha and Schalk Burger both determined to fight on to the end. The Orange River Colony had been so far pacified that farmers settled down to plowing and sowing. District commissioners under the protection of a provisional mounted police collected as much as 40 per cent. of the regular taxes, when bodies of armed Boers reappeared and, receiving no check, soon had the whole country in revolt. In the beginning of February, Sir Alfred Milner had to report that there had been retrogression since the middle of 1900, when the southwestern Transvaal, the southern half of the Orange River Colony, and all of Cape Colony seemed to be completely pacified. The end of the war and the beginning of administrative reconstruction could not be predicted, and it could only be foreseen that the task of conquering the Boers was to be far slower, more difficult and harassing, and more expensive than had been anticipated. The Boers, broken up into a great number of small forces, were raiding in every direction, and the British, similarly broken up, were pursuing them, which made the area of fighting much larger than if large masses were operating against each other and consequently the destruction was more wide-spread. The fighting was mainly over supplies. The Boers, living on the country, took all the horses, cattle, grain, and fodder from the farms, and clothes, boots, sugar, and coffee from the village stores, and in order to deprive them of these supplies the British destroyed everything wherever they passed or removed the stores and live stock that they seized to the refugee camps. The policy of burning farm-buildings which had been resorted to early in the campaign had mostly been given up as a measure which exasperated the Boers instead of intimidating them, increased the number of their sympathizers, and shocked public opinion in Great Britain as well as in other countries. The Boers or their sympathizers among the Johannesburg rabble wantonly destroyed the works in one of the mines, which were difficult to guard, as they stretch out over many miles of country. The vast extent of the republics and the necessity of concentrating the British forces for the long advance, first to Pretoria, and then on the Netherlands Railroad to Komatiport, resulted in the country that had been occupied being left open to raids begun by a few bold and skilful leaders, constantly growing in audacity and encouraged by their successes. These disturbers appeared first in the southeast of the Orange River Colony, then in the southwest of the Transvaal, and finally in every part of the conquered territory. The burghers who had taken the oath of neutrality were unable to resist the pressure of their old companions who appealed to their patriotism and to their fears, and justified their taking up arms again by the failure of the British to protect them. A general rising at the back of the British advanced forces led to a straggling conflict. As the British columns swept through the revolted country, meeting with hostility and sometimes treachery on the part of the people, they destroyed the property and made prisoners of many who had been faithful to their oaths of neutrality, not being able to distinguish them from the greater number who had broken faith. This resulted in further accessions to the ranks of the Boers, and the evacuation of Fauresmith, Jagersfontein, Smithfield, and other places where civil administration had already been introduced augmented the general revolt. Refugee

camps were then established along the railroad lines, and the British attempted to cripple the Boers by driving into these fenced enclosures the whole non-combatant population—women, children, the aged, and the peaceful burghers—though none were friendly now. Wherever the British columns went the country was thus stripped of its population and was laid waste so that the Boers could find no subsistence there. Ostensibly they were intended for refugees for the pacifically disposed. The Boers who could no longer fight did resort to them, but they were mostly tenanted by the wives and children of Boers who were still in the field. As the guerrilla warfare swept back over the western Transvaal where British rule had been accepted peaceably, and soon involved the whole of the Orange River Colony, its effect became marked in Cape Colony, where the bulk of the Dutch population seemed at one time disposed to accept accomplished facts and acquiesce in the union of all South Africa under the British flag. After the occupation by the British of the two Boer capitals, instead of being able to hold and defend whole districts, as was attempted at first, they were not even able to hold the line of the railroad with their army of 200,000 men, which was constantly being reinforced by fresh troops. Away from the railroad they could only make futile raids in pursuit of the active commandoes of De Wet, Delarey, Botha, and other Boer leaders, who captured trains of ammunition and commissary supplies and inflicted severe losses on British columns. The reprisals to which Lord Roberts resorted with the approval of Sir Alfred Milner and Mr. Chamberlain, such as the burning of farms and the harsh treatment of the families of the Boer commanders and other non-combatants, stirred the indignation of the Dutch colonists, who were incensed also by the determination of the British Government to annex the republics, and by the severe penalties inflicted upon colonists who had been commandeered or had aided the Boer cause. After a congress of Boer sympathizers had been held in Worcester, Boer commandoes, on Dec. 16, 1900, reinvaded Cape Colony and were received with open arms. The feeling among the Cape Dutch was as hostile as among the Boers in the field, excited as it was by exaggerated reports of British outrages and cruelty. But the Dutch farmers would not expose their property to destruction or lightly risk their lives or liberty by incurring the penalty of treason. The Boer commandoes which invaded the colony received secret aid wherever they went, and with fresh supplies of horses and food were able to evade the forces that were sent against them, but they did not at first gain many recruits such as flocked to their ranks during the previous invasion and still formed a large part of their force. The open agitation by speech and writing was suppressed by the rigorous application of martial law. This rendered the anti-British feeling still more intense and general, but military repression and a large augmentation of troops in the colony made a rising seem more hopeless to this cautious and practical people. The outside world was kept in ignorance of what was actually passing in Cape Colony. The Boer commandoes penetrated to within a few miles of Cape Town, and such was the feeling of the inhabitants against the English that British residents of villages near by were obliged to flee for safety into the capital, which, as well as the rest of the colony, was placed under martial law. The Boers meanwhile were very active in the two republics and raided various places in Natal. On Jan. 7 attacks were made simultaneously on five

British posts on the Delagoa Bay Railroad and inflicted a loss of 83 officers and men. Kaalfontein, near Pretoria, was invested and shelled a few days later. Lord Kitchener's body-guard was surrounded near Lindley, and all who were not killed were taken prisoners. A train was waylaid on the railroad near Kimberley. The main part of the British army was practically helpless except to guard ineffectually the main lines of communication. Cape Colony had to rely at first on the local irregular troops for its defense. When the columns of Lord Kitchener's army were brought south by rail to cooperate and the Cape troops were in possession of the principal railroad stations the panic subsided. The Boer commandoes retired from the more settled districts, where their presence was not welcome even to their friends. The eastern and western columns retired. In the center, however, Kritzinger's commando was active in the Middelburg and Graaf Reinet districts and able to defy all the forces that could be mustered, while fresh bands of Boers crossed the Orange river to join it. Christian De Wet, having left the Kroonstad district, was at this time attempting to invade Cape Colony, and the British made extraordinary exertions to head him off. He was pursued by Major-Gen. Charles Knox's columns, which he evaded after an engagement near Thabanchu. Other columns concentrated to hem him in, but the British would not go into the hills after him. President Steyn of the Orange Free State was with De Wet. Piet de Wet, who had surrendered with a good part of his commando after the fall of Bloemfontein and Pretoria, and had become the chairman of the Bloemfontein peace committee, wrote a letter to his brother urging surrender, but the Free State commandant-general and President were even more determined than Botha was to continue the fight for independence.

The majority of the Cape Colony Afrikaners who were willing and able to fight for the preservation of the Boer republics had slipped away and joined the commandoes long before. The severe penalties inflicted on the participants in the insurrection of 1900 deterred the people of the border districts from repeating the experiment, and the measures of disarmament then and since then carried out left them much less well prepared for war. The loyalists, on the contrary, were furnished with weapons, and in January the Government issued a general call to arms, to which the British colonists in the towns and the insignificant fraction of the Dutch who were ardent loyalists from the beginning freely responded. There were already 12,000 Cape Colonists in the Cape police, the regular volunteer corps, and the numerous irregular mounted corps, and when the appeal was issued for volunteers for local defense nearly as many more reported themselves. There were besides 1,000 Rhodesians and at least 10,000 Uitlanders fighting with the British forces. In January a limited number of men were allowed to return to the Rand, only 15 to each mine, while a large number of undesirable individuals who had remained there were taken to the seaboard and shipped off to Europe. A special guard of 1,500 men was formed in Johannesburg for the protection of the mines, and a force of 5,000 men was raised elsewhere for the same duty. The Dutch and other foreign governments protested against the deportation of neutrals who were their citizens, and still more strongly against the seizure by the British of the Boer Red Cross ambulances and the deportation of the surgeons and nurses, which the British did on the charge that these took part in the fighting.

Lord Kitchener, on taking the chief command, proceeded to reorganize the British forces with a view to resuming aggressive operations. The nominal strength was 210,000 of all ranks. Of this force 20,000 were incapacitated by sickness and other causes and 50,000 had to be detached for garrison duty and to preserve the lines of communication, so that the force available for offensive operations was 140,000 men, who were augmented before February by 20,000 reinforcements from England. Half or more of the troops were cavalry, artillery, and mounted infantry. The divisional commands were broken up, and the field army operated in brigades, over 40 in number. To each brigade a definite area was assigned, which it was ordered to clear until it reached the square belonging to the next brigade, and then if necessary to retrace its steps and go over the ground a second time. The combined movement was from the outside of each group of squares inward, so that 4 brigades could be quickly massed at any point of danger, and by means of its scouts each brigade could keep in touch with the brigades in front and rear and on either side. It was expected by moving steadily in one direction with these tactics to clear away and to enclose the Boer commandoes, which if they slipped through one group of brigades would find themselves in the area of another. Supplies were stored in a large number of places within two days' march of any of the brigades, so that if the Boers captured any of them the soldiers would not have to go long without food. New contingents were raised in Australia, New Zealand, and Canada, and in Great Britain and South Africa men accustomed to ride and shoot were sought. Recruits were offered 5s. a day, with provision for their families if married men. The approach of the South African winter, when the grass would disappear from the veld and the burgher troops would feel yet more keenly the lack of nourishment and warm clothing, was an additional motive impelling Botha to advance in force to the southeast of the Transvaal and De Wet to gather his forces for an invasion of Cape Colony. Forced thus to action, Lord Kitchener had a chance to put into systematic operation his tactics of sweeping the country clean of its inhabitants by sending 7 columns, under Gen. French, to carry out a convergent movement in the eastern Transvaal. The Boers were operating in commandoes of 1,000 men or more, and there were about 19,000 Boers in the field. The headquarters of the acting commandant-general and of the Government of the South African Republic had been at Pietersburg, far to the north of Pretoria. The simultaneous attacks early in January on Nooitgedacht, Belfast, Wonderfontein, and other posts on the Delagoa Bay Railroad was the first warning that the British had of the Boer movement. Botha concentrated about 3,000 men near Carolina, south of the railroad, and when he reached Ermelo, at the beginning of February, he had 7,000 men, and threatened to cut off British communications with Komatipoort. A section of the railroad in Portuguese territory was torn up by Boer raiders. The British movement was now developed. Gen. Smith-Dorrien's column, which had met the Boers soon after they crossed the railroad, was attacked on Feb. 6 by 2,000 men at Bothwell, and lost 77 men in beating them off. Other British columns occupied Ermelo on the same day, and Botha retired to the eastward. On the western border of the Transvaal Lord Methuen's column, after it had reoccupied Bechuanaland, scoured the country, carrying off all the stock and provender, destroying stores, and col-

lecting the women and children, who were quartered at Vryburg and other centers. Not merely to mount his own men, but also to keep the Boers from getting remounts, Lord Kitchener requisitioned all the horses that could anywhere be found, obtaining in January 13,000 horses and 4,000 mules. From abroad 30,000 fresh horses were landed, in addition to 100,000 having been received during 1900. On Feb. 1 a body of 1,400 with a gun captured the British post at Modderfontein, near Krugersdorp. Gen. French's mobile columns achieved pronounced successes, driving Gen. Botha's force of 7,000 Boers back from Bethel toward Swaziland. The British Government responded to new demands for reinforcements by raising an additional force of 10,000 imperial yeomanry and 20,000 other mounted troops. In Cape Colony the British forces were strong and active enough in the beginning of February to keep the Boer commandoes in check. The Cape Colonists were overawed, though vexed, by the military measures taken to prevent a rising, such as the search for arms, the commandeering of goods, the wholesale arrests of suspected Boer sympathizers, the depredations of the soldiers, and an order as inconvenient for British as for Dutch farmers that all horses, even those not fit for cavalry mounts, be given up to the military authorities.

When De Wet was endeavoring to take a large force into Cape Colony by one of the eastern drifts and was headed off, the British forces that were guarding the approaches to the Orange river were called off to pursue him in his retreat to the north. A detached part of his force slipped round the British columns and crossed at Odendaal drift on Dec. 16. This was Kritzingers's commando, 700 strong, and on the same day Hertzog crossed at Zand drift with 1,200 men. Caught between these posts and Gen. Knox's, Gen. Bruce Hamilton's, Gen. Maxwell's, and 4 other columns in the rear, he made a wonderful march from the east to the west of the Orange River Colony, and at last he slipped through the cordon and entered Cape Colony. When almost surrounded by the 7 British columns, De Wet had once more baffled his pursuers by turning westward and breaking down the resistance of Major Crewe's weak column, which attempted to defend a road through the hills. In crossing the railroad he captured supplies on the trains at Springfontein. After making feints at Rouxville and other drifts, he crossed the Orange river near Zand drift on Feb. 13. Gen. Cunningham operated against Commandant Delarey, who with 2,000 men was moving about north and west of the Rand. Two or three times a small Boer force appeared at the outlying mines and did some damage to the plant.

When De Wet invaded Cape Colony the defensive preparations of Gen. Brabant, who had charge not only of military operations but of the administration of martial law, were well developed. If any member of a colonial family joined the enemy the whole family was declared to be beyond the law, and colonists could claim no compensation for losses unless they actively resisted the invaders. Every farmer of the border districts was expected to enroll himself in the colonial force, either for general service or for the defense of his particular district.

On entering Cape Colony President Steyn and Commandant De Wet issued a proclamation declaring that the republics were not yet conquered nor the war finished; that the burgher forces, which Lord Roberts and Lord Kitchener had called marauding bands, were led by responsible leaders under the supervision of the governments

of both republics, and a part of these forces had invaded Cape Colony to wage war and to be in position to make reprisals by destroying the property of British subjects who were hostile to the Boers, though not to molest women and children, if the British continued their destruction of property in the republics and their barbarous manner of warfare, such as the ill-treatment of the wives of burghers and the destruction of their homes from sheer lust of destruction, the rough and insulting treatment of women and children, causing the deaths of many who were torn from sick-beds, the outraging of women, the robbing of prisoners of war, the murder of burghers, the capture of doctors and ambulances, the sending out of patrols to plunder, burn, and damage the burghers' private property, the arming of Kafirs and natives to make use of them in the war against the burghers, and the burning of farms, nearly all the houses in the two republics having already been destroyed, whether near railroads or not, on the pretext of Lord Roberts's order for such destruction in retaliation for the blowing up of railroad-tracks or the misuse of white flags calumniously attributed to Boers.

The columns which were in pursuit of De Wet, when it was seen that they could not prevent his crossing the Orange river, were called back and sent by railroad ahead of him into Cape Colony. His force was opposed by Col. Plumer's column and forced to retire from Philipstown. Hertzog's commando, which had been operating in the western part of Cape Colony, was checked not far from Cape Town by local levies and irregular troops and threatened on the flank by troops sent by rail. After holding Calvinia and other towns for a week the invaders retired to the north. Kritzingers still held the whole country about Murraysburg. Scheepers's commando in the east had fallen back toward Beaufort West. Detached bodies of Boers were wandering at will through the mountainous and thinly peopled parts of Cape Colony. The force that had crossed with De Wet numbered over 2,000, but the men were exhausted and badly equipped. Col. Crabbe's column took away a good part of the convoy near Hout Kraal. Gen. Knox and Gen. Bruce Hamilton crossed the Orange river after De Wet, who turned to the northeast, pursued by Col. Plumer's Bushmen, was defeated with a loss of guns, ammunition, and prisoners at Disselfontein. Other columns converged and De Wet was obliged to abandon all the captured horses, his guns, and most of his convoy, and only escaped capture by doubling several times. Hertzog's force, moving northward, endeavored to join him and bring fresh horses, and Kritzingers evacuated Murraysburg for the same purpose. Half of De Wet's force had melted away before Hertzog came up, which brought the number up to 2,000 again, but the British concentration compelled them to recross into the Orange River Colony as soon as the river, swollen by rains, became passable. De Wet tried several drifts before he crossed on Feb. 28 at Lilliefontein.

Lord Methuen's force cleared the country from the Bechuanaland border eastward to Klerksdorp, drove the commando of De Villiers out of Wolmaranstad, and defeated 1,500 Boers at Hartbeestfontein with a loss of 49 killed and wounded. Gen. French was successful in his operations against Botha's force, which retreated before him in scattered, disorganized parties to the number of 5,000, losing in successive actions 282 killed and wounded, 56 prisoners, 3 guns, and a great part of the horses, cattle, and ammunition, while the British losses were 158 in killed and wounded.

The Boer losses were at the rate of 1,000 men a month. Botha's and De Wet's attempted movements with large bodies of men were failures because the British could bring immensely superior forces against them. After consulting with Schalk Burger and with the other commandants, Gen. Botha decided to accept Lord Kitchener's invitation to meet him to discuss terms of peace. A return to guerrilla warfare offered to the British as discouraging a prospect as their attempt to resume operations with large bodies did to the Boers.

The strength of the British forces in South Africa before the arrival of the fresh reinforcements was 7,064 officers and 197,885 men, making 204,949 of all ranks, of whom 141,490 were British regulars, 28,339 colonials, 7,995 imperial yeomanry, 7,700 volunteers, and 19,425 militia. The garrison on Aug. 1, 1899, had the normal strength of 9,940 of all ranks, and before the war broke out on Oct. 11, 1899, it was increased by 6,643 from England and 5,903 from India. From then till the end of July, 1900, there were despatched 155,535 regulars from home and the colonies and 1,891 from India, making 157,426, and colonial contingents amounting to 11,584 were brought over sea and 30,319 raised in South Africa, and from Great Britain came 10,731 imperial yeomanry, 11,129 volunteers, and 21,457 militia. In the latter half of 1900 and up to Feb. 1, 1901, the further reinforcements were 16,099 regulars and 1,148 militia, which makes the total number of troops who fought in South Africa 282,379. Of these, 334 officers and 3,680 men were killed in action, 1,242 officers and 14,914 men were wounded, 301 officers and 9,008 men died of disease or wounds, 299 officers and 5,231 men were disbanded in South Africa, 415 officers and 13,716 men were in hospital on Dec. 31, 1900, and 12,323 of all ranks returned to England, 39,095 were sent home sick or wounded, 90 went back to India, and 2,130 regulars and 3,384 colonials returned to the colonies. Before Lord Kitchener attempted aggressive operations the British army was increased to 250,000, making the total number of troops sent out to South Africa over 320,000. Those who had been through the former campaigns were jaded and weakened by their fatigues and the relaxing climate. The fresh troops sent out were inferior in quality to the earlier recruits. In Great Britain 16,000 yeomanry were raised, and these were not fit to be sent into the field. Some of them were sent home as physically incapable, and of the rest Lord Kitchener complained that they could neither ride nor shoot. The effective force after the arrival of reinforcements remained about 200,000 men, with 450 guns and 248,000 horses and mules. Horses were sent continually at the rate of 10,000 a month, and yet the British mounted troops always lacked horses, although the Boers had a constant supply. Nearly 80,000 mules were purchased in the United States, where the expenditure for horses, mules, and commissary supplies reached £5,000,000. During the first six months of 1901 there were 61,000 fresh troops landed in South Africa. Supplies had to be provided for 314,000 persons directly or indirectly connected with the war, including 70,000 refugees in the concentration camps.

Casualties in the British army in South Africa in the first year, during which regular engagements were fought, were much more numerous than in the second year, characterized by guerrilla fighting. There were 71 officers per 1,000 killed in the first year, and 29 died of disease, whereas in the second year 22 were killed and

15 died of disease. Among the men 20 were killed and 31 died of disease in the first year and 11 were killed and 20 died of disease in the second year. The mortality from disease was twice as great as in the Franco-Prussian War, and that of the private soldiers in battle, though almost as many officers fell comparatively in that war as in South Africa in the first year. The excessive loss of officers was much reduced when they discarded the insignia of rank. Compared with the American war of secession the proportion in all ranks of the killed in South Africa was 25 per cent. greater during regular, but lower in guerrilla operations, while deaths from disease were 40 per cent. lower. The number of Boer prisoners taken before March, 1901, was nearly 17,000, and almost all of these were transported to distant British colonies. About 1,500 who surrendered on condition that they should not be transported were kept in the refugee camps, and some of these joined the burgher police. About 1,000 surrendered to the Portuguese in the Delagoa Bay territory, and these were conveyed in Portuguese transports to Portugal and confined in fortresses. The German Government applied to Great Britain for the release of German missionaries, and it was granted before punishment was inflicted upon them. The United States asked for the liberation of Americans who had been sent to Ceylon, and on its being refused made no further requests on behalf of American prisoners. The losses of the Boers in the campaign of 1901 were about 1,000 a month, and the British losses about the same.

President Kruger sent a protest to the United States Government against the shipments of horses and mules to South Africa, and his agents obtained a temporary injunction, but when it was brought up for decision the United States courts disclaimed any jurisdiction in the matter.

The cost of the war, including provision for the campaign of 1901, was about £175,000,000, of which £127,000,000 were borrowed.

Ex-President Pretorius, when he went on his peace mission, was met outside the camp of Gen. Botha and told that he would not be received; if the British had any proposals to make they should come from headquarters in writing. The emissaries of the peace committee on reaching the laager of De Wet, near Lindley, were flogged and Meyer de Kock also was shot as a traitor, he having circulated documents urging submission among the commandoes. Commandant-Gen. Louis Botha and Lord Kitchener met at Middelburg on Feb. 28 to discuss terms of peace. Lord Kitchener sought to exclude the question of independence from the discussion. Gen. Botha informed him that the Boers were fighting for their independence, and that the war had its origin in the annexation of 1877, an injustice which was not wholly made good in 1881. Lord Kitchener declined to discuss even a modified form of independence, saying that the British Government would never consent to the independence of the two republics. A Crown colony administration would replace the military guard, and it would consist of a nominated executive, with an elected assembly to advise the administration, to be followed after a period by representative government. After a complete suspension of hostilities amnesty would be granted in the Transvaal and Orange river territories for all *bona fide* acts of war. Boers as well as others would be allowed to keep rifles for their protection on obtaining a license. The Dutch and English languages would have equal rights, both of them be taught in the public schools where parents desire it and

allowed in courts of law. The franchise would not be given to Kaffirs until the new colonies had representative government. Dutch church property would remain untouched, as well as public trusts and orphan funds. No war-tax would be imposed on farmers. Lord Kitchener answered some questions more explicitly in a letter which was submitted to Sir Alfred Milner and afterward to Mr. Chamberlain, both of whom rejected some of the terms that he wished to offer in order to bring the war to an end. The proposal to amnesty Cape and Natal rebels and only to disfranchise them Sir Alfred Milner objected to as likely to have a deplorable effect in those colonies. The rebels would not be compelled to return to the colonies, but if they did they would be liable to be dealt with under the laws, which in Cape Colony were specifically passed to meet the circumstances arising out of this war and greatly mitigate the ordinary penalties of rebellion. Prisoners of war in St. Helena, Ceylon, India, Bermuda, and elsewhere would be returned, if burghers or colonists, as soon as transport could be conveniently arranged, but Mr. Chamberlain would not consent to the returning of foreigners to South Africa. Military administration would cease and at the earliest practicable date be replaced by civil administration consisting of a governor and an executive council composed of a certain number of official members to whom a nominated unofficial element would from the first be added. A high court would be constituted immediately which would be independent of the executive. The Imperial Government desired to introduce a representative element as soon as circumstances permitted, and ultimately to concede to the new colonies the privilege of self-government. Lord Kitchener proposed that debts of the state should be paid, even if contracted during hostilities, to the extent of the value received and up to the limit of £1,000,000, and he thought that the British Government would be willing to assist farmers who had suffered loss by the destruction of farms or the capture of stock. The Secretary of State was willing to put aside £1,000,000 to repay burghers and Uitlanders whose goods had been commandeered before annexation or forcibly taken afterward, but not to compensate any who had withheld their goods from the British to furnish them to the Boers; he would not consent to a grant to enable farmers to begin operations, but was willing to consider the question of loaning them money for the purpose of repairing injuries sustained by the destruction of buildings or losses of stock, but on condition of their taking the oath of allegiance, which would apply also to the privilege of having firearms. As to the Kaffirs, the franchise should always be so restricted as to insure white predominance, but their legal position must be similar to that which they hold in Cape Colony. Sir Alfred Milner desired, and Lord Kitchener more strongly, to have the Imperial Government promise money to the Boers whose farms had been destroyed as a free grant, not a loan. The exact terms of peace were presented to Gen. Botha on March 7, and on March 16 he replied that he could not recommend them to his Government and that his Government and chief officers agreed with him that they were unacceptable. Mr. Chamberlain sent instructions to Lord Kitchener not to reopen negotiations, and if he received any further suggestions from Botha or the other leaders not to reply, but to forward them, lest the Boers should be led to suppose that terms more favorable to them would be considered.

Gen. Botha in his interview with Lord Kitch-

ener complained of the armed Kaffirs in the British camps who committed atrocities, and the British general admitted that he employed Kaffirs as scouts. The ill-treatment of Boer families during their removal to refuge camps he attributed to lack of transport, and promised that where transport was not available they should not be removed. The families must be removed because every farm was a store for burghers, and he saw no other way of ending the war, and Kaffirs must be employed as scouts because the British were unfamiliar with the country. The Basutos were from the beginning of the war courted and threatened by both belligerents, not to induce them to join in the fighting, for both told them that it must be a white man's war, but because they were accustomed to supply mealies to the Free State Boers and to work on their farms in harvest-time, and because they had many cattle and excellent horses. The Paramount Chief Lerethodi and Jonathan Molapo remained loyal to the British, for which reason Jonathan's brother Joel and the enemies of the Paramount Chief were partisans of the Boers. The Resident Commissioner armed a force to defend the border when the Boers had the British besieged in Wepener. The Boers gave arms to their Basuto friends, and the Basutos fell to fighting among themselves. Mocheko's revolt was quickly suppressed by Lerethodi, but Jonathan Molapo and his allies, partly armed with rifles, were not easily overcome. The pro-Boer chiefs openly supplied horses, cattle, and harvesters to the Boers and the loyal chiefs did the same thing secretly. When the British army was greatly in need of remounts 10,000 Basuto ponies were purchased. More were obtained later in exchange for breeding cattle taken from the Boers.

Sir Alfred Milner went to Pretoria in March to take charge of the civil administration of the Transvaal. Mr. Fiddes was appointed Secretary; Patrick Duncan, Comptroller of the Treasury; Richard Solomon, Attorney-General; Sir Godfrey Lagden, Commissioner of Native Affairs; Mr. Wybergh, Commissioner of Mines; Mr. Rose-Innes, Commissioner of Public Works. Gen. Baden-Powell arrived in South Africa at the same time to take command of the South African constabulary, which was intended to replace the military in the settled districts. Lord Kitchener agreed to allow a few workmen to return to the Rand on condition that they should receive no more than 5s. a day, the pay of the colonial and imperial soldiers. This offer attracted none of the Uitlanders, but when it was arranged that the rest of their wages should be paid to their families at the seaports there was no difficulty in getting the number who were allowed to return, 15 to each mine that was permitted to be reopened, 3 mines, and eventually 7, working 50 stamps each. The first men who returned to Johannesburg were enlisted in the mine guard, as mining operations could not begin regularly without native labor. Such labor was afterward obtained in the northern Transvaal. The enlistment of all miners in the Rand rifles was made compulsory.

The civil administration of justice was formally inaugurated by the High Commissioner. Resident magistrates were appointed with powers to impose punishments up to three months' imprisonment, or in the case of natives 12 lashes, and to adjudicate in civil cases up to the limit of £100 in actions for debt or land titles and £500 on commercial paper. Special criminal courts for Pretoria and Johannesburg could sentence offenders to prison for twelve months or

inflict a penalty of 25 lashes on natives, but in more serious cases sentences had to be confirmed by the Attorney-General. The military courts in Pretoria and Johannesburg, which had to deal with martial offenses, death sentences requiring the confirmation of the commander-in-chief, were abolished. The results of Lord Kitchener's first aggressive operations, which stirred up the Boers to fresh activity in both republics and in Cape Colony and Natal, revealed the impossibility of organizing a civil administration at that stage. Sir Alfred Milner obtained leave of absence and went to England, and on May 9 Lord Kitchener assumed the offices of High Commissioner and Administrator of the Transvaal and Orange River Colonies.

A provisional municipal administration of Johannesburg and Pretoria was instituted by the appointment of town councils before the departure of Sir Alfred Milner. In the selection of officials and in his policy in regard to native labor, the cost of which the mine managers expected to reduce by $33\frac{1}{3}$ or 50 per cent. under British rule, and in other matters, Sir Alfred Milner was charged with being guided by the views of the Rand capitalists, especially Eckstein & Co., the representatives of Wernher, Beit & Co., who control nearly half the mines of the Witwatersrand. On July 1 Lord Kitchener issued a proclamation to protect from foreclosure or forfeiture and to release from the payment of interest or other contract obligations during hostilities British and other Uitlanders who had purchased farms or leased mineral lands from burghers before the war. The organization of the South African constabulary was completed by the beginning of July. A special criminal court with jurisdiction over the whole of the Orange River Colony was constituted at Bloemfontein on July 1, its decisions to be confirmed by the administrator. The mines produced 25,000 ounces of gold in July. Permission was given for several hundred more workmen to come and for additional mines to be opened. The mine operators and the Uitlanders generally were impatient at the delay in throwing open the mines. The danger of the food-supply being cut off was the chief reason for still shutting Johannesburg to the Uitlanders. In the supplementary estimates voted by the British Parliament for 1902 was the sum of £6,500,000 for a grant in aid of the revenues of the Transvaal and the Orange River Colonies.

The invasion of Cape Colony was undertaken partly as a diversion to enable Botha to take the field with his reorganized force. De Wet's venturesome and unsuccessful incursion had specially this object in view. Lord Kitchener's concentration for the protection of the lines of railroad frustrated the plan, enabling sufficient troops to be detached and swiftly moved by rail to take care of De Wet without weakening the mobile forces in the Transvaal to such a degree that they could not overwhelm Botha. Cape Colony, however, was left to defend itself as best it could. De Wet's force was cornered and driven back and scattered, but little notice was taken of other commandos which gradually made their way south, and from their bases in the mountains made themselves masters of Cape Colony in spite of all the colonial and irregular corps that were pitted against them there. They gained all the recruits they wanted among the Cape Dutch in the districts where they established themselves. At times they endured hardships, yet mostly they were well supplied with provisions, horses, and arms intended for the British army. They derailed and plundered railroad-trains, seized the

horses and country products that the British had requisitioned for their own use, rode into towns and fitted themselves out at the stores, surrounded detachments of troops that were hunting them and took away their horses, rifles, and bandoliers. Assistance and intelligence were freely given by the Cape Dutch, and on such as gave their support to the British they took vengeance, and swore vengeance on the latest converts and members of the Afrikaner Bond who opposed the rebellion or joined the volunteer corps raised to repel the invaders. The natives employed by the British they flogged with their whips of rhinoceros-hide. Particularly obnoxious Afrikaners were also whipped with the sjambok, just as in the former republics De Wet and other commanders used this instrument sometimes in the case of burghers who did not wish to break the oath of neutrality or to expose their property to destruction by the British in order to compel them to return to the ranks. As also in the north the Boers burned the farms of some whom they considered traitors, so did Kritzinger and Scheepers destroy occasionally the homesteads of some who were regarded as dangerous renegades. The British took still more terrible means to check the rebellion in Cape Colony and to oust the invaders. The law passed by the Cape Legislature to meet the case of the last rebellion punished rebels with fines and imprisonment not very severe and disfranchised them for five years. When the rebellion seemed to grow instead of coming to an end after the defeat and expulsion of De Wet, the common-law penalties, from death down, were declared by proclamation to be substituted for those of the special law. All the prominent members of the Bond who did not take the English side in regard to this latest rebellion were arrested, including Mr. Merriman, the leader of the Afrikaner Bond party in Parliament. Many of the Opposition members of both branches of Parliament had been punished in connection with the first rising, and now the rest were deprived of their seats, and in some cases candidates of the Government were elected to succeed them by the loyalist voters who alone were permitted to exercise the franchise. Nevertheless Parliament was not convened. It was prorogued from time to time, and the laws of taxation and supply were decreed by imperial authority. Whenever rebels were captured they were tried by court-martial and sentenced to the severest punishment. In cases where it could be proved that they fired on the British they were condemned to death and executed. All the people of the neighborhood were compelled to witness some of these executions until public opinion in Great Britain revolted against this reversion to barbarism. It was public opinion that caused Lord Kitchener to recall his order that the children and wives of burghers on commando should receive only part of the rations that were served in the refuge camps to other refugees. The innumerable irregular corps that were sent out against the guerrillas were of all sorts of material. They were allowed to live on the country, like the Boers, and besides their pay of 5s. a day or more they got a percentage of the loot that they brought in. The Uitlanders and colonials were often physically unfit for service as well as without training or discipline. The most successful fighters were the Australians. The methods adopted by these corps in dealing with the rebellion in the colony made the inhabitants more bitter and helped to spread the rebellion. When the Boers began to swarm into the colony the military authorities sent a large military force from the north after

having broken up Botha's army, and expected to be able to run them down or drive them into the arms of another column by swift pursuit. Kritzinger was several times almost hemmed in between two or three British columns and the flooded Orange river. These tactics failed. The Boers succeeded in gaining the mountains that cross the center of the colony. Lord Kitchener formed a plan of surrounding them there and barring the passage of the Orange river. But the British soldiers could not penetrate these mountains nor even keep the Boers from making raids in various directions. At the end of two months the commandoes were much stronger and the spirit of rebellion in the colony more implacable. Lord Kitchener then sent more brigades to Cape Colony and entrusted operations there to Gen. French.

The Boers employed Kaffirs as drivers and in all manual work. When the English began in the course of the guerrilla war to use them as spies, guides, and scouts they raised a protest, and when they caught natives who were aiding the British in this way they punished them terribly. It was understood on both sides that the blacks were to take no part in the warfare. To South Africans, British as well as Dutch, the idea of drawing the black populations into the conflict seemed repugnant and dangerous in the last degree. The British military authorities, wishing to deprive the Boers of the supplies and the labor which they were accustomed to draw from the Kaffir tribes, sought to gain these over by gifts and promises and gave them firearms to defend themselves against the Boers. In Rhodesia the beleaguered garrison of Mafeking put rifles into the hands of the natives, and could not have held out without their aid. In the guerrilla warfare Cape boys and Hottentots with the British columns were frequently furnished with weapons when a body of British troops was in a tight place. The Boers less frequently armed their trustiest servants in similar circumstances. Mr. Chamberlain more than once intimated the intention of raising colored corps to fight the Boers, denying that there was any agreement to the contrary. A few companies were actually recruited. When the policy of clearing the country was put into active operation corps of cattle-rangers were recruited who received 10 per cent. of the value of all the cattle and horses they brought in. A burgher corps was enlisted at Bloemfontein for this and for police and defensive duties, and tempting inducements were offered to attract surrendered burghers to the British service. When in the operations against Botha it was desired to clear the eastern Transvaal, Zulus were employed in bringing in the live stock, of which they received a share. The Natal Government protested strenuously against the employment of armed Zulus for such or any warlike business. Botha after the British brigades were withdrawn sent commandoes into Zululand which stripped the Zulus of their own cattle and property and the arms that the British had given them.

After the dispersal of the armies of Botha and De Wet the campaign was carried on by means of drives, in which a number of columns swept through the country in parallel or convergent lines, clearing the country at the same time by burning all the farm-buildings and the stores of grain, fodder, and other movables, capturing the cattle and horses, and taking the women and children off to the concentration camps. The men on commando were invariably able to dodge between two columns and get in the rear of the British, excepting small unmounted parties or insignificant commandoes that were caught by surprise

with the aid of informers or Kaffir scouts. Some of the Boer families left their farms and took refuge in caves or built huts in the kloofs of the mountains, where they were safe unless some native spy revealed their hiding-place. The eastern Transvaal was partly cleared during the operations against Botha. The first active operations with mounted troops were undertaken by flying columns carrying rations for ten days. They were directed against De Wet, whose commando scattered when it passed the Orange river in the retreat from Cape Colony and assembled again a week later, and against the commandoes of Brand and Hertzog in the southwest, Piet Fourie, Kritzinger, and Scheepers in the southeast, and Hasbroeck and Theron in the northeast of Cape Colony. De Wet, who had passed with his whole force unperceived through the defensive line stretching from Bloemfontein to Thabanchu, was not to be caught by flying columns of raw troops. The convergent movement of troops with regular commissariat, which had failed in Gen. French's advance upon Ermelo, was successful in the Zoutpansberg, the bush veld of the northeastern Transvaal, where the routes are few and the Boers could only flee before the British columns, not slip through as Botha's troops were able to do in the high veld. The seat of the Transvaal Government was removed from Pietersburg to Bothasberg and thence to Roos Senekal when Gen. Louis Botha developed his movement in the eastern Transvaal. Simultaneously with Gen. French's pursuit of the scattered bands of Botha's army to the Swaziland frontier Gen. Plumer was sent up to occupy Pietersburg and the drifts of the Olifants river in order to prevent the escape of the hunted Boers into the Zoutpansberg and Waterberg districts. He occupied Pietersburg on April 7, the Boers having evacuated it during the night. This town had been the chief base of supplies for all the Boer commandoes in the Transvaal, supplying meal and flour ground there in large mills, salt from the Zoutpansberg, clothing and saddlery, even powder manufactured by the Boers, so poor though that it was not used when Lee-Metfords and English cartridges could be captured. While at Pietersburg the Boers operated the railroad for 120 miles to Warmbaths. The winter grazing was good in this district. So long as the Boers remained there in force the British were afraid to advance on account of the supposed danger and difficulty of campaigning in the bush veld. Non-combatant burghers surrendered in Pietersburg, but through an error a gap was left in the cordon on the Olifants river, through which Commandant Beyers with about 2,000 men escaped to join Delarey. Gen. Sir Bindon Blood had command of the entire encircling movement, the main object of which was designed to drive in the Boer forces south of the railroad and capture the Transvaal Government and the principal army still in the field. The main divisions of that army under Louis Botha and Gen. Viljoen had no difficulty in doubling out of the drive. Many small bodies which remained were caught in the strengthened cordon on the Olifants river and in a convergent movement in Tantesberg and Bothasberg. The Boer Government fled from Roos Senekal, which was captured on April 22, to Ermelo, and thence toward Carolina, hiding when the British columns were present, and boldly coming out into public operation when they were gone. Every town taken by the British was reoccupied by the burghers after their columns had passed on, so that Botha was as fully in command of the district as he was before the drive. Gen. Blood's columns were successful, how-

ever, in bringing in over 1,000 surrendered and captured burghers, in digging up several buried guns, in carrying away cattle and supplies, and they took to the refuge camps thousands of women and children. On June 13 a large force of Boers surprised and captured at Wilmansrust 400 men of the Victorian regiment, who surrendered after losing 18 killed and 44 wounded, giving up 2 guns and large numbers of rifles and horses and a supply of food, clothing, and ammunition sufficient to last them a long time. Gen. Beatson by calling the Victorians white-livered caused a mutiny in the regiment, and to appease the Australians the mutineers were pardoned after conviction.

Commandant Delarey in the southwest Transvaal was the most aggressive of the Boer commanders, and for a long time was left in undisputed possession of the Magaliesberg region. Lord Methuen's outpost at Lichtenburg was attacked on March 3 by 1,500 men with 1 gun, and in a fight lasting nearly a whole day and night the Boers lost 60 and the British 42 killed and wounded. Gen. Babington marched from Naawpoort, compelling the Boers to retreat to Hartbeestfontein. On March 22 they attacked a detachment of cavalry near Geduld, but were repulsed with a loss of 24 men. The main body was driven back by the strengthened British column, losing a convoy at Zwartlaagte, where they left 54 killed and wounded on the field and 140 prisoners and 3 guns and 6 Maxims in the hands of the British. On April 14 Lieut.-Col. Sir Henry Rawlinson surprised the laager of Commandant J. C. Smuts at Goedvoruitzicht, taking 23 prisoners and 2 more guns and inflicting a loss of 16 killed and wounded. Gen. Delarey then concentrated his commandoes, numbering 2,000 men, in the hills about Hartbeestfontein. On April 22 he conducted at Brakspruit another determined but unsuccessful attack on a convoy, losing 18 killed and wounded. Lord Methuen brought up his force to cooperate with Gen. Babington, who had his base at Syferkuil. In an engagement near Brakpan he took from the Boers a gun. The British force continued to receive reinforcements, and in May Delarey abandoned Hartbeestfontein. There remained no large Boer force in the field. In July the total strength of the commandoes was estimated at 13,500, and in the operations by flying columns that ensued the Boers who voluntarily surrendered or were taken prisoners were about 1,000 monthly. Of the British about 4,000 were killed, wounded, or invalided every month. On May 27 Gen. Dixon's column, 1,400 strong, was fiercely attacked by Gen. Kemp's commando at Vlakfontein. Two guns were taken by the Boers and gallantly recaptured by the Derbyshire battalion. The British lost 60 killed and 120 wounded, the Boers almost as many. On June 6 Gen. Elliot's column captured a part of De Wet's supplies near Reitz in a stubbornly contested engagement in which the British lost 45 killed and wounded and the Boers 20. In consequence of raids into Natal from the Orange border Lord Kitchener had farms cleared from Sunday river to the Tugela. Commandoes from Amsterdam and Piet Retief compelled one post of Steinacker's Horse to evacuate Bremersdorp in Swaziland with a loss of 10 men and captured another. Gen. Walter Kitchener's and Gen. Campbell's columns were intercepted in the defile of the Selous river by Gen. Viljoen's men, but drove them off with artillery and even captured 2 machine-guns by a flanking cavalry attack. Gen. Blood's columns continued to scour the Carolina district, and the column under Walter Kitch-

ener operating north of the railroad finally drove Ben Viljoen across the Olifant river. Gen. Broadwood surprised the members of the Free State Government at a farm and captured most of them. President Steyn only escaped by mounting a horse and riding away half clothed.

The southern winter season was taken up with drives in parallel order and in convergent lines. The Orange Colony, the Transvaal, and parts of Cape Colony were traversed again and again, with no important military results. The country was cleared, however, thoroughly devastated, and all the families within reach were concentrated in the refuge camps surrounded by barbed wire and guarded by British sentries. The plan of night surprises was then tried. A column would march 5 or 10 miles, and then double back after dark, or a small force would be led by a spy to some Boer rendezvous. Some slight successes resulted from this change of tactics at first. Small parties of burghers were surprised, though occasionally the detachment fell a victim to a counter-surprise. Soon the burghers learned to guard against these night raids. The 80 British columns marched and counter-marched by day and by night, and merely wore out the soldiers and their horses. The Boers could no longer cross the railroad between Bloemfontein and Pretoria except in small parties because the blockhouses were only a mile apart, and working in conjunction with them were posts and mounted patrols on each side. There were 3,000 miles of railroads requiring protection, and 2,000 miles of these passed through a hostile country, requiring a permanent guard at every culvert. About 75,000 troops were necessary for this work, besides garrisons in the principal towns on the railroads and at particular defensive posts, which left only one-third of the effective British force free to operate against the enemy. Refugee camps were established at Irene, Kroonstad, Brandfort, Bloemfontein, and Aliwal-North in the Orange Colony, at Pretoria and other points in the Transvaal, and when the west was cleared at 2 or 3 stations near the border. Gen. French, who was placed in charge of the operation of clearing the Orange River Colony, carried out the work of denudation in a thorough manner. Except along the railroads and in the towns military occupation was not attempted excepting within a radius of 15 miles round Bloemfontein and small areas surrounding other garrison towns. An outer circle was protected by the South African constabulary strengthened by lines of blockhouses. In the occupied areas cultivation was carried on by surrendered Boers, and at each garrison town was a Government farm where vegetables and fodder were grown for the soldiers and their horses, the total area thus planted being 2,000 acres. To prevent Kaffirs from supplying food to the burghers or otherwise aiding them, they too were collected in concentration camps to the number of 40,000 in the Orange Colony. There were 60 British columns of from 200 to 2,000 men operating in July, and later as many as 70 columns. The Magaliesberg and adjacent parts of the western Transvaal were cleared. Boer families were found who were peacefully reaping their crops under the impression that the war had ended in their favor. The northern belt of the Orange Colony was also cleared. A third field of active operations was in Cape Colony, and this was the most difficult.

The surviving members of the Transvaal Government and Commandants Botha, Viljoen, and J. C. Smuts were inclined in May to give up the struggle, as burghers were surrendering, ammunition nearly exhausted, and food hard to get, and

with impending destruction of the nation all hope of preserving national sentiment would be lost. Mr. Steyn was not discouraged. He hoped for European complications, and relied on the growing uneasiness of the public mind in England. The Transvaal leaders proposed to send an agent to President Kruger to report the desperate condition of affairs, or if they could not do this to ask for an armistice in order to obtain the opinion of the inhabitants of the two Boer states as to making peace. Since the Free State Government did not favor a peace policy they determined to get the opinion of President Kruger and the deputation of the republics in Europe. Accordingly Gen. Botha asked Lord Kitchener to allow messengers to go to State-President Kruger in Europe to report to him the military situation with a view of terminating the war. Lord Kitchener was willing to forward a cipher despatch, which was accordingly sent. President Kruger and the Boer deputies, Dr. W. J. Leyds, A. Fischer, A. D. W. Wolmarans, and C. H. Wessels, replied that they still had hopes of a satisfactory ending of the long struggle, which the burghers should continue, while they on their part would see that the captive women and children and the prisoners of war would be provided for. On receiving this reply Schalk Burger, President Steyn, Louis Botha, and J. H. Delarey had a conference at which they resolved that, taking into consideration the material and personal sacrifices made by the Afrikaners of Cape Colony and Natal and the unbending persistence shown by the great majority of the men and women of the republics, they would accept no peace conditions by which the national independence and existence of the republics and the interests of their colonial brothers should be the price paid. They believed that after the destruction already done and the losses suffered the surrender of independence would result in the extinction of the Afrikaner nationality. Their determination to prosecute the war vigorously for the maintenance of independence was proclaimed on June 20. Steyn, De Wet, and Botha sent letters to Lord Kitchener stating that they intended to go on fighting. Peace delegates from the Afrikaner Bond of Cape Colony, ex-Ministers Sauer and Merriman, were sent to England, and they pleaded to be heard at the bar of the House of Commons, but they received little attention.

On Aug. 7 Lord Kitchener issued a proclamation on instructions from the Colonial Secretary declaring that, whereas the Orange Free State and South African Republic had been annexed and British forces were in possession of their seats of government, machinery of administration, principal towns, and railroad lines, and whereas 35,000 burghers were prisoners or had submitted and those still in arms were few in numbers and without guns or regular military organization, and therefore unable to carry on regular warfare, but continued to make isolated attacks on posts and detachments, to plunder and destroy property, and to damage railroad and telegraph-lines, therefore all field-cornets and leaders of armed bands still resisting the British forces and all members of the governments of the Orange Free State and the South African Republic, unless they surrendered before Sept. 15, would be permanently banished from South Africa and the cost of the maintenance of the families of all burghers in the field who failed to surrender before that date would be a charge on the property of such burghers.

The Boers, though courageous, were not aggressive at any time, and their natural caution

helped their present tactics, directed to prolonging the war so as to wear out the patience of the British people and benefit by the political reaction which the cost of the war in blood and treasure would produce in time. They were disappointed in the expectation of seeing any party in England come forward in favor of their independence. Only the Irish party took that ground. Even the Radicals declared annexation to be irrevocable, though they held out a prospect of self-government which Mr. Chamberlain shut off when he altered Lord Kitchener's pledge of elective colonial government at the earliest practicable moment into a promise to introduce an elective element after an indefinite period of Crown colony government. The Boer commanders were the political leaders, being elected to their position by political methods. The lack of discipline and cohesion in the Boer armies and the degree of initiative assumed by the inferior officers were favorable to the guerrilla operations. Although fine shots, the Boers were not such excellent marksmen as of old. Their shooting qualities were those of still hunters, not of soldiers, and they would not hold a position to the last. When offensive operations were undertaken it was always the foreigners who bore the brunt of the fighting. The religious sentiment predominated in the Boer camps and they grieved at the slaughter they inflicted on the enemy no less than at their own defeats. On the halt and in camp they read the Bible or sang psalms. They tended the British wounded with as much care as they did their own and treated their prisoners kindly. When a movement was proposed which was not agreeable to the men no officer would make a move; consequently many well-planned affairs were ruined. Their lack of capacity for the offensive prevented them as a rule from enjoying the fruits of a tactical victory. From the beginning Boers occasionally violated the rules of war, and so did the British. When Lord Roberts, and afterward Lord Kitchener, repudiated the accepted customs of war on the ground that the Boers had adopted guerrilla tactics, treating them as rebels, and later as bandits, a designation against which they feelingly protested, Botha and Delarey still observed the rules of battle, but Kritzing and other guerrilla leaders adopted barbarous methods in retaliation. When the hangings of Cape rebels began the Boer delegation in Europe unanimously advised the shooting of an English officer for every Afrikaner that was hanged. President Kruger, however, would not give his consent to the killing of prisoners. The Boer families in the concentration camps were invaluable to the British as hostages. In spite of the blockhouses dotting the railroads and the armored trains constantly within call patrolling every section of the line, the Boers could destroy trains and cut the line almost where and when they pleased. Their knowledge of the movements of the British was perfect, and the feeling that every inhabitant of the country, white or black, was a probable spy was exasperating to the British commanders. In the refuge camps the Boer women knew about battles before the official report was issued, and every movement of British troops found the Boer commandoes prepared. The train-wreckers always let supply-trains destined for the concentration camps go through and blew up and plundered only those carrying supplies for the troops. In certain sections of the railroads, by an arrangement with the trainmen, who deposited flour, coffee, and sugar for them beside the track, they refrained from destroying trains altogether. The blockhouses and armored trains could not prevent

the wrecking of supply-trains even when supplemented by a double line of posts and patrols on either side of the line. There was no point where a Boer could not creep up to set a rifle-lock connected with a dynamite cartridge to derail a train. In Cape Colony and in both republics the commandoes several times fitted themselves out with food and munitions from wrecked trains. In the first six months of 1901 the Boers derailed 43 supply-trains. There were many sections so poorly guarded that the Boers could have easily damaged the railroads permanently and cut off all supplies for the British garrisons. The Boer families in the concentration camps were hostages to prevent such a catastrophe. The burghers knew that their own families would be allowed to starve first. After a train was wrecked on Aug. 31 north of Pretoria and the commander and several men of the guard of 45 men shot down by Jack Hinton's commando, Lord Kitchener gave notice that prominent burghers would be placed on trains thereafter, following a precedent set by the Germans in the French war. This precedent, however, was condemned at the time and since by international lawyers, who hold almost unanimously that the laws of war give no rights over prisoners or hostages except that of keeping them in captivity. The Boers always had accurate information of the movements of British troops and the expected arrival of supplies. Many times the rations of the troops had to be reduced in consequence of the destruction of trains. Information could be conveyed to the enemy only by their friends in the towns. A more careful watch was kept, with the result that many burghers of Pretoria were caught who were in the habit of going out to the Boer commandoes. The head of the Boer intelligence department was believed to be Dr. Broecksma, formerly public prosecutor of the South African Republic. He was tried and hanged as a spy. Other prominent Hollanders and burghers were tried and punished for treachery and spying, and Mr. Nieuwenhuis, the Netherlands consul, was so connected with them that the British Government demanded his recall. Dr. Krause, a Transvaal burgher practising-law in London, was arrested and tried there, although he had always been classed with the pro-English Afrikaners. Some Boers who took the oath of neutrality when Pretoria was occupied were caught while attempting to steal out of the city to join a commando in June. They were carrying arms and wounded a sentry, and by sentence of a court-martial were shot. After that no night passes were allowed, and householders in all Transvaal towns were obliged to post on their front doors a list of the inmates of their houses and were held responsible for their presence.

The inmates of the concentration camps consisted of the families of burghers who had been killed in battle or were exiled prisoners, the families of those still fighting in the field, and burghers and their families who had voluntarily surrendered. These last, the "handsuppers," were treated with coldness and scorn by the others, who amid their severest privations and sufferings were even more earnest and resolute in their patriotism than their husbands and brothers on commando, as the Boer women have always been. The knowledge which reached these women in the camps of everything that was going on and the secret channels of communication between them and the commandoes puzzled the English intelligence officers and could not be fathomed. Very early the conditions of life in the camps shocked the world and roused in England feelings

of shame and indignation even in imperialist circles, though some blamed the Boers, who continued their hopeless resistance and who caused British soldiers as well as the refugees to go hungry by robbing provision trains and had caused great loss and suffering to the 50,000 Uitlander refugees from the Transvaal. In the first four months of 1901 there were 284 deaths in the Boer refugee camps of the Transvaal, and in the Orange River Colony camps 41 men, 80 women, and 261 children died. Emily Hobhouse, who was sent out by an English charitable society, wrote home of insupportable conditions in the Orange River Colony camps—of overcrowding, of lack of food, water, clothing, bedding, even soap, of medical care and nursing, and told of famished children dying and diseases raging with no organized effort to stop them. She was not allowed to visit the Transvaal camps, and when she came over from England a second time the military authorities expelled her from South Africa. The conditions grew steadily worse as the process of clearing whole districts was carried out by the flying columns without provision being made for the reception of the people. Filth and hunger diseases and unchecked contagion swept off adults and, above all, children. In June the annual rate of mortality per 1,000 in the camps rose to 159 at Kroonstad, 167 at Kimberley, 162 at Vredefort Road, 178 at Springfontein, and 383 at Bloemfontein. At Winburg it was 103, at Brandfort 74, at Norvals Pont 70, at Bethulie 50, at Aliwal North 35, at Heilbron, where the refugees were quartered in houses, only 26. The average death-rate was 117, and later it was 162. The refugees, sometimes 12 in a tent, slept on the bare ground without covering, saturated with rain and dew, fed with spoiled meat and meal, lacking fuel even for cooking. The military authorities, having shipped back to Europe the Dutch, French, German, and Swiss Red-Cross ambulance doctors who attended the Boers in the field and refused to allow others to come, now refused to allow a Swiss medical mission to come to attend the Boer women and children in the camps where the medical service was insufficient, even to separate the children suffering from measles and scarlatina from the rest. The mortality in the camps increased to 264 per 1,000, and among the children it rose in September to 440 per 1,000 per annum, a rate that would exterminate the young generation within two years. The transport facilities being insufficient to feed properly the refugees, the Government was urged to transport them all to the coast, but refused. The military authorities would not at first allow refugee families to go to friends at the Cape who would provide for them. Camps were established later at the coast, where the mortality was little above the normal, and for military reasons, to stop communications between the fighting Boers and their families, it was decided to send the families of Boers on commando as they were brought in to Cape Colony and Natal. The insignificant extent of country actually occupied after Lord Kitchener reversed Lord Roberts's policy of attempting to protect districts, when he withdrew all troops to the railroads and principal towns, afforded no base for the pacification of the country, and therefore he was compelled to extend his lines of blockhouses away from the railroads and enclose districts where agricultural operations could be carried on under the protection of the blockhouses and the South African constabulary. In the districts around Bloemfontein Kaffirs whose farms had been cleared or who had been brought in with the Boer families were released from the native

refugee camps in order to till pieces of ground allotted to them with the right of retaining the first and a share of subsequent crops. The blockhouses were of a pattern invented by Major Smith for the better defense of Ladysmith, consisting of hexagonal erections having bullet-proof walls made of two sheets of corrugated iron filled in between with gravel, with loopholes for 10 or 15 men. The Boers avoided these blockhouses for a time; then they devised a plan for attacking them and captured one after another by stealing up to the walls and using the loopholes against the defenders inside. The military authorities were on the point of abandoning the system when a method of preventing such attacks was found in entanglements of barbed wire in a broad lacework so interwoven that they could not be cut. For the protection of bridges masonry fortifications were built. The first line of blockhouses away from the main lines of transportation was the defensive line from Bloemfontein through Thabanchu to Ladybrand, intended to divide the northeastern part of the Orange Free State from the southeastern districts. When De Wet and his commando broke through at Springhaans Nek the number of posts was increased. Gen. Clements surrounded Pretoria with a ring of blockhouses to protect the town from Boer raids. A chain of blockhouses was afterward carried west from Bloemfontein to be manned by constabulary, and gradually extended along the Modder river to Jacobsdal, with a ramification stretching through Petrusburg to Fauresmith. Blockhouses were employed later in clearing and holding difficult parts of the Transvaal, such as the Schurveberg and the Zwart kopjes northwest of Johannesburg, Commando Nek in the Magaliesberg, which was connected with Krugersdorp by a chain of blockhouses, and the line of the Mooi river. In the autumn a line of posts was built between the Wilge river on the railroad to Komatipoort and Greylingstad on the railroad to Standerton. It was decided also to extend the line from Krugersdorp through the Losberg. Besides the infantry garrisons in the blockhouses mounted troops patrolled day and night between them. In October the Bethel district in the eastern Transvaal where the republican Government had long held sway was made the field of blockhouse extensions. The railroad from Pretoria to Pietersburg was protected by these erections, and they were placed along all the exposed branches of the Cape railroad network. Still the enclosed areas were not sufficiently cleared or sufficiently protected in any part of the republics or in the disaffected districts of the old colonies to allow the resumption of farming and other business.

Lord Kitchener's proclamation had not the slightest effect in leading the active Boer commanders to surrender, some of whom had already lost their families, others their property, and none of them cared to come under British rule. It made the conflict more bitter and desperate. The Boer deputies in Europe made the proclamation the pretext on which a fresh appeal for arbitration was made, which was addressed to The Hague Tribunal. That body took no notice of the application, because it had no power of initiative and can only act on the application of both interested parties. Lord Kitchener in a subsequent proclamation ordered the sale of the properties of burghers still in the field to provide for the maintenance of their families. Whenever a Boer officer was captured after Sept. 15 a sentence of perpetual banishment was promulgated. Martial law in Cape Colony caused many who had secretly aided the commandoes or who had

been suspected of doing so to join them. Others who were wavering or inclined to the peace party became rebels when friends, relatives, or neighbors were hanged. Many were alienated by the hardships which the application of the military laws brought upon themselves. Even the loyalist colonists smarted under a régime that stopped all business and subjected them to the tyrannical caprices of the local commandants. A written permit was required for every act. At an early hour in the evening everybody had to be indoors with all lights out. Foreign newspapers and periodicals were interdicted and English papers were kept back for weeks by the censor. The farmers had all their horses and most of their cattle requisitioned at prices mostly far below their worth, though some favorites got more than the value of their stock. Those who still had beasts to till the land could not take their produce to market without first making a trip to get a pass. All firearms and ammunition were taken away from the whites, and under the circumstances British and Dutch colonists alike saw with alarm the arming of large numbers of Kaffirs and Bastards. In August the country stores in certain districts were closed and all goods removed to large towns to prevent their falling into the hands of the Boers. Country residents were not allowed to have more than enough provisions to last a week. Later whole districts in Cape Colony and Natal were cleared and denuded as in the Boer states. In October martial law was extended to East London, Grahamstown, Port Elizabeth, and the Cape peninsula. No one was permitted to enter or leave by sea or land without a permit, and letters and telegrams were subject to censorship, as well as all newspapers and pamphlets. East Griqualand and Tembuland were placed under martial law because the Boers drew supplies from the natives.

The object of Gen. Sir J. French's operations in Cape Colony, begun in July, was to drive the commandoes northward to the line of blockhouses stretching from De Aar east, or, if they broke through or passed round the end of this line, to chase them over the Orange river. Against Scheepers in his mountain fastness near Graaf Reinet four columns operated. Scheepers had burned the public buildings in Murraysburg. Other columns were chasing Kritzingers, whose force was already broken up. The pursuit of Van Reenen, Fouché, and other leaders was begun at the same time. On July 13 Scheepers's laager in the Camdeboo mountains was captured and 25 prisoners were taken. Five-sixths of this commando and of most of the others were Cape rebels. Scheepers and most of his men escaped, and in the following week at Beaufort West they captured a train from Cape Town loaded with stores and carrying recruits for the British army. Of 113 soldiers on board 21 were killed or wounded. The principal commandoes were scattered over the country between Beaufort West and Queenstown south of De Aar and Stormberg. The British sent into this region the pick of their army, and the extraordinary strength and activity of French's columns kept the Boers on the move. The Herschel district in the north was troubled by parties of Kritzingers's commando, who were left alone, as also were the invaders in the west who received support from the inhabitants. To facilitate his great drive Gen. French had some districts in the center cleared of inhabitants and food supplies. The difficulty of the Boers in the Cape rebellion at this time was not to get recruits, but to provide them with arms. They had an abundance of Mauser rifles buried, but no Mauser

ammunition, and to arm every new recruit it was necessary to capture a British soldier. They had quantities of Lee-Metford ammunition captured from British trains and outposts. While moving about in front of the pursuing columns the Boers frequently blew up railroad-trains as they crossed the line. Many of them knew how to lay a mine by placing the lock of a Martini rifle and dynamite cartridges under the rails. Local troops and British infantry held the passes on the south and east to prevent the escape of any more of the commandoes in those directions while Gen. French carried out his northward drive in August and September. The energy with which the campaign was pressed gradually reduced the numbers of the Boers. They were pressed on all sides, and could no longer roam about at will. The railroads were guarded by blockhouses. Toward the end of July Gen. French decided to abandon the tactics of pursuing individual commandoes, and by a sweeping movement either to drive the Boers against the line of blockhouses extending from De Aar to Stormberg and from Norvals Pont to Naauppoort or drive them across the Orange river. A large number of parallel columns of about 500 men each marched south from the railroad. The Boers slipped between the columns and went north. When the columns had proceeded as far south as Graaf Reinet they swung round, were reinforced, and marched north again. When the columns on the extreme right came into contact with Kritzinger's commando they pressed forward, driving Kritzinger, Malan, and Wessels, with about 400 men, across the Orange river. The commandos of Botha and Lotter in the center were pushed against the blockhouses between Rosemead Junction and Naauppoort, but while five columns were converging upon them they escaped on Aug. 14 over a mountain that was believed to be impassable, and went south again to the Cradock district. Theron's commando also slipped through the line and returned to the Murraysburg district after having on Aug. 10 surprised a body of 68 scouts near Bethesda and taken away their horses and supply-train. Scheepers had kept to the south of the columns and when they turned about he made a dash to Willowmore, but turned to the northwest when columns arrived by train to enclose his little force. He boasted his intention of wintering in the mountains, in which he had collected a great quantity of supplies captured from the British. Kritzinger, Malan, and Wessels were driven before the columns and with about 300 men escaped over the Orange river. Kritzinger was overtaken by Col. Gorringe on Aug. 13 north of Steynsburg, and 20 of his men were killed. He fled with about 70 and crossed the river. Scheepers proceeded southward as far as Uniondale, where he came in contact with the troops of Gen. Beatson. The Boers in the Transvaal and the Orange River Colony sent several large commandoes to the south to support the Boers in Cape Colony. Against this move Lord Kitchener had made preparations by strengthening the posts in Orange River Colony and on the Orange river. Troops were also sent into the Transkei and Griqualand to prevent reinforcements from passing through or the Cape commandoes from breaking in. Hertzog and Latagan appeared with commandoes in the west near Philipstown and were driven back over the Orange river. Scheepers turned back to the northwest, and Theron, whose small force was composed mainly of foreigners, attempted to form a junction with him from the Willowmore district. Myburgh's commando of rebels escaped into Griqualand. The total number of burghers and rebels

still remaining in the Midland districts was estimated at the beginning of September at 1,500. A commando of Free State burghers succeeded in crossing the Orange river east of Herschel in the beginning of September. On Sept. 4 Lotter and his rebel commando were overtaken by Col. Scobell at Bowershoek, near Petersburg, and were captured after a fight in which 19 were killed and 52 wounded. The number of unwounded prisoners was 62. The section of Lotter's force commanded by Vandermerwe was caught east of Laingsburg by Col. Crabbe's column, and in the engagement the commandant and 4 others were killed, 7 wounded, and 37 of his men taken prisoners. On Sept. 18 the commando of Smuts attempted to break through the cordon of columns at Elands river poort by rushing a squadron of lancers, killing 3 officers and 20 men and wounding Major Sandeman and 30 men. On Sept. 20 Kritzinger with a reorganized commando attempted to force a passage of the Orange river and reenter the Colony at Herschel. He attacked a post held by scouts, killed Major Andrew Murray, the commander, and carried off a gun, but was repelled, and the gun was retaken. The British casualties were heavy, and in the counter-attack so were those of the Boers. Executions of Cape rebels were going on during the operations, and Scheepers and the other commandants still gained as many recruits as they could provide with weapons. Lotter was tried and executed for treason on testimony that he was a colonial who had changed his name. All his officers were also to be shot; the men had their sentences commuted to life imprisonment. Scheepers had to leave his commando and retire to a farmhouse to undergo a surgical operation, and there he was captured on Oct. 11. He was tried later for killing native scouts, and admitted that he whipped these scouts whenever he caught them and one he had shot after he had been tried as a spy.

After the issue of Lord Kitchener's proclamation the Boers resumed the offensive in all parts of the theater of war. A commando appeared at Acton Homes, southwest of Ladysmith, and the Natal volunteers were called out for the defense of the Tugela. In the Transvaal Gen. Delarey became active again, making Wolmaranstad his base, retiring when Gen. Hamilton appeared with a large force of cavalry, but returning as soon as the British had left. Col. Williams captured a part of Delarey's transport after a sharp fight near Klerksdorp on Aug. 19. The columns of Kekewich and Allenby continued to scour the Magaliesberg. Gen. Botha reassembled his commandoes and again threatened Natal with a force of 4,000 men. On Aug. 22 a detachment of 68 men belonging to Elliot's column was surrounded and captured after 1 was killed and 4 were wounded north of Ladybrand. In the attack on the guard of a derailed train within 20 miles of Pretoria on Aug. 31 Lieut.-Col. Vandeleur and 9 men were killed and 17 were wounded. The Delagoa Bay Railroad was broken near Komatipoort. In a fight near Jaskraal 16 regulars were killed or wounded. The British captured a Boer laager in the Losberg and took Delarey's brother prisoner. On Sept. 13 Commandant Theron attacked Heidelberg. On Sept. 17 Major Gough, with 3 companies of mounted infantry and 3 guns, was entrapped near Utrecht and after a fight in which 16 officers and men were killed and 29 wounded 155 surrendered. The attacking party belonged to Botha's commando. On Sept. 19 Capt. Tufnell, with 137 infantry and 2 guns, was led into an ambush at Vlakfontein in Orange River Colony, and after a stubborn resistance surrendered. Gen.

Louis Botha with 2,000 men made a dash into Zululand and a feint toward the north, then turned southeast and on Sept. 26 attacked Itala and Prospect forts on the Zululand border at the southeast corner of the Transvaal. The garrisons had been strengthened by Gen. Lyttleton without the knowledge of the Boers. Botha used no guns but kept up the assault on both forts under artillery and musketry fire for nineteen hours, suffering about 400 casualties. Major Chapman could not have held out longer if the Boers had kept up the attack on Itala, having expended all his ammunition. The British guns were disabled during the action. The Boers rushed to the trenches again and again with a daring and persistence that had not before been exhibited on either side during the war, and some passed through the rifle-fire to fall by the bayonet in the trenches. A simultaneous invasion of Natal by his force from the east and De Wet's from the west was planned. One commando made its way into Natal from the Orange River Colony, and others hovered on the border. After his disaster Botha, hard pressed by Lyttleton's columns, was not able to carry out his part of the plan. The cordon was drawn closer around him from Zululand and the Transvaal. On Oct. 6 his main force, 2,000 strong, was attacked by Gen. Walter Kitchener's column northeast of Vryheid and evacuated its position, retiring north into the Pongola forest, where it split up into small groups as the other commandoes had already done, and all slipped through the cordon or hid in kranzes and kloofs until the British troops retired. On Sept. 30 Delarey made a night attack with 1,000 men on Col. Kekewich's camp at Moedwill. The Boers killed 39 and wounded 108 British, including the commander, and then withdrew, taking off the camp supplies. The foreigners of Kemp's commando led the attack, which lasted two hours. Louis Botha returned to the Ermelo district, where the columns of Gen. Rimington and Gen. Rawlinson searched for him in vain. The heavy rains and fogs necessitated a lull in active operations for some weeks.

In December the Boers, though their losses in the last six months had averaged 2,000 men a month and 32,000 horses had been taken from them, displayed renewed vigor. Chris de Wet assembled a strong force with which in the night of Dec. 24 he rushed Col. Firman's camp at Zeefontein, within the quadrangle having Vereeniging, Volksrust, Harrismith, and Kroonstad for its points, which the British had attempted to clear several times and had enclosed with block-houses. There were 6 British officers and 50 men killed, 8 officers were wounded, and 2 guns were captured. The total Boer losses by the war in killed, wounded, and prisoners for the year ending Dec. 31, 1901, were 18,320 men. The number of rifles captured from the Boers or surrendered was 7,993, with 2,300,000 rounds of ammunition. All the guns known to belong to or to have been captured by the Boers, 27 in number, excepting the last ones captured at Zeefontein, were taken by the British during the year. The number of Boer horses taken was 29,882; of cattle and sheep, 366,821. The British casualties in battle during the year were 9,113 men, including 1,513 prisoners who were afterward released. The number killed accidentally was 342; died of disease, 4,090; invalided home, 25,800.

Claims for damages on account of losses incurred by being deported from South Africa were asked by the diplomatic representatives of various countries on behalf of their nationals. The powers acknowledged the legal position taken by the

British Government that a general commanding an army in the field has the absolute right to expel any persons whom he considers to be dangerous, suspicious, or undesirable. It was represented that many persons who had maintained strict neutrality had been expelled and had innocently suffered losses and hardships. Such cases the British Government agreed to examine and to make some compensation where hardship was proved. About 1,800 claims were investigated by a compensation commission. The total amount asked was £1,277,195. There were two principal classes of claimants—the employees of the Netherlands Railroad, belonging to all nationalities, Dutch being most numerous, Germans next; and aliens in Johannesburg of every nationality who were deported by wholesale after the discovery of a plot to murder Lord Roberts and other British officers in July, 1900. As the Netherlands Railroad officials actively aided the Boers in preparations for and the prosecution of hostilities, all employees of the company were required to establish the fact of their neutrality before compensation was allowed. The Johannesburg claimants, on the other hand, were presumed to have been neutral unless something could be shown to the contrary. The claims having been investigated, a lump sum was offered in settlement to each Government, £6,000, for instance, to be distributed among American claimants, and the offers were accepted, the total amount being about £100,000. The British Government decided to acquire the shares and debentures of the Netherlands Railroad. The directors had played so zealous and prominent a part in the hostilities that confiscation was urged. This international law and usage forbade. An offer was made of something under the current market price, and it was accepted. The British Government refused, however, to pay anything for the large amount of stock, 5,107 out of 5,713 shares, owned by the Transvaal Government, out of a total of 14,000 shares, sold for a good price after the beginning of the war to a syndicate of German capitalists. In the cases of deported professional men, railroad officials, missionaries, and others who had renounced allegiance to Germany to become Transvaal burghers the German Government held that they were equitably entitled to compensation because they were expelled as Germans. The English compensation commission refused to take such cases into account.

Portuguese Possessions.—Portugal claimed all Rhodesia and British Central Africa, Portuguese missionaries and slave-traders having formerly penetrated these regions, which were still visited by Portuguese negroes from the east and west coasts, both ancient possessions of Portugal. A British naval demonstration impelled the Portuguese Government, yielding to superior force, to concede to Great Britain the interior. Portuguese East Africa, the inland limits of which are fixed by the Anglo-Portuguese agreement of June, 1891, is divided into the districts of Mozambique, Zambezia, and Lourenço Marques. The Manica and Sofala districts of the interior have been transferred to the chartered Mozambique Company. The company that undertook the development of Inhambana failed. The district between the Rovuma and the Lurio is administered by the Nyasa Company. Gazaland, on account of the recent revolt of the natives, is under military law. In Manica, which borders upon Mashonaland, British miners have registered claims, but however rich in gold the country may prove to be, the mines can not be developed until means of transport are provided. Sugar is cul-

tivated on the lower Zambesi. The Zambezia Company has plantations, mines, and trading-posts. Rubber, ores, wax, and ivory are the principal exports. The value of imports in 1899 was £1,621,500; of exports, £164,200. The transit trade with British Central Africa and Rhodesia was £2,275,000. From the port of Beira a railroad has been built to the frontier of Mashonaland, 222 miles, and thence to Salisbury. The tracks have been widened to standard gage. In Beira were 1,467 whites in a population of 4,130 in 1899. Lourenço Marques, the maritime outlet of the Delagoa Bay Railroad, 57 miles in length to the Transvaal border, whence it is continued 290 miles to Pretoria, had a white population of 5,130 and 1,500 natives. In Chinde were 127 Europeans; in Inhambana, 97. The revenue of the colony in 1898 was estimated at 4,232,326 milreis, and expenditure at 3,945,765 milreis. The military force was 4,888 men, of whom 3,246 were natives. On the west side of Africa, Portugal retains Angola (see PORTUGAL).

German Southwest Africa.—The German protectorate of Southwest Africa has an area estimated at 322,450 square miles. Except in the north it is an arid region, having a nomadic population of Hottentots, Bushmen, Damaras, and Kaffirs estimated at 200,000. There were besides the military force of 761 men, 1,557 Germans in the protectorate in 1899 and 273 other Europeans. There are stations at Windhoek, Gobabis, Otjimbingue, Tsoakhaubmund, Keetmanshoop, and Gibeon, and the ports of Sandwich Harbor, Angra Pequena, and Swakopmund. From the last, where an artificial harbor has been made, a railroad to Windhoek, headquarters of the administration, was begun and 80 miles were done before the end of 1899. The Imperial Government contributed 7,181,000 marks in 1901, of which 2,300,000 marks were to build the remaining 100 miles of the railroad, to the total revenue of 8,174,000 marks. The Damaras have great herds of cattle. Sheep and common goats are also reared. The mineral resources are supposed to be large, but the copper-mines which first attracted the Germans are unprofitable, nor have paying gold-mines been found, though there are indications. The exports are guano, ostrich feathers, wax, hides, and cattle.

British Central Africa.—The British Central Africa protectorate has an area of 42,217 square miles with a native population of about 900,000, 400 Europeans, and 250 East Indians. In the Shire islands coffee has been planted, and in 1899 the export was 1,100 tons. The value of imports in 1900 was £176,000, and of exports £79,000, not including £31,300 worth of merchandise in transit. The principal exports are ivory, coffee, and rubber. The military force consists of 215 Sikhs trained in the Indian army and 1,070 native troops under English officers. A battalion of 1,048 trained natives was sent to Mauritius and afterward to British East Africa. Another force of 300 native troops with 50 Sikhs was sent to Ashanti in June, 1900. Two gunboats patrol the Shire river, and one of 350 tons was launched on Lake Nyasa in 1899. The British Commissioner and consul-general is Alfred Sharp, with Lieut. Col. W. H. Manning as deputy commissioner. The revenue in 1900 was £47,077; expenditure, £96,366.

SOUTH CAROLINA. (See under UNITED STATES.)

SOUTH DAKOTA. (See under UNITED STATES.)

SPAIN, a kingdom in southwestern Europe. The legislative power is vested in the Cortes, con-

sisting of a Senate of 360 members and a Congress of 401 members. Of the Senators half are hereditary, life, and official members and half are elected by the provincial and communal assemblies, universities, learned societies, and the most highly assessed taxpayers. Princes of the royal family, grandees of Spain who have an income of 60,000 pesetas, captains-general of the army, admirals of the navy, archbishops, and supreme court judges are Senators by right of birth or of office. There are 80 of these and 100 appointed for life, and the rest are elected for ten years or the duration of the Cortes. Members of the Congress are elected by universal male suffrage for five years. The Cabinet constituted on Oct. 23, 1900, was composed as follows: President of the Council, Gen. Azcarraga; Minister of State, Marquis Aguilar de Campo; Minister of Justice, Marquis del Vadillo; Minister of War, Gen. Linares; Minister of Finance, Allende Salazar; Minister of the Interior, Señor Ugarte; Minister of Public Welfare, Agriculture, Commerce, and Public Works, Sanchez Toca; Minister of Public Instruction, García Alix; Minister of Marine, Rear-Admiral Ramos Izquierdo.

Area and Population.—The area of Spain is 197,670 square miles. The population on Dec. 31, 1897, was 18,089,500. The legal population was 18,226,040. The number of emigrants in 1898 was 59,543, most of whom went to Brazil, the Argentine Republic, and Uruguay.

Finances.—The ordinary revenue in the financial year 1899 was 842,532,714 pesetas; expenditure, 878,398,568 pesetas. The total receipts from all sources were 921,063,895 pesetas, and the total expenditures 935,422,363 pesetas. In the budget for 1900 the estimate of revenue was 885,998,215 pesetas, and of expenditure 905,451,827 pesetas. For 1901 the revenue was estimated at 934,428,381 pesetas, of which 392,527,730 pesetas came from direct taxes on land, commerce, mines, Government salaries, registration, etc.; 347,140,000 pesetas from customs, excise, indirect taxes, etc.; 163,700,024 pesetas from the tobacco monopoly, the mint, etc.; 21,701,480 pesetas from revenue and 3,020,000 pesetas from sales of national property; 6,255,000 pesetas from the public treasury; and 84,147 pesetas from Fernando Po. The total expenditure was estimated at 926,498,150 pesetas, of which 9,250,000 pesetas were for the civil list, 1,638,085 pesetas for the Cortes, 417,938,480 pesetas for the public debt, 1,518,969 pesetas for the courts of law, 71,780,500 pesetas for pensions, 798,217 pesetas for the Council of Ministers, 4,836,442 pesetas for the Ministry of Foreign Affairs, 53,291,720 pesetas for the Ministry of Justice and Worship, 148,993,659 pesetas for the Ministry of War, 27,686,712 pesetas for the Ministry of Marine, 51,279,884 pesetas for the Ministry of the Interior, 18,553,404 pesetas for the Ministry of Public Instruction, 69,793,519 pesetas for the Ministry of Public Works, 18,336,647 pesetas for the Ministry of Finance, 30,289,515 pesetas for collection of taxes, and 512,387 pesetas for Fernando Po.

The public debt on July 1, 1900, amounted to 9,188,830,792 pesetas, of which 7,068,730,153 pesetas were the state debt of Spain, 944,842,639 pesetas the treasury debt, and 1,175,258,000 pesetas the colonial debt, besides which there were various liabilities of the treasury requiring 16,375,000 pesetas a year for the payment of interest, while interest on the state debt amounted to 307,999,997 pesetas, that on the treasury debt to 23,835,712 pesetas, and that on the colonial debt to 53,873,770 pesetas, making the total interest charge 402,084,479 pesetas. The amount of the foreign

debt was £118,967,929 sterling, of which £59,299,869 were perpetual and £59,668,060 redeemable external debt. Señors Laiglesia and Cornya, delegates of the Spanish Government, made on July 14, 1900, with representatives of councils and associations of foreign bondholders, a convention with reference to the 4-per-cent. external debt which, under the compact made with Señor Camacho, Minister of Finance in the Sagasta ministry, on June 28, 1882, was declared free from all imposts. The law of Aug. 2, 1899, for the reorganization of the debts authorized negotiations for the modification of this compact, which applied to all foreign debts. Señor Puigcerver, Minister of Finance in Sagasta's Liberal ministry of 1898, kept faith with the bondholders, paying the 4-per-cent. coupons in gold without the duty. It was an agreeable surprise in Spain when the delegates succeeded in inducing the foreign bondholders to forego $\frac{1}{2}$ of 1 per cent. of their interest on condition that it should be applied to amortization, thus taking upon their own shoulders the whole cost of the extinction of the debts without requiring any sacrifice from the Spanish treasury. The bondholders feared that the tax of 20 per cent. which was deducted from the interest on all Government debts paid to Spanish holders would be imposed on their coupons, although no proposal to that effect had been made by the Government or by any important political party.

The Army.—The permanent army on the peace footing has a legal strength of 98,140 men, inclusive of 18,140 gendarmes, to be raised in war to 183,972 men. All able-bodied Spaniards at the age of nineteen can be called into the service unless they purchase exemption by paying 1,500 pesetas. The annual contingent of recruits is fixed at 80,000 men. The whole period of service is three years in the regular army and three years in its reserve, after which they are transferred for six years to the sedentary reserve. There are 64 active regiments of infantry and 55 regiments in the reserve, 15 battalions of chasseurs, 28 active and 14 reserve regiments of cavalry, 16 regiments of field and mountain artillery, 10 battalions of fortress artillery, 1 regiment of siege artillery, 4 regiments of sappers, 1 regiment of pontonniers, 1 battalion of railroad troops, 1 battalion of telegraph troops, and 6 companies of sanitary troops. The depot battalions are being increased and each reserve battalion has its district with the object of forming a separate regiment in case of war. By this system it is expected to make the war strength of the army 1,000,000 men.

The Navy.—Since the disasters of the war with the United States little has been done to restore the naval armaments of Spain. The battle-ship Pelayo, of 9,900 tons, has been reconstructed and armed with Canet guns, 4 9.4-inch breechloaders in barbette turrets, 9 5.5-inch quick-firers, and smaller ones. The cruisers Cataluña, Cardenal Cisneros, and Princesa de Asturias, of 7,000 tons, having 12-inch steel armor belts and engines of 13,000 horse-power, giving a speed of 20 knots, are not yet completed. The Carlos V is a Spanish-built cruiser of 9,235 tons, carrying 2 11-inch guns, 10 5.5-inch quick firers, 4 4.7-inch ones, and 2 12-pounders, and with engines of 15,000 horse-power able to steam 20 knots. There are 2 deck-protected cruisers of 4,800 tons, the Alfonso XIII and Lepanto, which can also make 20 knots. The old Numancia and Vitoria are being rearmed.

Commerce and Production.—Four-fifths of the area of Spain is productive land, and of this over a third is taken up with farm and garden

crops and a fifth with orchards, which is more than is given to grazing, while vineyards and olive-groves cover 5.3 per cent. of the cultivable area. There are 3,426,000 assessed proprietors, the transfer of the land from landlords to the cultivators having proceeded rapidly in recent times. The area under wheat in 1898 was 3,861,997 hectares, and the yield was 43,649,900 hectoliters, and 20,822,061 hectoliters of barley were obtained from 1,514,457 hectares, 6,809,652 hectoliters of rye from 713,525 hectares, 3,112,585 hectoliters of oats from 376,923 hectares, and 4,968,264 hectoliters of corn from 408,890 hectares. The vineyards had a total area of 1,997,046 hectares, and they yielded 28,089,004 hectoliters of wine. The olive-crop was 2,829,111 hectoliters, the trees occupying 1,092,238 hectares. Beans are raised and consumed in great quantities. Flax and hemp are important crops. Oranges, grapes, and filberts are exported largely. The production of coal in 1899 was 2,565,437 tons; of iron ore, 9,505,119 tons; of copper ore, 2,443,044 tons; of lead ore, 123,750 tons; of galena, 184,906 tons; of zinc ore, 119,770 tons; of quicksilver ore, 32,144 tons; of manganese ore, 104,974 tons; of salt, 508,108 tons.

The total value of imports in 1900 was 862,396,600 pesetas, and of exports 723,867,883 pesetas. The imports of cereals, sugars, wine, and alimentary substances of all kinds were 139,571,350 pesetas in value, and exports 254,735,684 pesetas; imports of minerals, glass, pottery, etc., were 96,557,403 pesetas, and exports 159,092,522 pesetas; imports of animals and animal products were 81,901,845 pesetas, and exports 64,846,347 pesetas; imports of wood and wood manufactures were 60,182,094 pesetas, and exports 53,378,864 pesetas; imports of metals and metal manufactures were 41,280,627 pesetas, and exports 88,898,633 pesetas; imports of cotton and cotton manufactures were 84,832,169 pesetas, and exports 33,946,034 pesetas; imports of machinery, vehicles, and vessels were 138,850,707 pesetas, and exports 755,709 pesetas; imports of drugs and chemicals were 83,640,680 pesetas, and exports 18,879,732 pesetas; imports of wool and woolen manufactures were 28,901,704 pesetas, and exports 9,688,657 pesetas; imports of silk and silk manufactures were 26,380,189 pesetas, and exports 5,178,319 pesetas; imports of vegetable fibers and manufactures other than cotton 24,364,023 pesetas, and exports 1,308,449 pesetas; imports of paper and paper manufactures 11,234,137 pesetas, and exports 8,743,656 pesetas; imports of miscellaneous articles 8,692,193 pesetas, and exports 3,470,399 pesetas; special imports 30,488,309 pesetas, including tobacco for 20,300,385 pesetas and railroad materials for 6,350,754 pesetas; imports of gold and silver 5,519,180 pesetas, and exports 20,944,878 pesetas. The value of wine exports fell off from 103,562,987 pesetas in 1899 to 82,202,920 pesetas, of which 76,362,220 pesetas represent common wines, 5,325,120 pesetas sherry, and 515,580 pesetas wines of full body, most of which last went to American countries, while of the sherry the value of 2,465,280 pesetas went to England and 1,948,680 pesetas to France, and two-thirds of the common wines went to France.

Navigation.—The number of vessels entered at Spanish ports during 1900 were 17,722, of 14,172,872 tons, of which 10,161, of 7,332,737 tons, were with cargoes; the number cleared was 16,910, of 14,086,361 tons, of which 14,780, of 12,602,916 tons, were with cargoes. Of the total number entered 9,517, of 6,860,444 tons, and of those cleared 8,383, of 6,608,266 tons, were Spanish vessels.

Dependencies.—Spain has come to an agreement with France by which the Rio de Oro coast

region in northwestern Africa is retained, about 100,000 miles in extent, but Adrar is conceded to France. In the disputed Rio Campo and Muni region opposite the island of Corisco France concedes to Spain a territory, populous and fertile, about 8,000 square miles in extent. The delimitation of the boundary was carried out in 1901 by a mixed commission. The islands of Fernando Po, Annabon, Corisco, and Elobey and San Juan have a combined area of 850 square miles, with about 30,000 inhabitants. The station of Iñi, near Cape Nun, has an area of 27 square miles, with 6,000 inhabitants.

Railroads, Posts, and Telegraphs.—There were 8,170 miles of railroads in operation on Jan. 1, 1900.

Politics and Legislation.—The session of the Cortes which began on Nov. 20, 1900, was adjourned indefinitely on Jan. 15, 1901. The time was spent mostly in retrospective discourses and the discussion of political incidents, personal questions, and the approaching royal nuptials. The budget of 1901 was not discussed, nor the proposed revision of the alcohol duty and of the pension system. The pensions, increasing year by year, amounted in the estimates for 1901 to 70,000,000 pesetas. The Budget Committee considered a project for the emission of 5-per-cent. redeemable bonds to realize 150,000,000 pesetas annually so as to extinguish in seven years the war loans obtained from the Bank of Spain. The convention with foreign bondholders for the conversion of 1,043,000,000 pesetas of 4-per-cent. debt was not voted by the Senate. The debate on the military reforms of Gen. Linares was barely begun. The annual contingents for the army and navy were fixed. A commercial treaty with Japan was approved; also the treaty with the United States for the cession, in consideration of the payment of \$100,000, of certain islands in the South Sea not included in the treaty of peace concluded on Dec. 12, 1898; and a treaty with France which provided for the delimitation of frontiers in equatorial Africa on the Numi river and in the Gold Coast. To arrive at the paltry results of the session the Azcarraga Government had to appeal to the aid of Señor Silvela at times or to the benevolence of Señor Sagasta, even to the support of the dissentient Liberals who follow Señor Gamazo or to the Duke of Tetuan's dissident Conservatives, when the majority threatened to revolt against the Ministers of the Interior, of Public Works, and of Education. A law authorizing the Minister of Marine to arm as coast-guards 4 old vessels discarded from the effective fleet was passed with the help of Opposition votes. The parties were split up into a great number of shifting groups and factions—the Conservatives into Silvelists, Catholics of the school of Azcarraga and Sanchez Toca, Ultramontanes of the Pidal shade, modern Conservatives of the Dato kind, dissident Conservatives of the following of the Duke of Tetuan and Navarro Reverter; the Liberals were Sagastinos, Constitutional Liberals, Democrats of the shade of Moret and Aguilara, Advanced Liberals, Young Liberals like Canalejas, Old Liberals of the shade of Montero Rios, Dissident Liberals led by Gamazo and Maura; the Carlists were divided into moderate and impatient sections; the Republicans were Progressists, Federalists, Socialists, Catalanists, Moderates, or Opportunists. Outside of the purely political parties were the elements seeking to shake off the control of politicians and the ruling classes, such as the revolutionary Socialists. Since no budget had been voted, that of 1901 by the decree of Dec. 31, 1900, became the provisional

budget for 1902. The convention with foreign bondholders fixed Dec. 31, 1900, as the date for the ratification of the arrangement for the conversion of the 4-per-cent. stamped external debt into 3½-per-cent. amortizable debt; failing ratification by the Cortes, both parties from that date would regain their liberty of action. The convention was opposed on the ground that it did not obtain enough and that it tied the hands of the Spanish Government for sixty years. The failure of the Senate to give its approval restored the right of the bondholders to 4 per cent. interest in gold exempt from taxation. Military reforms, including universal service, reform of the civil service, and a revision of the concordat, were, in addition to an overhauling of the pension system, the tasks which the Conservative ministry promised to fulfil.

In February anticlerical demonstrations took place, evoked by the drama *Electra*, by Galdos, and by a lawsuit over the enforced detention of a wealthy heiress in a convent. The demonstrations were directed also against the marriage of the Princess of the Asturias, the heiress to the throne, to Prince Carlos of Bourbon-Canerta, son of the former chief of staff in the army of Don Carlos. Blood flowed in several cities. In Granada gendarmes shot into a mob from a cloister and killed several persons. In Madrid riotous demonstrations by students and others took place in front of Jesuit establishments when the parents of the Señorita Ubao applied for the custody of their daughter, who had entered a convent before she was twenty-five years old. The disturbance spread to Saragossa, Valencia, Santander, Alicante, Barcelona, and Malaga. On Feb. 14 a state of siege was proclaimed in Madrid. The Jesuits in the capital and in other cities fled to rural convents when their buildings were smashed in. The trades association of Madrid appealed to the Government to forbid industrial labor in cloisters and thus put an end to the disastrous competition with free labor of the religious orders, which pay no taxes. The marriage of the Princess of the Asturias was celebrated on Feb. 14.

At a Cabinet council on Feb. 25 the ministers decided to resign so as to enable a new Cabinet to frame the budget of 1902, and on the day following Gen. Azcarraga presented their resignations, which the Queen-Regent accepted. A coalition Cabinet of all the parties under Gen. Azcarraga could not be formed because Señor Silvela, the Conservative leader, refused to give it his support. Señor Sagasta undertook to form a Liberal Cabinet, which was constituted on March 6 as follows: Premier, P. M. Sagasta; Minister of the Interior, Señor Moret; Minister of War, Gen. Weyler; Minister of Foreign Affairs, the Duke of Almodovar; Minister of Finance, Angel Urzaiz; Minister of Marine, the Duke of Vergara; Minister of Justice, the Marquis Teverga; Minister of Public Instruction, Count Romanones; Minister of Public Works, Miguel Villanueva. Strike riots in Catalonia broke out a few days after the Cabinet was formed. Some of the workmen having struck work as a protest against the introduction of new textile machinery, the masters closed their factories. In the Ter valley textile workers were wounded by the gendarmes. In Madrid occurred disorderly demonstrations against the octroi duties. Gen. Weyler, as Governor of Madrid, had administered martial law with vigor while the state of siege lasted, but the new ministry, on taking office, restored the ordinary law. The accession of a Liberal Cabinet necessitated the dissolution of the Cortes, which was decreed on March 18. Anticlerical demon-

strations were renewed. The expulsion of the religious orders was demanded. A revision of the concordat requiring the Church to share in the financial sacrifices necessary to relieve the treasury of its embarrassments was not opposed by the Vatican. All that the Church contributed to the treasury was the fixed annual sum of 3,000,000 pesetas, while the hierarchy received from the treasury 2,500,000 pesetas in salaries and the total expenditure for ecclesiastical purposes was 41,000,000 pesetas. Only a small part of the income of the clergy comes from the state. The number of the higher clergy is 1,313. There were 45,328 priests and monks and 28,549 nuns in 1897. The Jesuits, numbering 1,500, exercise a powerful influence through their schools. The teachers of the public schools, 21,546 in number, receive wretched salaries and lead a slavish existence under the domination of officials and clergy. Early in May strike riots occurred in Barcelona of so serious a character that martial law was proclaimed. To satisfy the Catalan demand for home rule the Government decided to concede a certain measure of decentralization in all the provinces. A court of arbitration for labor disputes was approved by the Cabinet. The general election of Deputies took place on May 19. Election fights and demonstrations against octrois occurred in various parts of the country. The Liberals won 238 seats; Conservatives, 81; Dissident Conservatives, 12; Dissident Liberals, 13; Romerists, 14; Republicans, 16; Carlists, 6; National Union, 10; Catalanists, 4; Socialists, 1; Independents, 6. The Ministerialists numbered 238; the Opposition, 163.

The new Cortes were opened by the Queen on June 11. In the speech from the throne it was stated that the time had arrived for beginning to reform the monetary circulation, both paper and coin, the derangement of which was considered to be the cause of the unfavorable state of foreign exchanges. The Government proposed to cease issues of paper and the coinage of coin silver and to repay the advances of the Bank of Spain without resorting for the present to large credit operations. The preceding Government had resolved to cease the purchase and coinage of silver. The reduction of expenses and the readjustment of taxes were the means chosen for equalizing the budget. The Government possessed the means of fulfilling its engagements, and no one had a right to doubt the nation's credit. A public-works loan would be utilized for territorial defense and the reorganization of the naval forces. The congregations not authorized by the concordat would have to submit to the ordinary law, and no objection on the part of the Vatican was anticipated. A bill was to be brought forward dealing with the religious orders, declaring which were legal and which could not be tolerated. A thorough reform of the social organization was necessary, and this must be accompanied by the development of the wealth of the country and the consolidation of its finances. To this end various bills were to be presented, of which the principal ones dealt with electoral and municipal reforms. Municipalities must no longer take part in elections or engage in political intrigues, but confine their work to purely administrative matters. It was proposed, moreover, to make them as far as possible autonomous and free from interference from the Central Government in Madrid. The 4-per-cent. unsealed external bonds, the redeemable 4-per-cent. preference bonds not presented for redemption, and the Cuban and Philippine mortgage bonds were to be converted into internal 4-per-cent. stock. In the budget of Señor Urzaiz a surplus of 30,000,000 pesetas was calcu-

lated for 1902. His main financial measures were not presented till the winter session. Spain in twenty years coined 1,026,000,000 pesetas in silver, obtaining a profit of 141,000,000 pesetas. The Bank of Spain for several years has derived half its profits from excessive note issues necessary to meet the requirements of the treasury. As a remedy for the fluctuations of exchange the Minister of Finance introduced a bill prohibiting the coinage of silver, except recoinage of old coins, and authorizing the Government to reconvert a part of the existing coinage into ingots for sale, and gradually to issue treasury bonds to repay the advances obtained from the Bank of Spain during the Cuban and Philippine wars. The enforced conversion of the unsealed external debt into internal bonds would leave outstanding only the part held by foreigners, amounting to 1,026,000,000 pesetas. Señor Moret left the Cabinet on being elected president of the Chamber, and the Minister of Public Works, on July 15, took the portfolio of the Interior *ad interim*. The session was adjourned on July 22. Serious anticlerical riots occurred at Saragossa, and sporadic anticlerical and labor disturbances at various other places during the parliamentary vacation. The Carlists made preparations for a rising in the Basque provinces, but the leaders fled when the Government got wind of it. Anarchistic agitations were checked by closing labor societies and arresting the leaders. The Cortes met again in October. Gen. Weyler presented an army bill reducing by 40,000 the number of recruits for 1902. Companies paying interest or dividends in gold were required by a Government decree to pay their taxes also at gold rates. A decree of Sept. 19 against illegal religious associations prevented an invasion of the religious orders expelled from France. The budget when finally presented on Oct. 28 showed an increase of 25,000,000 pesetas in expenditure. Octroi duties were decreased 10 per cent., with a view of abolishing them entirely in ten years. An increase of 16 per cent. in the land tax was proposed. The tax on the revenues of societies was fixed at 12 per cent., and dividends on companies' shares were taxed 8 per cent. Banks of issue were required to pay 15 per cent. on their revenues and 5 per cent. on the dividends on their shares. Civil pensions for officials entering the public service since 1900 were suppressed. The Government assumed the care of primary education, and the surcharge on the land tax which had been given to municipalities toward its support was transferred to the treasury. A bill to regulate strikes declares strikes to be allowable if four days' notice is given to the authorities. In public works and concessions contracts with laborers must be signed in which the hours of labor and the rate of wages are stipulated, and if disputes arise they must be referred to the authorities and to arbitrators. Violence or intimidation are punishable, and strikes which stop the work of an entire town or tend to produce a lack of the necessities of life or are dangerous to life are illegal. The Government in November carried a bill for debt conversion and one prohibiting the coinage of silver. The measures applied to illegal religious associations were resisted by the Catholics, who considered that they ought to be exempted from the law of associations. They opposed also the new program of secular education. Customs duties on iron ships, carriages, cereals, and wines were made payable in gold. The Minister of Finance offered to resign when the Chamber voted 16,000,000 pesetas to cover the rate of exchange on the interest on the foreign debt, when he considered 9,000,000 pesetas suffi-

cient, anticipating that the payment of the coupons in gold would cause a fall in the rate of exchange. The interest amounts to 40,000,000 pesetas in gold annually, and the premium on gold at the beginning of December was 42.85 per cent. Premier Sagasta persuaded Señor Urzaiz to withdraw his resignation.

SWEDEN AND NORWAY, two kingdoms in northern Europe united since 1814, having the same sovereign, but in constitution, government, and laws independent of each other. The throne in each monarchically descends to the heirs of the house of Bernadotte. In case of the extinction of the dynasty the Diets of the two kingdoms will assemble separately to elect a sovereign, and if they can not agree upon one person an equal number of Deputies from each will meet together, and the choice of the majority shall be King. Affairs common to both kingdoms are decided by a Council of State composed of Swedes and Norwegians, and in case of a minor succeeding to the throne this Council of State will exercise the sovereign power pending the appointment of a regent or regents by the two Diets or by the joint vote of delegations from each. The reigning King is Oscar II, born Jan. 21, 1829, grandson of Marshal Bernadotte, Prince of Ponte Corvo, the founder of the dynasty, who was chosen by the Swedish Diet in 1810 to be the heir and successor of Carl XIII, the last sovereign of the house of Holstein-Gottorp. The heir apparent is Gustaf, Duke of Wermland, born June 16, 1858.

Sweden.—The Diet of Sweden, called the Riksdag, consists of a First Chamber composed of 150 members, elected for nine years by provincial and municipal assemblies, and a Second Chamber containing 230 members, elected for three years, 80 in towns by direct suffrage and 150 in rural districts, either indirectly or directly as the majority decide, by natives of Sweden who own or cultivate land of a certain minimum value or have 800 kronor of income. The Minister of State at the beginning of 1901 was Admiral Baron Fredrik Wilhelm von Otter, the Minister of Foreign Affairs was Carl Herman Theodor Alfred Lagerheim, and the Councilors of State were: Justice, Per Samuel Ludvig Annerstedt; War, Jesper Ingewald Crusebiorn; Marine, Gerhard Dyrssen; Interior, Julius Edvard von Krusenstjerna; Finance, Count Hans Hansson Wachtmeister; Education and Ecclesiastical Affairs, Nils Ludvig Alfred Claeson; Agriculture, Albrecht Theodor Odelberg; without departments, Sven Herman Wikblad, Karl Sigfrid Husberg, and Dr. Hammarskjöld.

Area and Population.—The area of Sweden is 172,876 square miles. The population on Jan. 1, 1900, was computed to be 5,097,402, consisting of 2,486,447 males and 2,610,955 females.

The Army and Navy.—The Swedish army, composed of enlisted troops paid by the Government and cantoned troops, who live rent free on the lands of the proprietors and receive from them a small amount of pay, had at the beginning of 1901 a strength of 1,946 officers, 1,782 non-commissioned officers, 1,655 musicians, 683 civil employees, and 33,057 rank and file, making a total number of 39,123 in active service, with 6,876 horses and 240 guns. The reserve consisted of 725 officers and 517 non-commissioned officers. The enlisted troops, who serve two or three years, include the guards, the artillery, the engineers, the train, sharpshooters, and some infantry and cavalry regiments. The cantoned troops may remain in the service as long as they are capable of bearing arms, the infantry receiving two hundred days and the cavalry four hundred days of train-

ing in the first two years, after which they exercise about three weeks every year. All Swedes not in the regular army are liable to conscription, and if drawn for the service are trained for ninety days and are bound to serve in case of mobilization with the regular troops during a period of twelve years and for eight years more in separate bodies. The annual contingent is about 29,000 men. The 12 classes subject to mobilization in the first line number about 250,000 men, and the 8 classes of the Landsturm about 200,000 men.

The Swedish navy in the beginning of 1901 comprised 7 first-class armored monitors, besides 3 unfinished ones, 4 of the second class, 9 smaller ones, 3 corvettes, 5 torpedo-cruisers, 13 gunboats, 13 first-class torpedo-boats, besides 2 not completed, and 9 second-class torpedo-boats, exclusive of 2 unfinished ones. The first-class monitor *Svea*, launched in 1886, has 11.8-inch armor and displaces 3,100 tons; the *Göta*, launched in 1891, has 11.7-inch armor and displaces 3,200 tons; the *Thule*, launched in 1893, with the same armor, displaces 3,300 tons; the *Oden*, launched in 1897, with 10-inch armor, displaces 3,500 tons; the *Niord* and *Thor*, launched in 1899, have 9½-inch armor but as great a displacement, which is the same for the *Dristigheten*, which has 8-inch armor; and the 3 new ones, with 7-inch armor, will have a displacement of 3,650 tons. The speed of the later turret gunboats is 17 knots, nearly a knot better than that of some of the earlier ones. With the improved armor their protection is better. Instead of 10-inch guns in their turrets, the latest have 8.3-inch quick-firers, with 5.9-inch quick-firers in their secondary batteries, while the earlier ships of the series have been provided with 4.7-inch quick-firers.

Legislation.—The Riksdag has approved a scheme of army reorganization introducing universal military service. The Government proposed a term of compulsory service of twelve months, but the Second Chamber would only agree to eight months. King Oscar in sanctioning the law on June 25 declared that he did not consider that it settled completely the question of defense. The estimates for national defense are increased 22,500,000 kronor owing to the new law which brings the military estimates up to 45,000,000 kronor and the naval estimates up to 14,000,000 kronor. The King, who while ill was represented by the Crown Prince, took charge again of the Government on Jan. 21, 1901. A bill for the insurance of workmen against accidents was introduced by the ministry. On Dec. 5 Dr. Annerstedt resigned the post of Minister of Justice; the King appointed Dr. Hammarskjöld as his successor and Dr. Westring to succeed the latter as minister without portfolio.

Finances.—In the budget for 1902 the total receipts of the treasury were estimated at 156,143,000 kronor, including 24,165,000 kronor brought over from the preceding year. The ordinary receipts of the year were reckoned at 21,578,000 kronor, of which 480,000 kronor come from the land tax, 1,500,000 kronor from tonnage dues, 2,100,000 kronor from leased domains, 750,000 kronor from the personal tax, 7,000,000 kronor net from railroads, 1,610,000 kronor from telegraphs, 7,000,000 kronor from forests, and 1,138,000 kronor from various sources. The extraordinary receipts amount to 108,400,000 kronor, of which 49,000,000 kronor come from customs, 12,400,000 kronor from the post-office, 6,500,000 kronor from stamps, 19,500,000 kronor from the tax on spirits, 10,500,000 kronor from the tax on sugar, 9,800,000 kronor from the income tax, and 700,000 kronor from various sources. The share of

the Government in the profits of the national bank for 1900, amounting to 2,000,000 kronor, is also counted in the receipts for 1902. The total expenditures were estimated at 156,143,000 kronor, of which 1,321,000 kronor are ordinary and 100,000 extraordinary expenses of the royal household, 3,852,420 kronor ordinary and 120,750 kronor extraordinary expenses of the Ministry of Justice, 652,050 kronor ordinary and 19,650 kronor extraordinary expenses of the Ministry of Foreign Affairs, 33,775,094 kronor ordinary and 12,546,806 kronor extraordinary expenses of the army, 10,461,982 kronor ordinary and 10,983,043 kronor extraordinary expenses of the navy, 19,319,100 kronor ordinary and 7,396,000 kronor extraordinary expenses of the Ministry of the Interior, 7,299,821 kronor ordinary and 985,179 kronor extraordinary expenses of the Ministry of Finance, 4,680,915 kronor ordinary and 1,558,725 kronor extraordinary expenses of the Ministry of Agriculture, 3,649,115 kronor ordinary and 1,540,000 kronor extraordinary expenses for pensions, 6,152,000 kronor extraordinary expenditure on railroads, 11,888,000 kronor expenditure for interest and amortization of debt and for the Diet, 1,400,000 kronor a reserve for the insurance of working men against sickness, and 250,000 kronor a reserve for the insurance of working men against accidents. The ordinary expenses of the Ministry of the Interior are 2,815,467 kronor for administration, 12,020,000 kronor for the post-office, 1,610,000 kronor for telegraphs, 1,717,224 kronor for public health, and 1,156,409 kronor for other purposes. The ordinary expenditures of the Ministry of Finance were 2,982,000 kronor for customs, 450,000 kronor for excise, and 3,867,821 kronor for other purposes. The ordinary expenses of the Ministry of Agriculture were 2,200,000 kronor for forests and 2,380,915 kronor for other purposes.

The public debt outstanding on Jan. 1, 1901, amounted to 337,898,733 kronor, consisting of 48,799,500 kronor of the internal loan at 3½ per cent. of 1887 and 289,099,233 kronor of foreign debt, of which 97,029,900 kronor borrowed in 1880, 57,886,667 kronor borrowed in 1886, 32,371,555 kronor borrowed in 1890, and 36,000,000 kronor borrowed in 1899 paid 3½ per cent., 25,111,111 kronor borrowed in 1888 paid 3 per cent., and 22,700,000 kronor raised in 1900 paid 4 per cent.

Commerce and Production.—The cereal crops of Sweden in 1899 had a total value of 252,300,000 kronor. The yield of rye was 7,554,100 hectoliters; of wheat, 1,561,200 hectoliters; of barley, 4,119,900 hectoliters; of oats, 18,923,100 hectoliters; of pulse, 678,500 hectoliters; of potatoes, 11,955,400 hectoliters. The number of horses in Sweden on Jan. 1, 1899, was 522,858; of cattle, 2,581,667; of sheep, 1,291,482; of pigs, 816,217. The number of farms in 1898 was 334,360, of which 74,293 were under 2 hectares, 215,514 between 2 and 20, 32,681 from 20 to 100, and 3,222 over 100 hectares. The quantity of iron ore mined in 1899 was 2,434,606 tons. The production of pig iron was 489,231 tons; of bar iron, 335,706 tons. The exports of iron ore in 1898 were 1,439,860 tons; of pig iron, 91,719 tons; of bar iron, 162,862 tons. The quantity of silver-lead ore mined in 1899 was 5,730 tons; of copper ore, 22,334 tons; of zinc ore, 65,159 tons; of manganese ore, 2,622 tons. The production of gold was 106 kilograms; of silver, 2,290 kilograms; of lead, 1,606,187 kilograms; of copper, 178,855 kilograms. The quantity of coal raised was 239,344 tons. The number of persons employed in mining of all kinds in 1899 was 29,814.

The total value of imports in 1899 was 504,788,000 kronor, and of exports 358,185,000 kronor.

The imports of coal were valued at 64,679,000 kronor; rye and wheat, 37,212,000 kronor; machinery, 28,297,000 kronor; iron manufactures, 21,733,000 kronor; coffee, 20,575,000 kronor; woolen goods, 16,906,000 kronor; hides and skins, 15,299,000 kronor; woolen yarn, 12,459,000 kronor; petroleum, 12,339,000 kronor; wool, 10,746,000 kronor; cotton, 9,176,000 kronor; fish, 9,176,000 kronor; fertilizers, 8,856,000 kronor; vessels, 8,330,000 kronor; vegetable oils, 7,402,000 kronor; cotton goods, 7,199,000 kronor; pork products, 6,549,000 kronor; tobacco, 5,978,000 kronor; silk goods, 5,720,000 kronor; bran, 5,058,000 kronor; oil-cake, 4,813,000 kronor; wood manufactures, 4,751,000 kronor; iron, 4,751,000 kronor; paper, 4,746,000 kronor; wine, 4,696,000 kronor; cotton yarn, 4,402,000 kronor. The exports of timber were valued at 140,118,000 kronor; iron, 54,040,000 kronor; butter, 39,450,000 kronor; wood-pulp, 20,726,000 kronor; machinery, 9,947,000 kronor; paper, 9,744,000 kronor; granite, 9,688,000 kronor; joinery, 9,270,000 kronor; iron manufactures, 7,813,000 kronor; oats, 3,995,000 kronor.

The foreign commerce was distributed among different countries in 1899 as shown in the following table, giving the values in kronor of the imports from and exports to each country:

COUNTRIES.	Imports.	Exports.
Great Britain.....	154,563,000	157,198,000
Germany.....	184,113,000	54,861,000
Denmark.....	60,681,000	43,298,000
Russia and Finland.....	28,502,000	15,761,000
Netherlands.....	10,391,000	25,667,000
France.....	8,992,000	29,066,000
Belgium.....	16,804,000	13,788,000
Norway.....	20,450,090	6,451,000
United States.....	10,467,000
Africa.....	86,000	5,787,000
Spain.....	1,768,000	2,851,000
South America.....	2,999,000	413,000
Italy.....	2,068,000	306,000
Portugal.....	1,530,000	852,000
Australia.....	826,000
Other countries.....	1,377,000	965,000
Total.....	504,788,000	358,185,000

Navigation.—The number of vessels entered at Swedish ports during 1899 was 34,208, of 6,186,000 tons; of which 17,477, of 3,111,000 tons, were Swedish, 2,200, of 908,000 tons, were Norwegian, and 14,531, of 4,167,000 tons, were foreign. The total number cleared was 34,292, of 8,199,000 tons, of which 17,567, of 3,160,000 tons, were Swedish, 2,270, of 912,000 tons, were Norwegian, and 14,465, of 4,127,000 tons, were foreign. Of the total number entered 14,706, of 3,866,000 tons, and of those cleared 22,006, of 5,780,000 tons, were with cargoes. The number of steamers among the vessels entered was 15,924, of 6,900,000 tons, of which 6,050, of 3,253,000 tons, were with cargoes; the number of steamers cleared was 15,916, of 6,898,000 tons, of which 8,047, of 4,601,000 tons, carried cargoes. The merchant navy on Jan. 1, 1900, consisted of 2,040 sailing vessels, of 289,248 tons, and 872 steamers, of 298,421 tons.

Railroads, Posts, and Telegraphs.—The railroads of Sweden had on Jan. 1, 1901, a total length of 6,865 miles, of which 4,535 miles belonged to the Government.

The post-office in 1899 carried 70,914,000 internal, 15,915,000 international, and 412,000 transit letters; 8,970,000 internal, 1,604,000 international, and 55,000 transit postal cards; 133,378,000 internal, 8,188,000 international, and 177,000 transit newspapers and circulars; and 3,794,000 internal registered letters and postal orders remitting 842,114,000 francs and 388 in the international service, remitting 68,773,000 francs. The

postal revenue was 15,875,213 francs, and expenses 14,677,349 francs. The Government telegraphs in 1899 had a length of 8,808 miles, with 26,342 miles of wire; the railroad telegraphs had a length of 5,763 miles, with 19,179 miles of wire. The number of paid internal despatches was 1,444,019; of international despatches, 918,403; in transit, 366,643; service despatches, 86,541.

Norway.—The Norwegian Diet is called the Storting, consisting of 114 members elected for three years, 38 by the towns and 76 by the rural districts. The Storting elects one-fourth of its members to form the Lagthing, which has a veto power over the acts of the Odelsting, composed of the rest of the members. The Minister of State presiding over the Council of State at the beginning of 1901 was Johannes Wilhelm Christian Steen, and the Councilors of State were: Ecclesiastical Affairs and Public Instruction, Vilhelm Andreas Wexelsen; Justice, Ole Anton Qvam; Interior, Minister of State J. W. C. Steen; Agriculture, Wollert Konow; Public Works, Jörgen Gundersen Lövland; Finance and Customs, Sören Tobias Arstad; Defense, Lieut.-Col. Hans Georg Jacob Stang; Public Accounts, W. Konow; delegation at Stockholm, Minister of State Otto Albert Blehr and Councilors of State Elias Sunde and Commodore Christian Sparre.

Area and Population.—The area of Norway is 124,445 square miles. The provisional reports of the census of Dec. 3, 1900, made the total population, 2,231,395. Christiania, the capital, had 225,686 inhabitants; Bergen, 72,179. School attendance for seven years in the country and seven and one-half years in towns is compulsory. There were 5,966 public primary schools with 255,433 pupils in the country districts in 1896, and in the towns 2,165 classes with 69,466 pupils. The cost was 8,302,943 kroner, of which the state supplied 2,462,541 kroner and towns, counties, and parishes the rest. The University of Christiania had 1,350 students in 1899. Of 6,699 emigrants in 1899 no fewer than 6,466 went to the United States, and of the rest 51 went to British America.

Finances.—The budget estimate of revenue for the year ending March 31, 1901, was 99,641,070 kroner, of which sum the income-tax receipts give 5,100,000 kroner, customs 35,000,000 kroner, spirit excise duties 4,300,000 kroner, malt excise duties 4,000,000 kroner, succession duty 560,000 kroner, stamps 1,070,000 kroner, judicial fees 900,000 kroner, mines 445,920 kroner, the post-office 5,100,000 kroner, telegraphs 2,350,000 kroner, state property 3,283,741 kroner, railroads 12,224,400 kroner, various sources 7,186,696 kroner, loans for national defense and railroad construction 14,357,113 kroner, cash surplus from preceding year 3,763,200 kroner. The expenditure for 1901 balances the receipts in the budget, and of the total sum the civil list absorbs 542,147 kroner, the Storting 881,500 kroner; the ministries take 1,627,938 kroner, churches and schools 9,117,571 kroner; 7,039,562 kroner are the expenses of justice, 4,769,251 kroner of the Interior department; posts and telegraphs cost 12,849,141 kroner to operate and maintain, the Government railroads 22,036,470 kroner, roads, canals, and harbors 4,677,717 kroner, and mines 597,130 kroner; the administration of finance and customs costs 4,084,958 kroner; for amortization of the debt 2,380,376 kroner are required, for interest 6,436,422 kroner; the expenses of the army are 14,471,160 kroner, and of the navy 4,485,000 kroner; the department of Foreign Affairs requires 782,020 kroner, and 2,862,707 kroner are left for miscellaneous expenses.

The amount of the public debt on June 30,

1899, was 198,549,146 kroner, having been increased 20,880,000 kroner in twelve months. The sinking-fund for the year was 2,502,115 kroner and the interest charge 5,992,888 kroner.

The Army and Navy.—The Norwegian military forces are raised by conscription, but recruits are required only to train forty-eight days for infantry and mountain and fortress artillery, sixty days for engineers, eighty days for field-artillery, and ninety days for cavalry, and for two or three years to exercise twenty-four days annually. The troops of the line number about 900 officers and 30,000 men, but not above 18,000 may be summoned to arms at one time, even in case of war, except with the consent of the Storting. The army for war purposes is organized in 5 brigades of infantry, each brigade composed of 4 corps, and each corps of 1 battalion of the active troops, 1 battalion of Landwehr, and 1 battalion of Landsturm; 3 corps of light cavalry from each ban, armed and trained as mounted rifles, 2 corps having 3 and 1 having 2 squadrons; 3 corps of field-artillery, each corps containing 1 battalion from each ban, the battalion consisting of 3 batteries of 6 pieces; 2 batteries of mountain artillery; 5 fortress battalions of seacoast artillery, with 5 signal companies and 5 torpedo companies; and 1 corps of engineers, consisting of 1 battalion each from the line, the Landwehr, and the Landsturm, the battalion consisting of 2 companies of sappers, 1 company of pontoon troops, 1 company of telegraphists, and 1 company of equipage; 1 corps of train, composed of 1 battalion of 3 companies from each ban; and 1 corps of sanitary troops, composed of 3 companies from each ban. The total effective strength is estimated at 1,700 officers and 80,000 men.

The Norwegian fleet has 4 armor-clad coast-defense turret-ships of 3,500 tons, 4 monitors of older construction, 3 first-class and 8 second-class gunboats of different dates, 1 torpedo despatch boat, and 8 first-class and 17 second-class torpedo boats.

Legislation.—In addition to the ordinary army estimates, amounting to 14,000,000 kroner, Col. Stang obtained appropriations for extraordinary purposes, including 1,180,000 kroner for defenses of the land approaches to Christiania, 1,400,000 kroner for the purchase of quick-firing guns, 800,000 kroner to continue the construction of forts near Christiansand, and 120,000 kroner to complete laying mines near Bergen.

Commerce and Production.—The chief agricultural products of Norway are oats, barley, and potatoes. The forests cover 26,320 square miles, three-fourths of this area consisting of fir or spruce. The Government has 3,870 square miles of forests managed by state foresters. The value of rough lumber exported in 1899 was 39,571,700 kroner; of manufactured lumber, 19,435,800 kroner. The total value of mineral products in 1898 was 3,793,800 kroner; of furnace products, 1,299,000 kroner; of manufactured iron and steel, 76,000 kroner; of silver, 345,000 kroner; of copper ore, 1,575,800 kroner; of copper, 884,000 kroner. There were 89,292 persons in 1898 engaged in the cod fisheries, 21,203 in herring-fishing in the summer, and 2,659 in fishing for mackerel, while all the mining establishments employed only 2,359. The value of the cod catch in 1898 was 8,934,234 kroner; of herring, 5,829,030 kroner; of mackerel, 386,223 kroner; of salmon and sea trout, 839,310 kroner; of lobsters, 479,920 kroner; of oysters, 7,864 kroner; total, 21,714,253 kroner, not including mackerel fisheries in the North Sea, bank fisheries, and whale, walrus, seal, and shark fisheries, producing 3,600,000 kroner more.

The total value of imports in 1900 was 310,653,000 kroner, and of exports 172,946,000 kroner. Imports of alimentary substances were 106,500,000 kroner, and exports 58,800,000 kroner in value; imports of raw materials were 79,400,000 kroner, including 35,200,000 kroner for coal, and exports were 55,500,000 kroner; imports of manufactured articles were 64,900,000 kroner, and exports 41,600,000 kroner; imports of drugs, dyes, and colors were 2,100,000 kroner, and exports 100,000 kroner; imports of oils were 18,400,000 kroner, and exports 5,800,000 kroner; imports of miscellaneous articles were 39,400,000 kroner, and exports 11,100,000 kroner. Among alimentary articles the imports of cereals were 52,800,000 kroner, and exports 500,000 kroner; imports of fermented liquors were 7,500,000 kroner, and exports 300,000 kroner; imports of colonial products 24,300,000 kroner, and exports 300,000 kroner; imports of animals and animal products 16,300,000 kroner, and exports 57,600,000 kroner. The imports of crude metals were 13,600,000 kroner, and exports 2,500,000 kroner; imports of hides and skins 8,800,000 kroner, and exports 5,700,000 kroner; imports of textile materials 7,100,000 kroner, and exports 300,000 kroner; imports of timber 7,300,000 kroner, and exports 42,700,000 kroner; imports of minerals 7,400,000 kroner, and exports 4,300,000 kroner. The value of imports of manufactured goods were 23,000,000 kroner for metal manufactures, against 2,100,000 kroner for exports; 33,500,000 kroner for textile goods, against 900,000 kroner for exports; 2,900,000 kroner for paper and paper manufactures, against 9,800,000 kroner exported; 1,000,000 kroner for leather manufactures, against 200,000 kroner for exports; 4,500,000 kroner for wood manufactures, against 28,600,000 kroner exported.

The values in kroner of imports from and exports to different countries in 1900 were as follows:

COUNTRIES.	Imports.	Exports.
Great Britain.....	93,330,000	75,512,000
Germany.....	84,672,000	22,595,000
Sweden.....	27,164,000	14,766,000
Russia and Finland.....	27,196,000	5,404,000
Denmark.....	16,563,000	7,329,000
Netherlands.....	14,991,000	10,786,000
Belgium.....	12,885,000	7,710,000
United States.....	16,583,000	1,973,000
Spain.....	3,247,000	11,248,000
France.....	5,305,000	8,306,000
Italy.....	1,507,000	2,216,000
Portugal.....	1,042,000	595,000
Other countries.....	6,268,000	6,606,000
Total.....	310,653,000	172,046,000

Navigation.—The number of vessels entered at Norwegian ports during 1900 was 13,465, of 3,149,711 tons, of which 7,029, of 2,127,820 tons, were with cargoes and 6,436, of 1,021,891 tons, were in ballast. The total number cleared was 13,586, of 3,231,177 tons, of which 12,166, of 2,615,967 tons, were with cargoes and 1,420, of 615,210 tons, were in ballast. Of the total number entered 7,019, of 2,068,240 tons, were Norwegian, 4,396, of 1,334,843 tons, having cargoes, while of 6,446 foreign vessels, of 1,081,471 tons, 2,633, of 792,977 tons, brought cargoes. Of the vessels cleared 7,113, of 2,150,700 tons, were Norwegian, and of these 6,400, of 1,839,391 tons, took cargoes, while of 6,473 foreign vessels cleared, of 1,080,477 tons, 5,766, of 776,576 tons, carried cargoes.

The merchant marine of Norway, the greatest in proportion to population, numbered 5,642 sailing vessels, of 1,002,675 registered tons, and 1,171 steamers, of 505,443 registered tons, on Jan. 1,

1901, compared with 5,698 sailing vessels, of 1,052,687 tons, and 1,128 steamers, of 482,247 tons, on Jan. 1, 1900.

Railroads, Posts, and Telegraphs.—The length of the state railroads in 1900 was 1,235 miles, and there were 103 miles of private railroads. The receipts of the Government railroads for 1899 were 11,768,282 kroner, and expenses 8,206,262 kroner, while the revenue of the companies was 2,711,833 kroner and expenses 1,603,781 kroner. The Government railroads carried 8,563,214 passengers and 1,759,279 metric tons of freight; companies' lines, 1,068,032 passengers and 908,072 tons of freight.

The postal traffic in 1900 was 38,519,800 internal and 12,106,400 foreign letters and postal cards, of which 2,676,500 internal and 75,000 foreign letters were registered, containing the values of 385,400,000 and 22,100,000 kroner; and 58,702,900 internal and 5,346,800 foreign newspapers, books, and circulars. The postal receipts were 5,060,791 kroner; expenses, 4,859,188 kroner.

The telegraphs of the Government had in 1900 a total length of 7,500 miles, with 11,740 miles of wire; those of railroad companies had a length of 1,230 miles, with 2,390 miles of wire. The number of internal messages was 1,430,804; of international messages, 837,111; of service messages, 22,692; receipts, 3,173,320 kroner; working expenses, 2,374,169 kroner.

SWITZERLAND, a federal republic in central Europe. The legislative power is vested in the Federal Assembly, composed of a National Council of 147 members, elected for three years by direct adult male suffrage, and a State Council of 44 members, elected in the cantons, in some of them by the legislative bodies, in others by popular vote. The executive power is vested in the Federal Council, whose members are elected for three years by the Federal Assembly, and from among the Federal Council the President of the Swiss Confederation and the Vice-President, who by custom is chosen President for the next succeeding term, are chosen annually. The Federal Council in the beginning of 1901 was composed as follows: President of the Confederation and Chief of the Department of Justice and Police, Dr. Ernest Brenner, of Basel; Vice-President and Chief of the Department of Posts and Railroads, Dr. Joseph Zemp, of Lucerne; Chief of the Political Department, W. Hauser, of Zurich; Chief of the Military Department, E. Müller, of Bern; Chief of the Interior Department, M. E. Ruchet, of Vaud; Chief of the Department of Commerce, Industry, and Agriculture, Dr. A. Deucher, of Thurgau; Chief of the Department of Finance and Customs, R. Comtesse, of Neuchâtel. On Dec. 12, 1901, Dr. Zemp was chosen by the Federal Assembly to serve as President of the Swiss Confederation for 1902 and Dr. Deucher was elected Vice-President.

Area and Population.—The Swiss Confederation is composed of 22 cantons; but as 3 of these are politically divided there are 25 republics in the league, the half-cantons sending only 1 member instead of 2 to the State Council. The area in square miles of each canton or half-canton and its population, according to the census taken on Dec. 1, 1900, are given in the table at the head of the next page.

The population of the principal towns was: Zurich, 150,239; Basel, 112,842; Geneva, 104,044; Bern, 63,994; Lausanne, 55,973; Vevey, 32,982; Lucerne, 29,145.

Finances.—The revenue of the Federal Government in 1900 amounted to 101,033,716 francs; expenditure, 102,757,837 francs. The budget esti-

mate of revenue for 1901 was 104,860,000 francs, of which 865,275 francs come from real property, 2,158,390 francs from invested capital, 57,100 francs from the general administration, 41,500 francs from the Political Department, 55,700 francs from the Department of the Interior, 519,400 francs from the Department of Justice and Police, 2,976,900 francs from the Military Department, 220,000 francs from the Department of Finance, 50,000,000 francs from customs, 507,500 francs from the Department of Commerce, Industry, and Agriculture, 349,400 francs from railroads, 37,384,000 francs from the post-office, 9,712,400 francs from telegraphs, and 12,435 francs from miscellaneous sources. The total expenditures for 1901 were estimated at 105,855,000 francs, of which 4,249,055 francs are for interest and sinking-fund of the debt, 1,236,900 francs for the general administration, 671,100 francs for the Political Department, 13,293,535 francs for the Department of the Interior, 527,400 francs for the Department of Justice and Police, 28,120,923 francs for the Military Department, 367,700 francs for the Department of Finance, 5,191,200 francs for customs administration, 1,417,400 francs for industry, 2,840,335 francs for agriculture, 1,008,900 francs for commerce, 26,400 francs for the assay office, 406,900 francs for railroads, 35,630,000 francs for the post-office, 10,825,535 francs for telegraphs, and 41,717 francs for miscellaneous expenses.

The Army.—Every Swiss citizen capable of bearing arms either performs military service or pays a tax. Between the ages of twenty and thirty-two he is a member of the Auszug, or Élite, then till he is forty of the first ban of the Landwehr, then of the second ban till he is forty-four. There were 543,120 men liable to service in 1899, of whom 249,959 were enrolled in the Auszug or the Landwehr, 283,983 paid the military tax, and the remainder were physically incapable or otherwise exempt. The contingent of recruits for 1900 was 17,037. The Landsturm comprises all citizens between the ages of seventeen and fifty who are not in the army. They can only be called out in the event of war. Recruits for the Auszug receive from forty-two to eighty days of military instruction and afterward are called into camp for sixteen days every second year and every year are exercised in shooting or cavalry tactics. Before entering the army boys are trained in school in military gymnastics and the use of

arms, and military exercises do not cease when service in the Auszug is completed, for the Landwehr are mustered periodically for inspection and practise. The total effective of the Auszug on Jan. 1, 1900, was 150,876 men, comprising 113,617 infantry, 4,551 cavalry, 20,442 artillery, 5,586 engineers, 4,928 sanitary troops, 1,451 administrative troops, and 301 bicycle troops. Only the engineers, cavalry guides, train, artificers, and sanitary and administrative troops belong to the Confederation. The infantry and the ordinary cavalry and artillery are maintained by the cantons, which receive half the military tax. The Auszug is organized in 4 army corps of 2 divisions each, and every division has its district in which the bulk of its soldiers are raised. A division consists of 2 brigades of infantry, 1 battalion of carbiniers, 1 company of guides, 1 regiment of artillery, and 1 half-battalion of engineers. The general staff on Jan. 1, 1900, was composed of 48 officers, with 766 officials, non-commissioned officers, and privates, besides 311 in the Landwehr. There is no officer of higher rank than a colonel until the army is mobilized, when one of the colonels is appointed commander-in-chief with the title of general, which he retains only during mobilization. The Landwehr on Jan. 1, 1900, numbered 62,789 men in the first and 24,575 in the second ban, the Landsturm 277,007 men, making with the Auszug a total strength of 515,247 men. The infantry is armed with the Swiss repeating-rifle, model of 1896, of 7.5 millimeters caliber. The artillery have 584 field, mountain, and position guns, steel breechloaders of 7, 5, and 8 centimeters, 4 centimeters, and 12 centimeters bore respectively.

Commerce and Production.—Of the total area of Switzerland 71.6 per cent. is productive land, and of this 35.8 per cent. is pasture and meadow, 29 per cent. forest, 18.7 per cent. orchard and vineyard, and 16.4 per cent. farm and garden. Cheese and condensed milk are exported in great quantities, 295,679 quintals of the one and 220,916 quintals of the other in 1899. There were 30,020 hectares of vines, from which 867,910 hectoliters of wine were produced, value 33,687,218 francs. Not nearly enough food is produced to supply the population. Rye, oats, and potatoes are the principal farm crops. The forests cover 3,296 square miles. The district between the Lake of Geneva and the Lake of Constance is preserved and reafforested under federal forest laws. In 1899 the number of trees planted was 23,669,657. The fish hatcheries in 1899 produced 32,744,000 fry. The production of salt in 1899 was 468,929 quintals; of cement, 524,015 tons. The quantity of beer brewed was 2,143,078 hectoliters. The federal alcohol *régie* in 1899 sold 64,417 hectoliters of potable and 44,720 hectoliters of methylated spirits. There were 4,933 factories subject to the factory laws in 1895, employing 200,002 persons and having machinery of 152,718 horsepower, half steam and half water power. The textile industries, the manufacture of food products, watch-making, wood-carving, the manufacture of jewelry, the leather and rubber industries, metal manufactures of various kinds, chemical manufactures, and the manufacture of paper are the leading branches of industry.

Legislation.—The law for the compulsory insurance of working men after elaborate preparation and years of discussion was passed by the Chambers, and then on May 20, 1900, rejected by the people in a national plebiscite by a formidable majority. Great care had been taken to conciliate the mutual-benefit societies, whose members belong to the *bourgeoisie*, and the highly

paid artisan class. The independence of these old societies was assured, and to secure their support the bill was loaded with complicated restrictions and exceptions. Their members were indifferent, the rural population disliked the law, and the industrial workers did not care for it, saying that

it insured only those who were not in need of insurance. The question was taken up again in the Chambers, and an attempt was made to frame a bill of briefer text, more clear and logical, and better calculated to satisfy the working classes generally.

THEOSOPHISTS. The Theosophical Society, the American section of which was founded in New York city in 1875, lays special stress upon the study of the knowledge acquired by the sages of the past, and especially by those of the East, and upon the culture of man's spiritual nature to the end of attaining a clear insight into the immaterial, spiritual world, in the course of which, it is believed, men may acquire perception of and control over various forces in Nature unknown to others. Parallel with these aims is a system of doctrines regarding nature, mind, religion, the destiny of the soul, occult science, and social laws. The society comprises 8 national sections, with general headquarters at Adyar, India, viz., the Indian, American, European, French, Scandinavian, Australasian, New Zealand, and Netherlands sections, to which it is expected an Italian section will soon be added. More than 20,000 members have joined the society and 600 charters have been issued to branch societies since its foundation. A return made to the annual convention in May, 1901, gave the number of branch societies in the American section as 74, and of members as 1,455.

The fifteenth annual convention of the American section met in Chicago, Ill., May 26. Col. Henry S. Olcott, president-founder and president of the entire society for life, presided. Greetings were received from the New Zealand and European sections, and an accredited representative of the European section addressed the convention, speaking of great activity prevailing in the centers in France, Holland, and Italy, and the possibility of forming a strong center in Switzerland. Eight new branches had been chartered, and as many had dissolved or had their charters canceled during the year. An increase of 169 members was shown. The receipts of the Propaganda fund for sustaining traveling lecturers and teachers had been \$910, and a surplus remained on its account of \$104. A discretionary fund of \$500 had also been at the disposal of the general council, and was to be continued by the donor for another year. The treasury surplus was \$496, against \$798 in the previous year. During ten months \$487 had been received and forwarded for the Indian Famine fund. A rule had been adopted by the General Council and promulgated as law defining the relation to the Theosophical Society of similar societies outside of it, and prescribing the method by which persons who had seceded from the society might be readmitted to membership. The National Committee reported concerning the use of lending libraries, the circulation of lectures, correspondence work, reference work in connection with Mrs. Besant's book *The Ancient Wisdom*, and newspaper work.

TURKEY, an empire in eastern Europe and western Asia. The reigning Sultan is Abdul Hamid II, the thirty-fourth in line from Othman, the founder of the dynasty and the twenty-eighth since the capture of Constantinople in 1453. The throne descends to the senior prince born in the

harem. The laws of the empire are founded on the Koran. The Sultan possesses supreme civil and religious authority which he exercises in civil affairs through the Grand Vizier and in religious affairs through the Sheik-ul-Islam, whose appointment is made with the concurrence of the Ulema, a body composed of the highest acknowledged exponents of Mohammedan doctrines and laws, summoned by the muftis, who are the expounders of the Koran. The Privy Council, corresponding to the Cabinet in constitutional countries, was composed in the beginning of 1901 as follows: Grand Vizier, Halil Rifat; Sheik-ul-Islam, Jemaleddin Effendi; Minister of the Interior, Memduh Pasha; Minister of Foreign Affairs, Tefik Pasha; Minister of War, Riza Pasha; Minister of Marine, Hassan Pasha; Minister of Finance, Reshad Pasha; Minister of Justice, Abdurrahman Pasha; Minister of Public Works and Commerce, Zihni Pasha; Minister of Education, Zuhni Pasha; Minister of Religious Endowments, Galib Pasha; President of the Council, Said Pasha. In accordance with the capitulations foreigners live in Turkey under their own laws, and cases between them are tried in consular courts.

Area and Population.—The Ottoman Empire in Europe in the sixteenth century was nearly four times its present size, extending into Hungary and Russia. All of northern Africa was once Turkish also, as well as Greece and the islands of the Mediterranean. The territories now subject to the immediate rule of the Sublime Porte having an extent of 65,752 square miles in Europe, with 6,086,300 inhabitants; 398,900 square miles in Africa, with 1,300,000 inhabitants; and 650,394 square miles in Asia, with 17,545,300 inhabitants; total area, 1,115,046 square miles, with 24,931,600 inhabitants. The tributary states of Bulgaria and Egypt, the provinces of Bosnia and Herzegovina occupied by Austria, and the autonomous principalities of Samos and Crete have a combined area of 464,936 square miles and 14,969,313 inhabitants, making the total area of the Turkish Empire 1,579,982 square miles and the total population 39,900,913. The population of European Turkey is composed of Turks, Slavs, Greeks, and Albanians in nearly equal proportions, with a sprinkling of Rumanians, Magyars, gipsies, Circassians, and Jews. In the Asiatic dominions the Turkish element is the most numerous, but two-thirds of the population is composed of other races, chief among them the Arabs, Greeks, Armenians, Kurds, Syrians, Circassians, and Jews. In Asia Mohammedans constitute the bulk of the population, but in European Turkey half the people are Christians of the Greek Orthodox faith, and in Asia there are the Greek, the Armenian, the Latin, the Maronite, the Syrian, and the Protestant bodies, all of which, as well as the Jews, are recognized by the Porte and privileged to rule themselves in religious and social matters according to their own creed and customs.

Finances.—The average revenue for the three years ending with 1895 was £ T. 18,927,745, and the average expenditure was £ T. 19,796,182.

For 1898 the estimate of revenue was £ T. 18,511,322, of which £ T. 4,100,000 came from tithes, £ T. 2,511,924 from the land and property tax, £ T. 500,000 from the income tax, £ T. 886,210 from the military tax collected from non-Mohammedans in lieu of service, £ T. 1,937,849 from the sheep tax, £ T. 321,273 from various other direct taxes, £ T. 2,000,000 from customs duties, £ T. 2,571,146 from indirect taxes on salt, tobacco, spirits, fisheries, silk, stamp duties, etc., most of which are assigned to the Debt Administration, £ T. 532,793 from the military departments, £ T. 1,962,036 from the civil departments, £ T. 51,775 from the share of the Government in the profits of the tobacco *régie*, and £ T. 1,136,316 from tribute, part of which is assigned to the Debt Administration. The estimated expenditures for 1898 amounted to £ T. 18,429,411, of which £ T. 882,550 were for the Sultan's civil list, £ T. 750,059 for tributary debt, £ T. 2,661,839 for loans under the debt administration, £ T. 1,204,839 for other loans, £ T. 523,523 for floating debt, £ T. 868,894 for railroad guarantees, £ T. 450,000 for the war indemnity due to Russia, £ T. 749,484 for religious endowments, £ T. 4,489,698 for the army, £ T. 1,013,944 for the gendarmerie, £ T. 546,209 for the navy, £ T. 462,177 for the artillery, £ T. 989,322 for the Grand Vizierate, the State Council, and the Department of the Interior, £ T. 668,011 for the Department of Finance, £ T. 461,441 for the Department of Justice, and £ T. 1,707,269 for other departments.

The Turkish debt on June 30, 1900, amounted to £ T. 136,407,659, of which £ T. 82,823,127 were the conversion loan of 1881, £ T. 30,338,087 various loans issued between 1888 and 1894, £ T. 13,953,897 the lottery bonds, £ T. 5,169,968 the 5-per-cent. customs loan of 1886, £ T. 920,260 bonds issued for the Tumbeki Company in 1894, and £ T. 3,202,320 the 5-per-cent. loan of 1896. Excepting three loans for which the Egyptian tribute is pledged, converted in 1891 and 1894 into 4- and 3½-per-cent. bonds, the customs and the Tumbeki loans, and a loan of £5,000,000 sterling guaranteed by the powers in 1855, all the Turkish loans have been placed in charge of the Council of Debt Administration, which receives the proceeds of the excise duties, the tobacco tithe and *régie*, the Bulgarian, Eastern Roumelian, and Cyprus tributes, and the tax on Persian tobacco. Four-fifths of the net receipts from these sources is paid as interest and one-fifth is laid by for a sinking-fund. If the receipts grow to be more than enough to pay 4 per cent. interest the surplus goes into the Government treasury. Up to the present the interest paid has only been about 1 per cent., but the reserve fund reached £536,363 in June, 1900. The assigned revenues yielded £ T. 2,616,735 in 1900, giving the net sum of £ T. 2,154,702 for interest and amortization, the expenses being £ T. 462,033. Besides loans the Turkish Government owed £ T. 24,513,000 in 1898 to Russia, being the unpaid balance of the war indemnity, and to Russian subjects £ T. 50,000 of indemnities, besides which there was a debt of £ T. 273,494 to the Damascus Railroad.

The Army.—Every Mussulman from the age of twenty is obliged to serve in the Turkish army when called to arms, for four years in the Nizam, or regular army, and two years in its reserve, then for four years in the first and four years in the second ban of the Redif, and subsequently for six years in the Mustahfiz. Those who are not drawn for active service are drilled from six to nine months and afterward for one month each year. The strength of the regular and reserve forces in 1900 was 583,200 infantry in 648 bat-

talions, 55,300 cavalry in 202 squadrons, 54,720 artillery with 1,356 guns, and 7,400 engineers in 39 companies. The total war strength of Turkey is estimated at 1,500,000 men instructed in the use of arms. There are 117 battalions of gendarmerie. Besides the regular cavalry there are the Hamadieh regiments, of which there will be 48 of 4 to 6 squadrons when fully organized, a militia force in the army districts of Erzinjan, Damascus, and Bagdad, commanded by the chiefs of the tribes from which they are drawn and expected to furnish their own horses and equipments, the Government furnishing only the arms. Three of the 7 army corps were already armed in 1900 with the small-bore Mauser rifle, of 7.65 millimeters caliber, and the fourth corps had large-bore rifles of 9.5 millimeters, 450,000 weapons having been given out, 250,000 being on hand to be distributed, and 222,000 having yet to be purchased in order to fully supply the army corps.

The Navy.—The Turkish navy is composed of small vessels, nearly obsolete, suitable only for port defense. Four old ironclads of 6,400 tons, the Aziziye, Mahmudiye, Osmaniye, and Orkaniye, dating from 1864, have had barbettes turrets placed fore and aft for their 11-inch Krupp guns. The Messudiye, of 8,990 tons, launched in 1874, having 12-inch armor and 12 18-ton Armstrong muzzle-loaders in a central battery, with 3 5.9-inch Krupps, has lately been reconstructed in Italy. The Assari-i-Tevfik, of 4,600 tons, launched in 1868, having a broadside battery of 8 9.4-inch guns, and 2 8.2-inch Krupp breech-loaders, is to be reconstructed in Germany. The Hamidiye, of 6,700 tons, launched at Constantinople in 1885, has 10 19-ton guns in a central battery and 2 6.6-inch Krupps. This vessel is not yet fully armed, and the barbettes cruiser Abdul Kader, of 8,000 tons, having 14-inch armor and an armament of 4 20-ton guns, 6 5.9-inch Krupps, and 10 quick-firers, is far from completion. There are 8 central-battery and 1 turret-ship of 2,050 to 2,720 tons, 2 armored gunboats, 2 destroyers, and 19 first-class and 7 second-class torpedo-boats. The Turkish Government is desirous of securing modern vessels and has been in negotiation with shipbuilders in Germany, the United States, and Great Britain, but the state of its credit, the hypothecation of the revenues for debt, and especially the demand of the Russian Government for the payment of the war indemnity, have hitherto prevented the execution of such projects.

Commerce and Production.—Only 6 or 7 per cent. of the total area of European and Asiatic Turkey is cultivated, although a large part of the land could be made very productive. The chief drawback is the lack of transport facilities, but even where these exist the tithes and taxes levied by the Government and the collection of duties at the provincial boundaries check agricultural development. In different parts of the empire are grown cereals of all kinds, coffee, opium, madder, nuts, almonds, grapes, olives, figs, and cotton. The production of opium in 1900 was 7,500 chests, equal to 105,800 pounds. Silk culture, which was checked by disease among the silkworms, is again increasing in the provinces of Brussa and Ismid in Asia Minor, which in 1900 produced 6,146,620 kilograms of silk, against 4,950,315 kilograms in 1899, and 556,000 ounces of silkworm eggs, of which 402,000 ounces were exported. The production of attar of roses has lately declined, being about 2,000 kilograms in 1898, against 3,900 kilograms in 1896, and to give an impetus to this industry the Ministry of Agriculture has furnished rose-bushes to the people free. The mineral resources of Turkey are

great, but undeveloped. The Asiatic provinces annually produce about 15,000 tons of chrome, 20,000 tons of silver lead, 5,000 tons of zinc, 200 tons of antimony, and 1,500 tons of copper ore, 400,000 tons of coal and lignite, 18,000 tons of borax, and 150 tons of meerschaum, and in the province of Salonica 45,000 tons of manganese ore are mined. A duty of from 5 to 15 per cent. is levied on exports of minerals, and by a recent decree foreigners are not allowed to own and operate mines. The fish taken in the Bosphorus, valued at £ T. 250,000 a year, and the sponges of the Mediterranean, the mother-of-pearl of the Red Sea, and the pearls of the Persian Gulf are valuable resources. Among the manufactures of Turkey are turned-brass and hammered-copper utensils, silk and cotton dress stuffs, embroideries, rugs, and ornamental work in wood, metals, and other materials.

The export of salt in 1900 was 35,223,513 kilograms, against 39,478,668 kilograms in 1899; of wine, 12,761,130 liters, against 7,397,360 liters; of spirits, 211,787 liters, against 151,730 liters.

Railroads and Telegraphs.—There were 2,953 miles of railroads in the Turkish Empire in the beginning of 1900, of which 1,240 miles were in Europe and 1,713 in Asia, the latter figure including the still unfinished line from Acre to Damascus. A line from Damascus to Mecca was being built and one from Konieh to Bagdad and Basra was contracted for, being the continuation of the Anatolian Railroad built by a German company. The gross receipts of the railroads in 1899 amounted to £1,303,094.

The length of telegraph-lines in the Ottoman Empire is approximately 22,400 miles, with 39,600 miles of wire.

Macedonian Agitation.—The Bulgarian revolutionary agitators were unusually active in Macedonia in the spring of 1901. In February the Russian ambassador called the attention of the Porte to the situation and pointed out the necessity of taking efficacious measures for the punishment of the guilty and for the protection of the peaceably disposed. The British, French, and Italian ambassadors gave similar advice. Turkish troops were massed in the European provinces to guard against an uprising and to suppress disorders. The Bulgarian Government was warned by the powers against countenancing the agitation. A national Albanian movement, encouraged by Albanians in Italy, was called forth by the spread of the Macedonian agitation, by the Pan-Servian agitation which this occasioned, the aim of which is to unite Serbia, Montenegro, Bosnia, Herzegovina, and Old Serbia under one scepter, and by the project of an Austrian railroad through the sanjak of Novi Bazar, threatening eventually to establish the political domination of Austria over Albania, a scheme which touched the susceptibilities of Italy as well as the patriotic aspirations of the Albanians. The Arnauts in Old Serbia have gradually acquired the best of the land, and the Slavs have become laborers. The Bulgarian committees extended their operations into Monastir and collected forced contributions from Greeks and others. Austrian influence in Albania has long been pursued among the Catholic Ghegs by the Jesuits and Franciscans, and the Austrians were stronger in Albania itself than the Italians, whose propaganda was spread by laymen; but the large Albanian colony settled in southern Italy exercised a powerful influence in favor of Italy. More recently Italian schools have been erected and Italian priests settled among the Catholic Albanians. The Turkish military and police authorities arrested and im-

prisoned many persons in Uskub and other places who were suspected of belonging to the Bulgarian revolutionary party. The Turkish soldiers, whose pay was in arrears, committed excesses. In April 19 prominent Bulgarian citizens of Salonica and 150 persons arrested in other parts of the province were tried in that city. The evidence showed that 6 revolutionary bands were active, and during the preceding month about 15 more had been formed, each consisting of from 12 to 15 men. The trial resulted in the sentence of 3 of the accused to death, of 7 to life imprisonment, and of several to imprisonment for long terms. Servians as well as Bulgarians were arrested, but no Greeks. The Greeks helped the authorities to detect the agitators. In Monastir a Bulgarian pope who had joined the Greek Church was murdered by revolutionists. The Macedonian committee of action gave authority to the bands, whose leaders alone had any knowledge of the central committee, to punish informers and renegades with death. Special commissioners of the Turkish Government discovered that some of the officials of Salonica and other vilayets had been receiving money for the release of wealthy Bulgarians who had been arrested. The Turkish troops on the Bulgarian frontier stopped revolutionary bands that endeavored to enter into Turkey, and several sanguinary encounters took place. The Servian frontier was disturbed by conflicts that occurred between Arnauts and Servians. The Servian Government protested at Constantinople against the violation of its territory by Turkish Arnauts. The Albanian aspirations were put forward by committees of Albanians living abroad, not only in Italian cities, but in Bucharest, Athens, and Brussels. The Albanian chiefs united in a petition to the Sultan for substantial autonomy. They desired that a governor of Albanian nationality should be appointed and that the Albanian language should be used in religious services and in the schools. When these demands were first presented in 1898 they were peremptorily refused and the Porte threatened to send troops into Albania to uphold and enforce the Sultan's supremacy in case of further insistence. In July the Servian Government appealed to the foreign embassies in Constantinople. Albanian bands had raided several villages over the border as well as in Old Serbia. In Prisrend churches were pillaged. At Kolashin, in the district of Mitrovitz, gendarmes and Arnauts on the pretext of searching for arms killed 3 Servians, attacked several villages, and threatened to expel the bishop and the Servian consul. The Russian ambassador demanded the cessation of domiciliary visits and the release of the arrested Servians. Turkish troops sent into Albania had several encounters with the Albanians. Both Austrian and Italian war-vessels were despatched to Albanian ports on the Adriatic.

The Albanians continued their raids on the Christian villages of Kossovo and Monastir, and 1,000 Turkish Serbs sought refuge in Serbia. The Servian Government demanded the dismissal of the Turkish officials who had encouraged the outrages at Kolashin and other places. In Albania the Turkish troops plundered villages, and the judges and police refused to continue their functions unless they received their pay. Throughout Macedonia the Turkish soldiery, receiving from the Government neither pay nor rations, took what food they needed from the villages. Central Albania lapsed into a state of anarchy. On the repeated demands of the Russian ambassador the Porte removed, in September, the Mutasserif of Prishtina and other officials of

Prishtina, Novi Bazar, and Mitrovitza, and had a number of disorderly Albanians arrested and taken to Constantinople. On Nov. 16 Kiazim Pasha, who for four years had endeavored to secure the pacification of Albania, was removed from his post as vali and from the command of the troops at Scutari on the demand of the citizens of that town. Several officials who had proceeded too harshly against Bulgarians were replaced earlier in the year. Murder and robbery became more frequent in Macedonia. On Sept. 6 Helen Stone, an American missionary, and Mme. Tsilka, a Protestant convert, were kidnapped near the village of Bansko by a band of Bulgarian revolutionists, whose means of subsistence had been curtailed since the suppression of the extortionate methods of the Central Macedonian Committee in Sofia. The Turkish Government ordered troops to catch the robbers, but at the request of the American representative they were recalled lest the ladies' safety be endangered by the pursuit. A ransom of £25,000 sterling was demanded by the captors, who took their prisoners into the mountains on the Bulgarian side of the border. The American consul-general made a demand on the Bulgarian Government for the arrest of the chief instigators of the plot. The police of Sofia made a show of seeking to arrest Sarafof, the former president of the Macedonian Committee. No arrests were made, however, and the Bulgarian Government tried to throw the responsibility for the crime upon the Turkish authorities, since it was committed on Turkish soil. The consul-general and the American Board of Foreign Missions declared that no ransom would be paid, because if the kidnapers obtained their price no American missionary in Turkey would be safe.

The Armenian Question.—In Armenia a special tribunal was established at Erzerum to deal with Kurdish outrages. The Porte issued a decree prohibiting the return or entry of Armenians who had obtained Russian or American citizenship or protection. Against this the Russian embassy and the American legation formally protested on June 3. The Kurds became ungovernable and renewed their oppression of the Christians to such an extent that the valis of Kastamuni, Erzerum, and Diarbekir were recalled. In the sanjak of Mush the Kurds accused the Armenians of Moghunk of having murdered one of their notables and proceeded to take vengeance by plundering that and other villages, destroying crops and killing over 100 Armenians. In the region of Erzerum similar disorders occurred. A circular was issued enjoining the valis to suppress disturbances vigorously with the public forces alone and not to call upon the inhabitants for assistance. Revolutionary Armenian bands from Russian territory tried to start an insurrection in Mush and Sassun, and were dispersed by Kurds and troops after sanguinary fighting. Subsequently the Kurds wreaked their vengeance on the Armenians of the district. Another edict was issued informing the valis that the Sultan desires order and tranquillity to prevail throughout the empire, with justice and security for all races and creeds. A strong Turkish garrison was quartered at Sassun and blockhouses were built in the mountains. These measures were as unwelcome to the Kurds as to the Armenians. In connection with disturbances in the Erzerum, and afterward in the Bitlis vilayet, the authorities blamed the revolutionists and arrested Armenians only. The American Government pressed for the restoration of the college and mission buildings that were destroyed in the last insur-

rection and received fresh promises from the Porte that its engagements would be fulfilled. The Russian Government gave orders in respect to the Armenian refugees in Transcaucasia that all who desired to become Russian subjects would be received as such at once, without having to wait until they have resided in Russia for the legal period required in other cases. They would be liable to military service from 1903, but would not receive allotments of land in any peasant communes nor for twenty years be permitted to acquire real property outside of the cities. Those who wished to leave Transcaucasia and settle in other parts of Russia would be assisted to do so. All Armenian refugees who arrived in Russian territory before Feb. 1, 1901, were required to elect at once whether they would become naturalized Russians. Those who had come since that date and those who did not elect to become Russians were ordered to leave the country at once.

Political and Financial Questions.—In new commercial treaties with Austria, Russia, France, Roumania, Serbia, and Greece it was stipulated that the Turkish inland duties on goods carried by water should be reduced from 8 per cent. to 2 per cent. A few years before, the duties between different Turkish provinces were abolished. These inland tolls have been detrimental to Turkish production. They have destroyed the wine industry in Turkey by compelling the producer to pay 67 per cent. of the value of his wine in various imposts, while Greek wine is admitted at a low rate. Turkish manufactures are at a disadvantage in the competition with foreign goods, on which a single import duty of 8 per cent. is levied, while the Turkish industrialist must pay this duty first on imported raw materials and once again on the finished article. In a new commercial convention with Bulgaria numerous articles are admitted free of duty. A similar convention was made with Montenegro. In the conventions with Serbia and Roumania stipulations were made for the safety of the persons and property of Mohammedans residing in those countries. A series of differences arose between the Porte and the powers over the action of the Turkish Government in attempting to take into its own hands certain public functions which had been organized under the auspices of the embassies. When the Turkish Government appointed sanitary inspectors the ambassadors protested in a collective note, asserting the prescriptive right of their delegates on the Board of Health to elect the inspectors. On March 23 the Russian ambassador demanded the payment of £ T. 50,000 of arrears from the previous year on account of the war indemnity. In April the council of the Greek patriarchate deposed Constantine V, the Ecumenical Patriarch, holding him responsible for the closing of many churches in Macedonia and the confiscation of lands belonging to Greek monasteries. Many Mussulmans were exiled in the summer for participation in the Young Turkey movement, which officials were forbidden ever to discuss or mention. The mails were seized with the object of abolishing the foreign post-offices and having the Government Postal Department carry on the whole business. Another object was to discover the persons in Turkey who carried on a correspondence with the leaders of the Young Turkey party who were living in various European capitals. Munir Pasha, the Turkish ambassador in Paris, sent warning of an intended revolutionary demonstration in Constantinople. The embassies were requested not to issue cards to persons desiring to see the Selamlık procession. During the Bai-

ram festival the palace hall in which the ceremony took place was shaken by an earthquake, but the presence of mind displayed by the Sultan averted a panic among the 3,000 people present. On June 15 a fire occurred in the Yildiz Kiosk which was attributed to incendiaries, and after investigation a large number of palace officials were banished to Yemen. The seizure of the mail-bags by the Turkish postal authorities took place on May 6. On the same day the embassies were informed that in the future the foreign mails would be delivered through the Turkish post-office. The foreign postal bureaus were told that if they would not agree to this the departure of the mails for Europe would be stopped. They were stopped, but on the demand of the ambassadors the mail-bags were released, though only after they had been opened. The Turkish post-office, established after the Crimean War, was at first farmed out to contractors, then taken over by the Government in 1861, but the postal rates were reckoned according to distances until 1888, when uniform postage in conformity with the regulations of the universal postal union was introduced. Postal stations were spread all over the empire, until now there are no foreign post-offices outside of Constantinople except at Jerusalem, Janina, and Adrianople. The ambassadors paid no attention to the demand of the Porte that the postal traffic be surrendered to the Government post-office, and the Porte yielded for the moment, reserving the right to exercise its sovereign rights at some more convenient time. Reshad Pasha, Minister of Finance, was relieved of his functions on May 6, and Zuhdi Pasha, Minister of Public Instruction, temporarily assumed the duties of that post in conjunction with his own. The necessities of the treasury became so pressing that advances amounting to £480,000 were obtained from the tobacco *régie* and the Ottoman Bank. On Sept. 17 Reshad Pasha was called back to the Ministry of Finance. A dispute with the French Government over a concession to a French company gave rise to strained relations between the two governments. The company had completed quays in Constantinople at a cost of £1,800,000 which produced a revenue of only £41,000, and complained that the Turkish Government did not give it the full benefit of the dues. The company claimed furthermore the right to sell lands which the improvement had made valuable, but the Government refused to sanction the sale. The Turkish Government wished to purchase the quays, deeming highly dangerous the facilities they afford for landing and embarking passengers, but as the company asked 45,000,000 francs the ministers could not raise a loan for the purpose because the quays do not yield enough revenue to pay the interest. Various claims of French citizens against the Turkish Government were combined with those of the quay company when the French Government determined on bringing pressure on the Sultan. There was an old claim to the inheritance of one Lorando which a French court had assessed at 12,500,000 francs. A French jeweler had a claim for articles supplied to the harem of the Sultan Murad. French bankers in Constantinople had a claim of 20,000,000 francs which was long overdue for advances to the Government. There was also a claim for money advanced for the construction of railroads, amounting with unpaid interest to 45,000,000 francs. These old claims, which consisted chiefly of compound interest at 9 per cent., the Sultan considered questionable, and desired a compromise. The pecuniary rights of the quays company he recognized,

but he maintained his right to expropriate the quays for state reasons. The Sultan promised to borrow 100,000,000 francs through the Ottoman Bank, and with this sum pay its French creditors and purchase the quays for 41,000,000 francs. When the Turkish Foreign Minister came to M. Constans on the following day with a different proposition, the French ambassador refused to listen to him, and said that if the arrangement which the Sultan had approved were not carried out he would not see the Sultan any more. The Sultan then removed the interdiction which prevented the quays company from establishing a ferry between Galata and Stamboul, extending the quays up into the Golden Horn, and building on adjacent land, rights which were embraced in the original concession. The quay company having been placed in possession of its full rights, the main question between the two powers was settled. A claim of the lighthouse board for the Adabazar marshes, which the Government had taken, then restored, and then taken away again, was also settled by the agreement to pay an indemnity of £ T. 27,000. The Turkish Government still held out for a reduction of the individual claims dating back to Sultan Murad's time. M. Constans, who had received from his Government authority to act at his own discretion, insisted that in these minor matters the arrangement made on Aug. 17 with the Sultan's approval be literally carried out. On Aug. 23 he announced that he would leave if this were not agreed to, and on Aug. 26 he left Constantinople. Munir Bey, in Paris, received his passports. The Porte requested Russian mediation in the matter of the Lorando and the bankers' claims, which were the cause of the rupture. No reply was made to this communication until a rupture between France and Turkey became imminent, when the advice came from St. Petersburg to yield to the French demands. The French Government decided to make a naval demonstration in the Levant in order to enforce its demands after giving ample time to the Turkish Government to make amends. As a condition of the renewal of diplomatic relations France demanded the recognition by Turkey of the treaty of Bardo, made in 1881, wherein Tunis acknowledged the establishment of a French protectorate. Turkey after the rupture gave fresh cause for offense to France by exacting from the French religious orders in the Turkish dominions the payment of a tax of 5 per cent. on real estate in spite of the capitulations, reestablishing the 5-per-cent. customs duty for the Roman Catholic monks in Jerusalem, and forbidding religious orders to settle on Ottoman territory without previously obtaining authorization. The Sultan yielded on all the points involved in the original controversy. These new regulations, however, were objectionable to France as the power protecting Roman Catholics in Oriental countries. The cause of the rupture was not the denial of the private money claims of private individuals of doubtful French nationality, but the deliberate failure of the Sultan to keep his word after giving it to the French ambassador. The French Government therefore determined to carry out its intention of making a naval demonstration. On Nov. 1 a French squadron, composed of the battle-ships *Gaulois* and *Charlemagne*, the armored cruisers *Amiral Pothuau* and *Latouche Tréville*, and the cruiser *Galilée*, proceeded to the island of Mitylene to seize the customs dues of the port of Kastro. On Nov. 7 Rear-Admiral Caillaud occupied the telegraph office with 60 men. The Sultan and his advisers had supposed that the concessions al-

ready given in answer to the latest demands of France would end the conflict. On learning of the landing, the Sultan resolved to give France satisfaction on all points. Having already complied with the original demands and accepted the fresh demands of France, the Sultan issued an *irade* recognizing the legal existence of the mission schools, hospitals, and religious establishments which are French or under French protection, and according to them immunity from land taxes and customs duties conformably to treaties and conventions; authorizing the erection, repair, or enlargement of schools, hospitals, or religious establishments damaged or destroyed during the events of 1894, 1895, and 1896 in Asiatic Turkey and in Constantinople; undertaking to consider as authorized any religious, educational, or other establishments which France may like to found in the future, or any erections or enlargements to which the Imperial Government fails to make objections within six months after being apprised of the intention, and ratifying the election of the Chaldean Patriarch. The French Government on receiving these concessions, valuable to the religious communities and confirming the position of France as protector of Catholics in the Levant, recalled the squadron, which departed from Mitylene on Nov. 11.

The desire of the Sultan to preserve the national rights and existence of the Ottoman Empire and guard against further privileges being claimed on behalf of foreigners to the detriment of Turkish sovereignty was shown by his attempt to bring sanitary and postal affairs under Turkish official management, by regulations regarding Catholic missionary congregations, and by the renewal of a decree forbidding Jews of foreign nationality to remain in Palestine longer than three months, or to acquire land in that province. The wholesale exodus of Jews from Russia and their recent emigration from Roumania gave rise to the apprehension that they might overcrowd Palestine, and this apprehension was strengthened by the increasing activity of the Zionists, who were believed to be aiming to reestablish a Jewish state in the ancient seat. The measure applies both to traders and pilgrims. Great Jewish bankers of Europe offered to loan money to Turkey on condition that the Sultan should favor their plans of the Jewish colonization of Palestine. There were 43,542 Jews living in Palestine in 1898, of whom one-third were foreign settlers. A school at Mihve-Israel, on the plain of Sharon, which is supported by the French Hebrew Alliance, is devoted to training Jews for agriculture. The same society has schools at Jaffa, Haifa, Jerusalem, Safed, and Tiberias, and it supplies funds to give farmers a start. The settlers in Sharon, Esdraelon, and north of Carmel produce the best wine.

German commercial schemes in Asia Minor were approved by the Sultan, who relied much on the political friendship of Germany. The Turks looked with some alarm on the encouragement given to foreign enterprises when legal obstructions and fiscal exactions prevented them from developing the resources of their own country. The Anatolian railroads have been slowly constructed and have been profitable as far as they are completed to their undertakers. The Russian Government, when the extension of the German railroad to the Persian Gulf was a subject of negotiation, objected to any concession being given to any but Russians for railroads within the drainage basin of the Black Sea, offering, if the Turkish Government thought a railroad on the Black Sea littoral to be necessary, to construct

one or to loan the money for its construction to the Turkish Government. The Germans in Asia Minor have in their extraterritorial privileges an advantage over Turkish competitors and are aided in their enterprises by their Government. The Turkish Government has undertaken with the aid of Turkish capital to build the railroad from Hijaz to Damascus, and although subscriptions of capital have been disappointing, soldiers have been employed in leveling the line and the tribes along the route have given assistance. To continue their line from Konia to the Persian Gulf the Germans, who received the concession in 1899, required a kilometrical guarantee. Disturbances occurred early in 1901 in the region where the terminus of the railroad will be. Mubarek, the sheik of Koweit, who had overrun Nejd, in central Arabia, and defeated Ibn Reshid, the Emir, was attacked by the latter and in turn defeated in a great battle in which the losses on both sides were reported as amounting to 5,000. Ibn Reshid was aided by the Turkish Government in regaining his power, and in the name of the Government he demanded from Mubarek the payment of taxes for Koweit. The Turkish vali meant to move troops to Koweit, and marched a force from Bagdad to Basra, but proceeded no farther when he learned that a British war-ship was at Koweit, whose sheik petitioned for British protection. The Vali of Basra offered the protection of Turkish troops against any further attacks of the Nejd men. The sheik of Koweit declined to receive Turkish troops. Koweit was practically independent from the time of the great Solymani until its sheik, whose family had ruled the country for two hundred and fifty years, was induced to acknowledge Turkish sovereignty in 1870 by Midhat Pasha, Vali of Bagdad, who was on an expedition to subdue Neshd, and who appointed the Sheik Mutasserif of his own territory. After the fall of Midhat the measures he had taken for the welfare of the Bagdad province were neglected. The Turkish officials continued to wring taxes from the Arabs, but Koweit in the course of time was left alone until recently attempts have been made to collect taxes once more from the districts on the Persian Gulf. The sheik sent representatives to Basra to protest, and when the general of the Turkish army corps proved obdurate the sheik made application to the British Government for protection, in consequence of which a British gunboat was sent to Koweit. Other Arab chiefs resented the reassertion of Ottoman sovereignty, especially the collection of taxes. The Sheik Saadon of Montefik resisted the payment of taxes, and to bring him and the sheik of Koweit to submission 10,000 troops were assembled at Basra and 20,000 at Bagdad. The presence of an English man-of-war at Koweit deterred the general from at once despatching a force to coerce Mubarek, as the only convenient way of reaching that district was by sea. The sheik has for many years kept the Turkish flag flying, but this he declared was the flag of Islam. On Aug. 24 a Turkish vessel appeared at Koweit with the intention of landing 500 troops to garrison the place. The British cruiser cleared for action, and the Turkish commander on receiving the intimation that he would not be allowed to land troops returned to Fao and telegraphed to Constantinople for instructions. The Turkish Government protested against the conduct of the English commander as incompatible with the friendly relations between Great Britain and Turkey. While the Turkish force was still at Basra the Emir of Nejd assembled 10,000 horsemen on the border of Koweit. The British Gov-

ernment thereupon concentrated a naval force in the Persian Gulf. Several big guns were landed at Koweit for the use of the Sheik Mubarek. Fighting occurred between the sheik's men and the Nejd warriors on Sept. 23. Subsequently the Emir withdrew his force, as the British gunboats in the harbor commanded the land approach to the town. The Vali of Bagdad sought to prevail upon the sheik to discourage the visits of British war-ships, but the sheik declined to accept his advice and persisted in his refusal to receive a Turkish garrison for the protection of his territory against the Emir of Nejd. The Emir Ibn Reshid, at the request of the Sultan, desisted from further aggression against Koweit. He had enemies nearer home to deal with, allies from among the neighboring tribes who had helped him to defeat Mubarek's army and who, regarding the reward they received as inadequate, made a combined raid on the outlying districts of Nejd. The result of the *pourparlers* between the Porte and the British Government was that Great Britain disclaimed any intention of occupying Koweit or proclaiming a protectorate over that port, but insisted on the preservation of the *status quo* in the Persian Gulf, while Turkey disclaimed any intention of effectively occupying the place or of disturbing the *status quo*, but asserted the view that Koweit was an integral part of the Ottoman Empire. The refusal of the British naval commander was explained by the British Government as having been prompted by a desire to prevent disturbances and justified by the fact that Koweit was under the rule of an independent sheik and that no sign of Turkish authority existed. The Sultan recalled the zealous Vali of Basra and appointed as vali and commander of the troops at Basra, Mustapha Noury Pasha. The Sultan sent a special emissary to Koweit to summon the sheik to Constantinople in order to make obeisance to his suzerain, threatening to remove him if he refused. At the same time Ibn Reshid collected another army and threatened Koweit. The sheik refused to allow the Sultan's envoy to land, and appealed once more to England for protection. The British naval force was increased. A Russian cruiser also appeared in the Persian Gulf. Anglo-Indian politicians were eager to assert British influence in a substantive manner on the Persian Gulf. This the British Government was not prepared to do because any forward action would provoke the active assertion of Russian influence in Persia in the direction of the Persian Gulf and would give cause of offense to Germany at a moment when negotiations were being carried on with the Porte regarding the continuation of the Anatolian Railroad from Konia to Bagdad and a port on the Persian Gulf. Koweit was the very port selected. German engineers in 1900 were not allowed by the sheik of Koweit to survey the harbor, and he refused to grant the village of Kadne for a railroad terminus, although the Sultan had agreed to the cession. The Porte needed to raise money to pay off the French claims and to pay its own officials and soldiers, and in return for a loan was willing to agree to terms proposed by the German railroad company. The concessions demanded the right to build besides the trunk line to Basra by way of Adana, Mosul, and Bagdad, branches to the Gulf of Iskanderun, Aleppo, Orfah, Hanekin, and Kazinca, with an extension to Koweit, also a preferential right to construct 7 other branches, the right to establish steamboat lines on the Euphrates, Tigris, and Shatt el Arab and of making harbors wherever the railroad touches the sea, and the privilege of working all mines within 20 kilo-

meters of the railroad. The Germans insisted furthermore on a guarantee from the Turkish Government of 13,000 francs net receipts per kilometer after deducting 4,500 francs for working expenses. French as well as German capitalists were interested in the scheme. The extension of British influence in Arabia has been pursued principally by the Indian Government from Aden as a political center and in combination with the extension of the commerce of Bombay in these regions. The Turkish Government has not been in a position to afford the sacrifice necessary to make good its nominal sovereignty over the Arabs, which can not be upheld even in the fertile parts of Yemen with powerful military forces. In central Arabia the tribes acknowledge Turkish sovereignty as long as they are left to themselves, but will not pay taxes and will defend their districts against Turkish troops. On the coasts of the Arabian Sea and the Persian Gulf the chiefs also are willing to own nominal allegiance to the Padishah unless the Turks proceed to any acts of sovereignty, when they claim independence, as in the case of the sheik of Koweit, and can appeal to the British naval forces to defend their independence. In the incessant tribal feuds the tribes which accept British dictation receive British secret aid, while their enemies are encouraged and helped by the Turks and acknowledge themselves to be good Ottoman subjects. Great Britain, or India, has subsidized the Sultan of Muscat for a long period, and that ruler acknowledges no allegiance to Turkey. During the first half of the nineteenth century the British punished the seafaring tribes on the Persian Gulf for plundering English merchantmen, exercised the right of search, and compelled them to sign treaties prohibiting the shipment of slaves and maritime warfare among themselves, leaving them free to conduct their feuds on land. Protection was promised against any chiefs who violated the treaty. The sheik of El Katr in 1871 acknowledged Turkish sovereignty and accepted a Turkish guard at the port of El Bidaa. When a war for the succession broke out in Nejd between the members of the Wahabi reigning family Midhat Pasha sent troops to support one of the claimants, and these occupied the maritime district of El Katif and the island of El Hasa. Great Britain remonstrated on the ground of the British treaties with the coast tribes acknowledging their political independence. The Porte replied that it had no intention of seeking supremacy over Muscat, Bahrein, or the coast tribes, or of undertaking naval operations. These tribes were formerly tributary to the Wahabis of Nejd, yet excepting in these occupied districts Turkey has not attempted to assert dominion over them since the submission of Nejd, which itself has been merely formal. Bahrein, where there are valuable pearl fisheries, has been claimed for Turkey as a dependency of El Hasa, and claimed also by Persia. In every case Great Britain has asserted the independence of the island, the sheik of which is virtually a British vassal. The territory of Basra was made a separate vilayet in 1875, reincorporated with Bagdad in 1880, and in 1884 again made independent. The Sultan of Muscat, or Oman, at one time had to take refuge in the citadel to escape the vengeance of rebel tribesmen who seized the town of Muscat. Since then he has strengthened his hold over the neighboring tribes and extended his rule even to the distant districts of Dhofar and Sohar and to the maritime district of Sur. He has taken the customs away from the Banyan trader to whom they were farmed out. The trade in 1901 amounted to \$4,726,000, four-fifths of which was with

India. Behind Aden the British have extended their boundaries, and here the Turkish Government has put forth efforts to prevent further encroachment. In 1891 a part of the protectorate was delimited and the frontier surveyed by an English commission. In recent years the territory in the immediate possession of the Ottoman Government has been extended steadily on the southwest coast as well as in the interior of Arabia in order to prevent the absorption of territory by England. The extraordinary efforts made for the pacification of Yemen have met with a considerable degree of success and the area of the vilayet has been almost doubled. Activity has been displayed particularly in the southwest corner of the peninsula where Turkish predominance would counterbalance the British position at Aden. The tribes outside of the sphere of British protection are brought under Turkish influence and those who are more or less under British influence are won over as far as possible. The promontory of Sheik Said, which commands the British island of Perim, and the harbor adjoining the promontory were purchased by Frenchmen in 1868, but nothing was done to improve the harbor after 1870, and in 1872 Turkey seized the promontory, repaired the old fortress on its summit, mounted guns and placed a garrison there. France made several attempts to induce the Porte to recognize her proprietary rights, but they were resisted with the encouragement of England. In the country back of this fortress the Turks have endeavored to establish their rule over the Arab tribes. The sheik of Lahidsh, in the Hinterland of Aden, gave warning that if the Turks advanced any farther he and the neighboring chiefs would invite the English to occupy their country. There are 9 tribes which recognize a British protectorate. In March, 1900, the Homala sheik, Mohammed Nazir Mukhbil, established himself in a fortified post within the territory claimed by the Haushabis, one of these protected tribes, and within the boundary mapped out by British surveyors. A party of 20 Turkish regulars proceeded to garrison this post. Representations were made to the Porte in consequence of which the fort was evacuated by the troops. The sheik afterward himself reoccupied the post. Fresh protests were made by the British ambassador at Constantino-

ple, who received the assurance that the commander of the Turkish troops in Yemen would make the sheik withdraw. The sheik, however, remained in possession, and the Turkish Government was informed that the British would themselves take steps to remove the intruder. Accordingly a force of Haushabis set out on June 27, 1901, to clear the territory of invaders and to destroy the fort. They met with strong and unexpected resistance, and were unable without artillery to effect their object. On July 14 a force of 300 British and Indian regulars and 200 natives with 6 mountain guns started from Aden with orders to expel the occupants of the fort, though not to cross the Turkish frontier. The attack was delivered on July 26, and an obstinate resistance was encountered. The village of Ad Darija and the hills overlooking the fort were taken before night, and during the night the Turks abandoned the fort, which the British blew up. Turkish troops had come to the assistance of the sheik, and among the prisoners taken by the British were Turkish regulars. The attention of the Porte was called to this, and the Vali of Yemen and the commander of the army corps stationed there received instructions to refrain from action beyond those parts of the frontier that are recognized by England, to recall troops and civil officials from beyond that line, and to exercise great prudence in their efforts to strengthen Turkish influence among the neighboring Arab tribes whether independent or under British protection. An agreement was afterward made with Great Britain for the delimitation of the boundary in the Hinterland of Aden by a joint commission. The place where the frontier conflict took place was claimed by the Porte as Turkish. The British in Aden claimed a sphere of influence beyond the political boundaries and a right to protect allies within the Ottoman territory of Yemen. Early in December disturbances occurred in Tripoli as the result of imperial decrees imposing military service and creating fresh taxation.

On Nov. 17 the Sultan appointed Said Pasha Grand Vizier to succeed Halit Rifat Pasha, who died on Nov. 9. To enable the Government to meet its engagements up to March 12, 1902, the close of the financial year, an advance of £ T. 600,000 was obtained from the Ottoman Bank.

U

UNITARIANS. The Unitarians in the United States return 544 ministers, 453 churches, and 71,000 members.

The seventy-sixth annual meeting of the American Unitarian Association was held in Boston, Mass., May 21. The Rev. Samuel A. Eliot was reelected president. The income of the association for the year had been \$85,885, and the expenditure \$95,026, more than half of the sum having been applied to the aid of new or feeble societies. The association had real estate in Boston, valued at about \$700,000. The report of the secretary represented that while but few new churches had been established, the general condition of the body was very much improved, many churches that had been languishing had been strengthened, and the missionary spirit had been developed, ministers in increasing numbers giving time to missionary service outside of their own pulpits. The American members of the International Council had held several meetings which had contributed largely to the formation of the plans for the series of meetings to be held during the month

in London. Special committees had sat in the compilation of statistics as to the Church covenants and methods of organization existing in the churches, and in the preparation of a handbook of Unitarian administration, and their reports were presented: Report of the Committee to Collect and Codify the Covenants and Statements of Faith in Use in Unitarian Churches and the Handbook for Unitarian Congregational Churches. Satisfactory reports had been received from the mission in Japan, which had been wholly entrusted to the care of the Japanese themselves. A closer cooperation of the association and the National Alliance of Unitarian Women had been effected by the appointment of a Committee of Conference between the two bodies. For the avoidance of conflict and waste of missionary energies, a special representative of the association had been appointed in every State, the previously elected secretary of the local conference being usually designated to that service. Ten new societies had been established during the year, 15 dormant societies had been revived, and a number

of new movements contemplating the formation of churches were mentioned. The printing of 262,400 old tracts had been authorized, and the manuscripts of 35 new tracts had been accepted by the Publication Committee. In the resolutions passed by the meeting, the stronger churches were asked to put their ministers at the service of the association for missionary work for a certain number of Sundays in each year. It was declared "that our churches will be untrue to their faith if they are not at the front in every community where they are organized, in all movements for honest and unpartizan government, for the best methods in education, for more just distribution of wealth, for sympathetic and friendly relations between employers and the employed, for the amelioration of the condition of the poor, for the same rule of purity for men as for women, for checking the enormous and corrupting use of intoxicating drinks, for international arbitration and against the curse of militarism, for genuine democracy and brotherhood." The appointment of a committee was advised, to consider and report upon the condition and progress of unsectarian education in American schools, academies, and colleges, "to the end that Unitarians may know where their sons and daughters may be well educated without compulsory attendance upon sectarian teaching and upon forms of worship hostile to their hard-won birthright."

Meetings of the National Alliance, the Sunday-School Society, the Young People's Religious Union, and the first annual meeting of the Unitarian Historical Society, were held in connection with the meeting of the association.

The nineteenth biennial meeting of the National Conference of Unitarian and other Christian Churches was held at Saratoga, N. Y., Sept. 23 to 26. The Hon. George F. Hoar presided. One hundred and sixteen churches and organizations were officially represented by 332 delegates. During the sessions about 30 papers were read and addresses made on various religious and social topics. A resolution of greeting and sympathy with the International Conference of Unitarian and other Liberal Thinkers and Workers was passed, and the representations of American Unitarians who had attended the meeting of that body in London, in May, reported concerning its proceedings. The Conference determined to raise \$50,000 to build the Edward Everett Hale House at Hackley School, in Tarrytown, N. Y., and advised the raising of a suitable endowment fund for the Prospect Hill School for girls at Greenfield, Mass. Expressing its appreciation of the peculiar importance of the education of the dependent races and of those of the white race whose means are slender, it recommended the industrial schools as exemplified by certain ones which were named as providing a most effective means to the best results. The completion of the gymnasium and dining-hall for Meadville Theological Seminary was recommended. Meetings of the Unitarian Sunday-School Society, the Unitarian Temperance Society, and the Young People's Religious Union were held in connection with the Conference. The Hon. George F. Hoar having resigned the office of president of the Conference, the Hon. Carroll D. Wright, LL. D., was elected to succeed him.

British Unitarians.—The New Century Meetings of the British and Foreign Unitarian Association and the International Council of Unitarian and other Liberal Religious Thinkers and Workers were held in London, May 26 to 31, the meetings connected with the British and Foreign Unitarian Association being held first. The Tem-

perance Association returned 60 local societies affiliated with it. Its name was changed from the Essex Hall Temperance Association to the National Unitarian Temperance Association. The report of the Sunday-School Association (in its sixty-seventh year) took account of nearly 300 Sunday-schools, with more than 30,000 pupils, and a teacher for about every nine pupils. The publishing department of the association yielded a revenue of about £1,230. The report of the postal mission gave account of correspondence which had been conducted with religious inquirers whose attention had been attracted by advertisements.

The seventy-sixth annual meeting of the British and Foreign Unitarian Association was held in London, May 29. The annual report showed that a revenue of £5,000 had accrued; that the grants to efforts at home and abroad amounted to nearly £3,000, and the book department was answerable for nearly £1,000 more. The "McQuaker fund," derived from the legacy of Mr. W. McQuaker, of Glasgow, and devoted to Scottish work alone, was applied to the diffusion of literature among orthodox ministers. The missionary to India, the Rev. S. F. Williams, had been busy in lecturing to university students and others. A resolution was passed declaring that no amendment or reconstruction of the education acts can be just or satisfactory which fails to provide for an effective elective control in the management of schools and the appointment of teachers, and that training-colleges should be established under public management free from all ecclesiastical or theological tests.

A scheme was organized during the meetings for a ministerial superannuation fund. It was resolved to appeal for a fund of £20,000, and an additional income of several hundred pounds a year to provide a fund for assisted life insurance.

A plan was adopted for the federation of the Young People's Societies of the denomination into an association to be called the National Conference Guilds Union.

The International Council.—The International Council of Unitarian and other Liberal Thinkers was called into being at the American Unitarian meetings of 1900, in Boston, Mass. Prof. J. Estlin Carpenter presided at the first stated meeting, which was held in London, May 30, and delivered the opening address. In it he defined the task of the Council to be "to disengage from the apparent confusion of modern investigations the facts which tend to support the great spiritual ideal which underlies the noblest forms of religion." The foreign delegations, representing 15 nationalities and 18 denominations, were then introduced, and made their responses. They included Unitarians from France, Holland, Germany, Belgium, Denmark, Iceland, Russia, Switzerland, Italy, Hungary, India, the United States, etc. Addresses were made on The Sympathy of Religions, by Dr. S. M. Crothers, of Boston, Mass.; The Origin and Purpose of the International Council, by the Rev. C. W. Wendte, of Boston; The Contributions of France to Religious Progress, by the Rev. Ernest Fontanes; The Struggle with Catholicism in Belgium, by Pastor J. Hocart; The Liberal Mennonites of Holland, by the Rev. F. C. Fleischer; The Thoughts and Experiences of a Liberal Religious Thinker and Worker in Russia, by Mr. V. Tchertkoff; The Spiritual Factor in the Materialism of our Time, by Principal Drummond, of Manchester College, Oxford; The Work of Liberalism in Catholic Countries, by M. Jean Reville; The Kind of a Church Wanted, by the Rev. Dr. Crothers; The Opportunities of the Young in the New Century,

by the Rev. Joseph Wood and the Rev. C. W. Wendte; *The Outlook*, by the Rev. W. C. Bowie; *Religious Thought in England at the Close of the Nineteenth Century*, by the Rev. E. A. Armstrong; *Liberal Thought Within the Dutch Reformed Churches*, by Prof. Eerdman, of Leyden; *Switzerland Three Centuries after Calvin*, by Prof. Montet, of Geneva; *The Movement in Catholic France*, by Prof. Bonet-Maury; *The Religious Crisis of our Age*, by Prof. Fliedner, of Berlin; *Wordsworth's Ideals and the Nineteenth Century*, by the Rev. P. H. Wickersteed; *The Liberal Movement in Italy*, by the Rev. Tony Andre; *The Position of Religious Parties in Hungary*, by Prof. G. Boros; *Hungarian Folk-Lore*, by the Rev. N. Jozan; and *Church and State in America*, by the Rev. C. W. Wendte.

UNITED BRETHREN CHURCH. I. The following is a summary of the statistics of the United Brethren Church for 1900, as officially published in its Year-Book: Number of annual conferences, 45, with 3 mission districts; of organized churches, 4,251; of bishops, 4; of itinerant ministers, 1,955; of local preachers, 438; of members, 244,667; of Sunday-schools, 3,564, with 35,996 officers and teachers and 260,333 pupils; of Young People's Christian Union Societies, 1,632, with 64,965 members; of church-houses, 3,298, having an estimated value of \$5,908,178; of parsonages, 768, valued at \$779,153; amount of contributions for all purposes, \$1,550,447, of which \$84,777 were for missions (\$16,402 for woman's missions), \$17,546 for church erection, \$2,193 for beneficiary education, \$30,656 for colleges, academies, and the seminary, \$5,058 for preachers' aid, \$690,650 for preachers' salaries, and \$8,435 for the support of the bishops.

The trustees of the publishing house returned cash receipts for the year of \$241,817, profits of \$22,527, and a valuation of assets of \$303,180. The profits for three years and nine months had been \$83,087. The institution had been freed from interest-bearing debt.

The Sunday-School Board returned a balance of \$1,500 in its treasury, and reported concerning the distribution of \$193 of Sunday-school literature to needy city mission Sunday-schools in the United States and foreign countries. It had expended \$12,646 in the past four years.

The Board of Education had aided 66 licentiates, with an expenditure of \$4,695. Several colleges had reduced or canceled their debts. The board reported to the General Conference that an increase in the beneficiary work had taken place during the past four years, that the receipts for that time had been \$17,007, and the expenditures \$16,002, while the fund had been increased by \$7,360. More than \$48,000 had been raised for the Beneficiary Educational fund since its founding, and 374 students had been aided at 10 schools and in Germany. The schools (1 theological school, 8 colleges and universities, and 4 academies and seminaries) returned 144 teachers and 2,661 students, 26 buildings, and property valued at \$900,929. A training-school in Africa had 3 teachers and 18 students, and other African schools 6 teachers and 393 students.

The Church Erection Society reported \$10,631 collected from 62 churches, 22 mortgages lifted from off church-houses, and \$13,309 of new funds secured, which, with the loans collected, made an aggregate of \$23,940 of receipts. Loans had been made of \$26,750 to 38 churches, and \$1,350 to 5 parsonages. During the past four years the Permanent fund had increased from \$45,157 to \$66,508. The cases aided during that period represented property valued at more than \$300,000.

Since the organization of the board, 338 churches and 5 parsonages had been aided, securing more than \$1,000,000 of property to the denomination.

The total receipts of the Missionary Society for the year had been \$91,764, while \$21,231 had been expended upon the foreign field and a total amount of \$85,878 had been paid out for all purposes. The debt had been reduced to \$19,846. The board reported to the General Conference that in the four years past 36 new missions had been opened in the home department, 69 churches organized, and 49 new churches and 21 parsonages erected. The mission work in Germany comprised 11 charges, 26 classes, 20 organized churches, 12 ministers, 1,013 members, and 9 church buildings. The work in West Africa, which had had to be restored after the disturbances that had prevailed, included 7 charges, 122 appointments, 358 pupils in Sunday-schools and 393 in day-schools, an annual attendance of 50,502 at preaching services and 13,785 at class-meetings, and buildings valued at \$17,000. A well-organized and efficient mission was sustained in Japan, and a congregation had been organized in Ponce, Porto Rico. The missionary income for the past four years to the general and the conference treasuries had been \$219,390. The income from thank-offerings and the Twentieth Century fund had been \$15,977. The Woman's Missionary Association had received \$25,869 and expended \$18,224 during the year.

The General Conference met in Frederick City, Md., May 9. The occasion marking the centenary of the denomination, the place of its origin was chosen for holding the anniversary General Conference. Special centennial services were held, at which addresses were delivered on the history and life of the denomination, including one on Philip William Otterbein and his collaborators in founding the church, and special pilgrimages were made to sites in Frederick City and Baltimore associated with its beginnings, where other memorial addresses were made. Among the acts of the General Conference was the adoption of a measure providing for equal ministerial and lay delegation in the body on a scale rising from 1 representative of each order, to be sent by conferences having less than 1,000 members, to 7 ministerial and 7 lay delegates from conferences having 20,000 members or more. The course of ministerial study was revised. Provision was made for an old people's home and an orphanage. Legislation relative to deaconesses included the designation of a course of study, directions concerning the manner of appointment of deaconesses and their ordination, the definition of their duties, and regulations for the establishment of deaconess homes. Bishop J. S. Mills, E. B. Kephart, J. W. Hott, and N. Castle were reelected for the ensuing term of four years.

II. United Brethren in Christ (Old Constitution).—The following is a summary of the statistics of the United Brethren Church, Old Constitution, as given in its Calendar and Year-Book for 1901: Number of annual conferences, 31; of conference appointments, 985; of organized churches, 817; of itinerant ministers, 471; of local preachers, 199; of members, 26,643; of Sunday-schools, 594, with 5,197 officers and teachers and 31,297 pupils; of churches, 479, having an estimated value of \$508,043; of parsonages, 71, valued at \$42,425. Twenty-seven new churches were built in 1900, at a cost of \$24,706. Whole amount of contributions, \$148,079, of which \$12,429 were for missions (\$2,874 for woman's missions), \$2,436 for education, \$480 for church erection, \$603 for preachers' aid, \$64,367 for salaries of

preachers and presiding elders, and \$2,663 for the bishops. The Church has 4 bishops, a publishing house at Huntington, Ind., where a weekly journal, a monthly missionary magazine, and Sunday-school periodicals and helps are published, and Central College, at Huntington, Ind. The Home, Frontier, and Foreign Missionary Society and the Woman's Missionary Association sustain home missions at about 100 stations, frontier missions in 12 mission conferences, with more than 100 preaching places, and a foreign mission in Africa. The business of the Church Election Society is managed by the Board of Missions. A permanent fund of about \$8,000 has been secured.

The General Conference, held at Chambersburg, Pa., in May, was attended by about 65 delegates from the annual conferences in the United States and Ontario, and by the superintendent of the mission in the Imperi country, West Africa. The division of the United Brethren arose out of the action of the General Conference of 1889 (see the Annual Cyclopaedia for 1889) in adopting a new constitution and a revised Confession of Faith in a manner which a dissenting minority held to be invalid in consequence of failure to observe precisely the steps prescribed in the constitution of the Church. This minority withdrew and organized themselves as the real General Conference, claiming to represent the true United Brethren Church. Several lawsuits have arisen over disputes concerning titles to property, but no decision has been rendered as yet which is accepted as final. The United Brethren of the Old Constitution affirm that the number of their adherents is much larger than the statistical tables appear to show, many of them being isolated in communities where the majority branch controls the churches. Reports made to the General Conference show that of the \$1,000,000 of property held by the Church, nine-tenths have been accumulated since the division in 1889. The only debt is a comparatively small one on the publishing establishment. Besides the college at Huntington, Ind., educational institutions have been established in Oregon and Washington. A surplus was returned in the treasury of the Foreign Missionary Society. Endowment funds to different institutions were being sent in liberally, and interest in church enterprises was growing.

UNITED STATES OF AMERICA, a federal republic in North America. The legislative power is vested in the Congress, consisting of the Senate and the House of Representatives. There are 90 Senators, 2 from each State, elected by the State Legislatures for six years, one-third being renewed every second year. The House of Representatives has 357 members, elected for two years by the ballots of all qualified voters in the congressional districts of each State, in most States by universal adult male suffrage. The executive power is vested in the President, who is commander-in-chief of the military and naval forces, can lay before Congress projects of legislation, is empowered to make treaties, subject to the ratifying vote of the Senate, has the power of veto over acts of Congress, which can be overcome by a vote of two-thirds of each house, commissions the officers of the army and navy, and appoints the civil officials of the Government, subject to confirmation by the Senate. The Vice-President is President of the Senate, and in case of the death, resignation, or removal of the President, he succeeds the latter for the remainder of the term. In case of the death or disability of both President and Vice-President, the Secretary of State becomes acting President, and after him

other members of the Cabinet in their order. The Senate, sitting as a high court, can remove the President or members of the Cabinet on articles of impeachment presented by the House of Representatives. The President and Vice-President are chosen by a college of electors, who are chosen in each State in the manner that the Legislature prescribes, which is in every State by popular suffrage, their number being equal to the sum of the Senators and Representatives of the State in Congress. It has become the custom of political parties to nominate in national convention their candidates for the presidency and vice-presidency, and the electors, chosen in each State on a collective ticket, are accustomed to vote solidly for the candidates designated by their parties beforehand. Thus the election of the President and Vice-President has come to be in reality, though not in form, by the direct vote of the nation. The term of the presidency is four years. Elections are held on the Tuesday following the first Monday in November of every leap year. The President-elect is sworn into office by the Chief Justice of the Supreme Court on March 4 of the year succeeding his election. The President for the term ending March 4, 1905, was William McKinley, of Ohio, elected in 1900 for the second time. The Vice-President was Theodore Roosevelt, of New York. The following were the members of the President's Cabinet at the beginning of 1901: Secretary of State, John Hay, of the District of Columbia; Secretary of the Treasury, Lyman J. Gage, of Illinois; Secretary of War, Elihu Root, of New York; Secretary of the Navy, John Davis Long, of Massachusetts; Postmaster-General, C. Emory Smith, of Pennsylvania; Secretary of the Interior, Ethan Allen Hitchcock, of Missouri; Secretary of Agriculture, James Wilson, of Iowa; Attorney-General, John William Griggs, of New Jersey.

On Sept. 6, while holding a public reception in the Temple of Music of the Pan-American Exposition at Buffalo, President McKinley was shot by an anarchist, who had concealed a revolver in a handkerchief wound round his hand like a bandage and fired two shots before he was seized. One bullet glanced off from the breast-bone; the other penetrated the abdomen. On Sept. 14 Mr. McKinley died from gangrene poisoning, which started from the wound in the stomach. Vice-President Roosevelt, who had hastened to Buffalo when the President was shot, and left for the Adirondack mountains when he was pronounced out of danger, returned and was sworn in as President the same day. The assassin was convicted of murder on Sept. 26, his trial lasting three days, and was executed in Auburn prison on Oct. 29. Mr. Roosevelt announced that he would follow out the policy which President McKinley had pursued for the good of the country, and he requested the members of the Cabinet to remain in office. No change in the Cabinet occurred until Charles Emory Smith, on Dec. 27, resigned his post. President Roosevelt at once appointed Henry C. Payne, of Wisconsin, to succeed him as Postmaster-General.

Area and Population.—The land area of the States and Territories is 2,939,000 square miles, exclusive of 31,000 square miles in the Indian Territory and of Alaska, which has about 531,000 square miles, and Hawaii, the area of which is 6,640 square miles, making the total area 3,507,640 square miles, exclusive of Porto Rico, which has an area of 3,600 square miles, and of the Philippine and Sulu Islands, with an area of 11,400 square miles, Guam, with an area of 200 square miles, and Tutuila and the smaller islands of the

Samoan group belonging to the United States, whose area is 79 square miles.

The urban population, counting only inhabitants of cities of 25,000 or over, increased from 14,855,489 in 1890 to 19,694,625 in 1900. Cities of 200,000 population or over numbered 16 in 1890, when Brooklyn and New York were separate cities, and 19 in 1900, although these two cities were merged into one, and the combined population of cities of this class increased from 8,879,105 to 11,795,809; cities of 100,000 to 200,000 increased in number from 12 to 19, and their population from 1,808,656 to 2,412,538; cities of 50,000, to 100,000 increased from 30, with 2,067,169 inhabitants, to 40, with 2,709,338; and cities between 25,000 and 50,000 increased from 66, with 2,100,559 inhabitants, to 81, with 2,776,940 inhabitants. The population of the principal cities in 1900 was: New York, 3,437,202; Chicago, 1,698,575; Philadelphia, 1,293,697; St. Louis, 575,238; Boston, 560,892; Baltimore, 508,957; Cleveland, 381,768; Buffalo, 352,219; San Francisco, 342,782; Cincinnati, 325,902; Pittsburg, 321,616; New Orleans, 287,104; Detroit, 285,704; Milwaukee, 285,315; Washington, 278,718; Newark, 246,070; Jersey City, 206,433; Louisville, 204,731; Minneapolis, 202,718; Providence, 175,597; Indianapolis, 169,164; Kansas City, 163,752; St. Paul, 163,632; Rochester, 162,435; Denver, 138,859; Toledo, 131,822; Allegheny, 129,896; Columbus, 125,560; Syracuse, 108,374; Paterson, 105,171; Omaha, 102,555; Scranton, 102,026; Albany, 94,151; Portland, 90,426; Atlanta, 89,872; Dayton, 85,333; Richmond, 85,050; Nashville, 80,865; Hartford, 79,850; Wilmington, 76,508; Trenton, 73,307; Bridgeport, 70,996; Oakland, 66,960; Hoboken, 59,364; Evansville, 59,007; Manchester, 56,987; Peoria, 56,100; Charleston, 55,807; Salt Lake City, 53,531; Wilkesbarre, 51,721.

Immigration.—The number of immigrants who arrived in the United States during the year ending June 30, 1901, was 487,918, of whom 135,996 came from Italy, 113,390 from Austria-Hungary, 85,257 from Russia and Finland, 30,561 from Ireland, 23,331 from Sweden, 21,651 from Germany, 12,248 from Norway, 12,214 from England, 7,155 from Roumania, 5,910 from Greece, 5,782 from Turkey in Asia, 5,269 from Japan, 4,165 from Portugal and the Cape Verde and Azore islands, 3,655 from Denmark, 3,176 from the West Indies, 3,150 from France and Corsica, 2,459 from China, 2,349 from the Netherlands, 2,201 from Switzerland, 2,070 from Scotland, 1,579 from Belgium, 701 from Wales, 657 from Servia, Bulgaria, and Montenegro, 592 from Spain and the Canary and Balearic islands, 540 from British North America, 387 from Turkey in Europe, 347 from Mexico, 325 from Australia, Tasmania, and New Zealand, 203 from South America, 173 from Africa, 140 from the Philippine Islands, 130 from Central American republics, 27 from Pacific islands, 22 from India, 20 from British Honduras, 6 from Hawaii, and 80 from other countries. The total immigration into the United States from 1820 to the end of 1901 was 20,253,073, and from 1789 to 1820 the number is estimated to have been 250,000. Of the immigrants who arrived in 1901, the number who came through the port of New York was 388,931; through Baltimore, 17,216; through Boston, 25,616; through Philadelphia, 13,236; through San Francisco, 3,655; through other ports, 39,264. Of the total number, 161,938 were laborers, 3,035 farmers, 42,027 domestic servants, 6,508 carpenters, 3,629 miners, 3,108 clerks, 9,609 tailors, 5,451 shoemakers, 2,613 blacksmiths, 2,192 bakers, 4,232 seamstresses and dressmakers, 3,414 masons, 4,695 sailors, 6,589 merchants, dealers, and gro-

cers, and 2,665 professional persons. The number having miscellaneous occupations was 272,064; of no occupation, including dependent women and children, 148,686; occupation not stated, 3,469.

Education.—The public schools of the United States in 1900 had 15,341,220 pupils enrolled, being 20.38 per cent. of the total population, and 10,513,518 in average daily attendance. The number of teachers was 421,288. In public primary and grammar-schools there were 14,821,969 pupils, and in private schools of the same grades 1,240,925 pupils, making a total of 16,062,894 children attending elementary schools. In public high schools and academies the number of pupils was 530,425, and in private academies 188,816, making the total number in secondary schools 719,241. City evening schools were attended by about 190,000 persons. In public normal schools there were 47,421, and in private normal schools 22,179 pupils; total in normal schools, 69,593. Private business schools and colleges had 91,549 students. The public universities and colleges had 34,177 students, and private universities and colleges had 76,735; total number of students, 110,912. There were 480 universities and colleges in the United States, having 12,664 male and 1,816 female professors and instructors and 124,365 male and 36,856 female students, of whom 32,399 males and 15,259 females were in the preparatory departments, 57,886 males and 19,199 females in the collegiate departments, 4,756 males and 1,377 females in the graduate departments, and 29,324 males and 1,021 females in the professional departments. The income of all the institutions was \$20,836,488, of which \$8,375,793 came from tuition fees, \$6,110,653 from productive funds, and \$4,386,040 from Government, State, or municipal appropriations. The number of bound volumes in the libraries was 7,876,073; value of scientific apparatus, \$15,136,181; value of grounds and buildings, \$136,336,871; productive funds, \$147,385,821; benefactions, \$10,840,084. The number of students in public professional schools in 1900 was 9,470, and in private professional schools 48,600; total, 58,070. There were 154 theological schools, with 994 professors and 8,009 students; 96 law schools, with 1,004 professors and 12,516 students; 121 medical colleges of the regular school, with 3,545 professors and 22,752 students; 22 homeopathic colleges, with 735 professors and 1,909 students; 54 dental schools, with 1,118 professors and 7,928 students; 53 schools of pharmacy, with 493 professors and 4,042 students; 432 training-schools for nurses, with 11,164 students; and 13 veterinary schools, with 124 professors and 362 students. The Government Indian schools had 21,568 pupils and the schools of the 5 civilized tribes had 10,499. In Alaska, the Government had schools with 1,753 pupils. In private kindergarten schools were about 95,000 pupils. The schools for art, music, etc., had about 50,000. In orphan asylums and other benevolent institutions about 15,000 children were taught. The number in the public reform schools was 23,901. In public deaf-and-dumb schools there were 10,563, and in private schools 478 pupils; in public schools for the blind there were 4,021; in public schools for the feeble-minded there were 9,762, and in private asylums 425 pupils.

The Army.—The United States army in September, 1901, consisted of 84,513 officers and men, of whom 33,874 were in the United States, 43,239 in the Philippines, 4,914 in Cuba, 1,541 in Porto Rico, 256 in the Hawaiian Islands, 527 in Alaska, and 162 in China. During the three years ending June 30, 1901, there served in the Philippine Islands 3,477 officers and 108,800 enlisted men, of whom

61,275 officers and men were regulars and 50,002 volunteers. Of the total number, 619 were killed in action and 219 died of wounds. The total percentage of deaths was less than 3.5, and that of desertions 4.3 per cent. The number of non-commissioned officers who received commissions was 200. Of the soldiers mustered out 81 per cent. made no claim for injuries received in the service, and out of 4,168 claims only 485 were allowed, of which 83 were found to be based on injuries not received in the service. The claims allowed amounted to only 3 per cent. of the total number of enlistments. Of the soldiers in the Philippines on Sept. 23, 1901, about half were enlisted for terms that expire before July, 1902. Adjutant-Gen. Corbin recommended the gradual withdrawal of many of the troops in the islands, but the recrudescence of rebellion in Samar and other parts of the archipelago convinced Gen. Chaffee, commander-in-chief of the military division of the Philippines, that the strength of the army there must not yet be reduced. The total number of enlistments and reenlistments during 1901 was 30,622, of which 26,267 were of native-born Americans, 378 of Porto Ricans, and 3,977 of aliens. Of the applicants for enlistment, 74 per cent. were rejected.

Lieut.-Gen. Nelson A. Miles was in chief command under the President of the United States army in 1901. The department of the Philippines was created into a division in 1901, under the command of Major-Gen. Adna R. Chaffee. Major-Gen. Loyd Wheaton commanded the department of the north Philippines, embracing all that portion of the archipelago lying north of a line passing southeastwardly through the west pass of Apo, or Mindoro Strait, to 12° of north latitude, thence east along that parallel to 124° 10' east of Greenwich, but including the whole of Masbate island; thence north to San Bernardino straits. The department of the south Philippines, consisting of all the islands lying south of that line, was commanded by Brig.-Gen. James F. Wade. Major-Gen. S. B. M. Young was in command of the department of California, embracing California, Nevada, and the Hawaiian Islands; Col. J. M. J. Sanno commanded the department of Colorado, embracing Colorado, Utah, and the Territories of Arizona and New Mexico; Brig.-Gen. G. M. Randall commanded the department of the Columbia, embracing Washington, Oregon, Idaho, and the Territory of Alaska; Brig.-Gen. Leonard Wood commanded the department of Cuba; Major-Gen. J. R. Brooke commanded the department of the East, embracing the New England States, New York, New Jersey, Pennsylvania, Delaware, Maryland, the District of Columbia, West Virginia, Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, and Porto Rico; Major-Gen. Elwell S. Otis commanded the department of the Lakes, embracing Wisconsin, Michigan, Illinois, Indiana, Ohio, Kentucky, and Tennessee; Brig.-Gen. J. C. Bates commanded the department of the Missouri, embracing Iowa, Nebraska, Missouri, Kansas, Arkansas, the Indian Territory, and the Territory of Oklahoma; and Col. J. N. Whealan commanded the department of Texas, embracing the State of Texas. The officers attached to the War Department were Major-Gen. Henry C. Corbin, Adjutant-General; Brig.-Gen. Joseph C. Breckinridge, Inspector-General; Brig.-Gen. M. L. Ludington, Quartermaster-General; Brig.-Gen. John F. Weston, Commissary-General of Subsistence; Brig.-Gen. George M. Sternberg, Surgeon-General; Brig.-Gen. A. E. Bates, Paymaster-General; Brig.-Gen. George L. Gillespie,

Chief of Engineers; Brig.-Gen. William Crozier, Chief of Ordnance; Brig.-Gen. George W. Davis, Chief Advocate-General; Brig.-Gen. Adolphus W. Greely, Chief Signal Officer; Brig.-Gen. F. C. Ainsworth, Chief Record and Pension Officer; Col. T. A. Bingham, Superintendent of Buildings. The general officers on regular service are Lieut.-Gen. Nelson A. Miles; Major-Gens. John R. Brooke, Elwell S. Otis, Samuel B. M. Young, Adna R. Chaffee, Arthur MacArthur, and Loyd Wheaton, and Brig.-Gens. James F. Wade, John C. Bates, George W. Davis, Samuel S. Sumner, Leonard Wood, Robert P. Hughes, George M. Randall, William A. Kobbé, Frederick D. Grant, J. Franklin Bell, Frederick Funston, and W. H. Bisbee. The regular army is recruited by enlistment for three years. It is composed of 30 regiments of infantry, including 2 negro regiments, each regiment containing 3 battalions of 4 companies; 15 regiments of cavalry, including 2 negro regiments, each regiment containing 3 sections, each having 4 troops of 100 men; 1 corps of artillery containing 156 batteries, of which 30 are mounted, mounted batteries of 6 3.2-inch breech-loading guns, having 162 men, the others 109 men; 3 battalions of engineers; a hospital corps; a detachment of mechanics; and the detachment of the United States Military Academy. The infantry weapon is the Krag-Jørgensen repeating rifle of the model of 1892, with a caliber of 7.62 millimeters, or the Lee model of 1893. The cavalry carry sabers, Krag-Jørgensen carbines of 7.62 caliber, and Colt revolvers. The army in 1900 consisted of 863 officers of the general staff, including 129 engineer officers, 11 officers of the signal corps, and 192 officers of the medical department; 1,420 men attached to the staff, including 250 serving at the Military Academy, 700 of the mechanical detachment, 100 commissary sergeants, 105 telegraphist sergeants, 75 electrician sergeants, and 863 on recruiting service; 1,530 officers and 55,080 men in 360 companies of infantry; 765 officers and 18,540 men in 180 troops of cavalry; 663 officers and 18,920 men in 126 battalions of foot-artillery and 30 mounted batteries; 2,002 men in 12 companies of engineers; 760 men attached to the signal service; 3,203 men in the hospital service; and 75 Indian scouts, making a total of 3,821 officers and 100,000 enlisted men.

Every male citizen of the United States between the ages of eighteen and forty-five is by law a member of the militia of his State. The organized militia of the several States is composed of men who join voluntarily, and these are obliged to drill, usually weekly in the armories, and sometimes to go into camp annually, and are liable to be called into service by the Governor for the suppression of internal disturbances or in any military emergency. The State of New York in 1901 had enrolled in the National Guard 14,410 men, besides 650 in the naval militia; Pennsylvania, 9,387 men, besides 109 in the naval militia; Illinois, 6,690 men, besides 59 in the naval militia; Massachusetts, 6,249 men, besides 536 in the naval militia; Indiana, 4,140 men; New Jersey, 4,017 men, besides 361 in the naval militia; California, 3,732 men, besides 405 in the naval militia; Michigan, 3,061 men, besides 225 in the naval militia; Alabama, about 3,000 men; Texas, about 3,000 men; Ohio, 1 division; Mississippi, 1 division; Wisconsin, 2,758 men; Connecticut, 2,688 men, besides 211 in the naval militia; Iowa, 2,475 men; Virginia, 2,400 men; Missouri, 2,460 men; South Carolina, 2,173 men, besides 224 in the naval militia; Minnesota, 2,079 men; New Hampshire, 1 brigade; West Virginia, about 2,000 men;

North Caroline, 1,800 men, besides 246 in the naval militia; Kentucky, 1,800 men; Louisiana, 1,794 men, besides 352 in the naval militia; Nebraska, 1,541 men; Tennessee, 1,500 men; Oregon, 1,497 men; Maine, 1,316 men, besides 49 in the naval militia; Kansas, 1,271 men; Florida, 1,247 men, besides 154 in the naval militia; Rhode Island, 1,242 men, besides 193 in the naval militia; Colorado, 1,170 men; Arkansas, 1,080 men; Washington, about 1,000 men; Oklahoma, about 1,000 men; Arizona, 1 regiment; Vermont, 756 men; South Dakota, 711 men; North Dakota, 692 men; Utah, 500 men; Idaho, 500 men; New Mexico, 500 men; Wyoming, 1 battalion; Delaware, 384 men; Montana, 325 men; Nevada, 148 men; Georgia, 128 naval militia. The total numerical strength of the organized militia in 1900 was 8,246 officers and 113,967 men. The total fighting strength of the United States, including all able-bodied men within the military ages, exceeds 10,000,000 men.

The Navy.—The vessels of the new navy have been built since 1892. All the battle-ships except the Texas, of 6,315 tons, the oldest of them, are of the first class, having a displacement of over 10,000 tons and a speed of over 15½ knots, carrying in their turrets 12-inch or 13-inch guns, and having 11-inch Krupp armor on the newest ones, 16½-inch Harvey armor on those launched in 1898, and 18-inch armor on the earliest large ships, launched in 1893. These are the Oregon, of 11,000 tons, and the Indiana and Iowa, of 10,810 tons, each carrying 4 13-inch, 8 8-inch, 4 6-inch quick-firing, and 20 6-pounder quick-firing guns. Their speed varies from 15.6 to 16.8 knots. The Iowa, launched in 1896, has 14-inch armor, a displacement of 11,340 tons, a speed of 17.1 knots with engines of 12,105 horse-power, and an armament of 4 12-inch, 4 8-inch, 6 4-inch quick-firers, and 20 6-pounders. The Kearsarge and Kentucky, of 11,525 tons, can steam 17 knots, and are armed with 4 13-inch, 4 8-inch, 14 5-inch quick-firing guns, and 20 6-pounders. The Alabama, Illinois, and Wisconsin, having a displacement of 11,565 tons, engines of 11,500 horse-power in the last and somewhat less in the others, giving an estimated speed of 17 knots and over, carry, besides the 4 13-inch breech-loading guns, 14 6-inch and 16 6-pounder quick-firers. The new Maine, launched July 27, 1901, has a displacement of 12,300 tons, and will be fitted with engines of 16,000 horse-power, capable of making 18 knots with twin propellers, with bunker capacity for 2,000 tons of coal. The length of the vessel is 388 feet, with a breadth of 72 feet 2 inches and a draft of 25 feet 6 inches. The vital parts are protected with Krupp armor tapering from a thickness of 11 inches above the water-line to 7 inches 3¼ feet below it; the barbettes and turrets have 12-inch, the casemates 6-inch armor, and there is a protective deck 2½ inches thick on the armored parts and 3 and 4 inches beyond the armor belt. The armament will consist of 4 12-inch guns in turrets, 16 6-inch quick-firing guns, of which 10 are in broadside casemates and 6 in barbettes fore and aft, 6 3-inch and 8 6-pounder quick-firers, and 9 machine guns. There will be 2 torpedo-tubes, both submerged. The Missouri, of the same size, and the Ohio, of 12,440 tons, are of the same design as the Maine. The Pennsylvania, New Jersey, and Georgia, of 15,000 tons displacement, and the Virginia and Rhode Island, of 14,600 tons, are planned to have engines of 19,000 horse-power and to steam 19 knots an hour, and their armament is to be, besides the 4 12-inch rifles in the turrets, 8 8-inch, 12 6-inch, and 12 14-pounder rapid-fire guns. The Pennsyl-

vania, New Jersey, and Georgia will be sheathed and coppered, as are the new first-class cruisers California, Nebraska, West Virginia, St. Louis, Milwaukee, and Charleston, and all the new second-class cruisers. The first-class cruiser New York, launched in 1891, has a displacement of 8,200 tons, 10 inches of armor over the vital parts, engines of 17,400 horse-power, giving a speed of 21 knots, and a battery of 6 8-inch breech-loaders and 12 4-inch and 8 6-pounder quick-firers. The Columbia and Minneapolis, of 7,375 tons, have 18,510 and 20,860 horse-power engines, making 22.8 and 23.1 knots nominal speed, and an armament of 1 8-inch gun and 2 6-inch, 8 4-inch, and 12 6-pounder quick-firers. The Brooklyn, launched in 1895, has a displacement of 9,215 tons, a speed of 21.9 knots with 18,769 horse-power engines, 8-inch armor, and an armament of 8 8-inch breech-loaders and 12 5-inch and 12 6-pounder quick-firers. The California, Nebraska, West Virginia, Maryland, South Dakota, and Colorado will have a displacement of 13,500 tons, engines of 23,000 horse-power to give a speed of 22 knots, and an armament of 4 8-inch, 14 6-inch, and 18 14-pounder rifles, all quick-firing, with 12 3-pounders, 8 1-pounders, 2 3-inch field, 2 machine, and 6 automatic guns. These vessels will have a complete belt of armor, 8 feet wide, 6 inches at the top, tapering to 5 inches at the bottom. The Charleston, Milwaukee, and St. Louis, of 9,700 tons, will have a belt of 4-inch armor 200 feet long at the water-line and 7½ feet wide, surmounted by another of two-thirds its length, and will be fitted with engines of 21,000 horse-power, to make not less than 22 knots an hour. They will carry 14 6-inch and 18 3-inch rapid-fire rifled cannons, 12 3-pounders, 2 3-inch field, 2 machine, and 8 automatic guns. The protected steel cruisers New Orleans and Albany, launched in 1896 and 1899, have 4,000 tons displacement, a speed of 20½ knots, and an armament of 6 6-inch, 4 4.7-inch, 10 6-pounder, and 8 1-pounder rapid-fire guns. The Chattanooga, Cleveland, Denver, Des Moines, Galveston, and Tacoma, protected cruisers of 3,200 tons, are intended to have a speed of 16½ knots, with engines of 4,700 horse-power, and a cruising radius of 7,000 miles at 10 knots, and to carry 10 5-inch quick-firers, supplemented by 8 6-pounders and 2 1-pounders. New monitors for harbor defense are the Arkansas, Florida, Nevada, and Wyoming, having a displacement of 3,235 tons, a speed of 11½ knots, and an armament of 2 12-inch breech-loading guns, with 4 4-inch, 3 6-pounder, and 5 1-pounder quick-firers. The protected cruisers Columbia and Minneapolis, displacing 7,375 tons, having 3 sets of triple-expansion engines of 20,000 horse-power (or 23,000 with forced draft), made 22.8 and 23 knots on their trial trips. The destroyer Bainbridge, of 420 tons, built in 1899, having 2 tubes for Whitehead torpedoes and 2 14-pounder and 5 6-pounder rapid-fire guns, has a speed of 29 knots. Built on the same model are the Barry, Chauncey, Paul Jones, Macdonough, Perry, Preble, and Stewart. The Dale and Decatur have an estimated speed of 28 knots. The Hopkins has a displacement of 408 tons. The Lawrence, displacing 400 tons, can make 30 knots, and so can the Truxtun and the Whipple and Worden of the same design, having a displacement of 433 tons. The torpedo-boats Bagley, Barney, and Biddle, of 167 tons, carrying 3 3-pounders and fitted with 3 18-inch Whitehead torpedo-tubes, can go 28 knots. The Blakeley, De Long, Shubrick, Stockton, Thornton, and Tingey, of the same size, are designed to make 26 knots; the Wilkes, 26½ knots; the Bailey, of 235 tons, has 4 6-pounders and only 2 torpedo-tubes.

and can make 30 knots. The Dahlgren, of 146 tons, has 4 1-pounders and 2 tubes, and can make 30½ knots. The Farragut, of 279 tons, armed like the Bailey, can make 30 knots, and so can the Goldsborough, of 247½ tons. The Craven, of 146 tons, with the same armament as the Dahlgren, can steam 30½ knots. The Du Pont, of 165 tons, carrying 4 1-pounders and 3 torpedo-tubes, has a speed of 27½ knots; and the Rowan, of 182 tons, makes 26 knots. The Nicholson and O'Brien, of 174 tons, are armed like the Bagley and have a speed of 26 knots. The Davis, of 154 tons, carrying 3 1-pounders and 3 torpedo-tubes, makes 22½ knots; but the Foote, of 142 tons, makes 24½ knots with the same armament; the Fox, of 154 tons, 23 knots; the Morris, of 105 tons, 24 knots; the Rodgers and the Winslow, of 142 tons, 24½ knots. The earlier Cushing, of 105 tons, has a speed of 22½ knots, with an armament of 3 1-pounders and 3 torpedo-tubes. The Stringham, built in 1899, has a displacement of 340 tons, being designed to carry 7 6-pounder quick-firers with 2 torpedo-tubes and to steam 30 knots. The small torpedo-boats have a single 1-pounder quick-firer and 2 tubes, as the Gwin, of 46 tons, steaming 20 knots; the Talbot, of 46½ tons, going a knot better; and the Mackenzie and McKee, of 65 tons, with a speed of 20 knots. The submarine boats Adder, Grampus, Moccasin, Pike, Plunger, Porpoise, and Shark, of 120 tons, are designed to carry 1 torpedo-tube and to go 8 knots an hour. The Holland, of 74 tons, has that speed under water. The Holland submarine boat Fulton was tested on Nov. 24 by Rear-Admiral John Lowe, who remained with comfort beneath the surface of the water for fifteen hours and reported that type of boat to be seaworthy and manageable.

By the law of March 3, 1899, the executive and engineering branches of the navy were amalgamated. The *personnel* of the navy was expanded from 12,500 men and 1,500 apprentices to 17,500 men and 2,500 apprentices, and the number of officers to 18 rear-admirals, 70 captains, 112 commanders, 170 lieutenant-commanders, 300 lieutenants, 350 junior lieutenants and ensigns. Subsequently it was further expanded, and on July 1, 1901, consisted of 21 rear-admirals, 72 captains, 115 commanders, 172 lieutenant-commanders, 304 lieutenants, 104 junior lieutenants, 126 ensigns, 126 cadets, 190 medical directors, inspectors, and surgeons, 136 pay directors, pay inspectors, paymasters and assistant paymasters, 24 chaplains, 11 professors, 41 constructors, 21 civil engineers, 18 chief boatswains, 73 boatswains, 14 chief gunners, 71 gunners, 16 chief carpenters, 46 carpenters, 10 chief sailmakers, 100 machinists, 25 pharmacists, 8 mates, 19,049 seamen, and in the corps of marines 199 officers and 5,544 men; total, 26,659 officers and men. The marines are armed with straight-pull Lee rifles of 6 millimeters bore. Admiral George Dewey is commanding officer of the navy, and the rear-admirals in active service in 1901 were John A. Howell, George C. Remey, Norman H. Farquhar, John C. Watson, Silas Casey, William T. Sampson, Bartlett J. Cromwell, Francis J. Higginson, Frederick Rodgers, Louis Kempff, George W. Sumner, Albert S. Barker, Charles S. Cotton, Robley D. Evans, Silas W. Terry, Merrill Miller, John J. Read, Henry C. Taylor, Mortimer L. Johnson, Edwin M. Shepard, Frank Wildes, and Henry Glass. The officers in charge of the different bureaus of the Navy Department were: Capt. A. S. Crowninshield, Navigation; Capt. Royal B. Bradford, Equipment; Capt. Charles O'Neil, Ordnance; Surgeon-General W. K. Van Reypen, Medicine; Pay-Director Albert S. Kenney, Supplies and Accounts; En-

gineer-in-Chief George W. Melville, Construction; Civil-Engineer Mordecai T. Endicott, Yards and Docks; Lieut.-Commander Samuel C. Lemly, Judge-Advocate-General; Capt. Charles D. Sigbee, Naval Intelligence.

Pensions.—The number of army and navy pensioners on the rolls on June 30, 1901, was 997,735, of whom 4 were widows of soldiers of the Revolution, 5 daughters of Revolutionary soldiers, 1 a survivor of the War of 1812, 1,527 widows of soldiers of the War of 1812, 1,086 survivors of the Indian wars from 1832 to 1842, 3,479 widows of soldiers of the Indian wars, 7,568 survivors of the Mexican War, 8,109 widows of soldiers of the Mexican War, 293,186 army invalid pensioners of the civil war, 83,504 widows and minor children of soldiers of the civil war, 4,480 naval invalid pensioners of the civil war, 2,298 widows and minor children of sailors of the civil war, 650 army nurses, 422,481 army invalid pensioners of the civil war under the act of June 27, 1890, 138,490 widows and minor children of soldiers receiving pensions under that act, 15,633 navy invalid pensioners under the same act, 6,621 widows and minor children of sailors receiving pensions under the act, 3,344 army invalids of the Spanish War, 1,981 widows of soldiers of the Spanish War, 211 navy invalids of the Spanish War, and 68 widows of sailors of the Spanish War. There were added to the rolls during the year 44,225 new pensioners, and the number restored to the rolls was 3,567, making an addition of 47,792 names, while 43,586 were dropped from the rolls, showing a net increase of 4,206 pensioners since June 30, 1900. The total sum paid out in pensions was \$138,531,483. The number of invalid army pensioners under the general law decreased 12,794; the number of army widows decreased 1,961; navy invalids, 133; navy widows, 16; nurses increased 4. Under the act of June 27, 1891, there was an increase of 7,216 in army invalids, 9,078 in army widows and dependents, 241 in navy invalids, and 307 in navy widows. The number of applications filed during 1901 was 58,373; number of claims allowed, 44,868.

Public Lands.—The aggregate area of public lands subject to entry and settlement on July 1, 1901, was 914,096,974 acres, including 367,983,506 acres unsurveyed in Alaska. The other lands, which do not include military and Indian reservations, reservoir sites, timber reservations, tracts covered by filings or selections, railroad grants, or claims not adjudicated were situated as follows: Alabama, 312,630 acres; Arizona, 48,771,054 acres, of which 11,615,248 acres were surveyed and 37,155,806 acres unsurveyed; Arkansas, 3,224,128 acres; California, 42,049,008 acres, of which 7,996,412 acres were unsurveyed; Colorado, 39,115,814 acres, of which 4,396,055 acres were unsurveyed; Florida, 1,459,774 acres, of which 160,070 acres were unsurveyed; Idaho, 42,475,176 acres, of which 30,795,087 acres were unsurveyed; Kansas, 1,085,315 acres; Louisiana, 319,335 acres, of which 65,018 acres were unsurveyed; Michigan, 462,157 acres; Minnesota, 4,140,193 acres, of which 2,172,908 acres were unsurveyed; Mississippi, 195,980 acres; Missouri, 281,727 acres; Montana, 65,803,307 acres, of which 46,664,861 acres were unsurveyed; Nebraska, 9,926,670 acres; Nevada, 61,322,225 acres; New Mexico, 55,589,124 acres, of which 31,654,848 acres were unsurveyed; North Dakota, 16,956,491 acres, of which 4,982,753 acres were unsurveyed; Oklahoma, 4,653,605 acres; Oregon, 33,784,023 acres, of which 10,141,659 acres were unsurveyed; South Dakota, 11,869,004 acres, of which 397,866 acres were unsurveyed; Utah,

42,515,855 acres, of which 31,685,613 acres were unsurveyed; Washington, 11,913,164 acres, of which 6,299,221 acres were unsurveyed; Wisconsin, 230,813 acres; Wyoming, 47,656,896 acres, of which 4,887,309 acres were unsurveyed. The total area of public lands and Indian lands remaining unsurveyed, including private land claims, was 698,897,362 acres. The number of acres entered under the homestead act during the year ending June 30, 1901, was 9,497,275. No lands were taken up under the timber-culture act. The receipts of the General Land Office for the year were \$4,307,437 from disposal of public lands, \$585,661 from disposal of Indian lands, \$585,661 for depredations on public lands, \$25,305 from sales of timber, \$597 from sales of Government property, \$14,429 for furnishing records and plots, and \$16,686 from fees and commissions.

Forests.—There are 699,500,000 acres of forest in the United States, constituting 36.5 per cent. of the land area, exclusive of Alaska. There are 2,250,000,000 cubic feet of lumber consumed annually in the United States, and 15,000,000,000 cubic feet of wood for fuel, 27,000,000 cubic feet of railroad ties, 30,000,000 cubic feet of fencing, and 1,000,000,000 cubic feet used for other purposes, making the annual consumption over 18,000,000,000 cubic feet. The annual value of forest products is \$1,038,616,000. The greater part of the white-pine forests has been cut down, and serious inroads have been made on other valuable timbers. The average annual loss by fire is over \$20,000,000. In accordance with the act of March 3, 1891, the President made 17 national forest reservations, comprising 17,968,440 acres, situated in Colorado, California, New Mexico, Arizona, Wyoming, Oregon, and Washington, and in 1897 President Cleveland proclaimed 13 additional reservations, comprising 25,683,840 acres. New York, Kansas, Michigan, Minnesota, Maine, New Hampshire, Pennsylvania, and Wisconsin have State Forest Commissions.

Patents.—During the year ending Dec. 31, 1900, there were 26,499 patents, reissues, and design patents granted, and 1,721 trade-marks, 737 labels, and 93 prints registered; total, 28,050. The number of applications for patents was 39,673; for design patents, 2,225; for reissues of patents, 82; for registration of trade-marks, 2,099; for registration of labels, 943; for registration of prints, 127; caveats filed, 1,731; disclaimers, 2; appeals on the merits, 907; total, 47,789.

Commerce and Production.—The total value of foreign merchandise imported into the United States in the year ending June 30, 1901, was \$823,172,165, compared with \$849,941,184 in 1900. The total value of domestic exports was \$1,460,462,806, compared with \$1,370,763,571 in 1900, which was the highest amount reached up to that year. Of the imports of 1901 the value of \$47,100,814 was brought in cars and other land vehicles, \$93,055,493 in American vessels, and \$683,015,858 in foreign vessels. Of the exports in 1901 the value of \$104,184,393 was carried in cars and other land vehicles, \$81,406,597 in American vessels, and \$1,274,871,816 in foreign vessels. The total value of imports free of duty was \$339,608,669, and of dutiable imports \$483,563,496. The values of the various articles of merchandise imported during the year ending June 30, 1901, are given in the following table:

Articles.	Values.
Sugar.....	\$90,487,800
Hides and skins, other than fur.....	48,220,013
Chemicals, drugs, dyes, and medicines.....	53,508,157
Coffee.....	62,861,399
Silk, unmanufactured.....	30,051,365
Cotton, manufactures of.....	40,246,935

Articles.	Values.
Fibers, vegetable, manufactures of.....	\$32,762,008
India-rubber and gutta-percha, crude.....	28,835,173
Silk, manufactures of.....	26,842,138
Fibers, vegetable, unmanufactured.....	22,932,506
Wood, and manufactures of.....	19,754,205
Iron and steel, and manufactures of.....	17,874,789
Wool, unmanufactured.....	12,529,881
Fruits, including nuts.....	19,586,703
Tin, in bars, blocks, or pigs.....	19,805,551
Jewelry and precious stones.....	24,216,407
Wool, manufactures of.....	14,585,306
Tobacco.....	16,290,387
Tobacco, manufactures of.....	2,480,139
Leather, and manufactures of.....	11,887,012
Copper, and manufactures of.....	9,940,463
Furs, and manufactures of.....	11,019,658
Tea.....	11,017,876
Earthen, stone, and china ware.....	9,472,869
Cotton, unmanufactured.....	6,787,828
Wines.....	8,219,236
Oils.....	7,097,431
Cacao, crude, and shells of.....	6,472,829
Glass and glassware.....	5,010,675
Animals.....	4,478,955
Coal, bituminous.....	5,381,474
Feathers, flowers, etc.....	3,674,384
Paper, and manufactures of.....	4,002,989
Spirits, distilled.....	4,162,149
Books, maps, engravings, etc.....	3,792,536
Spices.....	3,563,109
Paper stock, crude.....	2,183,686
Cement.....	2,198,891
Lead.....	4,832,737
Toys.....	3,830,311
Vegetables.....	3,719,679
Hats, bonnets, and materials for.....	2,798,109
Hair, and manufactures of.....	1,680,145
Art works.....	3,304,546
Rice.....	2,324,898
Provisions.....	2,649,466
Bristles.....	1,730,197
Corkwood, and manufactures of.....	2,270,995
Clocks and watches, and parts of.....	2,038,239
Malt liquors.....	1,885,215
Fertilizers.....	2,230,235
All other articles.....	83,641,876
Total merchandise.....	\$823,172,165

The quantity of sugar imported was 3,975,005,840 pounds; of coffee, 854,871,311 pounds; of tea, 89,806,453 pounds; of cacao, 45,924,353 pounds; of rice, 117,199,710 pounds; of tobacco, 26,851,853 pounds; of malt liquors, 3,599,446 gallons; of wool, 103,583,505 pounds; of cotton, 46,631,283 pounds; of hides and skins, 280,909,837 pounds; of India-rubber and gutta-percha, 64,927,176 pounds; of bristles, 1,684,575 pounds; of coal, 1,977,238 tons; of tin, 73,091,890 pounds; of lead, 251,183,836 pounds; of cement, 638,770,499 pounds.

The values of the articles of domestic produce or manufacture exported in the fiscal year 1901 are given in the following table:

Articles.	Values.
Agricultural implements.....	\$16,313,434
Animals.....	52,058,876
Books, maps, engravings, and other printed matter.....	3,472,343
Brass, and manufactures of.....	2,007,450
Breadstuffs:	
Corn.....	82,527,983
Wheat.....	96,771,743
Wheat-flour.....	69,459,296
Carriages, cars, and other vehicles, and parts of.....	10,920,931
Chemicals, drugs, dyes, and medicines.....	14,384,453
Clocks and watches.....	2,340,751
Coal:	
Anthracite.....	8,425,803
Bituminous.....	13,891,698
Copper ore.....	1,346,707

Wilmington, N. C.....	180,912	12,013,659

The production of wool in the United States in 1901 was estimated at 302,502,328 pounds, and the importation at 103,583,505 pounds, making a total of 406,085,833 pounds, from which are deducted 199,565 pounds of domestic and 3,590,502 pounds of foreign wool exported, leaving for home consumption 402,295,766 pounds, of which 22.6 per cent. is foreign wool. The cotton-crop of the United States for the year ending Sept. 1, 1901, was estimated at 10,425,141 bales, against 9,439,559 bales of 487 pounds in 1900. The exports of cotton to Europe in 1901 were 6,415,477 bales, and the consumption of the United States and Canada was 4,071,030 bales; total, 10,486,507 bales. The consumption of the United States in 1901 was estimated at 3,727,000 bales of 500 pounds, the world's consumption at 13,593,000 bales; the production of America at 10,677,000 bales of 494 pounds, the world's production at 12,343,000 bales. The number of spindles in operation in the United States was 20,870,000.

The number of acres under corn in the United States in 1900 was 83,320,872; under wheat, 42,495,385; under oats, 27,364,795. The value of the corn-crop was \$751,720,034; of the wheat-crop, \$323,515,177; of the oat-crop, \$208,669,233.

The production of corn in the United States in the calendar year 1900 was 2,105,102,516 bushels; of wheat, 522,229,505 bushels; of oats, 809,125,989 bushels; of barley, 58,925,833 bushels; of rye, 23,995,927 bushels; of buckwheat, 9,566,966 bushels. The annual value of dairy products of the United States is estimated at \$451,600,000, including \$167,200,000 for 2,090,000,000 gallons of milk consumed, \$257,400,000 for 1,430,000,000 pounds of butter, and \$27,000,000 for 300,000,000 pounds of cheese, reckoning 380 gallons of milk per cow from 5,500,000 cows, 300 pounds of cheese per cow from 1,000,000 cows, and 130 pounds of

butter per cow from 11,000,000 cows. The number of hogs packed and marketed during the year ending March 31, 1901, was 28,980,000. In the year ending June 30, 1900, there were 708,544,100 pounds of bacon and hams, 159,145,229 pounds of pork and 661,813,603 pounds of lard exported; total, 1,529,502,932 pounds, valued at \$109,572,863, the average price per pound being 7.16 cents. The number of horses in the United States in 1900 was 13,537,534, valued at \$603,969,442; of mules, 2,086,127, valued at \$111,717,092; of milch cows, 16,292,360, valued at \$514,812,106; of oxen and other cattle, 27,610,054, valued at \$689,486,260; of sheep, 41,883,065, valued at \$122,665,916; total value of farm animals, \$2,212,756,578.

The production of cane-sugar in Louisiana in 1900 was estimated at 132,000 tons; in Cuba, 395,000 tons; in Porto Rico, 50,000 tons; in Hawaii, 275,000 tons; the total world's production, 2,839,000 tons. The estimated production of beet-sugar in the United States was 72,944 tons; the world's production, 5,608,000 tons. The production of sugar in Louisiana in 1900 was 329,968,450 pounds; in other Southern States, 4,626,000 pounds; total, 334,594,450 pounds, or 149,372 long tons; production of molasses in Louisiana, 14,971,313 gallons; in other Southern States, 3,192,136 gallons. The product of imported sugar refined in the United States in 1900 was 1,950,014 tons; manufactured from imported molasses, 7,647 tons; domestic cane-sugar, 174,450 tons; maple-sugar, 5,000 tons; domestic beet-sugar, 82,736 tons; total consumption, 2,919,847 tons, average 65.2 pounds per head of population. The consumption of malt liquors in the United States in the fiscal year 1900 was 39,330,844 barrels. The importation of malt liquors in 1901 was 1,151,891 gallons in bottles and 2,447,555 in other coverings. The production of fermented liquors in the United States in 1900 was 39,471,593 barrels; of bourbon whisky, 19,411,829 gallons; of rye whisky, 14,296,568 gallons; of alcohol, 10,735,771 gallons; of rum, 1,614,514 gallons; of gin, 1,597,081 gallons; of pure neutral spirits, 24,173,671 gallons; of fruit brandy, 3,760,487 gallons; total distilled spirits, including high wines and miscellaneous spirits, 109,945,187 gallons. The production of wines was 24,306,905 gallons, of which California furnished 14,620,000 gallons, New York 2,528,250 gallons, and Ohio 1,934,838 gallons. The imports of distilled spirits in 1901 were 290,301 gallons of brandy and 1,712,156 gallons of other spirits and compounds. There were 875,099 gallons of domestic manufacture returned. The importation of still wines in casks was 2,785,850 gallons; in bottles, 373,832 dozen; of champagne and other sparkling wines, 311,078 dozen. The consumption of domestic spirits from fruit in 1900 was 1,386,361 gallons; of other domestic spirits, 94,156,023 gallons; of imported spirits, 1,705,998 gallons; of domestic wines, 26,492,491 gallons; of imported wines, 3,935,000 gallons; of domestic malt liquors, 1,218,183,252 gallons; of imported malt liquors, 3,316,908 gallons.

The production of crude petroleum in the calendar year 1899 was 57,070,850 barrels or 2,396,975,700 gallons. The exports of crude petroleum for the fiscal year 1900 were 133,023,656 gallons; of naphthas, benzene, and gasoline, 21,988,093 gallons; of illuminating oil, 721,027,637 gallons; of heavy paraffin and lubricating oils, 74,583,769 gallons; total, 967,252,341 gallons, valued at \$75,611,750. The world's production of mineral oil is over 5,000,000 gallons, of which the United States produces 2,500,000 gallons, Russia, 2,250,000 gallons, and Austria, Sumatra, Java, Canada, Germany, and other countries the remainder. The

American exports were in value more than three times as great as those of Russia in 1900. The United States in 1900 produced 268,787 long tons of copper, which was 55 per cent. of the world's production. Michigan produced 144,227,340 pounds; Arizona, 115,403,846 pounds; Montana, 254,460,713 pounds; California, 29,639,987 pounds; Utah, 18,504,726 pounds; Colorado, 7,826,949 pounds; Eastern and Southern States, 6,918,122 pounds; other States, 12,536,850 pounds; copper in sulfate obtained as a by-product, 11,313,962 pounds. The quantity of zinc produced in the United States in 1900 was 111,794 metric tons, which was 22 per cent. of the world's supply. The production of pig iron in the United States in 1900 was 14,099,870 metric tons, being 34 per cent. of the world's production; of steel, 10,382,069 metric tons, which was 38 per cent. of the world's production. The production of asbestos in the United States in 1900 was 998 metric tons, value \$16,500; of asphalt, 10,106 tons, value \$218,520; of asphaltic limestone, 3,547 tons, value \$16,830; of bituminous sandstone, 31,096 tons, value \$138,892; of barytes, 37,618 tons, value \$80,922; of bauxite, 23,820 tons, value \$85,922; of bismuth ore, 200 tons, value \$26,500; of bromine, 236 tons, value \$140,790; of calcium borate, 22,997 tons, value \$532,350; of natural hydraulic cement, 1,248,828 tons, value \$4,308,709; of Portland cement, 1,449,994 tons, value \$10,461,910; value of clay products, \$78,704,678; production of anthracite coal, 52,131,212 metric tons, value \$102,972,596; of bituminous coal, 191,256,216 tons, value \$219,460,521; of canal coal, 26,736 tons, value \$88,413; of cobalt oxid, 5,566 kilograms, value \$22,085; of copper sulfate, 34,480 metric tons, value \$3,903,102; of corundum, 753 tons, value \$58,100; of emery, 3,810 tons, value \$189,000; of feldspar, 29,918 tons, value \$136,773; of fluorspar, 19,646 tons, value \$114,430; of fuller's earth, 10,717 tons, value \$70,565; of garnet, 2,980 tons, value \$92,810; of grahamite, 9,975 tons, value \$98,370; of crystalline graphite, 1,861,132 kilograms, value \$164,122; of amorphous graphite, 948 metric tons, value \$8,640; of gypsum, 439,265 tons, value \$1,316,255; of iron ore, 26,332,071 tons, value \$77,152,179; of lepidolite, 91 tons, value \$3,700; of crude magnesite, 2,456 tons, value \$11,832; of manganese ore, 221,714 tons, value \$461,994; of scrap mica, 4,914 tons, value \$49,889; of sheet mica, 57,716 kilograms, value \$82,508; of molybdenum ore, 22 tons, value \$1,200; of monazite, 412 tons, value \$50,680; value of natural gas, \$18,500,000; production of ocher, including umber, sienna, and oxid of iron, 38,027 tons, value \$461,087; of crude petroleum, 8,749,458 tons, value \$74,246,582; of rock phosphate, 1,552,154 tons, value \$5,375,956; value of precious stones, \$200,000; production of pyrites, 204,538 tons, value \$684,478; of salt, 2,633,967 tons, value \$6,439,006; value of silica brick, \$916,819; production of diatomaceous earth, 1,247 tons, value \$9,675; of flint, 32,582 tons, value \$81,400; of sand, 889,000 tons, value \$1,312,500; of pumice, 227 tons, value \$1,250; of grindstones, 38,138 tons, value \$482,462; value of whetstones, \$84,874; production of tripoli, 1,675 tons, value \$3,987; of roofing slate, 299,385 tons, value \$2,885,153; value of slate manufactures, \$72,787; production of slate pigment, 6,003 tons, value \$72,787; of soapstone, 17,197 tons, value \$189,560; of natural soda, 12,791 tons, value \$195,300; value of building stone, \$41,400,000; production of limestone flux, 6,898,843 tons, value \$3,666,708; of lithographic stone, 36 tons, value \$2,000; of sulfur, 4,704 tons, value \$102,091; of sulfuric acid, 77,111 tons, value \$2,045,950; of common talc, 7,049 tons, value \$60,

217; of fibrous talc, 40,824 tons, value \$236,250; of tungsten ore, 224 tons, value \$35,200; of uranium ore, 139 tons, value \$15,900; of zinc sulfate, 478 tons, value \$22,657; of zinc ore, exported, 38,156 tons, value \$1,133,663; of zinc white, 42,775 tons, value \$3,772,080; estimated value of other minerals, \$5,000,000; total value of mineral products, \$672,099,416. The production of aluminum in 1900 was 3,243,219 kilograms, value \$2,288,000; of antimony, 1,452 tons, value \$301,440; of copper, 272,536 tons, value \$97,755,449; of ferromanganese, 260,073 tons, value \$22,825,469; of ferromolybdenum, 5 tons, value \$12,100; of gold, 117,611 kilograms, value \$76,159,674; of pig iron, 13,749,797 tons, value \$250,184,857; value of iridium, \$311; production of lead, 250,301 tons, value \$24,114,212; of molybdenum, 14,515 kilograms, value \$46,080; of nickel, 4,407 kilograms, value \$4,534; of platinum, 5.4 kilograms, value \$3,114; of quicksilver, 967 tons, value \$1,288,851; of silver, 1,852,564 kilograms, value \$36,576,900; of tungsten, 25,855 tons, value \$51,800; of zinc, 111,794 tons, value \$10,819,682; total value of metals, \$524,432,533. The production of alum in 1900 was 18,626 tons, value \$415,930; of aluminum sulfate, 55,954 tons, value \$1,480,272; of carborundum, 1,089 tons, value \$216,090; of slag cement, 88,932 tons, value \$622,490; of coke, 17,424,471 tons, value \$50,272,050; of copperas, 11,226 tons, value \$96,517; of crushed steel, 313 tons, value \$48,300; of artificial graphite, 390,434 kilograms, value \$68,860; of white lead, 87,468 tons, value \$9,910,742; of red lead, 9,161 tons, value \$1,050,192; of orange mineral, 748 tons, value \$100,650; of litharge, 9,491 tons, value \$1,067,124; of mineral wool, 5,445 tons, value \$60,320; of manufactured soda, 390,000 tons, value \$7,000,500; of Venetian red, 5,762 tons, value \$110,658; total value of important manufactured mineral and chemical products, \$72,720,695. From foreign ores and bullion were manufactured in the United States 28,342,688 kilograms of copper, value \$10,166,194; 60,605 kilograms of gold, value \$40,275,883; 93,750,340 kilograms of lead, value \$9,032,003; 3,488,648 kilograms of nickel, value \$3,599,713; and 1,450,024 kilograms of silver, value \$33,291,146; total value \$96,364,939.

Shipping.—The number of vessels registered in the United States in 1901 was 24,057, of 5,524,218 tons. Of these 7,414 were steamers and 16,643 were sailing vessels, canal-boats, and barges. There were 346 steamers of 426,259 tons, and 940 sailing vessels, etc., of 453,336 tons, engaged in foreign trade; total, 1,286 vessels, of 879,595 tons. In coastwise trade 7,059 steamers, of 2,491,231 tons, and 14,210 sailing and other vessels were engaged; total, 21,269 vessels, of 4,582,645 tons. In the year ending June 30, 1901, there were 526 sailing vessels, of 126,165 tons, 506 steamers, of 273,591 tons, 79 canal-boats, of 9,078 tons, and 469 barges, of 74,655 tons, built and first registered; total, 1,580 vessels, of 483,489 tons. The tonnage of the American merchant marine has steadily increased since 1880, having previously declined to 4,068,034 tons in that year from 5,999,175 tons in 1860.

Postal Service.—There were 76,945 post-offices and 511,808 miles of post routes on July 1, 1901. The revenue of the department in 1901 was \$111,631,193, and the expenditure \$115,554,920. The salaries of postmasters amounted to \$19,949,514, and \$58,610,976 were paid for transportation of the mails. The number of pieces of mail-matter carried during the year was about 8,000,000,000. The number of domestic money-orders was 35,586,379, and their amount was \$274,546,067; the

international money-orders numbered 1,247,888, and their amount was \$20,072,613.

Telegraphs and Telephones.—The Western Union Telegraph Company had a network of 193,589 miles of land wires and cables, with 972,766 miles of wire in 1901, in which year the number of messages transmitted was 65,657,049. The receipts were \$26,354,150, and expenses \$19,668,902. The average toll per message was 25.1 cents. The Postal Telegraph Company also has wires covering parts of the United States.

The American Telephone Company in 1901 had 1,348 exchanges, 1,427 branch offices, 627,897 miles of wire on poles, 16,833 miles of wire on buildings, 705,269 miles of underground wire, and 4,203 miles of submarine wire, making a total of 1,354,202 miles of wire. The total number of circuits was 508,262; the number of stations, 800,880; persons employed, 32,837; number of instruments rented, 1,952,412; number of daily conversations in the United States, 5,668,986; number per annum, over 1,825,000,000; average daily calls per subscriber, 7.1. The capital of the company is \$89,100,500. The long-distance telephone-lines on Jan. 1, 1901, had a total length of 12,427 miles, with 167,410 miles of wire and 359 offices. There are in the larger cities private branch exchanges used by the principal business houses. Independent telephone companies are in operation in every part of the country.

Railroads.—The railroads of the United States in 1901 had a length of 192,162 miles, besides 65,691 miles of second tracks and sidings, which make the total length of track 257,853 miles, of which 239,629 miles were laid with steel and 18,224 miles with iron rails. There were 38,065 locomotive engines. The number of passenger cars was 26,786; baggage and mail cars, 8,200; freight-cars, 1,350,258; total number of cars, 1,385,253. The number of miles of railroad operated in 1901 was 191,862. The passenger-train mileage was 373,226,581; freight, 513,667,388; mixed, 20,702,172; total, 907,596,141 miles. The number of passengers carried was 584,695,935; passenger mileage, 16,313,284,471; tons of freight moved, 1,071,431,919; freight mileage, 141,162,109,413. The bonded debt was \$5,758,346,250; unfunded debt, \$328,963,335; current accounts, \$422,262,823; sinking and other funds, \$114,800,860; total liabilities, \$12,428,966,022, balanced by \$10,484,430,907 expended in construction, \$1,766,493,090 of other investments, \$328,994,626 of sundry assets, \$188,922,213 of current accounts, and \$339,944,815 of surplus assets. The earnings from passengers in 1901 were \$331,402,816; from freight, \$1,052,835,811; miscellaneous earnings, \$117,456,751; total revenue from traffic, \$1,501,695,378; net earnings, \$483,247,526; receipts from other sources, \$67,772,934; total available revenue, \$551,020,460. The payments were \$214,199,502 for interest on bonds, \$6,315,028 for other interest, \$119,288,879 for dividends on stock, \$46,153,433 for miscellaneous purposes, \$30,248,304 of interest on rentals, \$21,054,774 of dividends on leased lines, and \$21,200,651 of miscellaneous rentals. The total official mileage reported by the Interstate Commerce Commission was 192,940 miles on June 30, 1901, and the unofficial mileage 405; total, 193,345 miles, showing an increase of 4,051 during the year, making 6.51 miles of line to 100 square miles of territory and 25.44 miles to 10,000 inhabitants. In Alaska there are 22 miles of railroad not included in the statistics above.

Commercial Treaties.—The reciprocity agreement made with France on May 28, 1898, on the basis of the Dingley tariff of 1897, reduced the duty on crude tartar from France to 5 per cent.

ad valorem, on brandy and other spirits to \$1.75 per gallon, on still wines and vermouth by a small percentage, and on paintings to 15 per cent. ad valorem, in return for which France extended the minimum tariff rates to American canned meats, table fruits, dried fruits, lard, manufactured and prepared pork products, hops, paving-blocks, staves, logs, and sawed or squared timber. A reciprocity treaty was concluded with France on July 24, 1899, but the Senate had not ratified it before the close of 1901. The same was true of the reciprocity treaty with the Argentine Republic signed on July 10, 1899, and of the treaties made with Great Britain for Barbadoes on June 16, 1899, for British Guiana on July 18, 1899, for Jamaica on July 22, 1899, and for Bermuda on July 24, 1899. In the reciprocal agreements made with Italy on Feb. 8, 1900, with Portugal on May 22, 1900, and with Germany on July 10, 1900, the same concessions are made as to France, in return for which Portugal gives to the United States as low rates as are accorded to any country except Spain and Brazil on breadstuffs, lard, mineral oil, agricultural implements, and some classes of machinery for manufacturing; Italy gives reduced duties on cottonseed-oil, fish, machinery, scientific instruments, fertilizers, and skins; and Germany grants to the United States the same tariff rates as are given to Belgium, Italy, Austria-Hungary, Roumania, Russia, and Switzerland during the existence of the unexpired tariff treaties with those countries, and annuls the regulations enforced against the importation of dried fruits from the United States, providing instead of them a system of inspection to prevent the introduction of the San José scale into Germany. The reciprocity treaty with France was reported favorably to the Senate in April, 1900, and subsequently treaties with Ecuador, Nicaragua, British Guiana, Santo Domingo, and the Danish island of Santa Cruz. Treaties with the British West Indian islands and with the Argentine Republic were not reported before the end of the session of 1900, and when Congress met on March 4, 1901, all the treaties were referred again under the rules to the Committee on Foreign Relations. On March 15 Mr. Hay and Lord Pauncefoot signed protocols extending for a year the time allowed for the ratification of reciprocity treaties relating to Jamaica, Bermuda, British Guiana, and the Turks and Caicos islands.

The imposition of the restrictive duties of the Dingley tariff on Russian beet-sugar provoked the Russian Government to reprisals. The Secretary of the Treasury in February, 1901, announced that Russian sugar would have to pay the increased duty of 35 per cent. placed on all sugar coming from countries paying a bounty on exports of sugar. His decision was subject to the decision of the United States Supreme Court on the question whether the excise rebate in Russia constitutes a bounty (see RUSSIA). Although the export of sugar from Russia to the United States is comparatively small, amounting to less than \$23,000 in 1900, the Russian Government immediately retaliated by increasing by 30 per cent. the duties on American hardware, steel and iron manufactures, dynamo-electric machines, sewing-machines, and motors and machinery of all kinds. All the principal exports from the United States to Russia were affected, and a large and growing trade, amounting to \$10,000,000 a year, was checked by these differential maximum duties, which the Russian Minister of Finance can impose or revoke at will, while the Secretary of the United States Treasury must follow the provisions of the acts of Congress. In the preceding

year the Treasury had ruled that Russian sugar received no bounty, direct or indirect, but on reexamining the question on receiving protests from the sugar manufacturers, which were supported by the diplomatic representatives of several European states whose sugar was subjected to the countervailing duty, the Treasury reversed its former decision. The Russian differential tariff on the American manufactures selected went into force on Feb. 27. The Italian excise regulations were likewise held by the Treasury Department to afford an indirect bounty, and custom-house officers were ordered to collect the differential duties on Italian sugar if imports arrived, which would be refunded if the courts decided that there was no bounty. The Russian Government offered to cancel all the increased duties on American iron and steel fabrics if the Secretary of the Treasury would cancel the duty on Russian sugar. The Russian Government having, under the treaty of 1832, accorded to the United States for five years most-favored-nation treatment, was desirous of concluding a permanent reciprocity agreement. A controversy had arisen over petroleum previous to the dispute regarding sugar bounties.

The Isthmian Canal.—The treaty signed by Mr. Hay and Lord Pauncefote on Feb. 5, 1900, regarding the projected interoceanic canal was amended by the United States Senate by inserting a declaration that the Clayton-Bulwer treaty was superseded and one that none of the stipulations applied to measures which the United States might find necessary to take for securing by its own forces the defense of the United States and the maintenance of public order, and by excising the article which provided for bringing the treaty to the notice of other powers and inviting their adherence. The British Government regarded the treaty as supplementary to the Clayton-Bulwer convention of 1850 providing for the joint protection of any isthmian canal that might be constructed by the United States and Great Britain. A modification of that convention was regarded as necessary by the United States Government in view of its undertaking the construction of the Nicaragua Canal, for which a concession had been obtained from the Government of Nicaragua, and which was not likely to be executed by private enterprise. By the Clayton-Bulwer treaty the United States and Great Britain agreed that neither would occupy, or fortify, or colonize, or assume or exercise any domain over any part of Central America, nor attain any of these objects by protection afforded to or alliance with any state or people of Central America. The amendment of the Senate giving the right to take any measures to secure the defense of the United States was copied from a similar provision in the Suez Canal convention which allows the Sultan of Turkey and the Khedive of Egypt, on notifying the signatory powers, to take any necessary measure for securing by their own forces the defense of Egypt and the maintenance of public order and allows the Ottoman Government to take measures to insure by its own forces the defense of its other possessions on the eastern coast of the Red Sea. The British Government rejected the amendments of the Senate and refused to accept the treaty as amended on the ground that the amendments were inconsistent with the principle of neutrality which both governments had accepted, by which the canal would remain free and unimpeded in peace and in war to the commerce and navies of the world. Negotiations were resumed, and on Nov. 18, 1901, Mr. Hay and the British minister signed at Washington a second treaty, as follows:

"I. The high contracting parties agree that the present treaty shall supersede the aforementioned (Clayton-Bulwer) convention of April 19, 1850.

"II. It is agreed that the canal may be constructed under the auspices of the Government of the United States either directly at its own cost, or by gift or loan of money to individuals or corporations, or through subscription to or purchase of stock or shares, and, that, subject to the provisions of the present treaty, the said Government shall have and enjoy all the rights incident to such construction, as well as the exclusive right of providing for the regulation and management of the canal.

"III. The United States adopts, as the basis of the neutralization of such ship-canal the following rules substantially as embodied in the convention of Constantinople, signed Oct. 28, 1888, for the free navigation of the Suez Canal; that is to say:

"First, the canal shall be free and open to the vessels of commerce and of war of all nations observing these rules, on terms of entire equality, so that there shall be no discrimination against any such nation or its citizens or subjects in respect of the conditions or charges of traffic, or otherwise. Such conditions and charges of traffic shall be just and equitable.

"Second, the canal shall never be blockaded, nor shall any right of war be exercised nor any act of hostility be committed within it. The United States, however, shall be at liberty to maintain such military police along the canal as may be necessary to protect it against lawlessness and disorder.

"Third, vessels of war of a belligerent shall not revictual nor take any stores in the canal except so far as may be strictly necessary; and the transit of such vessels through the canal shall be effected with the least possible delay in accordance with the regulations in force, and with only such intermission as may result from the necessities of the service.

"Prizes shall be in all respects subject to the same rules as vessels of war of the belligerents.

"Fourth, no belligerent shall embark or disembark troops, munitions of war, or warlike materials in the canal except in case of accidental hindrance of the transit, and in such case the transit shall be resumed with all possible despatch.

"Fifth, the provisions of this article shall apply to waters adjacent to the canal, within three marine miles of either end. Vessels of war of a belligerent shall not remain in such waters longer than twenty-four hours at any one time except in case of distress, and in such case shall depart as soon as possible, but a vessel of war of one belligerent shall not depart within twenty-four hours from the departure of a vessel of war of the other belligerent.

"Sixth, the plant, establishments, buildings, and all works necessary to the construction, maintenance, and operation of the canal shall be deemed to be parts thereof for the purposes of this treaty, and in time of war, as in time of peace, shall enjoy complete immunity from attack or injury by belligerents, and from acts calculated to impair their usefulness as part of the canal.

"IV. It is agreed that no change of territorial sovereignty or of international relations of the country or countries traversed by the before-mentioned canal shall affect the general principle of neutralization or the obligation of the high contracting parties under the present treaty.

"V. The present treaty shall be ratified by the President of the United States by and with the

advice and consent of the Senate thereof, and by his Britannic Majesty; and the ratifications shall be exchanged at Washington or at London at the earliest possible time within six months from the date hereof."

The treaty was laid before the Senate on Dec. 10, was reported favorably to the Senate by the Committee on Foreign Relations on Dec. 6, and was ratified on Dec. 16 by 72 votes to 6. The report of the Isthmian Canal Commission, submitted to Congress on Dec. 4, 1901, recommended the adoption of the Nicaraguan route, which was estimated to cost \$189,864,000, whereas to complete the Panama Canal would cost \$144,233,358, while the directors of the Panama Canal Company demanded \$109,141,000 for the franchise and property. The Panama Canal might be built at the sea-level, while locks would be necessary on the Nicaragua route, but Lake Nicaragua would afford an inexhaustible supply of water for the canal. Panama has harbors on both coasts, though considerable work would be necessary to make the harbor on the Atlantic side suitable as an entrance to the canal. The Nicaragua route has no natural harbors, but harbors can be constructed at both ends. It is possible to complete the canal by the Nicaragua route in six years after two years of preparation, whereas ten years would be necessary for the completion of the Panama Canal. The length of the Nicaragua route is 183.66 miles, while that of the Panama route is 49.09 miles. The cost of operating and maintaining the Nicaragua Canal would be \$1,350,000 more per annum than the annual cost of the shorter canal. It would take a vessel thirty-three hours to pass through the Nicaragua Canal, while the passage of the Panama Canal would require only twelve hours. The Nicaragua route is better, however, for sailing vessels on account of favoring winds, and is more advantageous to commerce save that originating on the west coast of South America. The hygienic conditions, moreover, are better in Nicaragua. The commission recommended that the United States Government acquire a strip of territory 10 miles wide from ocean to ocean. The consent of Nicaragua and Costa Rica for the construction of the canal by way of Lake Nicaragua was easy to obtain. The concessions of the Colombian Government to the Panama Company have yet many years to run. The directors of the Panama Company offered later to sell its franchises and property to the United States Government for \$40,000,000, the figure at which the Isthmian Canal Commission estimated the work done on the excavation and the other property to be actually worth. The commission recommended the Government to accept the offer and complete the Panama Canal rather than build one by the Nicaragua route, for which a bill was already before Congress.

Finances.—The excess of revenues over expenditures for the fiscal year ending June 30, 1901, amounted to \$77,717,984, against a like excess for the previous year of \$79,257,060. There was an increase of about \$5,000,000 in the receipts from customs and \$12,000,000 in those from internal revenue. There was \$2,122,841 received from the sale of the claim of the United States against the Sioux City and Pacific Railway (a new item), and an increase of postal receipts of more than \$9,000,000. Except in the decrease of more than \$2,000,000 in the deficiency of the postal revenues and about \$8,000,000 in the amount of interest paid on the public debt, there was no marked change in the several items of expenditures, there being generally a small increase all along the line.

Of the surplus revenues for the year, about \$31,000,000 was permitted to accumulate in the Treasury; the remainder was expended in the purchase of United States bonds, on which was paid for premiums \$14,649,573. The bonds were purchased at substantially their market prices, which at the time represented an annual income from the investment of only 1.726 per cent. Even the 2-per-cent. bonds of the Government were at a considerable premium in the markets of the world. The continuance of a surplus every year not being deemed necessary or advisable, Congress, by an act approved March 2, 1901, modified the internal-revenue taxes imposed by the act of 1898 on beer, cigars, cigarettes, tobacco, snuff, and a few other items, and repealed a large portion of the stamp taxes imposed by the same act, all to take effect at the opening of the fiscal year 1902.

The detailed receipts and expenditures of the Government for 1901, compared with those for 1900, are set forth in the table at the head of the next page.

That portion of the public debt against which no reserve is held was decreased in the year ending Dec. 31, 1901, by \$56,067,091. The changes in the several items of which it is composed are shown in detail by the following table. The changes involved indicate a material reduction in the annual interest charge:

OBLIGATIONS.	Interest rate.	OUTSTANDING DEC. 31,	
		1901.	1900.
Consols of 1930.....	2	\$445,940,750	\$419,679,750
Loan of 1908-'18.....	3	97,564,160	104,900,040
Funded loan of 1907.....	4	240,063,300	287,578,100
Refunding certificates.....	4	32,250	34,380
Loan of 1925.....	4	139,618,600	162,315,400
Loan of 1904.....	5	20,060,150	26,992,100
Old loans matured.....		1,339,790	2,654,070
Old demand notes.....		53,847	53,847
National-bank redemption account.....		35,003,208	31,531,532
Fractional notes.....		6,874,492	6,878,419
Total.....		\$986,550,547	\$1,042,617,638

In addition to the above-mentioned obligations, there were outstanding on Dec. 31, 1901, of United States notes \$346,681,016, and of Treasury notes of 1890 \$38,596,000; in all, \$385,277,016, payable on demand, against which the Treasury held, as required by law, \$150,000,000 of gold for their redemption when presented for that purpose. This fund was maintained throughout the year unimpaired, the redemption of notes having been adjusted each day by exchange for gold out of the available cash balance. The gold certificates and silver certificates in circulation, though obligations of the Government, are issued only upon a deposit of an equal amount of the metal they represent, from which deposit they are respectively redeemable upon presentation, the certificates being in effect used for circulation to their amount in place of the gold or silver deposited.

The most noticeable change in the character of the assets held by the public Treasury during the calendar year was an increase of \$62,000,000 in the amount of gold held, the total at the close of the year being \$540,797,603, an amount seldom if ever exceeded by this or any other government. Of this amount, \$150,000,000 was by law held as a reserve to meet the redemption of certain Government notes, as before stated, and \$316,785,089 to meet the payment of the certificates that had been issued therefor, which circulate as money, leaving \$74,797,603 as a part of the cash balance available to meet current disbursements of the Government.

The following table shows the amount of money in circulation Jan. 1, 1902, and on the same date in 1901:

CHARACTER OF MONEY.	AMOUNT IN CIRCULATION JAN. 1,	
	1902.	1901.
Gold coin (including bullion in Treasury).....	\$635,374,550	\$629,192,578
Gold certificates.....	277,997,069	232,787,929
Standard silver dollars.....	73,239,986	76,182,326
Silver certificates.....	449,492,892	422,399,403
Subsidiary silver.....	85,061,094	83,123,463
Treasury notes of 1890.....	38,439,737	61,230,159
United States notes.....	341,166,386	334,587,495
Currency certificates, act of June 8, 1872.....	1,560,000
National-bank notes.....	349,856,276	332,188,536
Total.....	\$2,250,627,990	\$2,173,251,879

Of the money in circulation outside of the Treasury, there was an increase during the year of more than \$41,000,000 in gold coin and certificates. There was also an increase in the amount

of silver certificates in circulation of about \$27,000,000. This latter increase was mainly due to the issue of certificates for the silver dollars coined as required by law from the bullion purchased under the act of 1890, for which the Treasury notes were issued in payment. Under the law, this coinage must go on until the bullion thus purchased has all been coined and the Treasury notes have been withdrawn from circulation and canceled silver certificates have taken their place.

Of the coinage at the several mints, there was a decrease in the value of the gold coins and an increase in that of the silver. There were coined during the year more than 24,000,000 silver dollars, an increase of about 6,000,000 over the amount for the previous year. The following table shows the value of the coinage in detail:

DENOMINATIONS.	1901.	1900.
Double-eagles.....	\$52,800,820	\$78,492,700
Eagles.....	31,300,880	21,779,340
Half-eagles.....	14,863,115	7,529,655

Total minor.....	2,009,568	\$2,243,017
Grand total.....	\$136,340,781	\$141,351,960

The Twelfth Census.—No census of the United States was ever planned so far in advance as was the twelfth. While the high scientific value of the tenth and eleventh censuses is beyond question, the practical utility of their results was seriously impaired by the delay unavoidable under the law attending their publication. This difficulty was felt by students of the social and economic problems, data for which were collected in those censuses, and especially by politicians and those who use statistics for more popular purposes and are in consequence prone to exaggerate the loss and inconvenience growing out of belated publication. This difficulty, and others less apparent, led to concerted efforts to secure a permanent census bureau, and when these proved unsuccessful, to extra legal efforts to improve the situation. Committees of the American Statistical Association and the American Economic Association led in these efforts, and by joint action formulated a plan for the twelfth census which had a material influence in determining its final scope. A bill embodying much of this plan was prepared by the Commissioner of Labor, and with modifications was finally adopted. This result was not secured, however, until after delays in Congress that were exceedingly disappointing to those most intelligently anxious to secure a satisfactory census, and the bill did not become a law until the closing day of the congressional session of 1899. The head of the new office was appointed on March 4, 1899, which was relatively about one month earlier than his predecessor of the eleventh census. Whatever was gained in the degree of preparation for the twelfth over the preceding census is attributable to the efforts of patriotic citizens not in public employment and to the diligence of the officers of the later census after their appointment.

The act providing for the twelfth census differs in notable particulars from legislation providing for earlier censuses. No census office has been an independent bureau, but each has been connected with some previously existing executive department and under the supervision of a Cabinet officer. The present law makes the Census Office a bureau of the Interior Department, but the relation is nominal; the director possesses plenary power of appointment and removal, he has full control over the schedules, and his decisions in regard to scientific or administrative questions are not subject to review by any officer of Government. The present Census Office is the first American bureau of the kind to enjoy practical and substantial independence.

The enormous range of inquiries undertaken in previous censuses is generally believed to have constituted a hindrance to the prompt and satisfactory completion of the investigations universally regarded as most important. This evil was remedied, in the law providing for the twelfth census, by the omission of certain inquiries and the postponement of others until after the completion of those regarded as most urgent. In accordance with the law, therefore, the work of the twelfth census up to the present time has been confined, with the exception of a few inquiries concerning the deaf, dumb, and blind, authorized by an amendment to the original act of Congress, to the four great investigations relating respectively to population, agriculture, manufactures, and vital statistics. The statute provides, further, that the statistics relating to these subjects collected in the census shall be examined, tabulated, arranged, analyzed, and the final reports "published not later than the first day of July, 1902." The postponed inquiries, not to be taken up until "after the completion and return of the enumeration and of the work until the schedules relating to the products of agriculture and to manufacturing and mechanical establishments" will relate to the insane; feeble-minded; deaf, dumb, and blind; crime, pauperism, and benevolence; deaths and births in registration areas; social statistics of cities; public indebtedness, valuation, taxation, and expenditures; religious bodies; electric light and power; telephone and telegraph business; transportation by water; express business; street-railways; and mines, mining, and minerals. The principal subjects included in the eleventh census that are omitted from the twelfth are railway transportation, insurance, fish and fisheries, and mortgage indebtedness.

The area covered by the twelfth census is greater than that covered by any of its predecessors, as it includes all regions under the civil government of the United States, and thus extends to the Hawaiian Islands. It also includes the first attempt to treat Indian Territory similarly to other portions of the United States. Censuses of Porto Rico and Cuba were taken at substantially the same time as the Federal census, but those islands were under the military government of the United States, and the enumerations were under the direction of the War Department, and not in any way within the control of the Census Office.

The Hon. William R. Merriam, formerly Governor of Minnesota, a business man of extensive experience, was made director of the census and has had as his scientific staff Dr. Frederick H. Wines, assistant director; William C. Hunt, Dr. Le Grand Powers, S. N. D. North, William A. King, and Dr. Walter F. Willcox, chief statisticians; and Col. J. S. Lord, Harry T. Newcomb, William

M. Steuart, Whitman Osgood, Hart Momsen, and Wm. H. Jarvis, expert chiefs of division. Edward W. Koch and Henry Gannett, geographer, U. S. Geological Survey, have supervised the highly important work of the geographical division, which has been under the direct charge of Charles S. Sloane, as geographer of the census.

Population.—For enumeration, the continental territory of the United States was divided into 297 supervisors' districts, which were subdivided so as to make a total of approximately 53,000 enumeration districts. The enumeration was taken as of June 1, 1900, but enumerators were allowed two weeks in cities of 8,000 inhabitants or more, and thirty days elsewhere, beginning with that date, to complete their work. The electrical tabulating device, invented by Dr. Herman Hollerith, and first used in the eleventh census, was again used in the tabulation of the population returns. Nearly 2,000 clerks, principally young women, were assigned, as soon as the schedules were received, to the work of punching the individual cards required by this system of tabulation, and the results, afterward slightly modified by corrections, of the count of the population were available and published on Nov. 27, 1900.

The population of the several States and Territories, thus ascertained, was given in the Annual Cyclopædia for 1900.

Every State and Territory, except Nevada, sustained an increase of population during the decade between the eleventh and twelfth censuses. The average gain was 21.0 per cent., and included gains as high as 518.2 per cent. for Oklahoma; 117.6 for Indian Territory; 88.6 for Idaho; and 75.2 for Montana. The lowest percentages of gain were 0.7 per cent. for Nebraska, 2.9 for Kansas, 3.4 for Vermont, and 5.0 for Maine. The loss for Nevada was 11.1 per cent.

The highest absolute increases were 1,265,257 for New York, 1,044,020 for Pennsylvania, 995,199 for Illinois, and 813,187 for Texas; the lowest, 7,390 for Nebraska, 11,219 for Vermont, and 16,242 for Delaware. Nevada lost 5,099.

Of the total increase, 27.5 per cent. accrued to the North Atlantic States, which, however, gained but 20.9 per cent. over their population in 1890. The South Atlantic States received 12.0 per cent. of the total increment of the country during the decade, but their own gain was 17.9 per cent. of their population when it began. The percentages for the States of the North Central division were 29.6 and 17.5 respectively; those for the South Central division 22.0 and 26.1, and the population of the Western division increased 31.9 per cent. over 1890, although they received but 7.5 per cent. of the total increase for the country. Five States gained more than 500,000 inhabitants, and received altogether 35.4 per cent. of the total gain for the country. In 1890 these States contained 31 per cent. of the total population; in 1900 they contained 31.8 per cent. The 10 States of New York, Pennsylvania, Illinois, Texas, Massachusetts, Ohio, Minnesota, New Jersey, Missouri, and Wisconsin had the highest numerical gain, and in the aggregate obtained 51.9 per cent. of the total increase. Their total gain amounted to 22.6 per cent., and their proportion of the total population increased between 1890 and 1900 from 48.1 to 48.8 per cent.

Changes in rank according to population have not been numerous, but some of them are significant. The first 5 States in the order of population—viz., New York, Pennsylvania, Illinois, Ohio, and Missouri—retain the places they held in 1890. Texas, which was seventh in 1890, has

changed places with Massachusetts, which was sixth. Then follow Indiana, Michigan, and Iowa in the same order as in 1890. Georgia and Kentucky, which were eleventh and twelfth respectively in 1890, have exchanged place, and also Tennessee and Wisconsin, which were thirteenth and fourteenth. Virginia, which was fifteenth in 1890, is now seventeenth, having been passed by North Carolina, which was sixteenth, and New Jersey, which was eighteenth. New Jersey has also passed Alabama, which has dropped from seventeenth to eighteenth. Kansas, which was nineteenth in 1890, has gone to the twenty-second place, having been passed by Minnesota, Mississippi, and California. Louisiana has gone ahead of South Carolina and Arkansas, while Maryland has passed above Nebraska. West Virginia is the twenty-eighth State in population, and is followed by Connecticut, Maine, Colorado, and Florida, all holding the same rank that they had ten years ago. New Hampshire has been passed by Washington, Rhode Island, and Oregon, and is now thirty-sixth instead of thirty-third. Vermont is now fortieth and is below Oregon, South Dakota, Oklahoma, and Indian Territory, all of which it outranked in 1890. Oregon, which was thirty-eighth, is now thirty-fifth. Oklahoma is thirty-eighth instead of forty-sixth, and Indian Territory has become thirty-ninth. Nevada, which had a greater population than Alaska in 1890, has fallen to the lowest place.

With the exception of the District of Columbia, which embraces a population almost wholly urban, the highest density of population is for Massachusetts, which has 348.9 persons to the square mile, New Jersey follows with 250.3, Connecticut with 187.5, New York with 152.6, Pennsylvania with 140.1, Maryland with 120.5, and Ohio with 102.0. No other State has as many as 100 persons to the square mile. The highest west of the Mississippi river is 45.2 in Missouri, and the next highest 40.2 in Iowa.

The inhabitants of the United States have been classified according to race, sex, and general nativity as follow:

CLASS.	Males.	Females.	Total.
<i>White.</i>			
Native:			
Of native parents.....	20,934,099	20,119,318	41,053,417
Of foreign parents.....	7,869,089	7,818,233	15,687,322
Foreign.....	5,545,833	4,704,230	10,250,063
<i>Colored.</i>			
Negro or of negro descent..	4,393,221	4,447,568	8,840,789
Chinese.....	111,054	7,996	119,050
Japanese.....	71,386	14,600	85,986
Indians.....	134,560	132,200	266,760
Total.....	39,059,242	37,244,145	76,303,387

The percentage of foreign-born persons in the country to the total population, as shown in the twelfth census, is 13.7. There are 7 States, in which the population of foreign birth is more than one-fourth of the total number of inhabitants. These are Massachusetts, 30.2 per cent.; Rhode Island, 31.4; Connecticut, 26.2; New York, 26.1; Minnesota, 28.9; North Dakota, 35.4; and Montana, 27.6.

Eighty-nine per cent. of all the persons who are classified as negroes are in the 14 States that have more than 160,000 such inhabitants. Only one other State, Pennsylvania, with 156,845, has as many as 100,000 negroes. Seven States have more than 50,000 but fewer than 100,000; while 8 have more than 10,000 but fewer than 50,000. The following table includes the States having more than 160,000 negroes:

STATE.	Total population in 1900.	NEGROES.	
		Number.	Per cent. of total population of each State.
Georgia.....	2,216,331	1,034,813	46.7
Mississippi.....	1,551,270	907,630	58.5
Alabama.....	1,828,697	827,307	45.2
South Carolina.....	1,340,316	782,321	58.4
Virginia.....	1,854,184	660,722	35.6
Louisiana.....	1,381,625	650,804	47.1
North Carolina.....	1,893,810	624,469	33.0
Texas.....	3,048,710	620,732	20.4
Tennessee.....	2,020,616	480,243	23.8
Arkansas.....	1,311,564	366,856	28.0
Kentucky.....	2,147,174	244,706	13.3
Maryland.....	1,188,044	235,064	19.8
Florida.....	528,542	230,730	43.6
Missouri.....	3,106,665	161,234	5.2
Total.....	25,417,548	7,867,621	31.0

The aggregate number of negroes and persons of negro descent now exceeds the number of white inhabitants in but two States—Mississippi and South Carolina—while in every State except Mississippi, Alabama, Tennessee, and Florida, the white population increased more rapidly between 1890 and 1900 than the negro population.

The percentage of the total population made up of white persons born in this country of native parents is higher in every State in the foregoing table—including Mississippi, the State in which the proportion of negroes to whites is the greatest—than in Massachusetts, Rhode Island, New York, Wisconsin, Minnesota, North Dakota, South Dakota, Montana, Arizona, Utah, or Nevada. Kentucky, which has 13.3 per cent. of its population of negro origin, has a larger proportion of native whites of native parentage than any other State except West Virginia, and any Territory except Oklahoma.

In the last decade the so-called "center of population" has moved westward 16' 1", or about 14 miles, and southward 2' 20", or about 2½ miles. It lies now in southern Indiana, at a point about 6 miles southeast of Columbus, the county-seat of Bartholomew County. It should not be supposed that the westward movement of this center is the result of the migration of population alone. It is influenced also by the locations adopted by immigrants and by the varying birth and death rates of different regions.

The growth of urban population between 1880 and 1890 was properly regarded as one of the most interesting facts established by the eleventh census. The tabulations of the twelfth census show that the impetus toward concentration of population is still working, although with slightly diminished force.

YEAR.	Total population.	URBAN POPULATION.			PLACES OF 8,000 POPULATION OR MORE.	
		Number.	Per cent of total.	Per cent increase.	Number.	Average.
1790...	3,929,214	131,472	3.4	...	6	21,912
1800...	5,308,483	210,873	4.0	60.4	6	35,146
1810...	7,239,881	356,920	4.9	69.3	11	32,447
1820...	9,638,453	475,135	4.9	33.1	13	36,549
1830...	12,866,020	864,509	6.7	82.0	26	35,250
1840...	17,069,453	1,453,994	8.5	68.2	44	33,045
1850...	23,191,876	2,897,586	12.5	99.3	85	34,069
1860...	31,443,321	5,072,256	16.1	75.1	141	35,973
1870...	38,558,371	8,071,875	20.9	59.1	226	35,716
1880...	50,155,783	11,318,547	22.6	40.2	286	39,575
1890...	62,622,250	18,272,503	29.2	61.4	447	40,878
1900...	75,468,039	24,092,199	33.1	36.8	545	45,857

The above table shows the relation of urban population to the total, regarding as urban the residents of all villages and cities of 8,000 in-

habitants or more. Hawaii, Indian Territory, and Alaska are not included.

The percentage of urban population is highest in Rhode Island, where it is 81.2 of the total. In Massachusetts 76.0 per cent. of the population is urban; in New York, 68.5; in New Jersey, 61.2, and in Connecticut 53.2. No other State includes as much as 50 per cent. of urban population. The twelfth census enumerated 3,380,193 persons who resided in 612 towns or cities having as many as 4,000 but fewer than 8,000 inhabitants. Considering these also as urban residents, the percentage of the total population regarded as urban becomes 37.3.

Nearly half of the urban population is in the States on the northern Atlantic seaboard (including Vermont), while more than 80 per cent. is in Northern States. And during the decade reported urban population grew much faster than rural in every section of the country.

The following table shows the cities having more than 25,000 inhabitants in 1900, together with their population in 1890:

CITIES.	POPULATION.

Eighty-one, or exactly half of the cities in the foregoing table, are in the States (including Pennsylvania and the District of Columbia) on the Atlantic seaboard.

Of the total population represented by the 161 cities in 1900 (19,757,618), 10,098,636, or 51.1 per cent., were contained in the 70 cities in the North Atlantic division, and 6,097,884, or 30.9 per cent., in the 49 cities in the North Central division.

New York is the first city of the country in the number of its inhabitants, a place which it has held at every census, beginning with that of the year 1790. Chicago, with practically 1,700,000 inhabitants, and Philadelphia, with not quite 1,300,000, hold the second and third places in 1900 as they did in 1890, although at the census of 1880 their positions were the reverse, Philadelphia then having very nearly 850,000 inhabitants compared with not much more than 500,000 for Chicago. St. Louis, Boston, and Baltimore, the next largest cities, have not changed their ranks in 1900, and each of these three cities now has a population somewhat in excess of 500,000. Boston was a fourth city in rank in 1880, but was passed by St. Louis in 1890, while Baltimore has occupied the sixth place at each of the three census periods considered. Cleveland and Buffalo have both increased materially in population during the past ten years, and now take precedence over San Francisco and Cincinnati, which in 1890 occupied the seventh and eighth places. Pittsburg also shows a large increase in population since 1890, and is now the eleventh city in the country, having exchanged places with New Orleans.

The Supreme Court.—There is but one term of the court each year, beginning on the second Monday of October. The number of cases docketed and pending at the October term, 1900, was 723, of which 377 were disposed of during the term. The number actually considered by the court was 368, of which 179 were argued orally and 152 were submitted on printed arguments. Among the cases of general interest decided were the following:

The Neely Case.—The case of *Neely vs. Henkel* involved the relations between the United States and Cuba, and was decided Jan. 14, 1901. Neely was charged with embezzling public funds in Cuba while acting as financial agent of the Department of Posts of that island. The case involved the right of the Cuban authorities to extradite him for trial in Cuba. By act of June 6, 1900, the provisions of United States Revised Statutes, section 5270, were extended to foreign countries "occupied by or under the control of the United States." After a careful review of the relations of Cuba to the United States resulting from the Spanish-American War, the court said: "The facts above detailed make it clear that within the meaning of the act of June 6, 1900, Cuba is foreign territory. It can not be regarded in any constitutional, legal, or international sense a part of the territory of the United States." The court unanimously directed the extradition of Neely to Cuba.

Stamp Tax on Export Bills of Lading.—*Fairbank vs. United States* was decided April 15, 1901.

The Northern Pacific Railway Company and Frank M. Fairbank, its agent, were charged with refusal to affix a 10-cent revenue stamp to certain export bills of lading under Schedule A of the war-revenue act. The case was tried in the United States district court at Minneapolis, Minn., before a jury, and a verdict of guilty was rendered against both the company and its agent, and a fine of \$25 was imposed upon each of the de-

defendants. A writ of error was issued to the Supreme Court of the United States, where it was decided that the tax was in contravention of the Constitution requiring that "no tax or duty shall be laid on articles exported from any State." The substance of the decision was as follows: "We are of the opinion that a stamp tax on a foreign bill of lading is in substance and effect equivalent to a tax on the articles included in that bill of lading." Justices Harlan, Gray, White, and McKenna dissented. The dissenting opinion said: "We submit that the denial, at this late day, of the power of Congress to impose what is strictly a stamp-duty on the vellum, parchment, or paper upon which is written or printed a bill of lading for goods to be exported to a foreign port or place, involves not only a departure from canons of constitutional construction by which it has been controlled for more than a century, but, in the words of *Prigg vs. Commonwealth*, delivers the interpretation of the Constitution 'over to interminable doubt throughout the whole progress of legislation and of national operations.' Practically no weight has been given in the opinion just filed to the fact that the power now denied to Congress has been exercised since the organization of the Government, without any suggestion or even intimation by a single jurist or statesman during all that period that the Constitution forbade its exercise."

Tax on Calls.—A suit was instituted in the southern district of New York by S. V. White against Charles H. Treat, collector of internal revenue, to recover stamp tax paid by the plaintiff on stock transactions denominated as "calls." This tax was collected in accordance with an opinion rendered by the Attorney-General April 27, 1899, that they were liable under Schedule A, act of June 13, 1898. The case was taken to the United States Circuit Court of Appeals and certified to the United States Supreme Court, which rendered a decision April 29, 1901, holding that a "call" is an agreement to sell, and therefore subject to taxation at the rate of 2 cents for each \$100 in value.

Constitutionality of State Laws.—In the case of *McDonald vs. Massachusetts*, the court decided, Feb. 25, that the statute of Massachusetts of 1887, by which "whoever has been twice convicted of crime, sentenced, and committed to prison, in this or any other State, or once in this and once at least in any other State, for terms of not less than three years each, shall, upon conviction of a felony committed in this State, after the passage of this act, be deemed to be an habitual criminal, and shall be punished by imprisonment in the State prison for twenty-five years," is constitutional. The statute imposing a punishment on none but future crimes is not *ex post facto*.

State Quarantine Laws.—The case of *W. P. Smith vs. the St. Louis and Southwestern Railway Company*, decided April 22, 1901, involved the constitutionality of quarantine regulations of Texas in 1897, against the importation of cattle. The shipment of cattle involved was made from Plaindealing, La., to Fort Worth, Texas, the officials of the road being unaware that a quarantine had been established. When the regulations became known, the railroad company refused to deliver the cattle to the consignee, and reshipped them to Plaindealing. Smith refused to receive them, and brought suit for damages, contending that the regulations were an interference with interstate commerce. The State court of appeals decided in favor of the railroad company, which decision was upheld by the Supreme Court, on the ground that the State has a right, under its

police power, to protect itself against infectious disease, even though commerce may be incidentally interfered with. Justices Harlan, White, and Brown dissented.

In the case of *Rasmussen vs. the State of Nevada*, the court affirmed the constitutionality of the law of the State of Idaho authorizing a quarantine against sheep from other States supposed to be affected by an infectious disease. The statute contemplated solely the protection of sheep of that State from the introduction among them of an infectious disease, and provided for such restraint upon the introduction of sheep from other States as in judgment of the State was necessary to prevent the spread of disease. The act was considered a purely quarantine act, and its constitutionality was sustained.

Kansas City Stock-Yards.—The case of *Cotting et al. vs. Godard*, decided Nov. 25, 1901, involved the validity of the State law of Kansas empowering the State authorities to fix rates of charges on stock in stock-yards in that State. The court held that the law was invalid because it applied only to the Kansas City Stock-Yards Company and not to other companies engaged in like business in the State, and was in conflict with the equal-protection clause of the fourteenth amendment.

Chinese Residents.—The case of *Li Sing vs. United States* was decided March 18, 1901. Li Sing was a Chinaman who, after residing for years in the United States, returned temporarily to China, taking with him a certificate purporting to have been issued by the Imperial Government of China at its consulate in New York, and signed by its consul, stating that he was permitted to return to the United States, that he was entitled to do so, and that he was a wholesale grocer. On his return to the United States by way of Canada, he presented this certificate to the United States collector of customs at Malone, N. Y., who canceled it and permitted him to enter the country. Subsequently he was brought before a commissioner of the United States for the southern district of New York, charged with having unlawfully entered the United States, being a laborer. At the examination he set up that he had a right to remain here, and that he was a merchant. The commissioner found that on his departure from the United States he was, and had long been, a laborer, and ordered his deportation. Held, that the decision of the collector at Malone was not final, and that, by the act of Oct. 1, 1888, the certificate issued to him by the Chinese consul on his departure from the United States was annulled.

Controversies between States.—In the case of *Missouri vs. Illinois* and the sanitary district of Chicago, the State of Missouri had filed a bill against the State of Illinois and the sanitary district of Chicago, asking an injunction restraining the defendants from receiving or permitting sewage to be received or discharged into the artificial channel or drain constructed by the sanitary district of Chicago under authority derived from the State, in order to draw off and discharge into the Mississippi river the sewage of Chicago, and from permitting the same to flow through said channel or drain into the Des Plaines river, and thence by the Illinois river into the Mississippi. The bill did not assail the drainage canal as an unlawful structure, nor aim to prevent its use as a waterway, but its object was to obtain relief against the pouring of sewage and filth through it into the Mississippi river, to the detriment of the State of Missouri and her inhabitants. The opinion reviewed the decisions of the Supreme Court on the question of its jurisdiction in con-

troversies between the States, and held that the demurrer could not be sustained, and the same was overruled and leave was given to the defendants to file answer to the bill. The Chief Justice and Justices Harlan and White dissented.

Divorces.—April 15, 1901, the court decided 3 cases involving the validity in one State of divorce decrees granted in other States. In *Ather-ton vs. Atherton*, the husband and wife had been domiciled in Kentucky. The wife left the husband and returned to her mother's home in New York. The husband obtained a divorce in a Kentucky court, on the ground of abandonment. Notice was served upon the wife in accordance with the laws of Kentucky, by mailing to her address a copy of the petition. Subsequently the wife, in the New York court, applied for a divorce, and the New York Court of Appeals held that the Kentucky decree was no bar to the suit. This was reversed by the Supreme Court, Chief-Justice Fuller and Justice Peckham dissenting. In this case, the divorce in Kentucky was by the court of the State which had always been the undoubted domicile of the husband, and which was the only matrimonial domicile of the husband and wife. The question was as to the validity of that divorce, granted after notice had been given as required by the statutes of Kentucky. As the proceeding was regular, the decree was entitled to as great credit by the courts of New York as it receives in Kentucky.

The other two cases also came from New York. In *Bell vs. Bell*, the question of the validity of a decree granted to the husband in Pennsylvania was raised, and in *Streilwolf vs. Streilwolf* the same question concerning a decree granted to the husband in North Dakota. In both cases the decrees were held to be invalid because neither the husband nor the wife had domicile in the State in which the divorce was granted.

The Insular Cases.—The court, May 27, 1901, handed down its decisions in five of the so-called "insular cases" which had been argued before it some time previously, and concerned the relations of the United States to its newly acquired territorial possessions.

The first case decided was that of *De Lima et al. vs. Bidwell*, collector, the case coming to the Supreme Court from the circuit court of the United States for the southern district of New York. The question at issue was the legality of customs duties upon goods imported from Porto Rico after the ratification of the treaty with Spain of April 11, 1899, ceding Porto Rico to the United States, and before the passage of the act of Congress to provide revenues and a civil government for Porto Rico, approved April 12, 1900, known as "the Foraker act." The constitutionality of the collection of the duties in this case had been affirmed by the United States circuit court, but the Supreme Court reversed the decision and held that, between the date of the ratification of a treaty ceding territory to the United States and the date upon which Congress legislated respecting the revenue and customs laws to be enforced over that territory, the territory was not foreign within the meaning of the tariff laws, and no duties on commerce between ports of the new territory and any port of the United States could legally be assessed and collected. Justice Brown delivered the opinion of the court. Justices Gray, Shiras, McKenna, and White dissented.

The case of *Goetze vs. United States* involved the validity of duties collected on tobacco imported from Porto Rico into the United States after the ratification of the treaty with Spain, but before the passage of the "Foraker act," and

the case of *Crossman vs. United States* involved the validity of duties collected on liquors imported from Hawaii in April, 1900, after the passage of the resolution for annexation, but before the taking effect of the act of April 30, 1900, providing a government for Hawaii. The only question in these cases was, whether Porto Rico and Hawaii, at the period mentioned, were domestic or foreign territory, and in accordance with the decision in the *De Lima* case the court held they were then a part of the United States and the importation not dutiable, reversing the action of the Board of General Appraisers and the judgment of the circuit court.

The *Dooley* case involved the validity of duties paid at the port of San Juan on goods imported into Porto Rico from New York between July 26, 1898, and May 1, 1900. The court held that the duties, which were levied under military orders and prescribed by the President as Commander-in-Chief and collected prior to the ratification of the treaty ceding Porto Rico to the United States, were legally collected, being justified by the laws of war. Those collected after the ratification of the treaty, however, were not legal, for the reason that on that date Porto Rico ceased to be a foreign country and the tariff ceased to apply. Justices Shiras, McKenna, Gray, and White dissented.

The *Armstrong* case was very much like the *Dooley* case, and the decision in that case applied.

The *Downes* case involved the question whether goods from Porto Rico which entered the port of New York after the passage of the "Foraker act" were exempt from duty or subject to duty under that act, which required the payment of "15 per cent. of the duties which are required to be levied, collected, and paid upon like articles of merchandise imported from foreign countries." The decision sustained the constitutionality of the Foraker act and the validity of the duties collected thereunder. Justice Brown delivered the opinion announcing the conclusion and judgment of the court. He said: "A false step at this time might be fatal to the development of what Chief-Justice Marshall called the American empire. Choice in some cases, the natural gravitation of small bodies toward large ones in others, the result of a successful war in still others, may bring about conditions which would render the annexation of distant possessions desirable. If those possessions are inhabited by alien races, differing from us in religion, customs, laws, methods of taxation, and modes of thought, the administration of government and justice according to Anglo-Saxon principles may for a time be impossible, and the question at once arises whether large concessions ought not to be made for a time, that ultimately our own theories may be carried out, and the blessings of a free government under the Constitution extended to them. We decline to hold that there is anything in the Constitution to forbid such action."

Justice White delivered a concurring opinion, which was also concurred in by Justice Shiras and Justice McKenna. Justice Gray also delivered a concurring opinion. The Chief Justice and Justices Harlan, Brewer, and Peckham dissented.

The Chief Justice, in his dissenting opinion, said: "The logical result is, that Congress may prohibit commerce altogether between the States and Territories, and may prescribe one rule of taxation in one Territory and a different rule in another. That theory assumes that the Constitution created a government empowered to acquire countries throughout the world, to be governed by different rules than those obtaining in the original States and Territories, and substitutes

for the present system of republican government a system of domination over distant provinces in the exercise of unrestricted power."

Mr. Justice Harlan, in his dissenting opinion, said: "It would seem, according to the theories of some, that even if Porto Rico is in and of the United States for many important purposes, it is yet not a part of this country with the privilege of protesting against a rule of taxation which Congress is expressly forbidden by the Constitution from adopting as to any part of the United States. In my opinion, Porto Rico became, at least after the ratification of the treaty with Spain, a part of and subject to the jurisdiction of the United States in respect of all its territory and people, and Congress could not thereafter impose any duty, impost, or excise with respect to that island and its inhabitants, which departed from the rule of uniformity established by the Constitution."

Dec. 2, 1901, the court handed down its decision in the case of 14 diamond rings, *Pepke, claimant, vs. United States*. This case involved the constitutionality of the imposition of customs duties upon merchandise brought into the United States from the Philippine Islands after the ratification of the treaty of peace with Spain. Emil J. Pepke was a soldier in a North Dakota regiment, serving in the Philippine Islands. He brought with him from Luzon 14 diamond rings, which he had purchased or acquired subsequent to the ratification of the treaty of peace. In May, 1900, in Chicago, these rings were seized by a customs officer as having been imported contrary to law and without payment of duties, and the same were declared forfeited. Chief-Justice Fuller delivered the opinion of the court, holding that the Philippines became domestic territory for tariff purposes by the ratification of the treaty, and therefore the collection of Dingley rates of duty on goods shipped from the island to the United States was unconstitutional. Justices White, Shiras, McKenna, and Gray dissented. The effect of this decision was to give the Philippines the same status that Porto Rico had before the Foraker act was passed.

On the same date the case of *Dooley et al. vs. United States*, known as the "second Dooley case," was decided. The court held that duties collected on goods imported into Porto Rico from the United States since the passage of the Foraker act were legal. Justice Brown delivered the opinion, and the court was divided on the same lines as in the first Dooley case.

The result of these decisions is, in effect, that Congress has the right to enact any tariff whatsoever between the United States and its Territories and possessions; and that, until Congress has acted, it must be assumed that no tariff barriers exist between regions that are under the jurisdiction of the United States.

Salaried Officers.—In *Glavey vs. United States*, decided May 27, 1901, it was held that when an office with a fixed salary has been created by statute, and a person duly appointed to it has qualified and entered upon the discharge of his duties, he is entitled, during his incumbency, to be paid the salary prescribed by statute. Such an appointment is complete when duly made by the President and confirmed by the Senate, and the giving of a bond required by law is a mere ministerial act for the security of the Government, and not a condition precedent to his authority to act in performance of the duties of the office.

Bankruptcy Law Construed.—Dec. 9, 1901, in the case of *Wilson Brothers et al. vs. Nelson*, the court construed the bankruptcy act with regard

to preferences. Cassius B. Nelson had permitted a creditor to obtain a judgment against him and the levy of an execution upon a note dated thirteen years before. This was held to be a preference, and Nelson's failure to vacate or discharge the preference was an act of bankruptcy, though the judgment was entered without the knowledge or consent of the debtor, and he was unable to prevent its enforcement in any other way than by filing his petition in bankruptcy.

Contracts.—The case of *Bedford vs. Eastern Building and Loan Association of Syracuse, N. Y.*, grew out of a sale of stock in the building association to Bedford, he being a resident of Tennessee. Bedford made default in the payment of his note and pleaded the violation of a law of Tennessee, passed after the contract, requiring the deposit of funds by building associations doing business in the State. The court held that the loan was a contract which the act of the State Legislature could not impair. The power of a State to impose conditions upon foreign corporations doing business within the State is recognized, but it can not be exercised to discharge a citizen of the State from his contract obligations.

ALABAMA, a Southern State, admitted to the Union Dec. 14, 1819; area, 52,250 square miles. The population, according to each decennial census since admission was 127,901 in 1820; 309,527 in 1830; 590,756 in 1840; 771,623 in 1850; 964,201 in 1860; 996,992 in 1870; 1,262,505 in 1880; 1,513,017 in 1890; and 1,828,697 in 1900. Capital, Montgomery.

Government.—The following were the State officers in 1901: Governor, William J. Samford, who died June 11, and was succeeded by the president of the Senate, William D. Jelks; Secretary of State, Robert P. McDavid; Auditor, G. L. Sowell; Treasurer, J. Craig Smith; Attorney-General, Charles G. Brown; Superintendent of Education, John W. Abercrombie; Commissioner of Agriculture, Robert R. Poole; Adjutant-General, W. W. Brandon; Railroad Commissioners, J. V. Smith, W. C. Tunstall, A. E. Caffee; President of the Convict Board, John J. Flowers; State Examiner of Public Accounts, John T. Gorman; Director of the State Department of Archives and History, Thomas M. Owen; Agent for the Sale of Swamp Lands, W. M. Byrd; Chief Mine Inspector, J. de B. Hooper; Chief Justice of the Supreme Court, Thomas N. McClellan; Associate Justices, Jonathan Haralson, John K. Tyson, Henry A. Sharpe, James R. Dowdell; Clerk, Robert F. Ligon, Jr. All are Democrats.

The term of the State officers is two years, but when the new Constitution goes into effect it will be four years; and the Legislature, which now meets biennially in November of the even-numbered years, will meet but once in four years. The session is limited to fifty days. The elections for State officers will take place at the time of the presidential elections.

Finances.—The condition of the State treasury was reported Sept. 30, as follows:

The receipts for the last year were something over \$128,000 less than the disbursements, but this was caused by extraordinary expense, that of the Legislature, the constitutional convention, and the university land settlement. The following statement comprises all receipts and disbursements during the fiscal year ending Sept. 30, 1901:

Cash on hand at close of Sept. 30, 1900.....	\$629,691 44
Receipts from Oct. 1, 1900, to Sept. 30, 1901.....	2,842,435 64
	<hr/> \$3,472,127 08
Disbursements from Oct. 1, 1900, to Sept. 1, 1901	2,970,767 78
Leaving balance on hand at close Sept. 30, 1901	\$501,359 30

The cost of the constitutional convention was \$90,469.03. The whole cost of the new Constitution would include the cost of the elections, in April for delegates, in November for ratification, probably about \$30,000 for each.

The convention was in session eighty-two working days.

In the apportionment of the special tax for disabled Confederate soldiers and the widows and children of deceased soldiers, although the fund was somewhat larger the amounts were smaller, the list having been increased by about 2,000 names.

In the militia appropriation at Washington, Alabama received \$23,360.

The total valuation of property in the State was raised this year by about \$10,000,000.

Education.—From a census office bulletin it appears that there are in the State 413,821 voters, of whom 232,476 are white and 181,345 are colored. Of the white voters, 200,795 can read and write and 31,681 are illiterate. Of the negroes, 73,399 are literate and 107,946 are illiterate.

The public-school fund for the present scholastic year amounts to about \$1,100,000, of which \$550,000 is the legislative appropriation from the general fund, \$245,245 the net special school tax, about \$152,000 poll-tax, and \$115,650 comes from interest on the sixteenth-section fund.

The university trustees instituted suit to recover lands belonging to the institution which had been sold to the Sloas-Sheffield Company at what was deemed much less than their value. The ground of the relief sought was that the sale was irregular, illegal, and void, and that the meeting of the Board of Trustees at which the sale was ordered was illegally called. The court refused the motion of the defendant to have the case dismissed for want of equity, and a compromise was then effected by which the lands sold, or lands equivalent, were deeded back to the university and the purchase money returned to the company.

The catalogue of the Alabama Polytechnic Institute showed 61 graduates this year and a total in former years of 640.

The average attendance at Booker T. Washington's institute at Tuskegee was given in March as 1,050. The pupils come from 23 States and Territories, Porto Rico, Cuba, Barbados, and Africa. One hundred and three persons comprise the faculty, and include officers, academic teachers, industrial instructors, and assistants.

The Southern University, at Greensboro, graduated a class of 16 in June.

The Conference College for Girls, at Tuskegee, which is forty-six years old, graduated 19 in the English and 9 in the classical course.

Charities.—In the insane asylum at Tuscaloosa there are about 1,500 patients who are crowded into a space that would be overfull with 1,000. During the year there have been 700 applications for admission, of which 137 had to be declined.

Six years ago Congress gave to the State Mount Vernon barracks and reservation, consisting of 1,600 acres of land, on which are very comfortable brick buildings. The property was deeded to the State for use for State purposes only, and is now lying practically abandoned, and Dr. Searey, superintendent of the hospital, suggests that the Legislature put the property at the disposal of the State Hospital Board, and they be allowed sufficient appropriation to make such improvements on the buildings and grounds as are necessary. This was done at the ensuing session of the Legislature.

The Girls' Industrial School, at Montevallo, had an attendance of 175 at the opening in September.

A reformatory for boys has been established at East Lake, through the efforts of many women of the State. In August it had 50 inmates. The Board of Control asked the Legislature for a grant of \$25,000, but only \$15,000 was given.

Convicts.—Damaging reports regarding the treatment of convicts at certain places in the State have been heard during the year. Dr. W. H. Blake, physician-inspector of convicts, made a report on the Dogwood mine, where county convicts were worked, showing lack of sufficient food, clothing, medical attendance, and proper attention to cleanliness. Eleven convicts were confined in one room badly deficient in light and ventilation.

A still more dreadful state of accommodations was shown by the report of another physician-inspector, Dr. Shirley Bragg, in May, as existing at the convict camp of Jennings Bros., near Manistee. These contractors work convicts from four counties who have been sentenced to hard labor. He found 19 men occupying a frame building about 40 by 35 feet in size, with two doors and no window, no ventilation, and no conveniences of any kind.

The Legislature appointed a committee to investigate the convict system of the State, and its report was made in February. It charged gross mismanagement, extravagance in use of the funds, the use of desperate criminals as "trusties," the employment of prisoners as house-servants for inspectors, abuse of perquisites by officials, violations of the law for hiring convicts, neglect of sanitation and needful repairs, and inadequate bookkeeping.

In September a report of convict inspectors made to the Governor indicates a great reform. The convicts were described as well-cared for in every respect, except at one place; and there the contract was canceled and the men removed. The whole number of State convicts was 1,694.

Official Irregularities.—In March was published the partial report of M. L. Woods, assistant inspector of public accounts, upon the result of his investigation of the method of convicting and sentencing prisoners in the county court of Butler County, on a charge of startling irregularities in the conduct of arrests and sentences of prisoners charged with riding unlawfully upon railroad-trains. In April the Governor pardoned 26 of these convicts who had been sent to the mines, making a total of over 50 Butler County convicts pardoned during the four or five months of his administration. A fuller investigation was afterward made by Hon. John T. Gorman, State Examiner of Public Accounts. His report showed that within the year there had been 356 prosecutions for this offense, the costs of which amounted to many thousands of dollars. The judge of the county court, Zell Gaston, received \$4 for the trial of each case; the sheriff's fees were larger; the clerk, the solicitor, and the witnesses also received fees; and the State paid the sheriff for boarding the prisoners. Many of the prisoners were charged with vagrancy as well as riding unlawfully, thus giving double fees to the officials, and some were charged with three offenses. Many were sentenced in the jail, instead of in the court-house.

Mr. Gorman also discovered the real cause for the arrest of so many persons in Butler County on this charge. Sheriff Hartley made oath to the statement that under an arrangement with R. S. Mitchell, a railroad detective, persons were invited by trainmen to ride free on freight-trains

and they were delivered up to J. W. Storey at Greenville, where they were taken to jail.

Railroads.—The report of the Railroad Commission for the year ending June 30 shows that the total gross earnings of all railroads in Alabama were \$21,773,220.26. The operating expenses were \$16,076,838.08, leaving the net earnings \$5,696,382.18.

Figured by the mileage, the average gross earnings per mile of Alabama railroads for the same period were \$4,353.74. The operating expenses per mile were \$3,198, leaving the net earnings per mile \$1,155.74. The total mileage of main-line tracks in Alabama is 4,145.44. In the year 151.77 miles of new track were built.

The assessment of railroad property was increased by the State board this year by \$2,399,574.40, the whole amount being \$50,577,913.23.

Insurance.—The annual report on insurance by the Secretary of State, *ex-officio* insurance commissioner, was published in May. It covers the year 1900, showing that the receipts were \$54,898.31 and the expenditures \$2,412.15.

In 1900 10 fire and marine insurance companies were admitted into the State, and 3 withdrew. Three life insurance companies were admitted to the State and 1 withdrew.

Banks.—The Eufaula National Bank closed its doors Oct. 21. The United States marshal arrested the president and the cashier on a charge of illegally using the bank's funds.

This failure followed not long after that of the Shelby County Bank, at Montevallo, for which the cashier was arrested charged with embezzling \$10,000.

Products and Resources.—The output of coal in 1900 is given as 8,500,000 tons; in 1890 it was 3,572,983 tons; in 1880 only 323,972 tons.

Official figures on the iron trade of Alabama and Tennessee for the calendar year 1900 show total shipments of pig iron amounting to 1,327,741 tons, of which the Birmingham district furnished 817,972 tons.

Figures of the production for the first eight months of 1901 are compiled from reports of the Southern Iron Committee. The shipments of pig iron from Alabama and Tennessee during the months named amounted to 985,404 tons, against 835,949 tons for the same period in 1900. The steel shipments amounted to 38,632 tons for the first eight months of the year.

In a report of the geologist I. W. Otley on the oil-fields in the Russellville and Riverton valley section of north Alabama, he says: "This field is an extension of the great Appalachian oil-belt from Canada to the Gulf of Mexico. The developments of this section of Alabama will undoubtedly prove a very rich field in both illuminating and lubricating oils. The essential geological features in much of this territory are so pointed that the question of securing oil in paying quantities is only secondary. The structural arrangement is such that the pools are necessarily broad, and when the catastrophes have been sufficient, but not too violent, deep pools may be anticipated."

The director of the United States Geological Survey submitted a sketch of the resources of the Coosa valley, which was to be used in support of an amendment to the river and harbor bill making appropriation for improvement of the Coosa river. He found that there were numerous gold-bearing veins, which, although the ore is generally low-grade, contain a very large amount of the metal and can be worked at a profit wherever transportation facilities are favorable; and that galena or lead ore occurs at numerous localities in the Coosa valley.

Other minerals occurring in the valley are marble, limestone, dolomite, clays, barite, yellow ochre, silica, graphite, mica, and feldspar.

A census bulletin gives the cotton-crop of the State as 1,103,690 bales; gross weight, 539,259,644 pounds. Mr. Hester's report in September gave the consumption in cotton-mills of the State as 164,357 bales. The estimated cotton acreage for 1901 was 3,449,751.

Labor.—From an abstract of a report on Child Labor in Alabama, by Irene M. Ashby, is taken the following: "She estimates that between 800 and 900 children under twelve are working for wages, with perhaps half as many helping their brothers and sisters without pay. She finds that these children are employed on an average sixty-six hours a week, and that there is no law against night work."

Lawlessness.—Lynchings of negroes have been reported as having taken place this year at or near Wilsonville, Georgiana, Athens, Tallassee, Leeds, Enterprise, and Chestnut Grove. The crimes charged were: 1, arson; 1, murder; 3, assaults upon white women; and 2, injuring white men. One was burned, 1 shot, and the others hanged. On Aug. 28 one of the men who confessed to having taken part in the lynching of Robert White, a negro who had wounded a white man with whom he had quarreled, was convicted of murder and sentenced to imprisonment for life.

At Ashville, Aug. 22, a negro named Brown was tried for assaulting a white woman, convicted, and sentenced to death. A mob collected and attempted to take the prisoner from the sheriff, after the trial, when a battle ensued between the mob and the officers, in which several were wounded, two, it was thought, fatally. These two were leaders of the mob. The Governor ordered troops to Ashville, but the order was countermanded when it was learned that the prisoner had been taken to Birmingham. The sheriff was afterward tried for firing into the mob. Gov. Jelks said in answer to criticism of his action in sending a company of militia to protect the sheriff during this trial: "It was represented to me by the best men in the county that North was in danger. I could not have forgiven myself had I left him to suffer for an official act which, so far as I know, has had the approval of the entire county. The sheriffs of the State may understand that in all lawful discharges of their duty I will protect them in so far as my office allows."

One of the first official utterances of the late Gov. Samford was a letter addressed to the presiding judge of the Fourth Circuit in regard to a lynching in Perry County, calling upon him to take steps to punish the lynchers. A similar letter was sent to the presiding judge of the Twelfth Circuit, in reference to a lynching in Henry County. Both occurred in December, 1900.

Movement for Annexation.—For some time the citizens of western Florida have been discussing the question of the annexation of that section to Alabama. At a meeting held at Pensacola in January resolutions were passed declaring such annexation to be for the interest of west Florida, and providing for a committee to present the subject to the legislatures of the two States. The counties involved are Escambia, Santa Rosa, Walton, Holmes, Washington, Jackson, and Calhoun, with a total population of 94,377.

The action of the Legislature on this question will be found below.

Legislative Session.—The Legislature convened Nov. 13, 1900, and was finally adjourned March 5, 1901, having been in session fifty days. After effecting permanent organization the

houses met in joint session to canvass the vote of the recent election. It is unusual to attend to this so early in the session; but the Governor-elect was so ill that it was feared he would not live to be inaugurated; and as there was some doubt about the succession in case of the death of a Governor-elect, the vote was canvassed immediately as a step toward providing for the succession of the president of the Senate.

William D. Jelks was elected President of the Senate, and Francis L. Pettus Speaker of the House. Mr. Pettus died March 6.

A bill was passed so amending the law that the Governor is not required to take the oath of office in presence of both houses of the General Assembly. Gov. Johnston signed the bill, though he said that he would not have voted for it had he been a member of the Assembly, as he thought a wiser measure would have been one applying only to the present special case. Another bill provided that the President of the Senate should become Governor in case of the death of the Governor-elect before he should have entered upon his term of office. This bill was vetoed by Gov. Johnston, but was passed over the veto.

Senator John T. Morgan was unanimously chosen Nov. 27 to serve the ensuing term in the United States Senate.

Daniel J. Meador was elected President of the Senate Dec. 3, to succeed W. D. Jelks, acting-Governor during the illness of Gov. Samford. The Governor recovered sufficiently to assume his duties and lived until June 11.

A new revenue bill was passed, requiring additional license tax on abstract companies, cigar-ettes, cane-rack, gipsy traders, all liquor-dealers and lager-beer dealers, pawnbrokers, and railroad-ticket brokers, and adding the following to the list of those to pay license taxes: Bill-posters, bicycles for rent or hire, book-agents, brokers and commission merchants, cider dealers, cigar and tobacco stands, clubs (social for men), cold storage, coal and coke agents, cotton buyers, dancing-halls, feather renovators, ferries and fall bridges, fruit-stands, horse-dealers, ice-factories, laundry, news companies, patent rights, photographers traveling, pistol or rifle cartridges, plumbers and gas-fitters, stocks and bonds, telephone companies, warehouse and elevator companies.

The license for retail liquor-dealers was raised \$25 to \$75, and that for wholesale dealers \$150.

An election was ordered to take place April 23, to decide the question of a constitutional convention, and for choosing 155 delegates, 100 to be nominated by the counties, 1 for each senatorial district, 2 for each congressional district, and 4 for the State at large; the convention to begin May 21, and the Constitution framed to be ratified or rejected by an election twenty to sixty days after the document should have been filed with the Secretary of State.

The jurisdiction of the State insurance department was extended over all fraternal, benefit, and aid associations, official and indemnity bond companies, and State organizations of every kind if operated for profit.

The general appropriation bill increased the annual common-school fund from \$450,000 to \$550,000. An appropriation of \$10,000 was made for the purpose of equipping a car to make an exhibit of the resources and products of the State.

The Mount Vernon military reservation, which has long been unused, was set apart as an insane hospital; provision was made for the incorporation and management of the hospital and for the admission and discharge of patients; and \$25,000 was appropriated for the Alabama Insane Hospital.

The gift of the former court-house of Calhoun County and its lot to the State Normal School, at Jacksonville, was confirmed, and \$10,000 was given for use on the buildings and grounds of Florence Normal College. The maintenance appropriation for each of the four white normal schools was increased to \$7,500.

For the Industrial School for White Boys at East Lake \$15,000 was appropriated for two years.

The appropriation for pensions to needy Confederate soldiers and sailors and their widows was raised \$100,000.

Among other general laws were the following: Providing for the segregation of consumptive convicts.

Setting aside June 3 of each year, Jefferson Davis's birthday, as a public holiday.

Requiring holders of diplomas or certificates from State normal schools and colleges or from other colleges to undergo examination for license to teach in the public schools.

To incorporate the Alabama City, Gadsden and Atalla Railway Company.

Establishing a State department of archives and history.

A resolution that was offered in the House to raise a joint committee to visit Florida and confer with the Governor and Legislature of that State relative to the annexation by Alabama of western Florida, was rejected in favor of a substitute providing that the Governor of Alabama be requested to take the matter up with the Governor of Florida and ascertain the sentiment of the Florida people.

The New Constitution.—An election to decide the question of holding a constitutional convention and to elect delegates to serve in case the vote should be in its favor was held April 23. The platform adopted by the Democratic State convention, March 19, explains the main purposes:

"After an experience of thirty years, affording every necessary facility to qualify the negro for the exercise of the franchise, it has been demonstrated that, as a race, he is incapable of self-government and the intelligent exercise of the power of voting. Therefore, in the interest of both races in Alabama we favor the holding of a constitutional convention for the purpose of regulating the right to vote so as to perpetuate the rule of the white race in Alabama.

"We pledge out faith to the people of Alabama not to deprive any white man of the right to vote except for conviction of infamous crime."

The Republican State Executive Committee held a meeting at Birmingham, Feb. 23, and adopted the following:

"Resolved, That we, the Republican State Executive Committee of Alabama, as the legal representatives of the Grand Old Party of the State, are unalterably opposed to a State constitutional convention."

At the same time the party organizations were urged to make nominations for delegates, that, in case the convention should be called, they might be as well represented as possible and use their influence against restriction of the suffrage.

The election resulted in a majority of 24,800 in favor of the convention, 70,305 for and 45,505 against, and it met at Montgomery, May 21. In the caucus of Democratic members the committee on credentials reported 141 delegates entitled to sit in that caucus, and 1 more was afterward admitted, leaving 13 not Democrats. Hon. John B. Knox was chosen president of the convention and Frank N. Julian secretary. Adjournment

was taken Sept. 3, after the Constitution as prepared had been adopted by a vote of 132 to 12, only 1 Democrat voting against adoption. The Governor appointed Nov. 11 as the date for the election to ratify or reject, and the majority was in favor of ratification. The official figures showed a majority of 26,879 in favor of ratification.

During the progress of the convention considerable opposition to the "grandfather clause" was developed. Four of the Committee on Suffrage and Elections presented a minority report opposing the clause, and Senator Morgan wrote a letter setting forth the reasons why it is opposed in his opinion to the spirit of the American Government.

The following "reasons for ratifying the new Constitution," published before the election, will give an idea of the changes it made:

"1. The limit of State taxation will be reduced from 75 cents to 65 cents on every \$100 worth of property, with perfect safety.

"2. The power of counties and towns to contract indebtedness will be restricted. The rate of taxation in counties will be reduced.

"3. No bonds, except those already authorized, can be issued except upon a vote of the people.

"4. Thirty cents of every 65 cents collected for State taxes will be devoted to the public schools, in addition to the poll-tax collected.

"5. Judges may discharge, under fixed rules, juries from the consideration of any case.

"6. Representation will always be according to population, and can not be changed except by a new convention, and not by amendment.

"7. Banks will be examined into by public accountants.

"8. The Legislature will meet every four years, saving \$50,000 every two years, and elections will be much less frequent.

"9. Local legislation will be next to impossible.

"10. Circuit solicitors will be elected by the people.

"11. Succession in the Governor's office is provided for in case of absence, inability, or death of the Governor.

"12. All State officers are elected for four years, and no one of said officers shall be eligible as his own successor, and the Governor shall not be eligible to election or appointment to any office under this State, or to the Senate of the United States during his term, and within one year after the expiration thereof.

"13. Inferior courts of law and equity, or either, can be established only in counties having 20,000 inhabitants and \$3,500,000 of taxable property.

"14. The Constitution of 1875 (Sec. 38, Art. I) recognizes the fifteenth amendment, which Alabama never adopted, and guarantees the negro all the rights of suffrage the white man enjoys. The new Constitution omits that section.

"15. Members of the Legislature and judicial officers are prohibited from using free passes, under heavy penalty.

"16. Assessments for street improvements will be limited to the benefit done abutting property.

"17. The new Constitution will be more easily amended than the present one.

"18. Under the suffrage provisions, the white man will rule for all time in Alabama.

"19. Prominent lawyers have expressed the opinion that under the present Constitution the State has no authority to fund its \$9,000,000 indebtedness. Under the new Constitution this can be done, and the debt refunded at from 1½ to 2 per cent. less interest than now paid. This will

save between \$100,000 and \$150,000 each year, a saving in one year of what the new Constitution will cost."

The suffrage article provides for the registration of all voters under the present law who have honorably served their country in war in the land or naval forces of the United States in the War of 1812, or in the war with Mexico, or in any war with the Indians, or in the civil war, or in the war with Spain, or who honorably served in the land or naval forces of the Confederate States, or of the State of Alabama in the civil war, the lawful descendants of such persons, and all who are of good character and who understand the duties and obligations of citizenship under a republican form of government.

The registration will be made in each county by a board of 3 persons, residents of the county, to be appointed by the Governor, Auditor, and Commissioner of Agriculture.

Heretofore the State has had no Lieutenant-Governor, the succession devolving upon the President of the Senate. The new Constitution provides for a Lieutenant-Governor, and the Attorney-General, State Auditor, Secretary of State, and State Treasurer have been added to the officers upon whom succession may devolve. If both the Governor and Lieutenant-Governor die, resign, or are removed, more than sixty days prior to a general election for any State officer, a Governor and Lieutenant-Governor must be elected at such election for the unexpired term. Provision has been made for ascertaining and declaring the disability of executive officers, when they appear to be of unsound mind.

It is provided that "whenever any prisoner is taken from jail or from the custody of the sheriff or his deputy, and put to death, or suffers grievous bodily harm, owing to the neglect, connivance, cowardice, or other grave fault of the sheriff, such sheriff may be impeached under section 174 of this Constitution. If the sheriff be impeached and thereupon convicted, he shall not be eligible to hold any office in this State during the time for which he has been elected to serve as sheriff."

Political.—The highest vote for presidential elector of each party in November, 1900, was: Democratic, 96,368; Republican, 53,669; Populist, 3,796; Prohibition, 1,407. For Governor the vote stood: Samford, 115,167; Steele, 28,291; Crowe, 17,543; Hargett, 1,301.

ARIZONA, a Territory of the United States, organized Feb. 14, 1863; area, 113,020 square miles. The population, according to each decennial census since the organization, was 9,658 in 1870; 40,440 in 1880; 59,620 in 1890; and 122,212 in 1900. Capital, Phoenix.

Government.—The following were the Territorial officers in 1901: Governor, N. O. Murphy—Alexander O. Brodie was appointed Governor in October; Secretary, Charles H. Akers, succeeded in July by Isaac T. Stoddard; Auditor, G. W. Vickers, who resigned Nov. 1; Treasurer, T. W. Pemberton; Attorney-General, C. A. Ainsworth; Adjutant-General, H. F. Robinson; Superintendent of Education, R. L. Long; Geologist, W. P. Blake; Surveyor-General, Hugh H. Price; Veterinarian, J. C. Norton; Chairman of Live-Stock Sanitary Board, A. C. McQueen; Surgeon-General, William Wylie, succeeded by M. M. Walker; Board of Equalization, R. N. Fredericks, M. P. Freeman, Michael Ohl; Game Commission, W. L. Pinney, T. S. Bunch, Eugene Allison; Chief Justice of the Supreme Court, Webster Street; Associate Justices, Richard E. Sloan, Fletcher M. Doan, George R. Davis; Clerk, Lloyd Johnston. All are Republicans.

Finances.—By the Treasurer's biennial report it was shown that the cash on hand June 30, 1900, was \$96,298.94; receipts from all sources for six months preceding June 30, \$271,925.42. This sum, with the exception of \$31,716.44, derived from the sale of bonds, was mainly received from the counties. To these receipts is added a balance on hand, January, 1899, of \$351,139.98. Expenditures in various directions amount to \$470,228.50, leaving a balance on June 30, 1899, of \$152,836.90. Receipts from all sources for the year ending June 30, 1900, were \$382,564.16; expenditures were \$439,102.11.

Since Jan. 1, 1899, the Treasurer has paid out for redemption of general fund warrants \$326,667.32; of this amount, \$50,905.97 was for interest.

Since Jan. 1, 1899, Territorial bonds have been redeemed amounting to \$74,000.

The general-fund warrants now outstanding amount to \$124,710.67, \$71,415.68 of which were issued on account of the Territorial prison and \$9,343.77 on account of a deficiency in the Insane Asylum fund.

Education.—Nearly 21,000 children were enrolled in the public schools at the latest report.

The normal school, at Tempe, graduated 18 students this year, of whom 4 were men.

The Territorial University, at Tucson, which in 1900-1901 had about 130 students and 3 graduates, showed an increase of about 20 at the September enrolment, with a senior class of 9.

The Navajo, Phoenix, and Pima Agency schools were represented in the collection of literary and industrial work of Indian schools exhibited at the meeting of the National Education Association at Detroit in July, which was highly praised and aroused much interest. Eleven girls were graduated in May in the domestic science department of the Indian school at Phoenix, the first class graduating in the Southwest in such a course. Four were graduated in the academic department.

The school at Sacaton agency, on the Pima reservation, has 260 pupils, who fill it to its utmost capacity. The school is in a desert surrounded by miles of sand and cacti.

A new school was opened at Rice Station in December, 1900, and has 208 Apache Indian pupils.

Railroads.—The valuations of railroads for taxation were considerably increased this year by the Board of Equalization in view of the greatly increased earnings. Two new roads were valued, the Morenci Southern at \$41,400 and the Southwestern at \$57,100. The increase on the older roads amounts to \$362,324, and the total valuation to \$4,822,859.

Contract was closed in August for the construction of the Bradshaw Mountain Railroad leading into the Lynx Creek country, which will give access to a valuable mining region. Though it is very short, only 8 miles, the work of grading and tunneling is very heavy.

Articles of incorporation have been filed for the El Paso, Phoenix and California Railway.

Insane Asylum.—The report on the insane asylum describes its condition at the beginning of the last biennial period, and the improvements that have been made with the \$12,000 appropriated by the last Legislature, which was \$6,000 below the estimate. It is shown that, in spite of the extreme drought of last year, the gross revenues of the asylum farm were \$8,366.64. The expense of the farm was \$3,301.29.

The Penitentiary.—In reporting on the condition of the Territorial prison, the Board of Control says it is to be regretted that no employment

has been found for the prisoners whereby the institution may be made self-sustaining. It is estimated that alterations and improvements needed will cost \$37,500. The expenses of the Territorial prison are now paid by warrants on the general fund drawing 7-per-cent. interest.

Reform School.—The contract for building the Reform School provided for by the Legislature of 1901 was let in September. The citizens of Benson gave a tract of 40 acres for the site. There is on the land an artesian well with a strong flow. The building, the contract price of which is \$25,000, will be 120×52 feet, two stories and basement. It will be constructed of stone, and is to be finished by Oct. 1, 1902.

Products.—The production of copper is steadily increasing in the Territory. In 1883 it was 23,274,965 pounds; in 1890, 34,906,680; in 1895, 48,329,403 pounds; in 1898 it was 110,823,364 pounds; in 1899, 152,267,403 pounds.

Among new discoveries recently reported are wolframite, in Mohave County, about 25 miles north of Signal; gold near Wickenburg, also at a place about 12 miles from Congress Junction, near Payson, and near Dos Cabezas, in the heart of the southern Arizona desert; and oil near Kingman.

According to a bulletin issued by the Census Bureau in August, "there are 5,809 farms in Arizona, with a total acreage of 1,935,327 acres, of which 254,521 are improved. Of these farms 1,769 are owned by Indians. There are 71 farms of more than 1,000 acres, and 814 of less than 3 acres. About half of the latter class belong to Indians. Of the total investment in farms over half, or \$15,458,717, was in live stock.

The raising of the California navel oranges is a growing industry, and experiments with the date-palm show that it can be successfully cultivated. The only home-grown dates shown at the Buffalo Exposition were from Arizona.

A report on the industries of Arizona by the Census Bureau shows that the Territory has 314 establishments with combined capital of \$10,157,408, an average of 3,268 wage-earners; total wages, \$2,369,065; miscellaneous expenses, \$433,272; cost of materials, \$8,464,410; value of products, including custom work and repairing, \$21,315,189.

The New Capitol.—This was dedicated Feb. 14, and at the same time the thirty-eighth anniversary of the organization of the Territory was celebrated. After a parade in the streets of Phoenix, the dedicatory exercises took place on a stand in front of the building. Addresses were made by the Governor, the President of the Council, the Speaker of the Assembly, the Chief Justice, and representatives of the counties.

The Territorial Government was first proclaimed at Navajo Springs, and the first legislative session was held at Prescott. The capital was afterward removed to Tucson, returned to Prescott in 1877, and in 1889 was changed to Phoenix.

Legislative Session.—The legislative session opened Jan. 21, and closed in March. P. P. Parker was chosen Speaker of the Assembly and Eugene S. Ives President of the Council. The Democrats were in a large majority, the parties standing: Council—Democrats 8, Republicans 4; House—Democrats 19, Republicans 5.

The poll-tax law was repealed, and code laws were passed upon and made effective.

A bill was passed providing for the improvement and enlargement of the Penitentiary at Yuma, and authorizing a tax levy of $3\frac{1}{2}$ cents on each \$100 of valuation. The Governor vetoed

the bill, but it was passed over the veto by a vote of 9 to 2 in the Council and 16 to 8 in the House.

Another bill passed over the Governor's veto was in reference to the Board of Equalization, the avowed object being to prevent interference by the Governor.

The Governor recommended that the Board of Equalization have the same authority over the mines as over railroads, as mines said to be worth \$100,000,000 were paying taxes on an assessment of \$2,000,000.

A new game-law was enacted, and the penalty for violation of its provisions was made not less than \$100 fine and costs, or imprisonment at the rate of \$1 a day until the fine is paid, one-half of the fines collected to go to the person or persons upon whose testimony the conviction is secured. The law prohibits the killing of camel, elk, mountain goat, female deer, mountain sheep, or spotted fawn altogether, and the killing of antelope for six years. No one person is allowed to kill more than one male deer in one day, or more than three in one open season, which is from Nov. 15 to Dec. 15. The season for doves is open all the year; the closed season for quail, bob-white, partridge, pheasant, wild turkey, wild duck, goose, brant, snipe, or rail is from March 1 to Oct. 15. No gun larger than 10-gage is allowed to be used on game-birds, and no one is allowed to net, snare, trap, or pound any game-birds. The open season for brook, mountain, or rainbow trout is from June 1 to Sept. 1, and for black bass, strawberry bass, or crappie, Sept. 1 to Dec. 1. Fish may be taken only with hook, line, or spear, and it is a misdemeanor to take one less than 7 inches long.

A new school law does away with county examining boards, and requires Territorial certificates for teachers, but county certificates now held are good for the term for which they were given.

Provision was made for the establishment of a reform school at Benson for youthful criminals, and appropriation was made for its construction, the bill imposing a tax of one-half a mill on the dollar for two years, estimated to yield about \$19,000 annually.

Other measures passed were:

Appropriating \$30,000 for water-storage.

For preservation of the public health.

For establishment of the National Guard.

Regulating the issuing of saloon licenses, providing that a county may not issue such a license unless the proposed licensee has obtained the consent of a majority of the property owners within 600 yards of the intended saloon or road-house.

Relating to games of chance, to exclude them from incorporated towns.

Authorizing a bond issue of \$25,000 for the building of a new structure at the university.

For taxing transient herds of sheep and goats.

Statehood.—An enthusiastic statehood convention was held at Phoenix, Oct. 26. Resolutions were adopted declaring that the Territory for the past ten years has had a larger population and greater wealth than the average of all the States of the Union at the time of their admission since the original 13 States established the Government; that no other equal area west of the Mississippi has more natural resources, her mines of copper alone producing bullion of the value of \$35,000,000 annually; and appealing to Congress to pass an enabling act. A commission of six was appointed to organize the movement.

The Governor's Report.—The report at the close of 1900 is summarized as follows: "The

taxable property of the Territory has increased more than \$1,250,000 during the year, notwithstanding the bad system of assessment. Railroad construction amounted to 74 miles. Throughout a greater portion of the year the Territory has suffered because of the drought, but the farmers have enjoyed prosperity and good crops. Last year, he says, was the most prosperous for miners in the history of the Territory. The public schools are in a flourishing condition, nearly 21,000 children being enrolled.

ARKANSAS, a Southern State, admitted to the Union June 15, 1836; area, 53,850 square miles. The population, according to each decennial census since admission, was 97,574 in 1840; 209,897 in 1850; 435,450 in 1860; 484,471 in 1870; 802,525 in 1880; 1,128,179 in 1890; and 1,311,564 in 1900. Capital, Little Rock.

Government.—The following were the State officers in 1901: Governor, Jefferson Davis; Secretary of State, John W. Crockett; Attorney-General, George W. Murphy; Auditor, T. C. Monroe; Treasurer, Thomas E. Little, who died April 10; Commissioner of Lands, J. W. Colquitt; Superintendent of Public Instruction, J. J. Doyne; Commissioner of Mines, Manufactures, and Agriculture, Frank Hill; Railroad Commissioners, F. M. Hanley, Abner Gaines, J. G. Wallace; Adjutant-General, Charles Jacobson; Geologist, John C. Branner; Chief Justice of the Supreme Court, Henry G. Bunn; Associate Justices, Simon P. Hughes, Burrill B. Battle, James E. Riddick, Carroll D. Wood; Clerk, P. D. English. All are Democrats.

State officers are elected on the first Monday in September in the even-numbered years, and serve two years. The Legislature meets biennially the second Monday in January in the odd-numbered years. The session is limited to sixty days.

Census Figures.—The increase in the negro population of the State from 1890 to 1900 was 57,739.

The number of deaths in the State in 1900 was 22,518. By the reapportionment in Congress the number of Congressmen for the State was increased from 6 to 7.

Finances.—The whole indebtedness of the State is \$1,271,000 of 3-per-cent. funded bonds, due in 1929, and \$58,000 principal and interest of 22 6-per-cent. bonds of 1869 and 1870, which appear from the records to exist and to be outstanding, but which were not presented and exchanged under the act of May, 1899. These \$58,000 were due Jan. 1, 1900, and may really not be in existence.

Of the bonded indebtedness of \$1,271,000 the sum of \$1,113,000 belongs to the permanent school fund, which can not be considered an indebtedness, because it can never be paid under the law creating it, only the interest thereof being paid from year to year, while the principal must remain invested as it now is. The annual interest on the whole bonded indebtedness is \$38,130.

The value of the work done on the new State Capitol is \$84,459.70, while the amount expended for all purposes is \$49,252.53, convict labor having been employed for part of the work.

Valuations.—The total valuation of real estate in 1900, upon which taxes were collected in 1901, was \$128,084,667; of personal, \$73,824,116; total, \$201,908,783. The total the preceding year was \$189,999,050.

Education.—The State has 8 universities and colleges with 108 professors and 1,636 students. There are 259 newspapers published within it.

The Insane.—The provision for the insane appears from the reports to be inadequate. There

are accommodations at the asylum for 600 patients, and appropriations for maintenance are made upon that basis—\$100 a year per capita. There were present in June 640 patients and about 100 employees. Further applications for admission were necessarily refused. From answers to inquiries sent to county judges it was learned that more than 300 insane were unprovided for, except as they were kept in ordinary jails. The Legislature made no provision for enlarging the accommodations.

Penitentiary.—There are nearly 1,000 convicts in charge of the State. A new prison has been built, the site of the old one having been taken for the new Capitol. The State penitentiary property was appraised by the board in November at \$249,008. The Penitentiary Board voted in August to annul on Oct. 15 the contract entered into during Gov. Jones's administration with the Arkansas Brick Manufacturing Company, whereby for a period of ten years the company was allowed to use the labor of as many as 300 convicts at 50 cents a day each, the State agreeing to guard, clothe, and feed the convicts, and furnish medical attendance for them. The State also furnished buildings, machinery, and force to operate the machinery. The boilers and engines were to be paid for in one, two, and three years at actual cost and 6 per cent. interest. The ground for annulment of the contract was given in the preamble:

"Believing that said contract is unjust to the State and made without legal authority, because the same was made for a term of years beyond the life of the board making it, and amounts to a lease of the State convicts, which is prohibited by law, and believing that it is to the best interest of the State and the management of the Penitentiary that the same be annulled and set aside."

The company resisted the action of the board and applied for an injunction to restrain it from carrying out the resolution, and in October Chancellor T. B. Martin, in Pulaski chancery court, granted a permanent injunction to restrain the board "from terminating the contract until its illegality or invalidity as a contract shall be adjudged and declared by some tribunal vested by law with jurisdiction and authority to be illegal or invalid."

Militia.—The reorganization of the militia was undertaken this year, with the intention that the organization, rules, and regulations should conform as nearly as possible to those of the United States army. The Legislature made no allowance, but \$16,993 was appropriated by the Government for the State Guard. All white citizens were urged to join the companies.

Confederate Soldiers.—The Soldiers' Home, 5 miles from Little Rock and half a mile from Sweet Home station on the Iron Mountain Railroad, has 75 inmates. About 60 acres of farm and garden land are cultivated by those able to work. In September the State Pension Board practically completed the work of passing upon the Confederate pension applications from the 75 counties in the State. About 4,500 claims were allowed, aggregating \$261,000. The amount available was between \$49,000 and \$50,000, so only about 19 per cent. could be paid to the pensioners. The money available represented the proceeds of the one-fourth of a mill levy. The last Legislature increased the levy to three-fourths of a mill, but no revenue can be derived therefrom until 1902. There was a great increase this year in the number of pension applications, as only about 3,000 were reported in 1900. The amounts, if

paid in full, would be from \$25 to \$100 a year for each pensioner.

Railroads.—The figures of the railway assessors, published in July, are summarized as follows: Number of miles of railroads in operation May 1, 1901, 3,105.88; increase in mileage since May 1, 1900, 53.73; valuation of railroads, express, etc., in 1901, \$28,298,031; increase in valuation over 1900, \$4,246,892.

Insurance.—It was reported in July that 5 insurance companies had withdrawn from the State within the two weeks previous to that date, and reinsured their risks in other companies, on account of legislation unfavorable to their interests, preventing the operation of rating bureaus and tariff associations.

Products.—A bulletin of the Census Bureau, issued in November, shows that the State has 4,794 manufacturing establishments, with a total capital of \$35,960,640 and a total of \$44,883,783 worth of products, including custom work and repairing. The number of establishments is 131 per cent. more than in 1890. The capital engaged in the industry shows an increase of more than 140 per cent., and the valuation of products 98 per cent. The average number of wage-earners is 26,501; total wages, \$8,686,291; and miscellaneous expenses, \$1,482,779.

The shipments of lumber in 1901 amounted to 241,587,705 feet, against 196,646,733 feet in 1900.

The coal product in 1900 amounted to 1,441,345 tons, and the value was \$1,653,818. Arkansas is one of the 4 States and Territories mentioned as having made the greatest comparative gains in coal production in the past decade.

Attention has been drawn of late to the great zinc deposits of the State, now being exploited, and promising immense returns when the railroads shall have opened up the country and furnished transportation for the product. The field is in the northwestern part of the State.

Borings for oil in the southwestern part of the State are proving successful.

Census bulletins show the nursery farms of the State in June, 1900, to have numbered 47, and the amount of sales of nursery stock was \$131,045.

The bulletin giving cotton statistics for 1900 shows the total gross weight in pounds for Arkansas to have been 406,491,933, and the number of bales 828,820. Hester's report gives the consumption in mills of the State as 1,729, a decrease of 651. The cotton acreage of 1901 showed an increase of 10 per cent. over that of 1900.

Lawlessness.—A race trouble arose in Ross-ton, Nevada County, in July, originating, it was said, with a negro preacher who went about organizing secret societies among the negroes. One of the many obligations taken was a pledge not to work for whites. Several negroes were whipped and the organizer was "run away abruptly." The rest of the story is told as follows: "A constable named Dalrymple went to arrest a negro by the name of Lizard Porter, and as he had no handcuffs he took a piece of rope to tie the negro. Either Lige Sigler or his boys knocked the rope from the constable's hand. A few nights after this Hop Haltom and Lewis Haynie went down to Lige Sigler's house to whip him, and the boys fired and killed both Haltom and Haynie. The boys were arrested. At night one of them was taken out or got away and in the morning was found down the road, shot full of holes."

A lynching was reported as having taken place at Mena, Feb. 20, the victim a negro in jail charged with assault on a girl of twelve.

The New Capitol.—Under the act of 1899 providing for beginning a new Capitol, and appro-

priating \$50,000, plans were obtained and the foundation laid on the site chosen—that where the old penitentiary stood—convict labor being employed for a large part of the work. The cornerstone was laid Nov. 27, 1900. An act was passed in 1901 providing for the completion of the building, limiting the cost to \$1,000,000, and levying a tax of one-half a mill for the purpose. It was provided that a new board should be appointed, and that the plans that had been adopted should be examined by an architect to be recommended by the supervising architect of the Treasury Department of the United States.

The commission, in November, decided that, as the building could not be completed as originally projected and upon the existing foundations for \$1,000,000, and as the commission was not warranted in erecting a smaller and different Capitol building upon another and different foundation, the board could proceed no further because of the prohibiting terms of the act of 1901.

Legislative Session.—The General Assembly met Jan. 14, and adjourned May 3, the session having been extended by joint resolution beyond the constitutional limit of sixty days.

Robert J. Wilson was chosen President of the Senate, and T. H. Humphreys Speaker of the House. In the House were 97 Democrats, 2 Republicans, and 1 Independent. The Senate was entirely Democratic.

United States Senator James H. Berry was re-elected by the unanimous vote of the Democratic members, the 2 Republicans voting for H. L. Remmel.

At the close of the session M. P. Huddleston was elected president *pro tem.* of the Senate.

An important measure was the act to punish and suppress gambling. A fine of \$500 to \$1,000 is to be imposed upon any person, firm, or corporation who shall set up, keep or exhibit, any gambling-table, or gambling device. The informant is to receive one-half the fine, and the other half goes to the common-school fund. The same fine is to be imposed upon the owner or controller of any building where such gambling devices are set up and operated; upon any official accepting a bribe to secure violators of the law from arrest and prosecution, one-half to go to the person or persons from whom the money was received, and the other half to the common-school fund.

The Governor, in August, remitted all but \$10 of fines of \$500 that had been imposed upon two negroes arrested for shooting craps. The Governor said he did not intend to see the new act "made odious and ridiculous by the officials of this county by having them permit the gambling-houses to run wide open in this city and a jury of their peers acquit them, and see the severe penalty of this law inflicted on the ignorant negroes for shooting craps."

The office of pomologist at the State University was abolished.

A collateral-inheritance law requires a tax of 5 per cent. on the property inherited, and calls for interest at 9 per cent. on such tax not collected by the end of one year from the death of the decedent.

An act was passed to prohibit the making of false statements of banks and the receiving of money and deposits when insolvent.

Under a former law when land that had been washed away along a navigable stream reformed as an island, it belonged to the State. This was changed so as to give title to the former owner, his heirs, or assigns.

The school laws were amended so as to require

full and elaborate reports concerning pupils and schools.

The organization of traction companies was provided for, and the maintaining and operating electric roads between cities and towns.

The game-law was amended so as to make section 343 read: "It shall be unlawful to catch, kill, or injure any wild buck, deer, doe, or fawn in this State between the 1st day of March and the 1st day of September in any year; provided, the citizens of this State shall have the right to kill any wild or undomesticated animal upon his premises destroying or in the act of destroying the crops of any such citizen at any season of the year, and it shall also be unlawful to catch, kill, or pursue with intent to catch, kill, or injure, any wild turkey between the 1st day of May and the 1st day of September in any year, and it shall also be unlawful to catch, kill, or injure, or pursue with intent to catch, kill, or injure, any pinnated grouse, commonly called prairie-chicken, between the first day of December and the last day of October of each year, or any quail, sometimes called Virginia partridge, between the 1st day of March and the 1st day of October in any year."

To prevent destruction of fish it was made unlawful to own, control, use, or construct, in any river or creeks of this State, any fish-trap for the purpose of catching fish. Some counties were excepted.

Other enactments were:

Defining kidnaping as taking into custody for the purpose of exacting a ransom or reward any man, woman, or child, and making the penalty imprisonment in the State Penitentiary for the term of not less than five nor more than twenty-one years.

Prohibiting the sale of adulterated candies.

Designating the first Monday in September as Labor Day.

Authorizing cities of the first class to establish and maintain training-schools for nurses and to issue diplomas to graduates.

Compelling corporations to redeem scrip in cash.

Exempting \$300 from attachment on behalf of widows and orphans.

Requiring licenses from non-resident peddlers of lightning-rods, steel stove-ranges, clocks, pumps, and vehicles.

Grading punishments for illegal sales of liquor.

Authorizing counties to buy bloodhounds for pursuing criminals.

Making the levy for Confederate pensions three-fourths of a mill.

The estimated amount of appropriations was \$1,100,000.

A resolution that was offered in the House, but failed to pass by a vote of 15 yeas to 68 nays, was for an amendment to the Constitution providing that school funds collected from whites and from corporations owned by whites should be kept separate from those collected from negroes, and that the funds from each race should be used only for the education of that race.

Constitutional Amendment.—An amendment was adopted by vote Sept. 3, 1900, permitting surety companies to sign bonds of State, county, and municipal officers.

Judicial Decisions.—In January the Supreme Court decided that the acceptance of payment of the poll-tax as a gift is contrary to the spirit of the requirement of the Constitution and does not entitle the person so accepting to vote.

The Attorney-General gave out an opinion in February that women are ineligible to appointment as notaries public. In June Chancellor Le-

land Leatherman, of Hot Springs, overruled a motion to suppress depositions taken before a woman as notary, holding that women are not ineligible, as the office of notary does not come under those in which the incumbent is required to have the qualifications of an elector.

The constitutionality of the coal-screen act, passed by the Legislature of 1899, having been called in question, the Supreme Court decided in favor of the act, the effect of which is to prevent coal companies from paying their miners upon a basis of screened coal instead of paying them for the coal before it is screened.

CALIFORNIA, a Pacific coast State, admitted to the Union Sept. 9, 1850; area, 158,360 square miles. The population, according to each decennial census since admission, was 92,597 in 1850; 379,994 in 1860; 560,247 in 1870; 864,694 in 1880; 1,208,130 in 1890; and 1,485,053 in 1900. Capital, Sacramento.

Government.—The following were the State officers during the year: Governor, Henry T. Gage; Lieutenant-Governor, Jacob H. Neff; Secretary of State, Charles F. Curry; Comptroller, Edward P. Colgan; Treasurer, Truman Reeves; Attorney-General, Tiley L. Ford; Surveyor-General, Martin J. Wright; Superintendent of Public Instruction, Thomas J. Kirk; Superintendent of Printing, Alfred J. Johnston; Adjutant-General, W. H. Seaman; Insurance Commissioner, Andrew J. Clunie; Commissioner of Labor, F. V. Meyers; Railroad Commissioners, E. B. Edson, C. S. Laumeister, N. Blackstock; Board of Equalization, Alexander Brown, R. H. Beamer, Thomas O. Toland, Lewis H. Brown; Commissioners of the Supreme Court, Wheaton A. Gray, James A. Cooper, N. P. Chipman, George H. Smith, and John Haynes; Building and Loan Commissioner, Frank H. Gould; Bank Commissioners, John Markley, A. W. Barrett, B. D. Murphy; Chief Justice of the Supreme Court, W. H. Beatty; Associate Justices, T. B. McFarland, C. H. Garoutte, R. C. Harrison, Walter Van Dyke, F. W. Henshaw, Jackson Temple; Clerk, George W. Root. The officers elected in 1898 were candidates on the Republican ticket except T. O. Toland and W. Van Dyke, who were candidates of the Fusionists. Justice Temple is a Democrat.

The State officers are elected in November of even-numbered years. The Legislature meets biennially in January of odd-numbered years, and the session is limited to sixty days.

Valuations.—The valuations of property in the State, as given in the Comptroller's official report for this year, amount to \$1,241,705,803, made up as follows: Value of real estate, \$680,270,651; improvements on real estate, \$276,849,326; personal property, \$189,506,344; money and solvent credits, \$45,957,997; railroads, \$49,121,485. The rate of State taxation is 48 cents.

The original assessed value of mortgages is \$149,341,064; the assessed value of university and other State mortgages, \$1,605,980. The total county indebtedness is \$3,333,233, of which \$3,224,400 is funded.

The aggregate valuation this year is \$23,413,346 greater than for 1900, and \$15,766,668 of this gain is represented in the enhanced value of real estate and new improvements. Mortgages have decreased by \$7,103,691, while money and solvent credits have increased by \$2,110,619. County indebtedness has been reduced \$296,146 during the year, while the total funded debts of the counties is \$278,300 less than for the preceding year. Notwithstanding these reductions in the financial obligations of counties, there has been no impairment of civic progress; in fact, many of the coun-

ties have added substantial improvements without incurring any additional indebtedness.

Education.—The State is particularly favored with educational institutions. There are only two States in the Union that have more than one university. The one is New York with Columbia and Cornell, the other is California with the University of California, at Berkeley, and Leland Stanford Junior University, at Palo Alto, Santa Clara County. The attendance at both universities was larger this year than ever. At the State University the total was in excess of 3,000, while Stanford has over 1,400. In October Stanford celebrated its tenth anniversary, and the State University was twenty-eight years old in July. The buildings at Palo Alto are gradually nearing completion, and it is expected that within two years the great quadrangle of stone structures, including the magnificent memorial chapel, will be completed as originally planned.

Probably the greatest event in educational life in California this year was the gift by Mrs. Jane L. Stanford to the Stanford University of more than \$30,000,000. This munificent gift, which was made on Dec. 9, makes that university the wealthiest institution of learning on the American continent, and one of the wealthiest in the world. The gift embraced money and interest-bearing bonds to the value of \$18,000,000, and the remaining \$12,000,000 was in productive property in 26 counties of the State. The University of the Pacific (Methodist), at San José; the California College (Baptist), at Highland Park, Oakland; the Wilmerding School, at San Francisco; Mills Seminary, at Seminary Park, Alameda County; Santa Clara College, at Santa Clara; and other educational institutions in various parts of the State, are all largely attended.

Mining.—The output of the precious metals was greater this year than in either of the two preceding years. The total gold yield was \$15,730,700, and the silver production aggregated \$1,118,335 in value. The State ranks second as a gold-producer and seventh among the silver-producing States. In the past few years mining in California has broadened out, and it is no longer confined to the precious metals. This development received a wonderful impetus last year. Copper is now produced in large quantities, and Shasta County has advanced from insignificance to first place among the counties for mineral wealth. The output of copper in Shasta County in 1901 was more than 32,000,000 pounds. Smelters were erected on copper properties in Lake, Siskiyou, and other counties. Late in the summer an extensive copper deposit was discovered on the western side of the Siskiyou mountains, about 5 miles south of the Oregon line. The ledge varies from 300 to 350 feet in width, and can be traced on the surface nearly 4 miles. It is said to be one of the greatest deposits ever found on the continent. Some attention is also being given to extensive iron-ore deposits in Trinity, Shasta, Mendocino, Kern, Mariposa, San Luis Obispo, Fresno, and Madera Counties. In the latter two counties large smelters are approaching completion. The copper production for 1901 is estimated at about \$7,500,000, and the value of all the base metals and inferior minerals is in excess of \$15,000,000.

Fuel Oil.—The extensive petroleum deposits of the State have assumed such large proportions as to change completely the outlook for industrial and manufacturing development. Petroleum was discovered in California more than thirty years ago, but so long as the production was confined to the narrow belt traversing Los Angeles Coun-

ty, and to a few other isolated spots, it attracted little attention and made but a small figure in the industrial possibilities of the State. In the past two years, however, when the oil prospectors have proved, through discoveries made in Kern County, that a large section of the State was underlaid with oil-bearing strata, the status of petroleum in its relation to the industries was completely altered. The rapidity with which wells have been sunk in the Coalinga and Kern river districts has been marvelous. Within two years the output has increased from hundreds of barrels to millions. Perhaps the most expressive evidence of the growth of oil-production is in the enormous advance in land values and other property in that section of the State. The assessed valuation of property in Kern County rose under the inspiration of oil-developments from \$13,293,000 in 1900 to \$19,165,000 in 1901. The Standard Oil Company has taken the initiative toward the investment of at least \$10,000,000 in the State for the construction of plants for transporting the crude petroleum to tide-water at San Francisco Bay and for the refining of it afterward. Contracts for the pipe-line have been let, and some of the material has been delivered on the ground. This pipe-line will be 270 miles long, extending from Bakersfield to Point Richmond. The main line, with its branches, will be about 400 miles long. As the total grade is only 415 feet, pumping-stations will be erected about 8 miles apart. Contemporaneous with the construction of this pipe-line, a large refinery, costing more than \$3,000,000, will be erected at Point Richmond. California has always been handicapped in manufacturing by the high cost of fuel, but crude petroleum has solved that problem. Many of the largest manufacturing plants in the State are using fuel oil, and many new industries are starting.

Recently the ferry-boats of the railroad companies plying on San Francisco Bay have been converted from coal-burners to oil-burners, and the locomotives are being similarly treated. The railroad companies thus use 4,000,000 barrels of crude oil a year. The total consumption of crude oil in the State at present is more than 7,000,000 barrels per annum. At the close of the year the Kern river field had 447 producing wells, with an annual capacity of 9,655,000 barrels. The neighboring Sunset and Coalinga fields have a capacity of 4,440,000 barrels a year, and the Los Angeles, Ventura, and Santa Barbara fields 1,900,000 barrels a year. The oil-producing capacity of the State, therefore, at the close of 1901 was about 16,000,000 barrels. The search for petroleum oil is being prosecuted in 29 counties. Petroleum now stands third in value among the State's productions, wheat being first and gold second.

Banking.—Reports from the 257 State banks show the financial condition of these institutions at the close of business on Dec. 31, 1901, with resources aggregating \$371,547,972.07. This is a gain of \$36,702,700.67, compared with the total for the same date of the previous year. Such an increase is without precedent in the history of banking in California. The item showing the largest gain is the amount due depositors. On Dec. 31, 1900, this total was \$258,928,138.28, and on Dec. 31, 1901, it had grown to \$290,076,038.79, thus showing an increase in deposits for the year of \$31,147,900.51. Nearly all that large increase evidently found profitable investment, for the increase in cash on hand was only \$554,318.82, compared with the previous year. During the preceding years, which were considered years of exceptional prosperity, the gain in banking resources

for the State was as follows: From August, 1898, to July, 1899, \$19,701,246; from July, 1899, to August, 1900, \$23,235,547. These reports include 178 commercial banks, of which 17 are in San Francisco; 59 savings-banks, of which 9 are in San Francisco; and 20 private banks. In addition to these, which are under the jurisdiction of the bank commissioners, there are 43 national banks in California, 5 of them being in San Francisco. The resources of national banks amount to \$74,752,680.66, and they hold deposits aggregating \$42,019,351.32. At the close of 1901 there were 400 banks in the State, with total resources of \$446,300,652.73. The deposits in all banks amounted to \$300,947,490, or more than \$200 per capita of the State's population.

Agriculture.—The year was one of prosperity for the farming interests, although prices for cereals ruled low for several months. The wheat-crop was a fair average for the central portion of the State, excellent for the northern counties, and poor for the southern section. The yield was 30,633,000 bushels, and the value about \$18,350,000. The crop of barley was a trifle in excess of 20,000,000 bushels, worth about \$7,500,000. Corn and oats are not grown extensively, and the yield of the former is estimated at 1,500,000 bushels, while the latter does not exceed 2,000,000 bushels. The bean-crop was liberal, and prices were remunerative. The yield is estimated at 54,000,000 pounds, or about 6,000,000 pounds more than in the previous year.

Contrary to expectations, the honey-crop was below the average. Before the close of autumn it was evident that the total would not exceed 220 car-loads.

The hop-crop was a good average yield, and considerably better than in the previous year. The total was about 45,000 bales, or 8,820,000 pounds.

The growth of sugar-beets has made steady progress for some years, and the sugar output for 1901 is the greatest in the history of the State. The total sugar production of the 8 refineries was 80,000 short tons, or more than double the output of the preceding year.

The dairy interests made substantial progress, and some of the large grain areas of the San Joaquin valley are now being devoted to dairy uses. Some of the large dairies imported more than 1,000 head of fine stock from the Eastern States for the improvement of California herds. The value of dairy-products for 1901 was a little more than \$16,000,000.

The wool industry is still quite important, but not so much so as in former years. The clip of 1901 is estimated at 15,000,000 pounds.

Horticulture.—The fruit-crop was scarcely up to the average in quantity, but the quality was excellent and good prices were obtained. The shipments of deciduous fruits to the Eastern States amounted to 6,459 car-loads, while 24,000 car-loads of oranges and lemons constituted the shipments of citrus fruits. The prune-crop was short, the total cured product aggregating about 72,000,000 pounds, the bulk of this being grown in Santa Clara County. The yield of raisins was about 70,000,000 pounds, a larger percentage than usual being of the seedless variety. Other dried fruits, with the exception of peaches, apricots, and pears, were about the same in quantity as in the previous year. The estimates of dried-fruit production for 1901 are as follow: Peaches, 28,500,000 pounds; apricots, 11,650,000 pounds; apples, 6,000,000 pounds; pears, 7,500,000 pounds; plums, 4,400,000 pounds; nectarines, 600,000 pounds; dried grapes, 440,000 pounds; and figs, 4,000,000

pounds. The yield of walnuts was liberal, the total being 14,400,000 pounds. Almonds were scarce, the estimated yield being 5,400,000 pounds. Late statistics show that the State has about 30,000,000 fruit-trees of all kinds, more than two-thirds being in full bearing. Santa Clara County has more than 4,000,000 trees, and Los Angeles County nearly 3,000,000. The northern part of the State has about 69 per cent. of the trees, and 31 per cent., mostly citrus trees, are in the southern counties. The wine production of the year was smaller than for the two previous years, the total being 17,500,000 gallons, of which 12,000,000 gallons is estimated to be dry wine and 5,500,000 sweet wine. The yield of brandy was 810,000 gallons. The estimated pack of canned fruits is 2,275,000 cases, each case containing 2 dozen 2½-pound cans. In addition, 1,150,000 cases of canned vegetables were put up. Increased attention is being given to candied fruits.

Railroads.—The principal event of the year was the opening of a new through coast line from San Francisco to Los Angeles, thus making a continuous rail line from San Francisco to New Orleans. This shortens the overland trip by the southern route nearly half a day, besides being much pleasanter for travel. Instead of bringing passenger-trains up through the vast grain-fields and cattle-ranges of the San Joaquin valley, the trains now follow the coast-line with the Pacific ocean in view for nearly 100 miles, thence through big-tree groves and the orchards and vineyards of the beautiful Santa Cruz mountains and the Santa Clara valley to San Francisco. In the northern part of the State the railroad has extended its northern terminal 25 miles beyond Ukiah, and the work is still going on toward Eureka, in Humboldt County. The line between San Francisco and San José is being improved, and will be double-tracked the entire distance.

Manufactures.—The State has always been at a great disadvantage in the utilization of its resources because of the high cost of fuel. The last year, however, has witnessed a marked advance owing to the abundance of petroleum oil and the transmission of electric power developed by water-pressure in the mountains. With these two sources of power manufacturing has largely increased, and the output of 1901 is nearly 50 per cent. greater than in any previous year.

COLORADO, a Western State, admitted to the Union Aug. 1, 1876; area, 103,969 square miles. The population was 194,327 in 1880; 412,198 in 1890; and 539,700 in 1900. Capital, Denver.

Government.—The following were the State officers in 1901: Governor, James B. Orman, Democrat; Lieutenant-Governor, David C. Coates, Populist; Secretary of State, David A. Mills, Populist; Treasurer, J. N. Chipley, Silver Republican; Auditor, Charles W. Crouter, Democrat; Adjutant-General, G. F. Gardner, Populist; Attorney-General, Charles C. Post, Democrat; Superintendent of Public Instruction, Helen L. Grenfell, Democrat; Chief Justice of the Supreme Court, John Campbell, Republican; Associate Justices, Robert W. Steele and William H. Gabbert; Clerk, H. G. Clark.

The State officers are elected in even-numbered years, the term beginning in January of odd-numbered years. The Legislature holds biennial sessions, beginning in January of odd-numbered years, limited to ninety days.

Valuation.—In 1898 the assessed valuation was \$192,243,080; in 1899 it was \$203,486,692; in 1900 it was \$216,776,356.

Education.—In 1900 the State paid for the support of schools \$2,894,331, an increase of near-

ly \$400,000 over 1899. The census of children of school age for 1900 was 158,112. The actual school enrolment for that year was 129,846, an increase of about 10,000 over 1899. The number of school-buildings erected in 1899 and 1900 was 126. The attendance at the State Normal School in 1900 rose to 575, an increase of 7 over 1899.

The State School of Mines had 235 students, an increase of about one-third over 1899, filling the school to its utmost capacity. The State University, at Boulder, had in 1901 900 students in all departments, and 92 instructors. The enrolment of the Agricultural College, the University of Denver, and the Colorado College also showed a large increase for 1900–1901. The other higher schools of the State show a gratifying condition of growth and prosperity. The attendance and the enlargement of facilities at the State University in 1901 surpassed the records of all previous years. A new library building is one of the latest additions.

Last year Colorado College received a donation of \$100,000 for a new science building.

The University of Denver in 1901 erected new houses for the accommodation of students.

Productions.—The report of the Director of the United States Mint, issued early in 1901, showed that while the total production of gold in the country during the calendar year 1900 was valued at over \$79,000,000, the product of Colorado, by far larger than that of any other State, amounted to \$29,500,000. In the output of silver this was also the leading State, being credited with more than 20,000,000 fine ounces. Of lead, Colorado in 1900 produced 82,137 short tons, against 70,308 in 1899, and her copper production was about 8,000,000 pounds. About 5,300,000 tons of coal were produced in 1900, being an increase of nearly 500,000 tons over 1899, and making Colorado seventh among the coal-producing States. The iron and steel production of 1900 was worth about \$6,000,000, the increase in iron ore being nearly 45,000,000 pounds, that in pig iron almost 50,000,000 pounds, and that in steel rails close upon 80,000,000. More than 500,000 tons of coke were produced—a substantial increase over 1899, showing a corresponding growth in various industries.

The biennial report of the Commissioner of Mines, filed at the close of 1900, presents many interesting facts, covering the entire mining history of the State.

There were 40,111 men employed in mining during 1900—16,040 above ground and 24,071 below ground. For the first time definite figures are given for the 1899 production of minerals in the State, namely, \$48,320,341.98, divided as follows: Gold, \$26,508,675.57; silver, \$13,771,731.10; copper, \$1,869,166.78; lead, \$6,170,765.63. There were 210 fatal and 1,001 non-fatal accidents in the mines under the commissioner's jurisdiction during the biennial period.

JAMES B. ORMAN,
GOVERNOR OF COLORADO.

The twelfth federal census gives the total value of Colorado live stock as \$49,359,781, while the number of farms is 24,703. The figures are distributed as follow: In October, 1900, there were of range and farm cattle, 1,333,202; dairy cows, 100,166; horses, 236,546; mules, 6,784; sheep, 2,044,814; swine, 101,198. The increase of horses over 1899 was 87,859; of swine, 80,485; of sheep, 389,263.

With an irrigable area of some 20,000,000 acres, the State has only about 10,000 miles of irrigating canals and ditches, or one-tenth of the requisite supply. The amount of improved and cultivated land is about 2,000,000 acres. The farm and garden products for 1900 were estimated to be nearly \$90,000,000 in value. The shortness of the 1901 potato-crop in other parts of the country was in contrast to the large yield in Colorado, which was a source of great profit to her farmers. In this, as also in other respects, 1901 was the best year they have ever known. The acreage of potatoes planted was estimated at 35,000, and the number of bushels marketed at 4,000,000. With the progress of irrigation, fruit-raising is rapidly developing. Peaches and many kinds of small fruits are grown as successfully as anywhere in the Union. In 1900 the number of acres planted with fruits was 140,000, and the value of the fruit product was \$6,300,000. The increase in acreage over 1899 was 10 per cent., and in yield about 30 per cent. At the beginning of 1901 there were 5 large beet-sugar factories in the State. In 1900, 75,000 tons of beets were used, producing about 15,000,000 pounds of sugar, valued at \$750,000. The capital employed in the industry was \$2,000,000, and the number of persons about 2,000.

In 1900 the capital invested in Colorado in manufactures and mechanical industries aggregated \$62,825,472; establishments, 3,570; wage-earners, 24,725; value of products, \$102,830,137; an increase of over 135 per cent. in capital and 142 per cent. in value of products since 1890.

Legislation.—The thirteenth biennial session of the Legislature began Jan. 2, 1901. Its membership (in both houses) consisted of 52 Democrats, 21 Silver Republicans, 15 Populists, and 12 Republicans. The number of bills introduced was 774, of which 116 were passed. T. M. Patterson was elected to succeed E. O. Wolcott as United States Senator. The appropriation bills passed by both houses aggregated \$1,771,621. The general appropriation amounted to \$550,000. Among special appropriations were: State Reformatory, \$85,000; Penitentiary, \$172; Insane Asylum, \$141; State University, \$120,000; St. Louis exposition, \$20,000; Soldiers' and Sailors' Home, \$40,000; State Normal School, at Greeley, \$25,000; State School of Mines, \$25,000; completion of the State Capitol, \$64,000. Acts were passed for the following purposes:

- To improve the normal institutes.
- To prevent the desecration of the American flag.
- To require instruction in the public schools on the humane treatment of animals.
- To preserve the forests on State lands.
- To build a hall of metallurgy at the State School of Mines.
- To create a food and dairy commissioner.
- To compel fire insurance companies to pay the face of the policy in case of total loss.
- To prevent farm-products from other States being shipped from this State as Colorado products.
- To establish a State normal school at Gunnison.
- To build a State tunnel and reservoir to irrigate Delta and Montrose Counties.

To establish the counties of Adams and South Arapahoe.

To provide that railway-train employees shall not be required to go on duty for ten hours after working sixteen consecutive hours.

To submit constitutional amendments for an eight-hour law, the eight-hour act of 1899 having been declared invalid by the Supreme Court.

For adoption of the Australasian land-tax system.

To repeal the law against blacklisting and boycotting.

To request a convention for proposing amendments to the Federal Constitution.

That mortgaged property shall be assessed as a unit at full value, disregarding the mortgage, which shall not be otherwise returned or assessed.

That all private corporations doing business in Colorado, except railroads, shall pay their employees in cash, or in checks convertible into cash on demand, on the 5th and 20th days of each month; and that railroads shall be required to pay once a month.

The last act to be passed was the revenue bill, prescribing many additional taxes.

Railroads.—About 200 miles of new railroad was built in 1900. A link was made giving Denver direct connection with the Burlington system and opening to the city the trade of a large section. The like connection of Denver with the Northwestern system, in progress during 1901, will also greatly strengthen the position of the Colorado capital as a railroad and trade center.

Interesting and successful tests were made in July on the Pike's Peak cog-road with a new locomotive weighing 14 tons. It was considered that the tests demonstrated the practical impossibility with this locomotive, which is stopped automatically, of accidents on account of the heavy grade.

Banks.—Reports from the 37 national banks of Colorado outside of Denver show that in the three months ended July 15 the individual deposits increased over \$200,000, to \$24,817,762, while the total loans and discounts increased nearly \$700,000, to \$13,939,591. These banks held \$1,626,038 in gold coin, compared with \$1,411,891 in April. The total amount of outstanding national bank-notes issued by them was \$1,831,600, an increase of \$6,000. These banks had bonds to secure deposits amounting to \$350,000, while in April they aggregated \$100,000 less.

Quartocentennial.—The celebration at Colorado Springs of the twenty-fifth anniversary of the admission of Colorado to the Union as a State was a noteworthy event. On Aug. 2 an address was delivered in presence of a great multitude by Vice-President Roosevelt.

Lawlessness.—In February one member of a posse, said to be acting without legal right, in an attempt to oust a Denver gambler from his premises was shot and fatally wounded by the man against whom the ejectment was designed.

During the summer, trouble with miners at Telluride led to much riotous violence against private individuals and peace officers, necessitating appeal to the highest authorities. Large rewards were offered by mine owners and county commissioners for the conviction of specified offenders.

A large mob of men, residents of Delta County, July 17, burned a hotel and other buildings belonging to the proprietor of the Grand Mesa lakes in revenge for the killing by a game-warden of a citizen who was fishing in the lakes without the proprietor's permission. In September the game-warden was convicted of manslaughter.

Political.—More than a score of women were elected as county superintendents of public instruction in November, and in several instances women were elected to other offices.

The congressional reapportionment under the census of 1900 gives Colorado a gain of 1 representative.

CONNECTICUT, a New England State, one of the original thirteen, ratified the Constitution Jan. 9, 1788; area, 4,900 square miles. The population, according to each decennial census, was 237,946 in 1790; 251,002 in 1800; 261,942 in 1810; 275,148 in 1820; 297,675 in 1830; 309,978 in 1840; 370,792 in 1850; 460,147 in 1860; 537,454 in 1870; 622,700 in 1880; 746,258 in 1890; and 908,355 in 1900. Capital, Hartford.

Government.—The following were the State officers in 1901: Governor, George P. McLean; Lieutenant-Governor, Edwin O. Keeler; Secretary of State, Charles G. R. Vinal; Treasurer, Henry H. Gallup; Comptroller, Abiram Chamberlin; Attorney-General, Charles Phelps; Adjutant-General, George M. Cole; Insurance Commissioner, Edwin L. Scofield; Railroad Commissioners, W. E. Wilcox, W. O. Seymour, O. R. Fyler; Auditors, W. A. Riley, J. P. Bree; Highway Commissioner, James H. MacDonald; Labor Commissioner, Harry E. Back; Fish and Game Commissioners, G. T. Matthewson, E. H. Geer, R. G. Pike; Shell-Fish Commissioners, G. C. Waldo, Christian Schwarz, Seth Sanford; Tax Commissioner, Andrew F. Gates; Forester, Walter Mulford; Fire Marshal, John A. Rusling; Commissioner of the School Fund, Carnot O. Spencer; President State Board of Charities, E. A. Doun, succeeded in September by Henry H. Bridgman; Bank Commissioners, C. H. Noble, G. F. Kendall; Dairy Commissioner, John B. Noble; Cattle Commissioner, Heman O. Averill; Factory Inspector, G. L. McLean; Chief Justice of the Supreme Court of Errors, Charles B. Andrews, who resigned and was succeeded in October by David Torrance, Associate Justice, whose place was filled by the appointment of Samuel O. Prentice, of the Superior Court; the other Associate Justices are Frederic B. Hall, Simeon E. Baldwin, and William Hamersley; Judges Baldwin and Hamersley are Democrats, the other justices and the elected State officers are Republicans; Clerk of the Court, George A. Conant.

The term of the State officers is two years, except that of the Attorney-General, which is four years. Elections are in the even-numbered years. The Legislature meets biennially in the following January; the session is not limited as to length.

Census Figures.—The final census report on population shows the number of persons of school age, five to twenty years inclusive, and the males of school age in Connecticut, respectively, 257,101 and 127,962. The males of militia age are 207,696. The males of voting age are 280,340; native born, 173,248.

Last year, it appears, there were 168 more men than women in Connecticut, whereas ten years before the excess of women was over 7,000. In 1890 there were 12,820 colored persons in Connecticut, and the return for 1900 was 15,996, of whom 15,220 were negroes, 599 Chinamen, and 153 Indians taxed. There were also 18 Japanese last year.

Almost three-fifths of the persons in Connecticut are now either foreign born or the children of foreign-born parents.

The death-rate decreased from 18.6 in 1890 to 17.0 in 1900, to the 1,000.

Finances.—The receipts for the year ending Sept. 30 were \$3,156,156.34, and the expenditures

were \$3,777,109.81. The bonded debt was \$1,720,876.76.

During the last five years there has been a decided decrease in the indebtedness of the State.

The receipts for the year proper were \$2,876,856.83 and the expenditures \$2,622,000.14.

The grand list, giving the returns of taxable property in the State, shows that the assessors' lists amounted to \$562,690,162, and the Board of Equalization added \$131,510,000, making a total valuation of \$694,200,162. The total in 1900 was \$570,163,749.

The Comptroller is required by statute to publish once in four years the returns made to his office of the indebtedness, amount received from taxation during the past year, and other information pertaining to the towns and other local governments. The total indebtedness of all the towns, cities, boroughs, and counties is \$27,624,827.42. This is an increase of \$3,043,760.87 over the amount reported in 1896.

The amount raised by taxation during the year was \$8,106,904.29.

The State Prison.—There were 504 convicts at the prison in June, the largest number since December, 1899. Additions and repairs were in progress. The new law provides that when a person is sentenced to State prison, except for life or in connection with a sentence of execution, the court shall not fix a definite term, but shall establish a maximum and a minimum term. The maximum shall not exceed the maximum sentence prescribed by the law, nor the minimum be less than one year. When the person shall have been twice before convicted, sentenced, and imprisoned in a State prison or penitentiary, the court shall sentence said person to a maximum of thirty years. Any person, after the expiration of the minimum term, may be released on parole by the warden and a majority of the directors, if the prisoner, in their judgment, will lead an orderly life.

School for Boys.—The report of the State School for Boys, at Meriden, shows that improvements have been made at a cost of nearly \$6,000, paid from the ordinary income of the school, as all improvements during the past few years have been. The introduction of a manual-training department, where 60 boys are instructed, and the lengthening of the school hours for the boys in cottages, have reduced the income from the chair shops a little over \$1,200; but the whole amount of receipts exceeds that of the preceding year by \$936. The State agent has made over 600 visits to paroled boys, and investigated before parole nearly 250 homes. Seventy per cent. of the entire number of boys remaining on the visiting-list are reported without any qualification as doing well.

Militia.—The membership of the National Guard, Sept. 30, 1900, was: Brigadier-General and staff, 16; Battery A, 82; First Regiment, 684; Second Regiment, 712; Third Regiment, 443; Fourth Regiment, 517; First Separate Company, 68; Brigade Signal Corps, 41; Machine Gun Battery, 42; Naval Battalion, 229; grand total, 2,834. Gain during the year, 168.

The congressional apportionment of funds for the militia gives Connecticut \$12,745.

Labor.—The report of the Labor Commissioner says that statistics for 108,782 wage-earners show the average daily wage to have been \$1.52 in 1900, against \$1.40 the year before. The report says further:

"It appears that during the past year 245 manufacturing buildings have been erected. One hundred and seventy-three manufacturing concerns have constructed these factories. They have

been put up in 59 of the 168 towns of the State. The cost of these bare buildings, apart from the machinery that went into them, was \$1,949,104. By the erection of these new factories and additions, employment has been furnished to 3,965 more mill operatives in this State than before.

"From July 1, 1899, to Dec. 1, 1900, there were brought to the attention of this bureau 51 strikes and 2 lockouts. Of these 18 were successful, 12 partially successful, and 23 unsuccessful. Sixteen were for increase of pay, 9 against reduction of time or wages, 1 for nine hours, 9 for discharge of non-union men, 2 for reinstatement of man discharged, 5 on account of dissatisfaction with rules, 2 ordered by head organizations, 2 against increased speed, 2 were sympathetic, 1 for objection to fines, 1 for being docked for poor work, 1 for allowance for overtime, and 2 on account of misunderstandings. The total number idle during the seventeen months covered by this investigation was 5,776."

License.—The returns of the vote on license in October show a net gain of 3 towns for no license. There are now 74 communities in which license is approved by majority vote of the residents, and 94 where it is not.

Products and Industries.—The census report of 1900 on agriculture in the State shows that there were farms to the number of 26,948, comprising 2,312,083 acres, or 74.6 per cent. of the land surface. Of this 1,064,525 acres were improved. The proportion of improved farm land decreased steadily from 74.2 per cent. in 1850 to 46 per cent. in 1900. Such changes in the use of land are incidental to the growth in Connecticut in the last fifty years of the dairy interest and an increase in the area devoted to market-gardening.

In the last ten years the total farm wealth of Connecticut increased \$5,254,872.

The dairy interest, the produce of which in 1899 was valued at \$7,090,188, or 32.1 per cent. of the gross income of farms, stands first in the agriculture of Connecticut. If to this value be added the income derived from poultry and eggs, animals sold and slaughtered, wool and mohair, and honey and wax, the great relative importance of the animal industry is strikingly shown. The aggregate value of these items in 1899 was \$11,651,359, or 52.7 per cent. of the income from all sources.

Most of the good tobacco land is found in Hartford County, which, in 1899, produced 80.2 per cent. of the tobacco raised in the State, and over half of that grown in the 6 New England States.

The report on the manufacturing industries of the State gives the following figures: Number of establishments, 9,128; capital, \$314,696,736; wage-earners, average number, 176,694; total wages, \$82,767,725; miscellaneous expenses, \$23,089,806; cost of materials used, \$165,641,219; value of products, custom work, and repairing, \$352,624,106.

Railroads.—The gross earnings of the rail and boat lines combined for the year ending June 30, 1901, were \$44,295,541.11. For the year ending June 30, 1900, \$44,310,852.76.

The figures for 1901 include the earnings of the New Haven Steamboat Company for a full year, while those of 1900 include only two months.

There have been charged to operating expenses during the year for betterments and new equipment to meet general depreciation \$2,425,814.76, and there have been charged to cost of road and appurtenances \$143,060.97 for purchases of real estate.

The length of main line and branches in the State is 1,013.35 miles. The length of the second

track is 248.55 miles, and the length of the third and fourth tracks is 42.44 miles. There are also 474.49 miles of sidings.

The total length of the street-railways in operation and reporting to the commissioners for the year ending June 30, 1900, is 471 miles, exclusive of sidings. This shows an increase during the year of 54 miles in the length of main tracks.

Dividends were paid by 10 out of the 31 companies reporting amounting to \$322,800.48 upon \$7,325,000 of capital stock, while no dividends have been paid on \$4,818,448 of capital stock.

Insurance.—On Jan. 1, 1901, there were in the State 58,539 policy-holders in life-insurance companies, the amount of insurance outstanding being \$108,163,343. Of this sum \$31,182,546 was in Connecticut companies. The policy-holders in Connecticut companies numbered 18,051. The amount of claims paid in 1900 in Connecticut was \$2,122,342. The Connecticut companies paid \$761,584. The amount of premiums paid was \$4,144,476. The Connecticut companies received \$1,485,176.

Payments in 1900 for taxes, salaries, etc., increased over 1899 with Connecticut companies, \$953,099.55; companies of other States, \$2,112,114.04; and industrial companies, \$882,103.96; a total increase of \$3,947,317.55. The actual increase in principal invested during 1900 was \$54,451,643.40, the market value being in excess of this amount by \$11,381,437.18.

Education.—The school fund, Sept. 30, 1900, was \$2,018,641.29; the cost of its management was \$18,081.28.

The State pays for the instruction of the blind at the Perkins Institute and at a private institution at Hartford, the proprietor of which was till this year a member of the State Board of Education for the Blind under a law of some years' standing requiring that one member should be blind. This provision was repealed by the last Legislature, and another appointment was made. The State Board of Charities recommended that no more special appropriations be made to the institution till after careful investigation. Fifteen State inmates were kept at this institution, and about 19 at the Perkins Institute.

There has been much trouble at the State Agricultural College, formerly called Storrs Agricultural School. The grounds of complaint seem to be, first, that from a strictly agricultural institution it has been made into an academic one; and, second, that the recent administration has been open to criticism, partly on account of lack of discipline and partly on account of neglect to emphasize the work for which the school was founded. Several professors resigned this year, and many students left, so that at the close of the school year only 38 remained. These notified the trustees that they would not return if a certain appointment should be made to the place left vacant by the resignation of Prof. Mayo. At length the trustees, at their September meeting, retired the president by a vote of 7 to 2, continuing his salary to July 1, 1902, though his connection with the college was to cease at once. The college had 22 persons on the salary list, of whom 18 or more were professors or instructors. The regular income consists of \$15,000 from the State, \$25,000 from the Morrill fund, and about \$7,253 from the land-grant fund. Near the end of October 53 students were in attendance. At the last commencement essays were delivered by 10 graduates.

Wesleyan University, at Middletown, graduated in June a class of 68, the largest in its history. At the fall commencement degrees were conferred

upon 576 candidates, of whom 249 received the degree of A. B. Large gifts were made to the university in connection with the bicentennial celebration.

Legislative Session.—The General Assembly met Jan. 9, and adjourned June 17. In the Senate were 22 Republicans and 2 Democrats; in the House, 201 Republicans, 53 Democrats, and 1 Independent. Henry Roberts was president *pro tem.* of the Senate, and John H. Light was Speaker of the House.

Nearly 2,000 measures came before the Legislature; fewer than half were passed, and those were largely incorporations and other private bills. The public acts numbered 184. In 1899 there were 230.

Among the important acts were the resolutions submitting to vote the question of holding a convention for revising the Constitution and also for submitting two amendments, which were passed to their second stage. One was for the election of State officers by plurality vote. The other was to permit the senatorial districts to be increased to 36. These were carried at the October election.

The amendment proposing a change of town representation failed in the House by a vote of 145 nays to 61 yeas, and is left to the constitutional convention with certain restrictions as to the action of that body.

Some new State offices were created: A tax commissioner, with salary of \$3,000, the incumbent to be *ex officio* member of the Board of Equalization; a forester, to be appointed by the Board of Control of the experiment station, and authorized to buy lands for State parks suitable for growing pine and chestnut, at not more than \$4 an acre; a fire marshal, to be appointed by the Governor to serve four years from July 1, 1901, future appointments to the office to be subject to approval of the Senate; a board of voting-machine commissioners; a board of examiners for barbers; an entomologist, to be appointed by the experiment station from the staff. The number of Superior Court judges was increased from 13 to 14. Appointment of truant officers was provided for. The Labor Commissioner was authorized to appoint superintendents for 5 free public employment bureaus; the annual expenses of each bureau are limited to \$2,000; all private employment offices are to be under the supervision of the commissioner.

An important measure was the corporation act, consisting of 63 sections.

A new law for taxation of corporations is designed to make that more equitable.

Another measure was a caucus law designed to prevent the packing of caucuses. Voters must be registered before taking part in primaries, declaring their party preferences.

A new law for the collection of poll and military commutation taxes provides that when any person shall refuse or neglect to pay any poll or military tax assessed against him, he may be sent to jail until the tax, interest, and costs are paid.

A law in regard to itinerant vendors calls for a deposit of \$500 with the Treasurer, a State license fee of \$100, and a local fee of \$25.

The laws of inheritance were so changed that parents inherit before brothers and sisters.

Automobiles must not go faster than 12 miles an hour within city limits, or 15 miles without. Rubber-tired vehicles must show lights at night, unless accidentally prevented. Provision is made for construction and maintenance of bicycle-paths.

The State is entitled to one more member of Congress according to the census and the Federal

apportionment. The fifth representative will be a Congressman-at-large.

Indeterminate sentences of state prison convicts were provided for.

A new general fish and game law was passed, bringing together the many statutes on the subject, making some changes in the closed season and some new provisions.

Other enactments were:

Prohibiting the committing of any boy under ten to the School for Boys at Meriden, except for an offense punishable by imprisonment at the State prison.

Making the maximum penalty for kidnapping, etc., thirty years' imprisonment.

Providing a maximum penalty of \$200 for keeping a billiard-table or slot-machine for purposes of lottery or gaming.

Providing that teaching in schools on the effects of alcohol and narcotics shall be given only to grades above the third. Neglect of such teaching shall be cause for withholding school money by the Comptroller.

Providing that fathers and mothers shall be joint guardians of their minor children; but a court may appoint either parent sole guardian, or other than a parent as guardian.

Making the license laws applicable to the sale of candies containing a liquor or sirup which has more than 1 per cent. of alcohol.

Forbidding contractors, foremen, etc., to receive payment of any kind for furnishing employment to any person.

Prohibiting the use in factories of stained, painted, or corrugated glass injurious to the eyes of workmen.

Requiring manufacturers employing persons under sixteen to procure and keep on file certificates of the age of all such.

Increasing the amount that may be used for the improvement of highways in one year from \$175,000 to \$225,000, and appropriating \$450,000 for the next two years.

Among the appropriations, the amount of which was very large and beyond the limit of the revenue, were the following: \$25,000 for a model school at the State Normal School; \$52,000 for education of the deaf and dumb; \$18,000 for completing the normal school at Willimantic; \$22,500 to the Litchfield County hospital, \$10,000 to the Waterbury hospital, \$6,000 to the Day-Kimball Hospital; \$165,000 for completing the general dining-room at the Connecticut Hospital for the Insane; \$8,000 to Stamford hospital; \$10,000 to St. Francis hospital; \$25,000 to the Hartford hospital to build an experimental hospital for the treatment of pulmonary tuberculosis; \$96,000 for hospitals at Hartford, New Haven, Bridgeport, Danbury, Meriden, New London, and Norwich; \$22,000 for the State Library; \$16,000 for electric lighting of the Capitol building and grounds; \$450,000 for good roads; \$5,500 for School for Imbeciles for filtration bed; \$22,500 for transportation of the General Assembly and its officers; \$60,000 for enlargement of the State prison; \$811,400 for judicial expenses for two years; \$30,000 to pay the commission on revision of the statutes; \$309,775 for military expenses; \$11,000 for Fitch's Home for Soldiers; \$180,000 for the support of sick, wounded, and disabled soldiers, sailors, and marines for two years, and \$15,000 for deficiency for appropriation for the care of sick and wounded soldiers; \$20,500 to supply a deficiency in the appropriation for the care of children in temporary homes; \$50,000 for an armory at Norwich; \$1,181,700 for education; \$1,607,000 for civil purposes, including the insane

hospital, School for Boys, county jails, care of Capitol, etc.; \$78,500 for State officers, librarians, Board of Education and Commissioner of School Fund.

Constitutional Convention.—The question submitted to vote of the people in October was decided in favor of a convention for revising the Constitution, by a vote of 47,317 to 26,745. At the same time the two proposed amendments were voted upon and carried, the one for elections by plurality, by a vote of 49,887 to 14,196, and the other for permitting increase in the number of senatorial districts by 42,804 to 17,811. Delegates to the convention were elected in November—one for each town—168 in all. The number of Republicans elected was 123; Democrats, 45. Of these, 38 were elected by non-partizan vote. The convention met in January, 1902.

Yale's Bicentennial.—The university celebrated the two hundredth anniversary of its founding Oct. 20–23. Delegates were present representing the colleges and universities of America, Europe, Asia, and Australia. The celebration opened Sunday, Oct. 20, with sermons and addresses by the Rev. Joseph H. Twichell, the Rev. Dr. Newman Smyth, the Rev. Joseph Anderson, the Rev. W. W. Battershall, and the Rev. Dr. George P. Fisher. On Monday addresses were made by Thomas Thatcher and W. H. Welch, and President Hadley gave the address of welcome to guests, which was followed by responses of congratulation. In the evening of Monday took place the torchlight procession of graduates and students, which is described as most picturesque and unique. "First came the illumination of the green, when 5,000 lights were turned on and the crowd gasped 'Oh!' But this was only the beginning. Presently the 7,000 lights on the campus, the orange-colored lanterns that hemmed the dormitories, the hundreds of electric bulbs that faced Vanderbilt Hall, the scores of electric lights on the Phelps gateway, the main entrance to the campus during the bicentennial festivities, and the 1,000 other lights on the old quadrangle started into life. Bands played, students cheered, and gray-headed men forgot they were not boys. The parade started promptly through the Phelps Gate, when a great flare of red fire behind Welch Hall announced that the procession was in motion. Headed by the grand marshal, the line of fire proceeded through College and Chapel Streets to Church Street, where it turned to the left and passed the reviewing stand.

"The first section in the second division were the Indians, who were represented by the class of 1902, academics. Their costumes consisted of long, baggy trousers of brown, with red trimmings, bright-red jackets, and a headgear of feathers.

"A company of colonial warriors composed the second section, impersonated by the class of 1902. Their costumes consisted of short trousers of light brown, with long brown stockings, a short coat of the same material, trimmed with white collar and cuffs and a belt of white with a huge steel buckle.

"The colonial troops were followed by the Continental soldiers, composing the third section in the line. These 1903 academic men wore large George Washington hats of blue, with white tassels, coats of blue of the West Point cut, white knickerbockers, white stockings, and low shoes, with immense copper buckles. Their costumes were nearly as striking as those of the 1903 men, who followed them, and who were garbed as representatives of 1812. The costumes of this

fourth section were of the Beau Brummel design, consisting of bright-yellow waistcoat, purple swallowtail coat, with large brass buttons, gray trousers, and a huge beaver hat of tan color with yellow band. The boys wore with this costume white ruffled shirts of the style of those days.

"In the fifth section were the academic sophomores, who were gowned as sailors, with entire costumes of white, trimmed with straps of blue and blue sashes. All the freshmen of the university were Rough Riders in the parade, and as a body of several hundred they made a great showing.

"The students of the medical school, in green caps and gowns; the divinity men, in costumes of red; the members of the law school department, in purple; the Japanese students, in pink; and the art and forest school students as Dominican monks, formed the seventh division in this tremendous aggregation of Yale undergraduates.

"The youngest alumni of Yale, members of the class of 1901, headed the procession of Yale graduates, who composed, with the visiting delegates, the third division. As Filipinos, in gowns of brown trimmed with red and large brown hats, they created no end of fun along the line of march.

"The visiting delegations of students from Harvard, Princeton, Trinity, and Wesleyan, in academic gowns of their college colors, were followed by the fourth division of the great parade, consisting of the alumni of the university. All wore caps and gowns of the lightest pale blue; and among the 3,500 alumni in line there were members of every class from 1853 to 1901. The prominent features of the parade were the floats and transparencies."

Tuesday morning was dedicated the memorial gateway, an entrance to the campus between Welch and Osborne halls, erected by the class of 1896 in memory of Ward Cheney and Gerard M. Ives, two members of that class who lost their lives in the Spanish-American War. In the forenoon were addresses by Cyrus Northrop, LL.D., and Daniel C. Gilman, LL.D.; in the afternoon, football games and a choral performance; in the evening, a dramatic entertainment by students. Wednesday morning occurred the commemoration service, an address by Justice David J. Brewer of the United States Supreme Court, and a poem by Edmund Clarence Stedman, LL.D. In the afternoon a concert was given, followed by the dedication of Woodbridge Hall, with an address by Donald G. Mitchell, LL.D., and a farewell reception by the president.

President Hadley.—The president of Yale University, Arthur Twining Hadley, is the son of James Hadley (1821–1872), who from 1851 was Professor of Greek in that institution and was an eminent philologist. The son was born in New Haven, April 23, 1856, was graduated at Yale in 1876, and then studied in Berlin. In 1879 he was appointed a tutor in Yale, and in 1886 Professor of Political Science there. He became president of the university May 25, 1899. He has made a special study of railroads, and has written much on economic subjects. His publications include: *Railroad Transportation* (1885); *Connecticut Labor Reports* (1855–'56); *An Account of the Relations between Private Property and Public Welfare* (1896); and *Report on the System of Weekly Payments*.

Norwalk.—On Sept. 11 the town of Norwalk celebrated the two hundred and fiftieth anniversary of its existence as a town, with music, addresses by Rev. A. F. Beard and United States Senator O. H. Platt, and a poem by the Rev. Dr.

Arthur T. Hadley

DAPPLETON & CO

J. G. Davenport. The Connecticut court issued a decree Sept. 11, 1651: "Ordered That Norwalke Shall bee a towne, and that they provide an inhabitant according to order, who shall seasonably be tendered to take the oath of a constable."

Old Saybrook.—The two hundredth anniversary of the founding of the collegiate school in which Yale University had its beginning was observed at Old Saybrook, Nov. 11, with appropriate exercises by members of the Yale faculty and sons of the university. Saybrook Point, where a boulder has just been placed to commemorate the site of the old collegiate school, was in holiday array with decorations of Yale blue in profusion. The boulder has a new bronze tablet inscribed: "The first site of Yale College. Founded 1701. Removed 1716." Commemorative exercises were held in the Congregational Church. The historical address was delivered by Prof. Franklin B. Dexter of Yale, and Dr. Samuel Hart spoke in behalf of the townspeople.

DELAWARE, a Middle Atlantic State, one of the original thirteen, ratified the Constitution Dec. 7, 1787; area, 2,120 square miles. The population, according to each decennial census, was 50,096 in 1790; 64,273 in 1800; 72,674 in 1810; 72,749 in 1820; 76,748 in 1830; 78,085 in 1840; 91,532 in 1850; 112,216 in 1860; 125,015 in 1870; 146,608 in 1880; 168,493 in 1890; and 184,735 in 1900. Capital, Dover.

Government.—The following were the State officers in 1901: Governor, John Hunn; Lieutenant-Governor, Philip L. Cannon; Secretary of State, Caleb R. Layton; Treasurer, Martin B. Burris; Auditor, P. B. Norman; Attorney-General, Herbert H. Ward; Insurance Commissioner, George W. Marshall; Adjutant-General, I. P. Wickersham; Chemist, T. R. Wolf; President Board of Pilot Commissioners, J. P. Virdin, succeeded by Alfred D. Poole—all Republicans; Chancellor, John R. Nicholson, Democrat; Chief Justice, Charles B. Lore, Democrat; Associate Justices, Ignatius C. Grubb and William H. Boyce, Democrats, and W. C. Spruance and James Pennewill, Republicans; Clerk, William Virdin, Democrat.

The term of the State officers is four years. They are elected in November of the years of presidential elections. The Legislature meets biennially in January of the odd-numbered years; the session is limited to sixty days.

Census Figures.—Delaware, with a total population of 184,735, has 51 per cent. of males and 49 per cent. of females. One-thirteenth of the population is foreign born. The white and colored races are 83.4 and 16.6 per cent., respectively.

The number of persons of school age, five to twenty years, is 59,635; males of militia age, 40,029; males of voting age, 54,018, of whom 47,202 are native born and 6,816 foreign born. The colored voters aggregate 8,426. There are 54,018 males twenty-one years of age and over, of whom 7,538 are illiterate. Of the illiterates, 6,332 are native born, while 1,206 are foreign born.

Finances.—The Auditor's report gave the following figures for 1900: Balance in treasury in general fund, \$65,152.33; total receipts, \$387,929.20; expenditures, \$273,622.50; balance in school fund, \$34,035.90; total receipts, \$168,329.90; expenditures, \$138,414.54; total receipts of sinking-fund, including balance, \$4,608.86; expended, \$600.

The larger items of expenditure were: Interest on Delaware College certificates, \$4,980; interest on school fund bond, \$9,405; interest on outstanding bonds, \$16,100; salaries of State officers,

\$10,775; salaries of judges, \$24,900; pensions of retired judges, \$3,000; State Hospital, \$15,000; State militia, \$5,000; military, \$10,000; Delaware College government appropriation, \$20,000; State College for Colored Students, \$20,000; appropriation, \$5,000; Industrial School for Girls, \$2,500; free public-school appropriation, \$100,000; maintenance and tuition of beneficiaries in institutions outside of the State, \$2,800; State Board of Health and pathological and bacteriological laboratory, \$2,300.

The items of expenditure of the school fund were: Free text-books, \$18,749.50; apportionment of dividends, \$119,665.04.

The Auditor's estimate of receipts in 1901 was \$482,557.53, and of expenditures \$341,005.

The total assets of the State were given as \$1,118,509.16. Of this, \$10,000 in bank stock and \$385,000 in mortgages were investments for the general fund; \$416,790 in bank stock and \$161,750 in bonds, for the school fund; \$144,967.16 in State buildings (expenditures and improvements in recent years); and \$973,542 in other assets. The total liabilities are \$769,750.

Education.—By the latest report at hand the public schools outside of Wilmington had 22,254 white pupils and an attendance of 15,938.

The report of Delaware College for 1900-1901 shows an enrolment of 92, with a graduating class of 18. In September the entering class numbered 38. There is a regular teaching corps of 15 professors and instructors, besides occasional lecturers from the staff of the Agricultural Experiment Station. This last institution has a staff of 6.

The State College for Colored Students graduated 3 students in May.

A suit before the Supreme Court in January turned on the question whether the provision in the school law of 1861 limiting the amount that could be spent in one year for improvements to \$500 is still binding. The court held that the act was repealed by the general school law of 1898, which imposes no limit.

Charities.—As the State has no institutions for deaf-mute, blind, and imbecile children, a limited number are sent to institutions of other States. At the beginning of the year there were 11 pupils from Delaware in the Columbia Institution for the Deaf and Dumb. These pupils are maintained and instructed at an expense to the State of \$250 per annum each. There were in the Pennsylvania Institution for the Deaf and Dumb 2 pupils, for whom \$260 each was paid. In the Pennsylvania School for the Feeble-Minded 10 pupils were kept at an annual expense of \$200 each. The present statutes limit the number of deaf, dumb, and blind children who can be sent from this State to 5 from each county, and the number of feeble-minded or imbecile children at 14 from the State.

There were 329 inmates at the State Hospital for the Insane Jan. 1. The report showed that at the end of the fiscal year, Dec. 1, on account of an increased number of patients and the increased cost of nearly every article purchased, there was a deficit of about \$8,000, and on Jan. 1 a deficit of about \$17,000.

Corrections.—The Ferris Industrial School for Boys, at Wilmington, has 75 inmates. The charter provides that Newcastle County shall pay \$100 for each boy committed from the county, provided that the sum does not exceed \$5,000 in one year. Boys are also admitted from the other counties, but no appropriations from them are provided for. The gross product of the farm in 1900 was \$4,500; the total receipts, \$29,391.76; expenditures, \$23,238.35.

The Girls' Industrial School also receives inmates from all parts of the State. It receives an appropriation of \$2,500.

Militia.—According to the Adjutant-General's report, 42,123 men were subject to enrolment and 28,080 subject to military duty. The total strength of the organized National Guard is 372, of whom 321 are privates. For the year 1900, receipts from the State amounted to \$5,078.44, and disbursements to \$3,308.16. In 1898 the Legislature appropriated \$30,000 to equip and prepare troops for the Spanish War; of this, \$23,150.36 was expended. The Government returned \$20,870.83, leaving in the hands of the State officials certain ordnance supplies. The Governor paid \$3,100 to the Adjutant-General and another officer for preparing and presenting the accounts to the proper officials at Washington.

Railroads.—The report of the Delaware Railroad shows its mileage to be 224.38. For the year ending Oct. 31, 1900, the earnings were \$1,646,660.34, an increase of \$256,123.88. The expenses were \$1,112,440.97; increase, \$123,697.45.

There was a very large increase in the freight revenue due to the increasing through traffic from connecting lines and to the improved fruit-crop on the peninsula.

Work was begun in May on a new trolley belt line which will touch the Delaware river, the Atlantic Ocean, and Chesapeake Bay. The combination constituting the circuit includes 45 miles of trolley traction already in operation and 100 miles which are to be built.

Insurance.—The Insurance Commissioner, who took office Jan. 1, made a report about Feb. 12, saying, in part:

"From the books of my office, as audited by the auditor of accounts from Oct. 1, 1898, to Jan. 1, 1901, I find the amount turned into the State treasury was \$38,823.81, exclusive of the salary of the commissioner. There is no record of expenses in the office.

"The insurance law specifies that the Insurance Commissioner shall grant certificates of authority to Delaware companies only when they shall have a paid-up capital of \$100,000. The General Assembly, at dates later than the passage of the general insurance law, has at various times granted special charters to insurance companies with a paid-up capital of less than \$100,000, and in some instances as low as \$25,000."

Products.—A census bulletin giving statistics of manufactures of Delaware places the total value of manufactured products for the State at \$45,387,630, an increase of 20.8 per cent. over the value of such products for 1890. The number of establishments in 1900 was 1,417; capital invested, \$41,203,239; average number of wage-earners, 22,203; total wages paid, \$9,263,661; cost of material used, \$26,652,601. The net or true value of products is given at \$29,573,449, the value of material purchased in a partly manufactured form being \$15,864,041.

Chief Statistician North, who makes the report, says: "The statistics indicate a healthy growth in manufactures of Delaware, although a decline is observable in cotton manufactures, in which the number of mills has decreased from 7 to 3; the manufacture of fertilizers, in which the number of establishments has fallen from 17 to 11; and the carriage and wagon manufacture, in which the number has fallen from 44 to 36. On the other hand, iron and steel manufactures, shipbuilding, foundry and machine-shop products, and the tanning and finishing of leather, show large and gratifying increases."

There are 9,687 farms in Delaware, with an

aggregate area of 1,066,228 acres, of which 754,010, or 70.7 per cent., are improved.

The recent decline of fruit-raising has led to the substitution of other branches of farming, and an increase in the production of market-garden truck, corn, and wheat. It has also stimulated the growth of the dairy and poultry interests.

The peach-crop of 1901 was estimated at 2,000,000 baskets.

Business.—Reports are given of 20 business failures in the State in 1900, with liabilities of \$106,477, and assets \$55,790. The preceding year there were 30, but the liabilities amounted to about \$10,000 less, while the portion not covered by assets was about \$2,000 less.

Cooch's Bridge.—A notable event in the history of the State was the unveiling, Sept. 3, of a monument at Cooch's Bridge to commemorate the first unfurling of the American flag in battle, Sept. 3, 1777. The monument, which was erected by patriotic societies and citizens, is of Brandywine granite, and stands in the roadway. Beneath a representation of the original flag of 13 stripes and 13 stars is the inscription: "The Stars and Stripes were first unfurled in battle at Cooch's Bridge. Erected by patriotic societies and citizens of the State of Delaware, Sept. 3, 1901." The very handsome stone, standing 8 feet high, is enclosed in a square, the corners of which are marked by cannon, and the sides by heavy anchor chains.

Legislative Session.—The biennial session of the General Assembly began Jan. 1 and ended March 8. It stood, politically, on joint ballot, 29 Republicans and 23 Democrats. The Republicans were still divided, as they have been for years, into two factions—the so-called Regular Republicans, represented by 11 members of the Legislature, and the so-called Union Republicans, of whom there were 18. Harry C. Ellison, Regular, was President *pro tem.* of the Senate, and Representative McCommons, Union, was Speaker of the House, the two factions having compromised on the organization.

Two United States Senators should have been elected, one to fill the vacancy for the term ending in 1905 and one to succeed Richard R. Kenney, whose term expired March 4, 1901. Forty-five ballots were taken, but no candidate received the 27 votes necessary to an election, so that the State will be unrepresented in the United States Senate for at least two years, unless a special session should be called and should succeed in electing. The Union Republicans voted steadily for J. E. Addicks for both terms. The Democrats voted for R. R. Kenney for the long term and Willard Saulsbury for the short term. The Regular Republicans voted scatteringly. Among their candidates were H. A. Du Pont, Charles F. Richards, L. C. Bird, Anthony Higgins, and H. R. Burton.

An incident of the senatorial contest, which was very bitter and excited, was a charge made by Representative W. M. Hearn, Democrat, against Representative R. R. Layton of an attempt to bribe him with \$2,000 to remain away from a session, in the interest of the Union Republican candidate. The majority report of the investigating committee recommended that the evidence and the entire matter be referred to the Attorney-General for such action as he should deem best; this report was adopted, and the matter so referred. The minority of the committee reported that the charges had not been sustained.

The law for taxing manufactures was amended. Under the old law, the tax imposed was 10 cents on the \$100 on the cost of material used in busi-

ness during the preceding year, and 10 cents on the \$100 on the cost of labor. The amended law provides, first, for the payment of an annual license fee of \$5; next, an annual payment upon the aggregate value of the real and personal property comprising the plant, the sum of $\frac{1}{10}$ of 1 per cent. per \$1,000, or 50 cents per thousand, up to a valuation of \$3,000,000; over that amount, $\frac{1}{10}$ of 1 per cent., or 25 cents per thousand.

The law providing for two State detectives was repealed and the office abolished March 12, and March 15 the office was reestablished and the Governor was authorized to appoint two detectives, which he did. The former incumbents, who were thus legislated out of office, contest this action.

Two acts concerning fox-hunting were passed—one making it unlawful to hunt foxes between May 1 and Aug. 31, and the other making it unlawful to shoot at, kill, or destroy any fox while such fox is being chased or pursued by a dog or dogs. The penalty for the former act is \$10 fine or ten days in jail; for the latter, a fine of \$20 to \$50, or imprisonment not less than ten days.

A new law was made for the protection of birds. Game-birds, as intended in the act, are named, and the English sparrow, the redwing blackbird, and the purple grackle, or crow blackbird, are excepted; and any one may kill a bird found on his own premises destroying his grain, fruit, or poultry, but may not sell it. The act further authorizes the Governor to appoint annually an arbor and bird day.

An act was passed increasing the membership of the levy court of Newcastle County from 5 to 7, and authorizing the Governor to appoint the additional members for the time being. This, it was contended, was beyond the powers of the Legislature.

It was made a prerequisite for receiving the State school money that each white district should have raised by taxation \$100 and each colored district \$50.

A resolution was passed for submission of an amendment to the Constitution in regard to corporations; also a joint resolution requesting Delaware's Senator and Representative in Congress, if in their judgment they can wisely do so, to support a bill for the purchase of Temple farm and Moore House, at Yorktown, Va., by the Government of the United States.

In all, 238 bills were passed. Among those of public interest not already mentioned were the following:

For the corporal punishment of wife-beaters.

For the suppression of gambling by means of slot-machines or other devices.

Changing the time when reedbirds may be killed.

Amending the act for the protection of women.

Providing for the appointment of an oyster-revenue collector.

For the improvement of the Christiana river.

Providing a free ambulance service for the city of Wilmington.

Making Abraham Lincoln's birthday, Feb. 12, a legal holiday.

Enabling the cities and incorporated towns to receive one-third of the liquor-license fees collected therein.

Amending the act to prevent the spread of diseases among cattle so as to make it cover tuberculosis.

Providing for the establishment and maintenance of free public libraries.

Appropriating \$150 for colored teachers' institute, and \$450 for institute for white teachers.

Amending the law on imitations of butter.

For the improvement of the schoolhouses for colored children, and making an appropriation therefor \$6,000 annually.

Appropriating money to the Christiana Society for the Prevention of Cruelty to Children.

The Governor vetoed a bill for making life-grade certificates of teachers valid for qualification for the office of county superintendent of schools. He also vetoed a bill legalizing the shooting of live pigeons in matches.

Judicial Decision.—The majority decision rendered by the Supreme Court in May, in an action against the so-called Adams law passed in 1897 for the taxation of investments, was to the effect that the law is invalid on account of the fact that an amendment to one section which was passed in 1898 was unconstitutional because taking up a subject not within the title of the act; and that the unconstitutional provision could not be separated from the other parts of the law and leave them operative.

FLORIDA, a Southern State, admitted to the Union, March 3, 1845; area, 58,680 square miles. The population, according to each decennial census since admission, was 87,445 in 1850; 140,424 in 1860; 187,748 in 1870; 269,493 in 1880; 391,422 in 1890; and 528,542 in 1900. Capital, Tallahassee.

Government.—The following were the State officers during the year: Governor, William S. Jennings; Secretary of State, John L. Crawford; Treasurer, James B. Whitfield; Comptroller, W. H. Reynolds, Alonzo C. Croom (appointed on death of Reynolds); Attorney-General, William B. Lamar; Superintendent of Public Instruction, William N. Sheats; Adjutant-General, Patrick Houstoun, J. Clifford R. Foster (appointed on death of Houstoun); Commissioner of Agriculture, Benjamin E. McLin; State Chemist, R. E. Rose; State Auditor, W. V. Knott; Railroad Commissioners, H. E. Day, J. L. Morgan, J. M. Bryan; State Health Officer, Dr. Joseph Y. Porter; Board of Health, E. M. Hendry, Horace E. Simpson, M. D., N. B. Broward; Chief Justice of the Supreme Court, R. F. Taylor; Associate Justices, Milton H. Mabry, Francis B. Carter; Supreme Court Commission, W. A. Hocker, J. G. Glen, E. C. Maxwell; Supervisor of Convicts and Convict Camps, Robert F. Rogers.

The term of the State officers is four years. They are elected in November of the years of the presidential elections. The Legislature meets biennially on the first Tuesday after the first Monday of April of the odd-numbered years. The session is limited to sixty days.

Population.—The Federal census of 1900 divided the population of the State (528,542) as follows: Males, 275,246; females, 253,296; native born, 504,710; foreign born, 23,932; total white, 297,333; native white, 278,076; foreign parents, 24,044; foreign white, 19,257; total colored, 231,209. Persons of school age, 197,600; males of militia age, 114,500; males of voting age, 139,601; foreign males of military age, 7,934; colored, 53,723, of which 53,546 are negroes. Foreign born of voting age, 11,736; colored, 61,417.

The population of the largest 10 cities in 1900 was as follows: Jacksonville, 28,429; Pensacola, 17,747; Key West, 17,114; Tampa, 15,839; St. Augustine, 4,272; Lake City, 4,013; Gainesville, 3,633; Ocala, 3,380; Palatka, 3,331; Fernandina, 3,245.

Finances.—The Treasurer's report gives the following figures: Balance in treasury, Jan. 1, 1901, \$277,885.10; receipts during the year from all sources, \$544,040.85; disbursements in 1901, \$631,443.83. Balance in treasury, Jan. 1, 1902,

\$190,482.94. Received in 1901 from State taxes, \$230,647.65; from State license taxes, \$228,905.69. The total debt of the State on Jan. 1, 1902, was \$1,032,500, divided as follows: Bonds in State school fund, \$650,100; in Agricultural College fund, \$135,800; in Seminary fund, \$98,600; in hands of individuals, \$148,000,000.

All the outstanding 7-per-cent. bonds of the State issued in 1871 to mature Jan. 1, 1901, were taken up as investments by the State educational funds. These 7-per-cent. bonds, amounting to \$267,700, were refunded in consolidated manuscript 3-per-cent. bonds, issued to the State educational funds, and the 7-per-cent. bonds were destroyed. The State educational funds will take up as investments all outstanding 6-per-cent. bonds of the State issued in 1873, now amounting to \$764,800, and they will at their maturity, Jan. 1, 1903, be refunded in 3-per-cent. bonds, to be issued to those funds. The total outstanding bonds of the State amount to \$1,032,500. After Jan. 1, 1903, all these bonds will be held by the State educational funds as investments, and will bear 3 per cent. interest. The State has no floating debt. The interest on the bonded indebtedness of the State paid in 1901 amounted to \$68,776.50.

Valuations.—The assessed valuation on property of all kinds for 1900 was \$96,686,954, an increase of \$3,159,600 over the assessed valuation for 1899. The report of the Comptroller gives the following data: Number of horses, asses, and mules, 53,055; neat and stock cattle, 484,661; sheep and goats, 116,236; hogs and dogs, 288,919; full cash value of animals, \$4,834,698; value of all other personal property, \$12,163,354; aggregate value of all real estate, \$60,175,465; personal property, \$16,998,052; railroads and rolling stock, \$19,250,113; telegraph-lines, \$263,324. Total value of property returned for taxation in 1900, \$96,686,954.

Banks.—According to the statement of the Comptroller, on Jan. 1, 1901, 23 incorporated banks were doing business under the laws of the State. At the close of business Dec. 31, 1900, their assets amounted to \$4,773,016.11, an increase over the assets on Jan. 1, 1900, reported as \$3,862,541.21, of \$910,474.90. Five of the State banks are savings-banks, or have savings departments. On Jan. 1, 1901, these reported assets of \$2,061,974.57.

Education.—The latest report of the Superintendent of Public Instruction, covering the years 1899-1900, gives these statistics: Number of schools in 1900, 2,443; for whites, 1,813; for negroes, 630. School population (six to twenty-one years of age) in 1900, 161,428, divided as follows: White, 93,351; negro, 68,077. Children enrolled in public schools in 1900, 108,874, divided as follows: White males, 34,249; white females, 32,828; negro males, 19,716; negro females, 22,081. Average length of school term in 1900, both races, ninety-three days, divided as follows: Whites, 95; negroes, 87. Illiterates between ten and twenty-one, both races, 4,031, divided as follows: Whites, 779; negroes, 3,252. The United States census of 1900 gives the percentage of illiterates above twenty-one years in the State as 8.4, next to the lowest among the Southern States.

Number of teachers employed in 1900, both races, 2,729, divided as follows: White teachers, 2,084; negro teachers, 645; white male teachers, 713; white female teachers, 1,371; negro male teachers, 294; negro female teachers, 351. Average monthly salaries paid teachers, both races, in 1900, \$34.58, divided as follows: White teachers, \$36.81; negro teachers, \$27.67; white male teachers, \$42.20; white female teachers, \$34.22; negro

male teachers, \$29.06; negro female teachers, \$26.36. Expenditures for schools, both races, in 1900, \$656,804, divided as follows: White schools, \$522,919; negro schools, \$133,885. Per capita cost of all schools in 1900 for each person in the State, \$1.24; per pupil enrolled, \$6.03.

The appropriation of the State in 1900 for the partial support of normal, military, and industrial schools was \$42,626.92.

The school for the deaf and blind had an enrolment of 65 for the school year ending June 30, 1901, divided as follows: White, 42; negro, 23; white deaf boys, 17; white deaf girls, 17; white blind boys, 6; white blind girls, 2; negro deaf boys, 10; negro deaf girls, 8; negro blind boys, 5. The appropriation for the school for the year ending June 30, 1901, was \$10,000. The Legislature of 1901 increased the amount of the annual appropriation to \$12,000, and made a separate appropriation of \$4,500 for repairs and other expenses.

Charities.—The Hospital for the Insane on Jan. 1, 1901, had 600 patients. In the year, up to Dec. 25, 1901, 270 new patients were admitted. These were: Whites, 166; negroes, 104; white males, 96; white females, 70; negro males, 67; negro females, 37. More patients were admitted during 1901 than during any previous year in the history of the hospital. The State in 1900 expended \$68,302.63 in the maintenance of the hospital. The average monthly per capita expense in 1900 was \$9.36.

Agriculture.—Reliable sources give the following data as approximating the value of the State's agricultural productions in 1900: Sea island cotton, \$2,125,000; upland cotton, \$1,400,000; corn, \$2,500,000; oats, \$270,000; sweet potatoes, \$735,000; Irish potatoes, \$80,000; sugar-cane products, \$645,500; rice, \$75,000; field peas, \$315,000; hay, \$245,000; peanuts, \$1,500,000; tobacco, \$720,000; cabbage, \$110,000; beans, \$175,000; celery, \$125,000; tomatoes, \$1,000,000; other vegetables, \$193,000; watermelons and cantaloups, \$225,000; strawberries, \$245,000; peaches and pears, \$90,000; oranges, \$1,212,500; grapefruit, \$182,000; pineapples, \$600,000. Number of cattle in the State, 460,000; value of cattle marketed, \$1,433,320; number of sheep, 75,000; value of wool, \$60,000; number of hogs, 320,000; value marketed, \$320,000; value of poultry sold, \$250,000; value of eggs sold, \$400,000; value of dairy-products, \$840,000; value of honey, \$40,000.

The secretary of the State Agricultural College makes the following statements: The State has the largest apiary in the world, 3,000 colonies; the largest watermelon farm in the world, 2,300 acres; the largest tomato farm in the world, 250 acres; the largest pineapple plantation in the world, 65 acres; the largest cigar-tobacco farm in the world, 1,000 acres; the largest fenced stock-range east of the Mississippi, 25,000 acres; the largest flock of sheep east of the Mississippi, 15,000 head; the largest velvet-bean plantation in the world, 1,300 acres; the largest citrus-tree nursery in the world.

Railroads and Telegraphs.—The railroad mileage in Florida in 1901 was 3,147.13 miles of main track, with 361.21 miles of branches and sidings. The assessed valuation of the railroads in the State was \$19,323,699.16. In 1900 the mileage of the main track was 3,109.70 miles, with 341.32 miles of branch, side, and switch track. The total assessed valuation in 1900 was \$19,190,310.81. The gross earnings of the railroads doing business in Florida were \$7,142,134 in 1900; operating expenses, \$5,252,821.

There were 2,952.40 miles of telegraph-lines

assessed in 1901, ranging from 1 to 55 wires to each pole. The total assessed valuation for the telegraph-lines of the State was \$258,134.20. In 1900 there were assessed 3,048.40 miles of telegraph-lines, at a valuation of \$259,317.40.

Insurance.—The last statement of the State Treasurer gives 83 insurance companies authorized to do business in the State in 1900. Of these 54 were fire insurance companies, 10 life insurance companies, 19 miscellaneous insurance. The aggregate losses of the fire insurance companies in 1900 were \$438,228.24, and the receipts for the same period \$808,703.31. Nine life insurance companies reported loss of \$265,455.32; receipts of the 10 doing business were \$918,526. Seven of the miscellaneous companies reported no loss; the aggregate losses of 12 were \$38,765.08; the receipts of the 19 companies doing business in the State were \$95,596.06. The total profits of all insurance companies doing business in the State were \$1,080,377.44 for 1900.

Fish and Sponge.—The number of barrels of fish caught in 1900 was 177,950, value \$983,000. The yield and value of the sponge-fisheries of the State, as stated by the United States Commissioner of Fish and Fisheries in his last report, were as follow: In 1895, 306,120 pounds, value \$386,871; in 1896, 236,311 pounds, value \$273,012; in 1899, 304,400 pounds, value \$367,914; in 1900, 364,999 pounds, value \$567,685. Five million shad fry were placed in Florida streams in 1901 by the State Fish Commission.

Penitentiary.—On Dec. 31, 1901, there were 923 State convicts, of whom 119 were white and 904 colored, divided as follow: White males, 118; white females, 1; negro males, 888; negro females, 16. In the year 1901 8 convicts died from natural causes, and 2 were killed while endeavoring to escape; 15 escaped, and 13 were pardoned. In 1901, 220 convicts were discharged by limitation of sentence, and 401 new prisoners were committed.

The death-rate in 1901 was remarkably low. The condition of the State convicts has much improved since they were placed under the charge of a State supervisor; they are furnished with comfortable quarters and good food and clothing. Before the appointment of a State supervisor to visit the camps at which the convicts are worked and enforce compliance with the convict laws the convicts were made to work and to sleep in shackles; they are now freed from all chains, and the number of escapes is 50 per cent. less.

Corporations.—The following figures, including the period from Dec. 31, 1900, to Dec. 1, 1901, are believed to be accurate: Articles of incorporation issued, 88. These included 18 to manufacturing enterprises, 1 to building and loan association, 13 to transportation, dockage, and telephone companies, 4 to mutual benefit associations, 2 to fair associations, 3 to agricultural enterprises, 2 to mining companies, 10 to land companies, 5 to publishing companies, 3 to banking companies. Lumbering enterprises on a very large scale were undertaken this year, which also saw the beginning of boring for coal-oil.

Militia.—The authorized strength of the Florida State troops is: 1,024 privates, 229 non-commissioned officers, 109 field and staff officers. The actual strength on Jan. 1, 1901, was: Governor's staff, 10; officers of all ranks, 106; enlisted men, 1,084; a total of 1,200 men. During the year 1901 the expenses of the State troops amounted to \$4,011.82; expenses of troops for military occupation of Jacksonville after the great fire, \$12,734.66.

Jacksonville.—The metropolis of the State was nearly destroyed by fire on May 3. The fire

was started by a spark from a chimney which fell into a pile of fiber, and fanned by a high wind, and in a few minutes was beyond control. An area of 455 acres, having 1,000 houses, was burned over in about six hours. One block in the limits of the old incorporation was totally destroyed; 50 of these were burned out of the remainder the finest residence portion of the city; and 9,501 persons were burned out of the number of places of business. The property loss is estimated at about \$11,000,000, with about \$2,000,000 of insurance. The city received outside relief amounting to \$240,000 in money, and about \$60,000 in supplies. It showed wonderful recuperative power, and at the end of eight months from the time of the fire had issued nearly 1,400 building permits, generally for a better class of buildings than those destroyed.

Legislative Session.—The biennial session of the Legislature opened on April 2 and ended May 31. A large number of bills were passed, few being of general importance. The appropriations for educational purposes were unusually liberal; and extraordinary measures were taken for the relief of sufferers by the Jacksonville fire, and for the purpose of reestablishing legal records and papers destroyed in the fire.

Gov. Jennings, in his message to the Legislature, said: "One of the most important questions for your consideration is that of taxation. Under our present system of valuation, property in some of the counties is assessed at 90 per cent. its value, and in others at less than 20 per cent. I recommend a board of equalization." This suggestion was acted upon.

The most important acts passed by the Legislature are as follow:

To provide for the inspection and analysis of and to regulate the sale of commercial fertilizers, manurial chemicals, cottonseed meal, castor pumice, tobacco-stems, tobacco-dust, or tobacco-meal.

To amend an act to provide for a board of phosphate commissioners and an inspector of phosphate.

To authorize any person, association, or union of working men to adopt and use a label or trademark, to protect the same by law, to provide for its record.

To protect contractors, mechanics, and material men, and to provide for summary collection of moneys due them for wages or materials furnished.

To authorize a married woman under age to convey real estate.

To regulate the holding of political primary elections.

A joint resolution favoring the election of United States Senators by the people was passed.

To provide for the issue, custody, redemption, sale, and transfer of tax-sale certificates, and the issue of tax deeds. This act is an attempt to rectify a state of affairs that has caused the State much loss of taxes, and property-holders much hardship.

GEORGIA, a Southern State, one of the original thirteen, ratified the Constitution Jan. 2, 1788; area, 59,475 square miles. The population, according to each decennial census, was 82,548 in 1790; 162,686 in 1800; 252,433 in 1810; 340,985 in 1820; 516,823 in 1830; 691,392 in 1840; 906,185 in 1850; 1,057,286 in 1860; 1,184,109 in 1870; 1,542,180 in 1880; 1,837,353 in 1890; and 2,216,331 in 1900. Capital, Atlanta.

Government.—The following were the State officers in 1901, all of whom hold through the year 1902: Governor, Allen D. Candler; Secretary of State, Philip Cook; Treasurer, Robert E. Park;

Comptroller-General, William A. Wright; Attorney-General, Joseph M. Terrell, succeeded Feb. 1, 1902, by Boykin Wright; Adjutant-General, J. W. Robertson; Commissioner of Agriculture, O. B. Stevens; Geologist, W. S. Yeates; Chemist, J. M. McCandless; Special Attorney of Western and Atlantic Railroad, E. T. Brown; Pension Commissioner, John W. Lindsey; Entomologist, W. M. Scott; Librarian, James Brown, succeeded by C. J. Wellborn in November, 1901; Railroad Commissioners, S. R. Atkinson, J. Pope Brown, G. Gunby Jordan; Prison Commissioners, J. S. Turner, C. A. Evans, Thomas Eason; Chief Justice Supreme Court, Thomas J. Simmons; Associate Justices, Samuel Lumpkin, Henry T. Lewis, Andrew J. Cobb, William A. Little, William H. Fish; Clerk, Z. D. Harrison; Court Reporters, George W. Stevens, John M. Graham—all Democrats.

The term of the State officers elected by the people is two years. They are elected the first Monday in October of even-numbered years. The Legislature is elected for two years, and meets annually on the fourth Wednesday in October for a session of fifty days.

Finances.—During the year Gov. Candler was authorized to borrow \$200,000 with which to tide over casual deficiencies. The Treasurer, instead of securing the loan from Eastern houses, decided to borrow from Georgia banks, and obtained the money at the rate of 2-per-cent. interest, when Eastern banks were receiving 3 per cent. for similar loans. The balance in the treasury Jan. 1, 1902, was \$1,356,525.99. The bonded debt of the State Jan. 1, 1902, was \$7,631,500. On Jan. 1, 1902, \$100,000 of bonds was retired, and the same amount will be retired on the 1st of every January. The annual interest charge on the bonded debt is \$325,800.

The records of the Comptroller-General show that the State owns the Western and Atlantic Railroad, running from Atlanta to Chattanooga, Tenn., 139 miles. This property is estimated in value at \$12,000,000. The State owns 186 shares of the Georgia Railroad and Banking Company, worth \$20,700, and 440 shares of stock of the Southern and Atlantic Telegraph Company, estimated in value at \$10,000.

Valuations.—The value of all taxable property in the State for 1901 is \$456,347,034, showing an increase over 1900 of \$23,023,343. The increase for the year in railroad property alone was \$6,385,619. The increase in manufactures was \$5,777,228, and the increase in merchandise \$3,454,492. The total amount of property returned for taxation by the negroes of the State was \$15,629,811, an increase of \$3,000,000 during the past ten years. The increase in the value of railroad property since 1890 was \$13,000,000.

Appropriations.—The appropriations for 1901 were as follow: To the State University, \$8,000; Academy for the Blind, \$18,000; School for the Deaf, \$25,000; State Sanitarium, \$290,000; State School of Technology, \$40,000, and for buildings, \$16,000; Georgia Normal and Industrial College, \$22,900; North Georgia Agricultural College, \$7,000; State Normal School, \$22,500; Negro College, at Savannah, \$8,000; printing, \$15,000; Public Building fund, \$17,500; fire insurance, \$24,000; Supreme Court reports, \$7,500; disabled Confederate veterans, \$190,000; indigent veterans, \$300,000; widows of Confederate veterans, \$200,000; indigent widows of soldiers, \$100,000; geological department, \$8,000; prison department, \$112,000; additions to State Sanitarium (special), \$150,000; addition to State University (special), \$45,000; other special appropriations, \$15,000. The additional appropriations available in 1902 are the

sum of \$500,000 to build a new union depot on the property of the State in Atlanta, \$19,000 to rebuild the Confederate Soldiers' Home, \$20,000 for the State militia, and \$63,500 additional to the fund for indigent veterans.

Banks.—The capital of State banks is \$9,315,127.50. There are also in Georgia 32 national banks, with capital of \$4,416,000, and 51 private banks, 8 of which are branches of State banks. State Treasurer Park says in his report: "There has been an increase of 24 banks in the State since I entered upon my duties as Treasurer and State Bank Examiner, and the deposits have grown proportionally. There were examined in 1900 134 banks, and 169 were examined in 1901. There are chartered at the present time 175 banks. The total increase in loans made by Georgia banks from Nov. 1, 1900, to Sept. 5, 1901, was \$5,393,945.81." In 1901 only one failure was reported among the State banks. Figures prepared by the department show that the heaviest depositors in the State as a class are the farmers. The following figures show the condition of the Georgia State banks in 1901: The resources were—Loans, \$33,147,888.60; overdrafts, \$479,701.98; bonds and stocks, \$2,430,067.06; real estate, furniture, and fixtures, \$1,799,961.97; due from banks and bankers, \$3,622,947.62; cash on hand, \$2,484,397.89; other items, \$153,243.35; total, \$44,118,208.47. The liabilities were—Capital paid in, \$9,315,127.50; surplus and net profits, \$3,766,876.44; due banks and bankers, \$986,765.45; due unpaid dividends, \$18,958.52; due depositors, \$23,585,161.77; rediscounts, \$1,689,204.43; bills payable, \$4,752,918.33; other items, \$3,196.03; total, \$44,118,208.47.

Education.—The report of the State School Commissioner, issued in September, 1901, shows a total enrolment in the public schools of 484,385. The public-school fund for 1901 was \$1,505,127, and the same fund for 1902 is \$1,538,955.17. The negro common schools have the same term as the white schools, and the enrolment of negro children is 45 per cent., while that of the whites is 55 per cent. This shows a large increase in the percentage of negroes attending schools. Lack of capable teachers is assigned as the greatest drawback to the negro's education. The School Commissioner is authority for the statement that not 10 per cent. of negro teachers are capable of teaching. The Slater educational fund distributes \$5,000 to negro schools in Georgia. The Peabody fund gives \$6,000 to white schools and \$1,500 to negro schools. Practically \$2,000,000 is invested in negro schools for higher education by philanthropic people at the North and East. This is more than all the white schools in the State of similar character are worth. In the rural districts the poor whites depend on the bounty of a poverty-stricken treasury for their education, while Northern philanthropy provides for the children of the negroes.

The public schools have had the largest enrolment in their history during the past year. All the secondary schools and colleges, without exception, have had largely increased patronage. In almost every county there was held during the past summer an educational rally, generally in the form of the county institute. Under the present law only \$25 is allowed for the pay of an institute teacher. At the meeting of the county superintendents in May, 1901, a resolution was passed urging the Legislature to increase the salary of institute teachers, and also to lengthen the institute term to two weeks.

In the mountainous portions of Georgia the condition of illiteracy is deplorable. Of the peo-

ple in this section, President Branson, of the State Normal School, says: "I spent a few days in the mountains recently; the people I found there might just as well have been born without fingers, so useless are their hands. It is pitiful. They can neither cook nor sew. Apparently they can do nothing except hoe small patches of corn, hang together a few rags for clothes, and beat their dirty linen with paddles. Their homes are wretched hovels; their surroundings are forbidding, and their minds are sunken into a kind of pauperism out of which it seems impossible to rouse them. Of course there are better people in these mountains, as elsewhere in the State; but the superstructure of our civilization rests on miasms of ignorance, superstition, dirt, and insensibility to things above mere animal existence."

In his annual report for 1901, State School Commissioner Glenn says: "We have 665,000 children of school age. Eight-ninths of these children are in the rural districts. They go to school less than one hundred days in the year. The teachers of these children receive as their pay an average of less than \$130 for their services in each one of the rural schools. The day laborer in the streets of Atlanta receives more pay for his toil than we pay to the average district-school teacher, and yet the teachers are expected to be experts. There is a growing demand for teachers, especially in the rural schools, who can teach manual training, elementary agriculture, and other studies that are known to be necessary for a well-rounded development of the child."

Prisons.—Oct. 1, 1901, there were on hand 2,245 State convicts, distributed among the convict camps and at the prison farm at Milledgeville. Of this number, 258 were white and 1,987 colored. Of boys and girls under fifteen years of age there were 22. The number of women in the Penitentiary is 85, of whom 6 are whites and 79 blacks. Of those in the Penitentiary, 1,028 can read and write; 202 can read only; and the remainder, 1,015, are wholly illiterate. From a financial standpoint the operation of the new lease system has been a decided success. The establishment of the prison farm at Milledgeville was brought about for humane purposes; in order that the old and infirm and diseased, together with women and children, might be taken away from the convict camps and away from associations with hardened criminals. At the prison farm are 261 convicts, of whom 157 are men, 85 are women, and 19 are boys under fifteen years of age. The burden of farm work falls upon the women and boys, who are, as a rule, strong and healthy, and who not only make their own support but assist to a large extent in making a support for the men. The prison farm is one of the largest agricultural establishments in the State, and the income derived from it not only makes it self-supporting but turns into the treasury a large sum every year.

The system of pardoning is such that the Governor, in whom the real pardoning power is vested, seldom or never exercises that authority, leaving the applications of convicts entirely with the Prison Commission. In 1901 the Commission passed upon 216 applications for pardon. In a vast majority of them it declined to recommend.

Under the new lease system, which has taken the convicts out of the control of contractors, where they were subjected to many brutalities, and placed them in the State's control, Georgia realizes a larger sum from convicts than ever. In conformity with the new act, the labor of the convicts has been leased for five years, and

\$100 a year is the average price per capita for the convicts' labor, compared with the lessees of this labor have subleased at enormous profit, some of them getting as much as \$250 per capita.

Minerals.—The value of the gold mined in Georgia from 1895 to 1901 is estimated at \$546,006. In the Gold Bulletin of his department, State Geologist Yeates says: "I do not believe that the Georgia mines may be expected to produce bonanzas, and the fortunes to be made in a day will be exceedingly rare, but there is every reason to believe that when properly developed and equipped for operation, the gold-mines of Georgia will rank among the best dividend-producers in the world."

The department of geology has just issued a statement of the mineral output of the State for 1900, as follows: Iron, 236,748 tons, \$235,343; ocher, 3,212 tons, \$39,505; manganese, 3,089 tons, \$25,377; bauxite, 7,507 tons; asbestos, 650 tons, \$10,500; coal, 233,000 tons, \$233,344; clays, \$834,908 (manufactured); cement, \$13,500; slate, \$7,500; granite, \$411,344.

During the past year the production of coal and iron moved forward faster than any other minerals.

Agriculture.—The year witnessed rapid strides in the southern counties in nearly every branch of agriculture. In the past, the pine country has been satisfied with the production of naval stores and lumber; but its people have begun to see that the pine forests can not last forever, and they are turning to the cultivation of the land. In this section the soil is richer than anywhere else in the State, and sugar-cane and tobacco are being raised with every evidence of success. The Commissioner of Agriculture reports the products of the State for 1901 as follow: Corn, 34,119,530 bushels, \$19,448,132; wheat, 5,011,133 bushels, \$4,760,567; oats, 7,010,040 bushels, \$3,434,920; rye, 109,525 bushels, \$112,815; Irish potatoes, 391,816 bushels, \$301,698; hay, 190,237 tons, \$2,425,522; cotton, 1,345,699 bales, \$48,024,822; by-products of cotton, \$14,000,000; rice, 7,500,000 pounds, \$375,000.

Tobacco never has been a staple crop in Georgia, and only in the last year has any attempt been made to raise it for market. The latest report on tobacco shows an area of 800 acres devoted to it, on which was produced 263,752 pounds last season.

The truck-farming business has taken rapid strides, and the truck farms in the five largest counties are valued as follow: Chatham, \$225,000; Richmond, \$85,000; Bibb, \$35,000; Muscogee, \$30,000; and Fulton, \$150,000.

The peach industry has grown greatly in the past year, and it is estimated that since 1900 about 2,000,000 young trees have been planted, which, with those put out in 1899 and 1898, will give Georgia by 1904 more than 8,500,000 bearing peach-trees. In 1901 the number of car-loads of peaches from all Georgia shipping-points was 2,500, of which 1,400 came from one small section of the State. The next largest fruit-crop is apples. A pecan grove of over 1,000 trees is now bearing in Dougherty County. Smaller groves have been planted in Spalding and Hancock Counties. The innovation is meeting with great success.

R. J. Redding, director of the Georgia Agricultural Experiment Station, in his report for the past year, says: "I know of no soils that respond so promptly and gracefully to fertilizers as the soils of Georgia. During each of the last three years yields of 25 to 40 bushels of wheat to the acre have not been unusual. The same soils would

produce 75 to 100 bushels of oats, or $1\frac{1}{2}$ bale of cotton, or 50 bushels of corn."

Manufactures.—The year 1901 served to put Georgia in the front rank in manufactures in the Southern States. In the construction and operation of cotton factories and cottonseed-oil mills since 1898, and particularly during the past twelve months, Georgia leads. The rapid construction of cotton factories has in fact been so rapid as to cause a setback to this industry. It is a fact not generally known that the trade which the Georgia cotton factories, in competition with Eastern factories, had built up was the trade with China and the Orient, and the recent troubles in China practically put an end to trade relations for the time being, and the Georgia factories were forced to seek other markets.

A table based on that of the Census Bureau shows the following manufacturing totals for 1901: Number of establishments, 7,504; capital, \$8,789,656; wage-earners, average number, 83,842; total wages, \$20,344,071; miscellaneous expenses, \$5,321,330; cost of materials used, \$53,232,203; value of products, including custom work and repairing, \$106,648,677.

The latest statistics show that the cotton factories of the State already built and in operation number 75. Their total value is placed at \$20,689,000. The number of spindles in operation is estimated at 927,346, and the number of looms at 26,645. In September, 1901, there were 52 active cottonseed-oil mills in the State, with an approximate capital of \$2,500,000. These mills paid last year \$5,000,000 for cottonseed alone, and the value of their products was approximately \$14,000,000. Seven new mills are in process of construction.

The lumber, tar, and turpentine business has brought into Savannah and Brunswick a vast quantity of material for shipment, and has made the former city the largest lumber and naval-stores market in the world.

The pig-iron industry in Georgia, which remained dormant from 1890 to 1895, has suddenly moved forward again, and several large plants are being constructed in the northern part of the State. Georgia consumes more chemical fertilizers than any other State in the Union. In 1901 there were 112 fertilizer plants in operation in the State. The consumption of fertilizers in 1901 amounted to 478,000 tons.

The last Legislature amended the fertilizer laws and placed rigid restrictions around the sale of the article.

Confederate Soldiers' Home.—The home for indigent and helpless Confederate veterans, which was built through the influence of Henry W. Grady a few years before his death, was finally opened for the veterans on July 1, 1901. On Sept. 30, 1901, the institution was destroyed by fire, and the same day a temporary home was rented in Atlanta, and the veterans still live there, waiting for their home to be rebuilt. In addition to the insurance secured on the building, the people of the State added liberally by popular subscription, and enough money is now on hand to build a finer home than the original one.

IDAHO, a Northwestern State, admitted to the Union July 3, 1890; area, 84,000 square miles; population in 1890, 84,385; in 1900, 161,772. Capital, Boise City.

Government.—The following were the State officers during the year: Governor, Frank W. Hunt; Lieutenant-Governor, Thomas F. Terrell; Secretary of State, Charles J. Bassett; Auditor, Egbert W. Jones; Treasurer, John J. Plumer; Attorney-General, Frank Martin; Adjutant-General, J. L. Weaver; Superintendent of Public In-

struction, Permeal French; Mine Inspector, Martin H. Jacobs; State Engineer, D. W. Ross; Chief Justice of the Supreme Court, Ralph P. Quarles; Associate Justices, I. N. Sullivan and Charles O. Stockslager; Clerk, Solomon Hasbrouck.

The State officers are elected in even-numbered years, the term beginning in January of odd-numbered years. The Legislature holds biennial sessions, beginning in January of odd-numbered years. Sessions are not limited, but members draw pay for only sixty days.

Finances.—The report of the Treasurer shows that at the beginning of 1901 the State was in

a strong financial condition. County delinquencies have been corrected, and as a result of the law requiring counties to remit promptly, the amount of outstanding warrants has been greatly reduced. The amount of these, Jan. 1, 1899, was \$204,649.64, and Jan. 1, 1901, it was \$95,499.45. The interest paid on general fund warrants, which in 1895 amounted to \$20,737, had been reduced to \$4,261 in 1900. Of the outstanding bonds, the State held, Jan. 1, 1901, \$73,000, and on \$340,500 it was paying interest. The general fund receipts for 1899 and 1900 were \$613,507.26, and the disbursements \$613,376.29, leaving a balance Jan. 1, 1901, of \$130.97. The sale of \$205,000 of State bonds in June was made to a single bidder, and brought \$10,865 premium. The bonds carry interest at the rate of 4 per cent., but the premium reduces this to 3%.

Valuation.—The State Auditor's computation of the assessed valuation by counties as equalized in 1901, exclusive of railroads, telegraphs, and telephones, presents a total of \$52,195,486.39, against \$47,545,905.82 in 1900. The amount of State taxes levied for 1901 was \$245,000. According to the State Auditor, the assessment for mines and mining improvements for 1899 was \$1,482,679; for 1900, \$1,533,406. The railroads of Idaho were assessed in 1901 \$9,032,260, against \$8,893,415 in 1900. There are now more than 1,300 miles of railroad in the State. Special levies upon the counties for wagon-road funds in 1901 raised the total revenues of the State from \$245,000 to \$270,715.38.

Education.—The State University has had another year of growth and prosperity. At its sixth commencement in June 24 degrees were conferred upon graduates—16 in the department of arts and letters, 2 in agriculture and horticulture, 2 in civil engineering, 3 in mining engineering, and 1 in music. A girls' dormitory and an engineering building were added in the year. Under a law passed by the last Legislature, reducing the number of regents of the university from 9 to 5, the Governor appointed a new board in March.

The State Normal School, at Lewiston, is also rapidly growing in equipment and attendance. New buildings and new departments were added in 1901.

FRANK W. HUNT,
GOVERNOR OF IDAHO.

Idaho makes provision for the care and education of a considerable number of deaf, dumb, and blind children at institutions in neighboring States. The State Superintendent of Public Instruction reports gratifying results for the year from this arrangement.

Blackfoot Asylum.—In January the directors of the Asylum for the Insane, at Blackfoot, made their report for 1899 and 1900. During the latter year the smallest number of patients at any one time was 189, and the largest 213. The report says that the asylum made a fine display at the State fair at Boise City in 1900.

Penitentiary.—The number of prisoners in the Penitentiary Aug. 1, 1901, was 124. In July 6 were discharged, paroled, or pardoned, and 5 were received.

Martial Law.—May 4, 1899, Shoshone County was declared under martial law, and order and prosperity ensued. April 11, 1901, Gov. Hunt issued a proclamation abolishing martial law and restoring civil government. April 14, at Mullan, in the same county, two deputy sheriffs were shot at from ambush in the night, and one of them was wounded three times. One of the assailants was killed by the officers.

Legislative Session.—The session of the Legislature began Jan. 7 and ended March 12. Its membership consisted of 43 Fusionists and 27 Republicans. One of its early acts was the election of F. T. Dubois, Silver Republican, to succeed G. L. Shoup, Republican, as United States Senator. The number of bills passed was 115; resolutions and memorials, 11. Among the bills approved by the Governor were the following:

Making the judiciary committees of both houses a joint body to consider the codes.

Providing for the rebuilding and equipment of the Soldiers' Home.

Creating a free traveling library and a library commission to establish free public and public-school libraries throughout the State.

Providing for the care and preservation of flags belonging to the State.

Establishing at Pocatello the Academy of Idaho.

Authorizing a \$13,000 bond issue for improvements at Albion Normal School.

Prohibiting non-resident insurance agents from writing policies in Idaho.

Creating an arbitration commission to act in adjusting disputes between employers and employees.

Creating the office of insurance commissioner, and providing for taxation of insurance companies.

Creating Clearwater County.

Appropriating \$15,000 for an exhibit at the Pan-American Congress and providing for a Pan-American commissioner.

Providing for a bond issue of \$50,000 for a girls' dormitory and a hall of science at the State University.

Refunding the bonded indebtedness incurred by the State at its admission to the Union.

Providing for the codification and publication of the laws of Idaho.

Providing for the incorporation and regulation of trust, guarantee title, abstract, and safety-deposit companies.

Making the killing of live stock by a railroad *prima facie* evidence of negligence on the part of the railroad company.

Submitting a constitutional amendment for an eight-hour law.

Authorizing the issue of \$117,000 of bonds to pay deficiencies incurred from 1895 to 1900.

Appropriating \$5,000 for the mining congress.

The total amount of appropriations made and bonds authorized by the Legislature was \$940,714.50.

Irrigation.—At the beginning of 1901 Idaho had 535,000 acres of irrigated land under cultivation, being about the same amount that was cultivated without irrigation, and more than 2,500 miles of large canals, costing over \$1,600,000. The increase of irrigation from 1889 to 1899, shown by the Federal census, was 132 per cent. There were 13 canals owned by corporations selling water to the farmers, under which 82,000 acres were irrigated, while the number of acres irrigated under farmers' canals was 453,000. The great increase since 1899 has been under canals owned by the users of the water. In the upper Snake valley, where the canals are mainly owned by the farmers, settlement has been much more rapid than in any other part of the State.

Productions.—According to the estimate of the United States Director of the Mint, the production of gold in Idaho in 1900 was valued at \$2,067,173, against \$1,550,958 in 1899. The silver yield was 4,500,000 fine ounces. Adding lead and copper, the total value of the State's mineral production was about \$14,000,000. Great importance is attached to the developments of the year in the Snake river gold region, and those of the Thunder mountain section created an unusual excitement. Lively interest has also been awakened in the oil and gas discoveries of 1901 in various localities along the Snake.

Sheep-raising is an industry of growing importance. Expert investigation in the interest of the National Sheep-Growers' Association, early in 1901, found the conditions in different parts of the State highly satisfactory. The number of sheep summered in 1900 in the 10 southernmost counties was found to have been more than 3,000,000.

The Idaho commissioner at the Pan-American Exposition reported in July: "The mining exhibit from Idaho attracts the attention of a certain class, the forestry exhibit of another, the agricultural exhibit of another, but the horticultural attracts the attention of all. It is the best exhibit in that line at the exposition." It was a matter of general surprise to visitors to learn that Idaho raised fruit at all.

Land Survey.—The following statement is based on the official report of the United States Surveyor-General for Idaho for the fiscal year ending June 30, 1901: The area of the State has generally been given in official reports as 55,228,160 acres, but from recent surveys it appears that it is 53,883,648 acres, of which the accepted surveys are 19,077,729 acres, leaving unsurveyed 34,805,919 acres. There was appropriated for agricultural surveys for the fiscal year \$39,400, and there were during the year surveyed 50 full and fractional townships, embracing 818,435.24 acres. The report of the Receiver of the United States Land-Office for the same period shows that in the Boise land district, embracing nearly 13,000,000 acres, there are over 11,500,000 acres still unappropriated. This area includes almost every known kind of land.

Hydrographic Surveys.—Surveys to determine the amount of water-supply are being conducted under an agreement entered into by the State Engineer with the director of the United States Geological Survey, by the terms of which the hydrographic surveys in this State are to proceed under the appropriation of \$1,200 made by the last Legislature, which sum has been duplicated by the General Government.

ILLINOIS, a Western State, admitted to the Union Dec. 3, 1818; area, 56,650 square miles. The population, according to each decennial census, was 55,162 in 1820; 157,445 in 1830; 476,183 in 1840; 851,470 in 1850; 1,711,951 in 1860; 2,539,891 in 1870; 3,077,871 in 1880; 3,826,351 in 1890; and 4,821,550 in 1900. Capital, Springfield.

Government.—The following were the State officers during the year: Governor, Richard Yates; Lieutenant-Governor, William A. Northcott; Secretary of State, James A. Rose; Auditor, James S. McCullough; Treasurer, M. O. Williamson; Attorney-General, H. J. Hamlin; Superintendent of Public Instruction, Alfred Bayliss; Adjutant-General, Gen. J. M. Reece; Superintendent of Insurance, Henry Yates; Justices of the Supreme Court, Carroll C. Boggs, James B. Ricks, Jacob C. Wilkins, Joseph N. Carter, John P. Hand, James H. Cartwright, Benjamin D. Magruder.

The Governor, Lieutenant-Governor, Secretary of State, Auditor of Public Accounts, and Attorney-General are elected in November of presidential years and hold office four years. The State Treasurer is elected biennially, in November of even-numbered years, and may not serve two terms in succession. The State Superintendent of Public Instruction is elected for four years in November of even-numbered years other than "presidential years." The Legislature meets biennially in January of odd-numbered years. The length of the session is unlimited.

Valuations.—The total assessment of the counties for 1901, as given by the Auditor, was \$891,256,228, against \$779,512,078 for 1900. The Board of Equalization had not completed its report at the end of the year. The delay was caused by a suit for mandamus to compel the board to assess the capital stock and franchise values of 23 Cook County corporations. The board added \$172,000,000 to the valuations of 1900, and in round numbers \$86,000,000 to the assessments for 1901.

Banks.—The following figures were given in the report of the State Auditor as to the condition of 151 State banks that were doing business for the twelve months ending June 30, 1901: Capital, July 1, 1900, \$18,237,000; surplus, \$7,142,301; undivided profits, \$5,434,020; total investments, consisting of loans, bonds, stocks, and realty, \$160,755,094; total investments, consisting of part of reserve due from banks, \$39,464,173; gross earnings for the twelve months, \$9,976,210; net earnings for twelve months, \$2,895,611. Of the above 151 banks, 134 report dividends having been paid during the twelve months amounting to \$1,712,169.43. The percentage of dividend per capital, surplus, and undivided profits was 5.7, and the percentage of dividend per capita was 9.8.

In October, 1901, the Auditor's statement showed the total resources and liabilities of the 167 State banks as \$262,421,036. This report included the following items: Resources—loans and discounts, \$143,058,409; United States bonds, including premiums, \$323,424; other bonds, including premiums, \$40,995,820; other real estate, \$1,421,472; gold coin, \$6,885,191; gold certificates, \$10,362,272; silver coin, \$347,309; silver certificates, \$1,385,905; national bank currency, \$6,366,865; legal-tender and Treasury notes, \$2,581,905. Liabilities—capital stock, \$20,900,000; surplus fund, \$9,768,233.

Charities.—The report of the State charitable institutions for the quarter ending Sept. 30, 1901, shows the following figures: The number of inmates present Sept. 30 was 10,445. The average

number during the quarter was 9,712. The per capita cost of maintenance was \$40.52. Deducting outside receipts, the cost to the State was \$36.20. A comparison of the liabilities and available resources of the institutions shows that the surplus for all, Sept. 30, was \$137,219.74.

The number of inmates present in the Northern Insane Hospital at the end of the quarter was 1,158, of whom 523 were males and 685 females. The other 4 asylums for the insane report as follows: Eastern, Kankakee, 1,112 males, 1,029 females; Central, Jacksonville, 640 males, 623 females; Southern, Anna, 567 males, 503 females; Western, Watertown, 335 males, 300 females.

The Illinois Soldiers' and Sailors' Home, at Quincy, had enrolled 1,563 inmates. The average cost of maintenance for the quarter was \$29.91. The total cost to the State was \$42,034. Surplus of cash on hand and cash due, \$26,371.

The Illinois Asylum for Feeble-Minded Children, at Lincoln, had 987 inmates—533 males and 454 females. The average daily attendance for the quarter was 957. The average per capita cost of maintenance was \$36.93. The total cost to the State for the quarter was \$31,850.63 for ordinary expenses, \$13,388 for special expenses. The accounts show a surplus of \$18,062.

The Institution for the Deaf and Dumb, at Jacksonville, had present Sept. 30, 1901, 527 inmates—310 males and 217 females. The actual cost of maintenance for this period was \$16,626, or \$31.85 per capita.

The Soldiers' Widows' Home, at Wilmington, provided for 48 inmates during the quarter, at a cost to the State of \$2,223, or an average of \$51.28.

The Soldiers' Orphans' Home, at Normal, had 217 males and 172 females.

Education.—The public-school statistics for the year ending June 30, 1901, reported by Alfred Bayliss, Superintendent of Public Instruction, give these items: Number of children between the ages of six and twenty-one—males, 808,330; females, 787,515; total, 1,595,845. This number is somewhat too small from the fact that the school census has not been taken in Chicago since the spring of 1900. Number of pupils enrolled in schools—males, 485,350; females, 478,284; total, 963,634, an increase of 4,723 during the year. Average daily attendance, 756,558, an increase of 18,802. Average number of days the public schools were kept, 159.6. Number of buildings used for schoolhouses, 12,852. Number of schoolhouses built during the year, 176. Number of pupils enrolled in public high schools, 40,639, an increase of 1,881. Number of pupils enrolled in private and parochial schools, 142,076, a decrease of 420. Number of different teachers employed in public schools—men, 6,897; women, 19,632; total, 26,529, an increase of 216. Average monthly salaries of teachers, \$55.22—men, \$61.69; women, \$53.51. The total expenditures were \$19,601,994.69, an increase of \$1,274,873.57.

Insurance.—The statement of the Insurance Superintendent for 1900, issued in February, 1901, contains the following figures: The companies doing a general fire, marine, and inland navigation insurance business in this State may be classified as follows: Illinois joint-stock fire and marine companies, 6; mutual fire and insurance companies, 9; joint-stock fire and marine companies of other States, 121; foreign fire and marine companies, 50; mutual fire insurance companies of other States, 12; total, 198. This shows a net loss of 5 companies as compared with the number authorized to transact business in this State at the date of the last report.

The aggregate capital stock and deposit capital of the stock and foreign companies doing business in this State at this date is \$850,000 less than the aggregate capital at the previous report. The table also shows an increase in assets of these companies of \$5,971,991, an increase in surplus of \$1,789,772, and of risks written of \$167,662,857. The net excess of receipts over disbursements for 1900 was \$6,321,327. The risks in force at the end of the year 1900, compared with 1899, show an increase of \$1,378,907,603.

The year was one of marked prosperity in life insurance, the business written exceeding that of the previous year by 8,598 policies and \$9,756,031, exclusive of industrial business. The net increase of insurance in force on new insurance written was 44 per cent., as against 57 per cent. in 1899. The total premiums received amounted to \$16,380,708, and the total losses paid were \$5,411,966. The entire industrial business written shows an increase of 212,484 policies and \$41,150,103 of insurance. The total business of all life insurance companies shows an increase in income of \$36,061,849, an increase in expenditures of \$18,483,765, an increase in assets of \$154,736,811, in liabilities of \$136,411,960, and an increase in surplus of \$18,324,851.

The 41 companies in the State doing the business of fidelity, surety, and casualty insurance show the following aggregate results: Capital, \$18,836,400; admitted assets, \$116,732,804; liabilities, \$97,706,569; net surplus, \$19,026,234; risks in force, \$4,870,025,910.

There were at the date of this report 25 assessment life and 6 assessment accident companies doing business in the State, with total admitted assets as follows: Life, \$18,378,807; accident, \$203,298. One hundred fraternal beneficiary societies doing business in Illinois show total admitted assets of \$17,865,584.

Building and Loan Associations.—The 572 associations doing business in 1900 show total assets of \$47,896,148, as compared with 599 associations in 1899 with \$54,104,602 assets.

Railroads.—From the report of the Railroad and Warehouse Commission for the year ending June 30, 1900, it appears that the total mileage of steam railroads in the State is 16,806.28 miles, an increase over 1899 of 388.41 miles. The mileage of elevated and surface electric lines is 149.68, an increase over the previous year of 52.62 miles.

The total capital of all steam railroads in Illinois at the close of the fiscal year ending June 30, 1900, was \$3,068,699,029. This is an increase of \$141,323,872, a very remarkable showing. The increase in capital of the elevated and surface electric lines was \$7,140,448. The total amount of taxes paid by the steam railroads for the year was \$4,379,611, which is a decrease from the taxes paid in 1899 of \$254,158. There was a large increase in the wages paid to employees.

The number of passengers carried by the roads reporting was 42,153,557, and the passenger earnings per mile were \$2,194. The total amount of freight handled was 83,667,441 tons. On all lines of roads reporting to the Illinois commission, the entire number of persons employed for the year 1900 was 327,163, to whom was paid in salaries a total amount of \$187,050,638, an increase over the previous year of \$22,078,495.

Mining.—From the coal-mining statistics for 1901 it appears that the number of counties in Illinois producing coal is 52. The output of all mines for 1900 was 25,153,929 tons, of which 21,009,803 tons were shipped. The number of shipping mines is 323, and average days of active operation 214. The number of employees is 39,

384, of whom 35,203 were underground. The price paid per ton for hand mining was 49.3 cents, an increase of 2 cents over the previous year. The average value of lump coal has also increased from 91 cents to \$1.09.

Food Commission.—This commission was created in 1899, penalties to go into effect on and after July 1, 1900. The duties of the commissioner, his assistant, and 6 inspectors are to enforce the laws in regard to the purity of foods by analyzing samples and prosecuting manufacturers or dealers found guilty of any violations of the law. The report for 1901 shows a total of 980 food samples analyzed. In the year 132 prosecutions were instituted, of which 53 were for fraudulent sale of oleomargarin.

Militia.—The militia consists of 7 regiments of infantry, 3 battalions of colored infantry, 1 regiment of cavalry, 3 batteries of artillery, 1 engineer company, 1 signal corps, and 1 hospital corps.

Arbitration.—The subject of arbitration of industrial disputes in 1901 received the marked attention of both employees and capitalists, and the advance made in the direction of perfecting the arbitration laws of the State have met with the approval of all persons interested in the subject. Prior to 1901 the arbitration laws of the State were lacking in one essential particular, which has been corrected by the last Legislature. This defect was the lack of jurisdiction of the State Board of Arbitration when disputes arose in labor circles which involved the public, and in which quasi-public corporations were the employers and parties to the strike or lockout; when, for instance, the means of communicating, or the questions of food, fuel, or light were involved in the strike, the inconvenience of the strike was very serious, and yet the State board had not the means at hand of making an investigation into it. The present board secured the passage of an amendment to the arbitration laws, which is embodied in the following paragraph:

"Whenever there shall exist a strike or lockout wherein, in the judgment of a majority of said board, the general public shall appear likely to suffer injury or inconvenience with respect to food, fuel, or light, or the means of communication or transportation, or in any other respect, and neither party to such strike or lockout shall consent to submit the matter or matters in controversy to the State Board of Arbitration, in conformity with this act, then the said board, after first having made due effort to effect a settlement thereof by conciliatory means, and such effort having failed, may proceed of its own motion to make an investigation of all facts bearing upon such strike or lockout and make public its findings, with such recommendations to the parties involved as in its judgment will contribute to a fair and equitable settlement of the differences which constitute the cause of the strike or lockout; and in the prosecution of such inquiry the board shall have power to issue subpoenas and compel the attendance and testimony of witnesses, as in other cases."

While this law does not give the board the right to compel the parties to the dispute to arbitrate, it nevertheless gives it the power to investigate, and makes it their duty to report to the public the results of such investigations.

The year 1901 witnessed fewer strikes in Illinois than any of its predecessors for several years. Undoubtedly the prevailing prosperity has tended to increase the wages of employees, and thus promote peace among the various workers. The adoption by the vast army of coal-miners through-

out the State of an arbitration plan of their own, very much like the methods employed by the State board to produce harmony between themselves and their employers, has had much to do with the tendency toward peace in the industrial ranks. The most important cases investigated by the State board in 1901 were the East St. Louis Building Trades case, the Saline County coal case, and the Chicago Heights case, in all of which thorough investigations were made by the board, and recommendations made which were acceptable to both sides.

Legislative Session.—The General Assembly convened at Springfield on Jan. 9, 1901, and was presided over by Lawrence Y. Sherman, Speaker. On Jan. 23 United States Senator Shelby M. Cullom was reelected. Many important measures were presented to the Assembly, but the legislation consisted chiefly of enacting appropriation bills. The Assembly adjourned *sine die* May 4, 1901. Among the more important laws of the session were the following:

The garnishment law was amended so as to exempt \$15 a week of the wages of heads of families.

The State Board of Arbitration received authority to inquire on its own motion into labor disputes that directly affect the public.

Kidnaping for the purpose of extorting money was made a capital crime, punishable by death.

Juvenile courts received jurisdiction of delinquent or uncared-for children under the age of eight years, with power to designate homes and hospitals for them. Provision made for a State home for delinquent boys, at a cost of \$35,000.

The addition of two colored battalions to the National Guard was authorized.

The city election law was amended by requiring lodging-house keepers to file lists of lodgers, etc., four weeks prior to elections.

The primary election law was amended by limiting the number of voters in each precinct to 800, and keeping the polls open from noon to 7 P. M.

Corporation authorities and park commissioners were empowered to raise funds and condemn land for small parks or pleasure-grounds.

The sum of \$250,000 was voted for the State's representation in the Louisiana-Purchase Exposition to be held in St. Louis.

The aggregate of all taxes in any district or municipality was limited to 5 per cent. of the assessed valuation of property.

Corporations were required to make annual reports to the Secretary of State.

The sale of liquor near national homes for disabled soldiers was prohibited.

Hazing was made a misdemeanor; penalty, \$500 or six months' imprisonment.

Factory owners were forbidden to employ persons under sixteen years of age more than ten hours a day, and required to furnish seats for women and girls.

INDIANA, a Western State, admitted to the Union Dec. 11, 1816; area, 36,350 square miles. The population, according to each decennial census since admission, was 147,178 in 1820; 343,031 in 1830; 685,866 in 1840; 988,416 in 1850; 1,350,428 in 1860; 1,680,637 in 1870; 1,978,301 in 1880; 2,192,404 in 1890; and 2,516,462 in 1900. Capital, Indianapolis.

Government.—The following were the State officers in 1901: Governor, Winfield T. Durbin; Lieutenant-Governor, Newton W. Gilbert; Secretary of State, Union B. Hunt; Auditor, William H. Hart; Treasurer, Leopold Levy; Attorney-General, William L. Taylor; Superintendent of

Public Instruction, Frank L. Jones; Statistician, Benjamin F. Johnson; Adjutant-General, James K. Gore, succeeded in April by John R. Ward; Geologist, Willis S. Blatchley; Commissioner of Insurance, Cyrus W. Neal; Commissioner of Public Lands, L. G. Rothschild; Tax Commissioners, J. C. Wingate, Parks M. Martin; Supervisor of Natural Gas, J. C. Leach; Secretary of the Board of Forestry, W. H. Freeman; President Board of Health, J. H. Forrest; Factory Inspector, D. F. McAbee; Fish and Game Commissioner, Z. T. McSweeney; Secretary of the Board of Charities, Amos W. Butler; Chief Justice of the Supreme Court, John V. Hadley; Associate Justices, James H. Jordan, Alexander Dowling, Leander J. Marks, Francis E. Baker; Clerk, Robert A. Brown. All State officials are Republicans.

A Governor is elected once in four years, at the time of the presidential election. Other State officers are elected for two years in the even-numbered years. The Legislature meets biennially, in January of the odd-numbered years, and consists of 50 Senators and 100 Representatives.

According to the census the State has 843,885 persons of school age, 833,697 of them native born and 10,188 foreign born. There were 425,666 males of school age; 411,353 white natives, 5,252 foreign whites, and 9,060 colored, of whom 9,011 were negroes. Of the 418,219 females of school age, 408,788 were white and 9,431 were colored. Of militia age, eighteen to forty-four years, Indiana had 530,615, of whom 516,250 were white and 14,365 colored. There were 720,206 voters in the State, 646,889 native born; 701,761 white, 18,445 colored, of whom 18,186 were negroes. The foreign-born voters numbered 73,317, of whom 73,087 were white.

Finances.—The Auditor's report for the year ending Oct. 31 shows that there was at the end of the year a balance in the treasury of \$611,649.98, which was greater by \$239,582.06 than the balance Oct. 31, 1900. During the last fiscal year the school revenue for tuition amounted to \$2,060,377.02; the receipts of the benevolent institution fund were \$660,145.80; of the State debt sinking-fund, \$396,043.29.

The disbursements for the year were \$5,541,832.86, of which \$2,055,568.20 was from the school revenue fund, \$660,109.42 from the benevolent institution fund, and \$219,717.07 from the educational institution fund.

In July the Auditor took up \$300,000 of the State's bonds, which could have run till 1909, but contained a provision giving the State an option on redeeming them before they were due.

A part of the State debt, amounting to \$1,085,000, can not be paid off until April 1, 1915, because the bonds representing that amount contain no option. There are bonds belonging to the Purdue University endowment fund amounting to \$340,000 that run perpetually, and the State

WINFIELD T. DURBIN,
GOVERNOR OF INDIANA.

University at Bloomington holds bonds of the State amounting to \$144,000 that can not be paid off until 1937. The remainder of the bonded debt that remains to be discharged is in the form of bonds that pay 3 per cent. interest annually.

The total of the State debt in January was \$4,504,615.12.

The new law for foreign corporations is a source of increased income to the treasury.

Valuations.—The Legislature added to the kinds of property to be assessed by the State Board of Tax Commissioners street-railway properties, pipe-lines running through more than one county, and fast freight and transportation companies. The assessments show a great increase in the valuations of various classes of property. The railroad property in the State is increased from \$154,275,131 to \$156,973,151. Telephone property is nearly double its previous assessment, being \$4,436,663 in 1901 against \$2,929,190 in 1900. Electric roads are valued at \$7,746,452; sleeping-car companies, \$869,580; telegraph companies, \$2,514,812; express companies, \$1,811,736; pipe-line companies, \$8,879,027.

Education.—The Superintendent of Public Instruction says: "The most remarkable development in Indiana's school system during the last ten years has been its high schools. There are within the State 717 *bona fide* high schools in which instruction is given during periods of two, three, or four years."

Of the operation of the transfer law he says: "No other force has had such an immediate and such a harmful effect upon the high-school spirit. The new law requires a transfer of school funds to accompany the transfer of children. This exodus of school funds, though not great, in most communities has caused trustees to build and equip high schools to avoid the transfer of the funds, though the additional expenditures for buildings and the small attendance do not justify such a policy."

The State Normal School, at Terre Haute, graduated 50 students in June and 26 at the close of the summer term in August.

The annual attendance at the State University, at Bloomington, is given as 1,157, and the whole number of graduates it has sent out as 2,200. About 140 were graduated in June. A new science hall is to be finished in June, 1902.

Wabash College graduated 16; the Indiana Law School, 43; Butler College, 9. De Pauw College received gifts amounting to \$146,500. By the will of Henry C. Long, his estate of \$750,000 is to be used, after the death of his widow and two children, to found a girls' college in Indianapolis.

At Purdue University the registration was more than 1,000. A new agricultural building is in process of erection.

The June apportionment of State school funds disposed of \$1,147,246.22, on a basis of 756,616 school population.

The superintendent appointed Nov. 22 as Harrison day, to be observed by the schools, with exercises commemorating the patriotic services of Benjamin Harrison. The teachers were directed to receive contributions for the memorial fund to be used for a monument to the ex-President. The amount from a pupil was limited to 5 cents, and from a teacher to 10 cents. School statistics for 1900 show an enumeration of school-children, 756,004; teachers, 15,617, of whom 7,208 were men; average daily wages of men in townships, \$2.11; and of women, \$1.94.

Charities and Corrections.—The population of Indiana's penal and correctional institutions

has remained almost stationary in the past six years. The figures six years ago were 2,118, and for last year 2,185. While it is true of the total number in all the institutions the number in the institutions severally have varied somewhat. The number of persons actually in each of the State's 13 institutions on April 30, 1901, was as follows:

Central Hospital for Insane, 1,675; Northern Hospital for Insane, 787; Eastern Hospital for Insane, 622; Southern Hospital for Insane, 680; Soldiers' Home, 434; Soldiers' and Sailors' Orphans' Home, 626; Institution for Deaf, 309; Institution for Blind, 130; School for Feeble-Minded Youth, 744; State Prison, 878; Indiana Reformatory, 909; Industrial School for Girls, 163; Woman's Prison, 46; Reform School for Boys, 579. The total cost for the six months was \$747,201.03. The earnings of the institutions were \$61,770.66, making the net cost \$833,367.21.

A new cell-house was finished this year at the Jeffersonville Reformatory at a cost of \$250,000. It contains 600 cells in 5 stories or tiers, and is arranged most conveniently with plumbing, heating, and ventilation as perfect as possible.

The workings of the indeterminate sentence and parole law are summarized as follow:

"During the four years ending April 1, 1901, both prisons had paroled 1,141 men—the Reformatory 833 and the State Prison 308. Of this number 135 have been returned to the Reformatory and 21 to the State Prison for violation of parole. The number of unsatisfactory cases has been 147 paroled from the Reformatory and 35 from the State Prison. The earnings of paroled men during the four years have amounted to \$184,083.87. The men who have gained their final discharges from parole have had on hand or due them \$36,928.43.

"One of the most valuable features of the Indiana law is that it provides an agent whose duty it is to secure homes and employment for paroled men."

Banks.—The state of the national banks July 15, 1901, was: Loans and discounts, \$50,000,000; individual deposits, \$65,000,000; bank deposits, \$12,000,000. The trust companies had deposits of \$1,400,000; United States deposits, \$2,900,000; aggregate resources, \$110,400,000. The State banks had loans and discounts of \$15,200,000; individual deposits, \$20,000,000; aggregate resources, \$25,700,000.

Insurance.—From a summary of facts from the Insurance Commissioner's report given in October are taken the following items: Insurance is written in Indiana by 113 fire companies, of which 6 are native to the State, 73 have their official residence in other States, and 34 have their home offices across the ocean. Five companies were admitted during the year, 2 consolidated with other companies, and 10 reinsured their business.

Dec. 31, 1900, the life, accident, and fraternal associations had in force in Indiana 110,667 policies of insurance, calling for a total of \$148,676,448.10.

There are 43 life companies which maintain the legal reserve for protection of policy-holders. Of these, 5 are Indiana companies and 38 belong to other States.

Twenty-eight companies are engaged in writing miscellaneous insurance. Of these, 25 belong to other States and 3 are organized under Indiana laws.

Eighteen assessment life and accident companies report to the Auditor, and 12 of such companies belong to other States.

The fraternal associations of Indiana had in force in this State, on Dec. 31, 1900, 28,279 policies, covering \$38,112,650 of insurance, while fraternal associations of other States had in force in this State, at the same time, 59,709 policies, covering \$88,042,383 of insurance.

Loan Associations.—In the State, not including Marion County, 143 associations show an increase in business, and an equal number a decrease. In Indianapolis 32 associations reported an increase, while 48 show a decrease. Ten associations retired from business in the State and 12 began business. Five went into liquidation, 4 of which are in Indianapolis. The associations, as a rule, maintained a good business, the assets compared with 1900 showing a decrease of about \$400,000, while the membership showed an increase of about 9,000.

Loans on mortgage securities have diminished about \$300,000, and on stock security increased about an equal amount.

Saloons.—The State statistician reports that Dec. 31, 1900, there were 4,392 saloon licenses in vogue in Indiana, one for every 573 persons. Fifty-nine of 80 cities in the State that have reported have 2,643 saloons against 2,188 in 1897. The licenses amounted to 63 cents for each person.

Lawlessness.—On Feb. 26 a negro was hanged at Terre Haute by a mob, for the murder, which he confessed, of a young woman, who, as he said, had called him "a dirty nigger" and struck him in the face. His body was burned.

Requisition from Kentucky.—Requisition was made on the Governor by the Governor of Kentucky for the return to that State of ex-Gov. William S. Taylor and ex-Secretary of State Charles S. Finley, to be tried for complicity in the assassination of Gov. Goebel. The requisition was refused in a communication from which the following extracts are taken: "I choose to make use of the right and the duty as the executive of the commonwealth to exercise a discretionary power of refusal, to the end that the purposes of persecution, which seems to be the conspicuous feature of this prosecution, may not force these men before a court partizan to the very extreme of vindictiveness and a jury organized for conviction in its *personnel* and impanelment. I have given careful and conscientious consideration to the evidence produced in the case already heard of the persons accused of complicity in the murder of William Goebel so far as has been placed in my hands by the attorneys for the prosecution, and I unhesitatingly affirm that conviction based upon such a mass of self-evident perjury reflects the poisoned passions of a court and jury and strengthens the belief that were these requisitions honored I would be only aiding the determination of the prosecution to convict these men without any reference to law, justice, or fact."

Monument to Mrs. Lincoln.—About 1897 the attention of Gov. Mount was called to the neglected condition of the grave of Abraham Lincoln's mother, in Spencer County. Through his efforts a fund was raised, and the burial-place was enclosed and cared for. Later, the Culver Company offered to give a monument, which offer was accepted, and in April the company announced that the monument was ready. The foundation was to be built of material from the old vault where Mr. Lincoln was buried at Springfield.

Legislative Session.—The General Assembly was in session from Jan. 10 to March 11. Senator Wood was president *pro tem.* of the Senate, and Samuel R. Artman was Speaker of the House.

The new offices, boards, and commissions that

were created were those of an additional judge of the appellate court; a State mine-inspector; a State veterinarian, the veterinary board being abolished by the same act; a State board of embalmers; a State board of forestry, of 5 members, 1 to be the secretary; a Shiloh battle-field commission, with appropriation of \$25,000, all but \$4,000 of which is to be used in paying for monuments to mark the positions of the Indiana troops on the battle-field of Shiloh. The \$4,000 remaining is to be used to pay the expenses of the members of the commission, which is to have two years for its work.

A new primary election law was enacted, and the use of voting-machines was provided for. The State was reapportioned into congressional districts.

An antilynching law makes the seizure and lynching of a prisoner in custody of a sheriff not merely *prima facie* but conclusive evidence of the sheriff's failure to do his duty, vacates his office at once, and makes him ineligible for election or appointment to any office. Provided, however, that he may have a hearing before the Governor, and if he can show that he did all in his power to protect the prisoner, he may be reinstated in office.

An antitrust law was passed.

Loan, trust, and safe-deposit companies doing business under the law of 1893 are required to give to the Auditor statements of the full amount of their outstanding obligations, and the amount of premiums charged and received. Savings deposits held by such companies are subject to the same regulations as savings-bank deposits.

A new militia law appropriates \$75,000 a year, and requires regular drill nights in each week of each calendar year, and three days in each year for target practise upon the rifle-range; provided, that not less than one hour and a half actual instruction be considered a drill, nor less than eight hours be counted a day upon the range.

A law regulating the sale of convict-made goods makes so many restrictions as practically to prohibit such sale.

The insurance laws were amended in several particulars.

The soliciting of certain kinds of insurance was prohibited by what was known as "the graveyard insurance bill."

A law for regulating the sale and transfer of grain in elevators and other places of storage was enacted. Persons dealing in grain must make complete written declarations concerning it; and warehouse receipts must contain statements that such declarations have been made.

A law for the better protection of game is more stringent than previous laws on the subject. Hunting is prohibited between Oct. 1 and Nov. 10, except upon special permit of the Game Commissioner; and then the permit does not extend to the hunting of animals for which there is a close season, as, for instance, quails and prairie-chickens, the open season for which begins Nov. 10 and ends Jan. 1. There is also a penalty of fine and imprisonment for selling or offering for sale such birds during the period named, whether the same were killed in this State or elsewhere. The killing of wild ducks and other water-fowl is prohibited from April 15 to Sept. 1 and from Oct. 1 to Nov. 10, except by permit, such permit to be issued to residents free of charge. Non-residents of the State are not permitted to hunt or kill wild animals or game-birds within the State at any time without a license, the cost of which is \$25. It is made a misdemeanor to hunt or shoot on enclosed land without the owner's con-

sent, or to hunt or shoot game or song birds on Sunday.

There is also a new and stringent fish law.

To encourage the study of agriculture, horticulture, economic entomology, and agricultural chemistry, provision was made for county institutes, prescribing the duties of trustees and faculty of Purdue University in connection therewith, and making an appropriation of \$10,000.

Hereafter town officers are to be elected for terms of two years, in May of the odd-numbered years, one-half of those chosen at each election to take office immediately, and the other half the following year.

For the expenses of the session \$115,000 was appropriated. The total of appropriations was \$350,000 less than that in 1899.

Among other enactments were these:

Providing for the sanitation of all food-producing establishments and the health of the operations and the purity of the food-products thereof.

Amending the tax law by providing for taxation of pipe-lines, fast freight lines, lines of oil-cars, refrigerator-cars, and for the shipment of horses, cattle, hogs, sheep, and other kinds of freight.

Providing for the establishment, maintenance, and increase of public libraries in cities or incorporated towns, and for the levying of a tax for such purposes.

Providing for the taxation of steamship and navigation companies.

Amending the act for the settlement and distribution of decedents' estates.

Providing that illegitimate children who have been acknowledged by the parent shall inherit as others.

For the relief of the poor.

Making the United States flag the flag of the State.

Providing a minimum wage-rate of 15 cents an hour for unskilled labor employed on any public work of the State, counties, cities, and towns.

Defining kidnaping and prescribing punishment therefor.

Granting permission for the erection of a statue in University Square, in Indianapolis, to the memory of Abraham Lincoln, in accordance with a request in the will of the late Henry C. Long.

Appropriating \$250 to make a record of home guards that served in the civil war.

For protecting the liberty, safety, and health of labor—relating to factory inspection.

To prevent improper use of the United States flag.

Authorizing cities of 3,500 and not more than 4,000 to accept custody and control of established libraries.

The Supreme Court affirmed the constitutionality of the law giving the wages of working men, to the extent of \$50, a preference over other forms of indebtedness in the case of an employer whose business has been suspended by the action of creditors.

IOWA, a Western State, admitted to the Union Dec. 28, 1846; area, 56,025 square miles. The population, according to each decennial census since admission, was 192,214 in 1850; 674,193 in 1860; 1,194,020 in 1870; 1,624,615 in 1880; 1,911,896 in 1890; and 2,251,829 in 1900. Capital, Des Moines.

Government.—The following were the State officers in 1901: Governor, Leslie M. Shaw; Lieutenant-Governor, J. C. Millman; Secretary of State, W. B. Martin; Treasurer, G. S. Gilbertson; Auditor, Frank F. Merriam; Attorney-General, C. W. Mullan; Superintendent of Public Instruc-

tion, R. C. Barrett; Adjutant General, M. H. Byers; Railroad Commissioner, Welcome Mowry; E. A. Dawson, David J. Bohrer; Labor Commissioner, C. F. Wennerstrom; Game and Fish Commissioner, Samuel Calvin; Fish and Game Commissioner, George E. Delevan, succeeded April 1 by George A. Lincoln; Secretary of the State Board of Education, J. F. Kennedy; Secretary of the State Board of Agriculture, George H. Van Houten; Jail Commissioner, B. P. Norton; Custodian, J. D. McConaugh; Librarian, Johnson Brigham; Board of Commissioners, D. F. Johnston, Mrs. D. W. Harris, Mrs. H. M. Towner, Miss Jessie B. Waiter; Secretary of the Executive Council, A. H. Davison; Chief Justice of the Supreme Court, Josiah Given; Associate Justices, Scott M. Ladd, Emlin McClain, C. M. Waterman, H. E. Deemer, J. C. Sherwin; Clerk, Christopher T. Jones. All are Republicans.

A State election is held every November, but the term of State officers is two years, the Governor, Lieutenant-Governor, Superintendent of Instruction, 1 judge of the Supreme Court, and 1 railroad commissioner being chosen in the odd-numbered years, and the Secretary, Auditor, Treasurer, Attorney-General, a judge, and a railroad commissioner in the alternate years.

The Legislature meets in January of the even-numbered years. If the amendment noted below had been valid, the members would have been chosen at biennial elections in the even-numbered years, and the sessions would have been held in the following years.

Constitutional Amendment Invalid.—An amendment providing for biennial elections was carried at the polls in November, 1900, by a majority of 25,591. It was discovered after the election that the amendment had not been recorded in the Legislature according to the forms required by the Constitution, which says that amendments proposed shall be agreed to by a majority of the members of the two houses and shall be entered on their journals. The amendment in question was not recorded on the House journal of the twenty-seventh General Assembly. A suit was brought in Washington County to test its validity. The decision was against it, and this was affirmed by the Supreme Court Feb. 3. If the amendment had been declared valid, the further question would have come up for settlement whether the new provision should be held to extend the terms of officials holding office in 1900. In order to avoid any question as to the legality of the official acts of the new officials, the Secretary of State and the Treasurer resigned at the beginning of the year and their successors-elect were appointed.

Census Figures.—A late census bulletin shows that the foreign-born population is 305,920. There are 12,693 negroes, 104 Chinese, 7 Japanese, and 382 Indians. Of the men of militia age, 31.4 per

ALBERT B. CUMMINS,
GOVERNOR OF IOWA.

cent. are native whites of foreign parentage, and 16.7 per cent. foreign-born whites. The native whites of foreign parentage and the foreign born together constitute nearly one-half of the males of voting age. Nearly three-fourths of the foreign born are naturalized, namely, 117,524 out of 158,025. The illiterates constitute 10.7 per cent. of the aliens and 4.7 per cent. of the naturalized voters. In the increase of population the State is gaining more native than foreign born.

Finances.—The biennial report of the financial condition of the State shows that it has improved during the period. No interest-bearing indebtedness has existed at any time in the biennium, and the floating indebtedness has been reduced. The revenue has increased, and yet that derived from direct taxation has been reduced. The revenue from counties was \$3,939,323.12, while in the biennial period just preceding it was \$4,055,767.75. But the total receipts in 1900–1901 were \$5,120,059.54, while in 1898–99 they were \$5,079,403.29. The corporation taxes for 1900–1901 were \$425,139.76, which is \$49,543.19 greater than in 1897–99, notwithstanding the fact that telephone, telegraph, and express companies paid taxes to the Treasurer of State for but one year during 1899–1901, the laws of the twenty-eighth General Assembly having authorized the taxation of these corporations in the same manner as the property of individuals, thus requiring payment to the county treasurer instead of to the State.

From State officers fees were received amounting to \$281,875.36, an increase of \$58,320.77. The collateral-inheritance tax yielded \$196,464.54, which is \$143,665.02 greater than in the preceding period.

From State institutions \$181,577.04 was received, an increase of \$56,718.09.

The total of disbursements was \$4,420,193.70. Among the items of expense were: The twenty-eighth General Assembly, \$134,181.29; militia, \$111,976.14; expenses Board of Control, \$45,402.95; expenses of custodian, with his salary, \$41,337.91; the 15 State institutions, \$2,153,269.44.

The State carried a monthly average balance of about \$700,000 in the several depository banks, and the Treasurer recommends that a law be passed providing for depositing the State's money where it will draw interest.

The State levy was fixed in July at 2.7 mills. This is an increase of one-tenth of a mill. The law adds two special levies of one-tenth of a mill each. The total levy, therefore, for the year is 2.9 mills.

The special levies are those of the State University and the State Agricultural College.

The total valuation of property for the levy of 1902 is \$558,508,269.

Education.—Compilation of reports of county superintendents for the year ending Sept. 15, 1900, gave the following summaries: Ungraded schools, 12,615; rooms in graded schools, 5,766; average number days of teaching, 160; school-houses, 13,861; value, \$17,655,922; houses built during the year, 240; enumeration, 731,154; enrollment, 566,223; attendance, 373,474; average to teacher, 29; average monthly tuition, \$1.96; male teachers, 4,948; female, 23,841; average monthly salary of male teachers, \$40.20; of female, \$30.24; schools teaching effects of stimulants, 17,510; enrolled in normals, 19,544; expenses of normals, \$58,675; paid for teachers' salaries, \$5,606,932; for all other purposes, \$3,421,986.

The superintendent says: "Consolidation has been tried in 28 counties, transportation in 35, and both in 19. Consolidation has been adopted by 63 districts, and 30 districts have transported

pupils at the expense of the district. In 9 counties districts have been consolidated without providing transportation at the expense of the districts. In 16 counties pupils have been transported where there has been no consolidation."

The annual report of the State Normal School, at Cedar Falls, shows very rapid growth. In 1901 the school had 2,017 students, or more than any other educational institution in the State, and 49 teachers.

The medical building at the State University, Iowa City, was destroyed by fire in March; the loss was estimated at \$109,305. The flames spread to a building known as the "Old South Hall," the home of 4 of the university literary societies, the engineering department, and some of the chairs of liberal arts.

An increase of 20 per cent. is reported in the attendance in 1900–1901. The total income of the university was \$602,137.

The large experiment barn at the Iowa State College, at Ames, was burned Oct. 25. The increase of students at this college during the biennium was about 40 per cent.

Charities and Corrections.—The statistics of the Board of Control for the past biennium, 1899–1900, show a gain of 341 in inmates of the insane hospitals at Mount Pleasant, Independence, and Clarinda; a gain of 14 at the industrial schools at Mitchellville and Eldora; a loss of 255 at the penitentiaries at Fort Madison and Anamosa; a gain of 147 at the Soldiers' Home at Marshalltown; a loss of 19 at the Davenport Orphans' Home; at Glenwood School for the Feeble-Minded, a gain of 274; making a total net increase of 502. The total cost of support for the two years was \$2,167,906; and from special funds was paid \$337,813 for land, buildings, extraordinary repairs, equipment, transportation, etc. There was a balance of unexpended appropriations, July 1, of \$621,798. For new buildings, \$183,987 was paid. Contracts were let in March for buildings for the Cherokee Insane Hospital, amounting to \$302,975. The whole number of inmates in October was 6,949; and the whole cost of support in that month was \$161,677. The number of insane in State institutions is 2,901; in county hospitals, 987; in private, 453. During the year ending July 1, the counties paid \$714,396 for support of 2,761 persons in 93 almshouses and for outside relief.

Banks.—The total number of State and savings-banks has increased in ten years from 205 to 474. There are now 256 savings and 218 State banks. Their reports for the year ending June 30 are summarized as follow:

Assets: Bills receivable, \$103,634,798.11; gold coin, \$1,443,776.41; silver coin, \$399,979.02; legal tender, national-bank notes, etc., \$3,130,272.60; credits subject to sight draft, \$25,647,492.81; overdrafts, \$1,306,814.52; real and personal property, \$3,991,257.35; total assets, \$139,554,390.82.

Liabilities: Capital stock, \$18,845,400; due depositors, \$114,731,614.06; due banks and others, \$780,949.13; surplus, \$2,710,160.70; undivided profits, \$2,486,266.88; total liabilities, \$139,554,390.82.

On Sept. 30, 1901, the deposits in the State and savings banks of Iowa amounted to \$120,466,645, an increase of \$5,735,031 since June 30.

Insurance.—The Auditor's report of life insurance in 1900 shows a total of 124 companies, including 54 fraternal beneficiary societies and orders, and 8 assessment accident associations. The number of policies in force at the end of the year was 353,444, and the amount of insurance \$514,248,775. During the last biennial period the

insurance companies paid \$95,000 in fees and \$382,165.22 in taxes.

Railways.—Iowa is credited with 267 miles of new railway in 1900. The greater portion of it has been built by the Northwestern and Rock Island, the former having added 133 miles and the Rock Island 105 miles. The remainder was built by the Minneapolis and St. Louis and the Burlington, Cedar Rapids and Northern in making short branches. The whole mileage is 9,185.

The rates of taxes paid on gross earnings, net earnings, and on actual assessments in 1901 are given as, respectively, 0.030, 0.097, and 0.034.

Products and Industries.—The final official report of the national Department of Agriculture on the chief cereals grown in the United States in 1900 proves that Iowa is the first State in this respect, having produced 21,798,223 bushels of wheat, 305,859,948 bushels of corn, and 130,772,138 bushels of oats.

The year 1901 has been much less productive in cereals. An estimate by the crop correspondent of the State weather and crop service, Oct. 1, shows an average yield of 26 bushels of corn to the acre, or a total of 225,570,000 bushels, which is about 35,000,000 less than the State average for the twelve years next preceding.

The beet-sugar product in 1900 was 5,687 tons, worth \$19,904. During the year ending July 1, 1901, the State produced 65,404,842 pounds of butter, worth, at the average market rate of 21.65 cents a pound, about \$14,160,000. Of the amount 57,761,612 pounds were shipped out of the State. Of this, more than 35,000,000 pounds went to New York, probably for transshipment abroad. Records, the commissioner says, show that shipments have been made of Iowa butter even to Australia. There are 1,382,242 cows in the State, 675,000 of which are connected with creameries, and their value is \$37,420,392. The number of creameries reporting was 551.

The Census Bureau issued a preliminary report on the manufacturing industries of the State, Sept. 20. The figures, with per cent. of increase since 1890, follow: Establishments, 14,819; per cent. of increase, 99. Wage-earners, average number, 58,553; per cent., 15. Total wages, \$23,931,600; per cent., 17. Miscellaneous expenses, \$7,988,767; per cent., 39. Cost of materials used, \$101,170,357; per cent., 28. Value of products, including custom work and repairing, \$164,617,877; per cent., 32.

The coal production in 1900 was 85,202,939 short tons, with a spot value of \$7,155,341, a production almost exactly equal to that of the State during the previous year.

Court Decisions.—The so-called "tax-ferret law" has been brought before the courts by persons against whom assessments have been made for back taxes on property discovered by the "ferrets"—that is, men employed by boards of supervisors to search for property omitted from back assessments. In October the Supreme Court sustained the constitutionality of the law.

The decision apparently does not touch the question whether county authorities have the right to pay commissions to the ferrets employed out of the taxes so collected—a question which has been before the district courts.

In the United States district court, at Clarinda, Oct. 28, the law prohibiting the sale of liquor shipped into Iowa from other States in original packages was declared unconstitutional.

A college of osteopathy, in Des Moines, was successful in a suit before one of the lower courts involving the law providing that the State Board of Medical Examiners shall issue certificates to

graduates of schools of osteopathy which are in good standing as such. The reasons urged by the demurrer were that the law is unconstitutional, and that the board is sole arbiter of the administration of the law.

Dedication of a Monument. The Women's Relief Corps of Iowa dedicated, Sept. 16, the monument which they have erected in the national cemetery at Gettysburg to the memory of Jennie Wade, the only woman killed during the battle. The shaft is 12 feet in height and is surmounted by a statue of Jennie Wade. The inscription on the face of the monument is: "Jennie Wade, killed July 3, 1863, while making bread for Union soldiers." On the opposite side appears: "Erected by the Women's Relief Corps of Iowa, A. D. 1901."

Political.—The Republican State Convention met at Cedar Rapids, Aug. 7. The party was divided into factions which were opposed on the candidates for the nomination for the office of Governor. Gov. Shaw declined early in the year to be considered a candidate for a third term; and many others were named and urged by their friends. Albert B. Cummins was nominated on the first ballot. For the remaining offices the following were named: Lieutenant-Governor, John Herriott; Judge of the Supreme Court, Silas M. Weaver; Railroad Commissioner, Edward C. Brown; Superintendent of Instruction, Richard C. Barrett.

The platform expressed approval of the National administration and the work of Congress; condemned the measures adopted in certain States for negro disfranchisement; declared that the Republican policy of protection was the cause of the rapid development of our national resources; favored changes in the tariff to meet changing conditions, and also favored reciprocity; recommended reelection of United States Senators Allison and Dolliver; expressed pride in the elevation of Speaker Henderson; and commended the administration of Gov. Shaw.

The Democrats met in State convention, at Des Moines, Aug. 21. Following is the ticket: For Governor, T. J. Phillips; Lieutenant-Governor, G. E. Ferguson; Supreme Judge, John Shortley; Railroad Commissioner, A. C. Brice; Superintendent of Schools, W. P. Johnson.

The declaration of principles included the following:

"The Democratic party believes that the burden of taxation should be borne equally by all taxable property subject to the jurisdiction of the State. We pledge our members of the General Assembly to formulate and urge the adoption of such a law as will compel the burden of taxation to rest on corporate and individual property alike, without favor or exemption of any interests.

"We demand economy in the administration of State affairs, the repeal of the mullet laws, the enactment of a local option law, the abolition of the offices of State printer and State binder, and the contracting for supplies for the State with the lowest responsible bidders."

The People's party, in convention at East Des Moines, Aug. 23, chose the following candidates: For Governor, L. H. Weller; Lieutenant-Governor, Perry Engle; Supreme Judge, J. R. McDonald; Railroad Commissioner, Luke McDowell; State Superintendent, Ira C. Harland.

The resolutions, after setting forth the evils of trusts, the power of railroad companies, the granting of franchises, etc., said:

"We extend our sympathy to all peoples struggling to establish more representative forms of government and we condemn the concerted action

of the present administration and the administration of England in trying to crush out young republics, and establish in their places Crown colonies and imperialistic rule. We especially commend and indorse that system of government known as direct legislation.

"On State issues we demand the equal taxation of all property, whether corporate or private, and we further demand that no person be compelled to pay taxes on property over and above the equity he has in the same."

The Prohibitionists named candidates as follows: For Governor, A. U. Coates; Lieutenant-Governor, A. B. Wray; Judge of the Supreme Court, J. A. Harvey; Railroad Commissioner, Wesley Suddoth; Superintendent of Instruction, Miss Ella Moffatt.

The Antisaloon League, which held a convention at Des Moines, Aug. 26-27, refused a reelection to its State superintendent, H. H. Abrams, because he had declared that he would vote for the Republican candidate for Governor, and was in favor of retaining the mulct law, rather than throw away his vote on a candidate with no prospect of success. He was afterward, however, elected superintendent of the league's department of enforcement of law.

The Socialist party of Iowa, successor to the Social-Democratic party of former years, was organized in Des Moines at the State convention of socialists, on Sept. 5. A full ticket was named. Following were its candidates: For Governor, James Baxter; Lieutenant-Governor, W. A. Jacobs; Judge of the Supreme Court, A. F. Thompson; Railroad Commissioner, H. C. Middlebrook; State Superintendent, E. E. Stevens.

The Republican candidates were elected. The official count gives the following vote for Governor: Cummins, Republican, 226,839; Phillips, Democrat, 143,655; Coates, Prohibitionist, 15,645; Baxter, Socialist, 3,460; Weller, Peoples', 778; total, 390,377; Cummins's plurality, 83,184; Cummins's majority, 63,303.

For the State Senate, 39 Republicans and 11 Democrats were elected; and for the House, 84 Republicans and 16 Democrats.

KANSAS, a Western State, admitted to the Union Jan. 29, 1861; area, 82,080 square miles. The population, according to each decennial census, was 107,206 in 1860; 364,399 in 1870; 996,096 in 1880; 1,427,096 in 1890; and 1,470,495 in 1900.

Government.—The following were the State officers in 1901: Governor, William E. Stanley; Lieutenant-Governor, Harry E. Richter; Secretary of State, George A. Clark; Treasurer, Frank Grimes; Auditor, George E. Cole; Attorney-General, A. A. Godard; Superintendent of Public Instruction, Frank Nelson; Secretary State Board of Agriculture, F. D. Coburn; Adjutant-General, S. M. Fox; Superintendent of Insurance, W. V. Church; Oil Inspector, S. O. Spencer; Grain Inspector, A. E. McKenzie; State Printer, W. Y. Morgan; Bank Commissioner, Morton Albaugh; Labor Commissioner, W. L. A. Johnson; Members State Board of Charities, Henry J. Allen (president), Edwin Snyder (secretary), G. W. Kanavel (treasurer), Reuben Vincent, and John Hannon. All the elected officers are Republicans. Supreme Court—Frank Doster, Chief Justice; William A. Johnston, William R. Smith, Edwin W. Cunningham, Adrian L. Greene, Abram H. Ellis, and John C. Pollock, Justices. Prior to 1901 the Supreme Court consisted of the Chief Justice and two associate justices. The court was so far behind with its work that in 1895 provision was made for a court of appeals, of 6 members, to relieve the Superior Court of a portion of its work. The

Court of Appeals expired by limitation of the law Jan. 14, 1901. At the general election of 1900 a judicial amendment to the Constitution, providing for the increase of the membership of the Supreme Court to 7, was adopted, and the 4 additional members—Cunningham, Greene, Ellis, and Pollock—were appointed by Gov. Stanley. With the exception of the Populist Chief Justice, all are Republicans. The State officers are elected in November of the years of even number. The Legislature meets biennially in January of the odd-numbered years. The session is limited to fifty days.

Finances.—Owing to exceptionally large appropriations, there was a deficiency in the treasury in October, and for nearly two months the Treasurer was obliged to stamp warrants "Not paid for want of funds." But by Dec. 1 funds were available in such amount that cash payments were resumed. The Treasurer expected to be able to retire the \$350,000 worth of stamped warrants in February, 1902. Up to Dec. 26, 1901, the amount of money collected during the year for all purposes amounted to \$3,900,613.56. This was distributed among the various funds, the expenditures of which were, up to that date, general revenue, \$1,764,353; State-House, \$579.01; State-House completion, \$42,186.78; interest, \$23,297.39; interest on State twine-plant fund, \$64,830.21; current University, \$5,073.75; permanent school, \$776,440; annual school, \$397,705.17; University permanent, \$7,950; University interest, \$6,236.51; Normal School permanent, \$31,750; Normal School interest, \$13,573.55; Agricultural College permanent, \$35,300; Agricultural College interest, \$28,005; United States aid to Agricultural College, \$25,000; municipal interest, \$21,117.16; twine-plant revolving fund, \$115,000; insurance examination fees, \$1,787.71; Stormont Library, \$600; Stormont Library interest, \$92.75; total, \$3,360,876.15.

The balances in the various funds on Dec. 26 were: General revenue, \$251,771.86; State-House, \$162.16; State-House completion, \$51,707.54; current University, \$3,431.39; permanent school, \$79,628.26; annual school, \$28,218.88; University permanent, \$124.70; University interest, \$966.91; Normal School permanent, \$6,196.29; Normal School interest, \$1,072.14; Agricultural College permanent, \$33,016.84; Agricultural College interest, \$3,117.75; insurance, \$3,069.90; Stormont Library permanent, \$1,686.71; municipal interest, \$4,235.57; twine-plant revolving fund, \$65,000; insurance examination fees, \$45; total, \$533,451.70.

The State School Fund Commissioners in 1901 purchased for the Permanent School, University, Agricultural College, and Normal School funds \$951,440 in bonds, and distributed in interest among the public schools and State institutions \$445,519.72.

Banks.—In the 119 national banks and 422 State and private banks, at the close of business, Sept. 30, 1901, the total amount on deposit was \$87,181,194.14. Individual deposits in the State banks aggregated \$42,076,447.62; in the national banks, \$35,360,516.97. The average reserve held in the State banks amounted to 53.21 per cent., and that in the national banks 45.78 per cent. While there are more than three times as many State banks as national banks, the capital stock of the former aggregates but \$7,000,000, compared with \$8,000,000 of the latter. As to surplus funds, the State banks have \$1,587,261.01, and the national \$1,526,782.21. The per capita deposit in Kansas is \$59.28.

There are 37 State banks that have more money

credited to surplus and undivided profits than they have in capital stock. With but a few exceptions these are in small towns, with good agricultural surroundings, their capital ranging from \$5,000 to \$35,000.

Education.—Kansas has a school population of 508,854, and enrolment of 389,582. The average daily attendance is 261,783. There are more than 11,600 teachers, whose combined annual salaries are in excess of \$5,000,000. In the past year 175 schoolhouses were erected, at a cost of over \$140,000. In proportion to population, Kansas has a school enrolment larger than that of any other State in the Union. There are 24 denominational colleges. During the year Campbell University, at Holton, formerly non-sectarian, passed into the control of the Baptists. There are 3 independent normals—Salina Normal University, Salina; Central Normal College, Great Bend; and Nickerson Normal College, at Nickerson. There are 14 academies and 15 business colleges. There are 10 county high schools, which employ 60 teachers. The present enrolment approximates 1,800. The total value of the property in the public schools, denominational colleges, and State institutions is more than \$20,386,000. There are now 26 counties in which women are superintendents of public instruction. Two of this number are serving fifth terms.

The State University, at Lawrence, has 80 instructors; enrolment, 1,095; value of property, \$930,000; appropriation by the last Legislature, including money for new buildings, \$210,000.

The State Normal School, at Emporia, has 44 instructors; enrolment, 2,150; value of property, \$490,000; last appropriation, \$159,000.

St. John's Military School, at Salina, has 8 instructors; value of property, \$87,000; enrolment, 73.

Midland College, at Atchison, has 15 instructors; value of property, \$80,000; enrolment, 153.

The College of the Sisters of Bethany, at Topeka, has 16 instructors; value of property, \$400,000; enrolment, 194.

The College of Emporia has 12 instructors; value of property, \$100,000; enrolment, 106.

Baker University, at Baldwin, has 32 instructors; value of property, \$125,000; enrolment, 750.

McPherson College, at McPherson, has 20 instructors; value of property, \$55,000; enrolment, 330.

Kansas City University has 76 instructors; value of property, \$214,000; enrolment, 327.

Bethany College, at Lindsborg, has 40 instructors; value of property, \$165,000; enrolment, 800.

Lane University, at Leocompton, has 7 instructors; value of property, \$30,000; enrolment, 140.

Ottawa University has 23 instructors; value of property, \$220,000; enrolment, 603.

St. Marys College, at St. Marys, has 28 instructors; value of property, \$200,000; enrolment, 323.

Traveling Libraries.—The traveling library department of the State Library contains nearly 10,000 books. Libraries to the number of 153 are in actual use, being sent wherever they are asked for. Each of the little libraries contains 50 books, the 153 cases now in use being equivalent to 7,650 books in service in 153 communities. The majority of them are in the hands of district schools, but they are sent out also to study clubs, literary societies, teachers' associations, etc.

Insurance.—In 1901 the taxes and fees from insurance companies turned into the general revenue fund aggregated \$115,063.71, against \$109,962.66 for the previous year. In 1900 the department collected for the Firemen's Relief fund an aggregate of \$20,640.26. This sum for

1901 will be slightly exceeded. There are 204 insurance organizations operating in the State: Stock fire companies, 13; mutual fire companies, 17; mutual hail companies, 2; mutual and straight life companies, 38; fraternal companies, 20; fraternal beneficiary societies, 51. In 1901 there were admitted to do business in the State 3 fire, 8 life, 2 casualty, and 8 fraternal organizations. There were withdrawn 5 fire, 1 accident, and 3 fraternal concerns. The department issued for 1901 10,293 agents' licenses.

Charitable Institutions.—At the Soldiers' Home, Atchison, there are: officers and employees, 43; inmates, 155. The Industrial School for Girls, at Beloit, has: officers and employees, 17; inmates, 125. Topeka Insane Asylum has: officers and employees, 142; inmates, 901. Osawatomie Asylum has: officers and employees, 166; inmates, 991. The Deaf-and-Dumb Institution, at Olathe, has: officers and employees, 54; inmates, 244. The Reform School, at Topeka, has: officers and employees, 31; inmates, 179. The Imbecile Asylum, at Winfield, has: officers and employees, 38; inmates, 220. The Blind Asylum, at Kansas City, has: officers and employees, 34; inmates, 90.

The State Penitentiary, at Lansing, has: officers and employees, 95; inmates, 985. Hutchinson Reformatory has: officers and employees, 36; inmates, 226. The State Soldiers' Home, at Dodge City, has: officers and employees, 31; inmates, 416.

Railroads.—The latest available returns for the year 1900 show for Kansas 8,716.62 miles of main track and 1,476.56 miles of side tracks. The total assessments of railroad, telegraph, and telephone properties is \$59,320,032. But little railroad-building was done in 1901. The Rock Island made an extension of its line from Liberal, in Stevens County, to El Paso, Texas, only about 20 miles of the road being in Kansas. A charter was granted to the Fort Scott, Iola and Western, an organization believed to be backed by Missouri, Kansas and Texas interests, and a road is partially constructed between Fort Scott, Bourbon County, and Piqua, in Woodson. Only 5 of the 105 counties, and but 7 county-seats, are without railroad communications.

The Omaha, Kansas and Gulf road has received articles of incorporation. The avowed purpose is to build a line from Emporia to Omaha, Neb., the route extending through Lyon, Wabaunsee, Pottawatomie, Shawnee, Jackson, Geary, Marshall, and Nemaha Counties, in Kansas. The intention is to build from both ends of a north and south independent line 8 miles in length now in operation in Pottawatomie County, the shortest line in the West, which gives Westmoreland, the county-seat of Pottawatomie, connection with the Leavenworth, Kansas and Western at Blaine.

The consolidation of the Kansas City, Fort Scott and Memphis and the St. Louis and San Francisco was effected in the summer. The former road had a mileage of 258.37 miles in Kansas, the latter 362.81.

In May, 1900, the Kansas City, Mexico and Orient Railway was chartered in the State of Kansas with a capital stock of \$25,000,000. Bonds of the State of Kansas to the amount of \$250,000 have been voted to this corporation. It is proposed to build the road from Kansas City to Port Stilwell, on the Gulf of Mexico. About 240 miles have been graded.

Products.—In common with other States of the West, Kansas suffered from extremely dry weather during the crop-making season, yet, notwithstanding the diminished corn-crop, reports made by the secretary of the State Board of Agri-

culture show a net increase of \$7,485,246 in the value of the year's agricultural product over that of 1900, making the total of these, as it is in live-stock values, the greatest in the State's history. The yield of winter and spring wheat was 90,333,095 bushels, valued at \$50,610,505.75. The yield of corn was 42,605,672 bushels, valued at \$21,731,215.39. This year's yield of wheat is more by 11,915,183 bushels, or 15.2 per cent., than the United States Department of Agriculture has ever reported raised by any State in any year, barring the Kansas yield in 1900. The yield of corn in the State was cut down from 134,523,677 bushels in 1900 to 42,605,672 in 1901. Oats and rye each had increased value for 1901, amounting to \$1,405,195 together, although the former crop fell more than 10,000,000 bushels below the 1900 yield, while the production of rye was greater by nearly 52 per cent. Irish and sweet potatoes were less by 11,915,183 bushels than in 1900. Other crops, mostly of minor importance, show decreases in both yields and values, except tame and prairie hay, which together, although having fewer tons, had a value exceeding that of 1900 by \$7,318,602, or 12.3 per cent. The sorghums for grain and forage for 1901 were worth more than in the year preceding by \$1,138,339, or 13.1 per cent.

For the surplus animals slaughtered or sold for that purpose the value was \$60,902,241, an increase over the previous year of more than \$6,580,000, or 12 per cent.; while the value of the dairy and poultry products and wool exceeded their combined value in 1900 by \$1,111,045.

All live stock increased in numbers except sheep and swine, which show slight decreases compared with 1900; but the total value was \$153,037,732, a net increase of \$9,579,979. The total value of farm-products for the year was \$195,254,652; total value of live stock, \$158,037,732.

Sugar-Beet Bounties.—The Legislature of 1901 passed a law providing for a bounty of \$1 a ton on all sugar-beets raised in the State showing 12 per cent. or more of sugar. The investigation to determine those entitled to the bounty was made by F. D. Coburn, secretary of the Board of Agriculture. His report shows the following facts in relation to the new crop, which is grown in the extreme western portion of the State by the aid of irrigation: Number of beet-growers, 77; acres harvested, 337; average acreage for each grower, 4.37 acres; average harvested by each grower, 22.82 tons; maximum tonnage by one grower, 111 tons; minimum, 1.5 ton; average yield per acre, 5.22 tons; maximum yield per acre, 18.41 tons; minimum, 1.15; average per cent. of sugar, 17.8; maximum per cent. of sugar, 22.8; minimum, 13.3; average price per ton received, exclusive of bounty, 5.14; average profit per acre, computed from reports of 37 growers, \$17.03. The average per cent. of sugar developed by the beet-farmers of Germany, the home of the industry, is 15 per cent. Tests made at the State Agricultural College showed that 16 different samples of beets developed an average of 21 per cent. of sugar.

Model Farm.—A new feature of work in connection with the State Agricultural College will be the establishment of a model farm, under direction of the regents of the institution, on the old Fort Hays military reservation, ceded by the General Government to the State. Preparations to this end are under way.

Labor.—Eight hours constitutes a day's service in State, county, city, town, and other municipal work. The matter of seeing that the law is

obeyed is in the hands of the State Labor Commissioner. During the year he won recognition for the law by taking 9 cases into court. The law was enforced in 200 cases without litigation; altogether about 1,000 men were affected by the cases taken up.

In a dispute between the Miners' Union and the companies over the meaning of a certain phrase in the working contract, Chief-Justice Doster, of the Supreme Court, was asked to act as arbitrator. A clause in the contract provided that all matters not settled at the annual conference should be arbitrated. Judge Doster's decision was in favor of the men of the union, and the result was an increase in the amount earned annually of several thousand dollars in the mining district.

Free Employment Agency.—By act of the Legislature, a bureau of this nature was organized under the direction of the State free employment agent. It has been in operation since May 1, and has been the means of securing employment for 2,200 to 2,500 persons. No charges are made either to those seeking employment or to those in quest of help. In assisting the farmers to secure help during the harvest season, the agency demonstrated its efficiency, although it was scarcely organized. The State employment agent works in connection with the clerks of all cities of the first and second class, the clerks receiving no additional remuneration for their work of this character. All books and blanks are furnished by the State, the city furnishing a room in which to do the business. For the most part, house-maids and common laborers have been benefited in the greatest degree by the new law, although it is planned for all classes.

Prohibition Crusade.—The most remarkable movement in connection with the Kansas law prohibiting the sale of liquor marked the year 1901. Its active spirit was Mrs. Carrie Nation, of Medicine Lodge. She raided a saloon in her home county in the autumn of 1900, but first became widely known near the close of that year, when she wrecked the handsome bar of the leading hotel in Wichita, and marred a valuable painting that offended her ideas of propriety. She was placed in jail, and afterward was released on bond. Not until near the close of 1901 were all the cases against her in Wichita dismissed. When she was released, she set out on a tour of the State, and at several points gave exhibitions of "saloon-smashing." In Topeka she was received with open arms by many of the most zealous opponents of the liquor interests. There were no saloons in Topeka, but many "joints," where the illicit sale of liquor was carried on. Mrs. Nation soon had the capital city in an uproar. She "smashed" several saloons, and a large number of her followers effected a regular organization for the purpose of bringing the liquor traffic to an end by forcible means. Many persons of standing were among her ardent supporters. One of these was a minister, who was fined in the police court for attempting to use a weapon while raiding a wholesale liquor house. From the first, however, the more conservative Prohibitionists refused to have anything to do with the movement, maintaining that nothing could be gained by trying in an illegal manner to suppress an illegal traffic. Mrs. Nation was arrested repeatedly, and was in jail in Topeka several times. She started a paper—*The Smasher's Mail*—made up for the most part of illiterate communications from zealous adherents all over the United States. The paper did not pay nor last long. The furor in Kansas caused an un-

usually large number of the municipal elections in April to hinge on the "wet" or "dry" question. In many towns there were some exciting scenes. At several points, following Mrs. Nation's lead, mobs formed, and in many instances women were the active spirits. Joins were wrecked, and considerable litigation followed. One of Mrs. Nation's Topeka followers, a young man, who had been active in wrecking a joint, appealed his case from the district court, where he had been fined, to the Supreme Court, pleading that an illegal business had no rights at law. The Supreme Court affirmed the decision of the court below, and this put a damper on the ardor of the Nation followers, and ended the "smashing" campaign. Mrs. Nation then set out on a lecturing tour, but financially her success was indifferent. Her husband, a veteran of the civil war, brought suit for divorce on the ground of desertion. She returned to Kansas in November to fight the suit, but the divorce was granted. During the progress of the trial Mrs. Nation admitted that one reason for fighting the case was that she wished to be in a position to draw a widow's pension on the death of her husband.

For the purpose of ascertaining to what extent the prohibition law is violated in Kansas, the State Temperance Union instituted an inquiry in the summer. Queries were sent to 200 cities, and 192 replies were received. For the purpose of the investigation the cities were divided into four classes: (1) Cities the known and avowed policy of which is to collect license from the joints as a means of revenue, the license taking the name of a fine, and usually being collected once a month. Twenty-five were listed in this class. (2) Cities in which the joints are probably licensed by the officers, but in a clandestine manner, the joints running almost openly despite the supposed efforts of the officers to close them. Twenty-three were listed in this class. (3) Cities in which it is generally known or believed there are joints, but the proprietors of which "do their business like thieves, avoiding the officers, and constantly fearing arrest." Fifty-two were listed in this class. (4) Cities in which there is no joint, and but little and only occasional "bootlegging." In this class 92 were listed.

Lawlessness.—In March there was a mutiny on the part of prisoners in the State Penitentiary who worked the coal-mines. On the 18th they overpowered the guards on duty in the mines, and threatened to kill their prisoners unless the warden would consent to reduce the amount of coal called a day's work. The warden refused to make any terms with them. A negro convict made the perilous climb of 720 feet from the bottom of the mine up the shaft to the top, for the purpose of acquainting the officials with the situation beneath. He went down again in a cage, with guards. The convicts were fired upon, and two were wounded. The imprisoned guards were released, after having been held for two days. The convicts were then hauled to the top and put under close restraint. The negro who made the climb was pardoned. Two hundred and eighty-four convicts were concerned in the mutiny.

Another mutiny occurred in November at the Federal Penitentiary, within a few miles of the State institution. A large cell-house was in course of construction, the work on it being done by convicts, out in the open and insufficiently guarded. Presumably through the agency of discharged prisoners, several convicts received weapons, and on the afternoon of Nov. 7 overpowered their guards, and 27 succeeded in getting away. In the mêlée one convict was killed and another

fatally wounded. Three convicts were wounded, one of them mortally. At Nortonville, a day or two later, in a fight between a squad of the convicts and a posse, two of the former were killed and two were wounded. One of the sensational incidents connected with the escape, and the capture, by two convicts, of Sheriff Cook, of Shawnee County, within a few miles of the capital of the State. He was kept in a farmhouse several hours, and officers on the outside were deterred from making any attempt to rescue him because of threats made to kill him. The convicts finally left the house, using the sheriff and a farmer and his wife as shields, and made good their escape. Captures were made at various points, but of the 27 that broke away, 9 escaped.

Legal Decisions.—In the case of the State of Kansas vs. Board of County Commissioners of Wichita County (62 Kan., 494), the Supreme Court held that "boards of county commissioners are authorized to refund bonded indebtedness which has been outstanding more than two years; and where a board issues refunding bonds under the refunding act, and recites on the face of the refunding bonds that the debt refunded is in county bonds which actually existed when the act was passed, and which have been outstanding more than two years, and that all prerequisite facts existed, and all conditions precedent to the issue of refunding bonds had been complied with, and at the same time makes a full report to the Auditor of State of the steps taken and the proceedings had in the matter of refunding, as the refunding act requires, certifying that all acts and conditions and things required to be done precedent to the issue of the bonds had been properly done and performed—the defense that the debt refunded was not bonded indebtedness nor bonds which had been outstanding more than two years is not available against a *bona fide* holder; nor can the county escape liability on the ground that the bonds issued exceeded in amount the limit prescribed by the refunding act."

The same court, in the case of The State of Kansas vs. Robert Simons (61 Kan., 752), decided that "the assent by a defendant upon trial on a charge of felony to the discharge of one of the jurors, with an agreement to submit to a verdict by the remaining number, is insufficient to bind him, and in such case, in the event of an adverse verdict, he is entitled to a retrial notwithstanding his agreement. When not enough jurors of the regular panel to constitute a jury are in court, and either party to a case called for trial requests that the necessary additional number be drawn, in the manner prescribed by chapter cxi, Laws of 1899, it becomes the duty of the judge to cause the drawing to be made, and not to fill the panel with talesmen from among the bystanders."

The Kansas law of 1897, empowering the State authorities to fix the charges of stock-yard companies in November, was declared unconstitutional by the Supreme Court of the United States on the ground that it was class legislation, and its enforcement would deprive the company of its property without due process of law. The decision reverses the United States Circuit Court.

Legislative Session.—The Legislature (Republican in both branches) assembled on Jan. 8, and remained in session until March 9. The appropriations amounted to \$4,476,297, compared with \$4,230,802 expended by the Legislature of 1899.

A great deal of money was expended in providing for new buildings at the State institutions. The University at Lawrence was given a new museum building at a cost of \$75,000. Provision

was made for a library for the Normal School, at Emporia, to cost \$60,000. The Agricultural College, at Manhattan, was allowed \$70,000 with which to build a physics and chemistry building to replace one destroyed by fire. The Quindaro Industrial School, at Wyandotte, for negro youth, was given \$13,000 for new buildings. Provision was made for a new cell-room at the State Penitentiary, to cost \$2,000, and for a new cell-block for the Boys' Reformatory, at Hutchinson, to cost \$15,000. Five thousand dollars was appropriated to erect an engine-house and laundry building at the State Industrial School for Girls, at Beloit, to replace one burned down. For the Topeka Insane Asylum \$10,000 was appropriated to finish the work on the new administration building, and the asylum at Osawatimie was given \$25,000 with which to complete and equip the new hospital. A third asylum for the insane is to be built at Parsons at a cost of \$150,000, for which a reappropriation was made.

Following are some of the more important measures that became laws:

For the appointment of cattle-brand inspectors.

Allowing cities of the second class to issue bonds to pay their floating indebtedness.

Making train-robbing punishable by life imprisonment.

Creating a State board of railroad commissioners, to take the place of the old Court of Visitation, the bill creating the court having been declared unconstitutional.

Enabling railroad employees to vote wherever they may happen to be, when in line of duty, on Election Day.

An amendment to the libel law, making it less easy to "hold up" newspapers.

Prohibiting prize-fights.

To prefer the wages of employees of defunct corporations.

Providing for the care of dependent children.

To establish an experiment station and a branch of the State Normal School on the Fort Hays reservation.

For a park at Pike's Pawnee village, in Republic, where Gen. Zebulon Pike, on his pioneer trip through the West, found a Spanish flag flying over an Indian village, took it down, and ran up the Stars and Stripes.

Prohibiting the sale of opiates except on prescription of physicians.

Providing for the reorganization of the Kansas National Guard.

A bill known as the "Hurrell law" was passed for the purpose of strengthening prohibition legislation by providing for search and seizure of contraband liquor. Many actions were brought under it and convictions secured, particularly in Topeka, where about 100 cases were pending, when Judge Hazen, of the Shawnee district court, decided, in December, that the law was unconstitutional.

Provision was made for biennial elections.

Another election bill that passed is known as the "antifusion" law. It prohibits the appearance of any one name in more than one column on the ballot.

Political.—No party conventions were held this year, and the passage of the biennial election law resulted in no general election in the autumn. Elections were held for county commissioner in one district in each county, the result being that the Republicans elected 64 out of the 105.

In order to determine the legal make-up of the election boards the Secretary of State made an analysis of the vote cast at the general election in 1900, and for the first time it was demonstrated

to a certainty that the Populist party was the third in numbers in the State. The count showed votes cast by Republicans, 181,893; by Democrats, 83,388; by Populists, 81,220. In seven years the Republicans gained 33,196 votes and the Democrats 54,966, while the Populists lost 37,904.

KENTUCKY, a Southern State, admitted to the Union June 1, 1792; area, 44,400 square miles. The population, according to each decennial census since admission, was 220,955 in 1800; 406,511 in 1810; 564,135 in 1820; 687,917 in 1830; 779,828 in 1840; 982,405 in 1850; 1,155,684 in 1860; 1,321,011 in 1870; 1,648,690 in 1880; 1,858,635 in 1890; and 2,147,174 in 1900. Capital, Frankfort.

Government.—The following were the State officers in 1901: Governor, J. C. W. Beckham; Secretary of State, C. B. Hill; Treasurer, S. W. Hager; Auditor, G. C. Coulter; Adjutant-General, David R. Murray; Attorney-General, R. C. Breckinridge, adjudged by the Court of Appeals, Nov. 20, not to be entitled to the office by a decision in favor of the contestant, Clifton J. Pratt; Superintendent of Education, H. V. McChesney; Commissioner of Agriculture, I. B. Nall; Commissioner of Insurance, J. B. Chenault; Chairman of the Railroad Commission, C. C. McChord—all Republicans but Pratt; State Inspector, Henry B. Hines; Chief Justice of the Court of Appeals, B. L. D. Guffy; Associate Justices, J. D. White, George Du Relle, A. Rollins Burnam, T. H. Paynter, J. P. Hobson, Ed. C. O'Rear; Clerk, Samuel J. Shackelford. The clerk and Justices White, Paynter, and Hobson are Democrats; the other justices are Republicans.

Elections of State officers are held in November of the years next preceding presidential elections. The term of office is four years. The Legislature consists of 38 Senators and 100 Representatives, and meets biennially, the first Tuesday after the first Monday of January in even-numbered years.

Census Figures.—A census bulletin giving the population of the State by sex, nativity, and color shows that there are 1,003,697 males and 1,033,228 females, of whom there were foreign born 265,530 males and 237,119 females, and natives of foreign parentage 67,600 males and 71,157 females. The total negro population was 142,073 males and 142,633 females, the native whites of native parents amounting to 854,002 males and 819,411 females.

In Kentucky there were only 54 male Chinese and 3 females, no Japanese, and 52 male and 50 female Indians.

The percentage of the urban population is given as 19.7.

Finances.—The Auditor's report covers the two years ending June 30, 1901. The amount of cash in the Treasury July 1, 1899, was \$385,148.70; on July 1, 1900, it was \$570,347.69. The total receipts for the fiscal year ending June 30, 1901, was \$4,447,474.51. Of this amount, \$1,404,465.63 was placed in the general expenditure fund. This fund, to which 15 cents tax on each \$100 worth of property goes to defray ordinary expenses, is, the Auditor says, inadequate to defray such expenses. The amount paid out during the last fiscal year under the head of general expenditures was \$2,862,829.94, leaving a deficit in this fund of \$1,458,364.31.

The Auditor estimated the amount that would be on hand Jan. 1, 1902, at about \$1,000,000, but that not one dollar of this amount will be in the general expenditure fund under the present law.

The State paid out during the year for criminal prosecutions \$595,692.30; for salaries to circuit judges and attorneys, \$123,821.08; for charity, the

insane asylums, and other institutions, \$729,678.36, showing a total of \$1,449,191.74. This expenditure exceeds the expenditure fund under the present law for this purpose by \$44,726.11. The expenses incurred during the past two fiscal years for criminal prosecutions and jury expenses and that incurred in the support of pauper idiots show enormous increases.

The Auditor calls attention to the enormous bank deposits which are permitted under the present law to go untaxed. Only 13 per cent. of deposits was taxed in 1901. The amount of omitted taxes from this source alone in two years was \$578,584.04.

The amount of military appropriation expended since the last session was \$29,572.73, and the Attorney-General has been directed to sue for money illegally appropriated under the Taylor administration.

The expenditures on account of the penitentiaries from July 1, 1900, to June 30, 1901, were \$180,391.11, while the receipts for the same time were \$151,262.54.

Education.—Estimates of the resources of the school fund, given by the Auditor in July, are for the year ending June 30, 1902: Balance on hand, \$40,235.46; interest on bonds, \$138,755.80; dividend of Kentucky banks, \$6,000; licenses, \$136,510.53; sheriff's revenue, 1901, \$1,200,000; railroads, \$147,928; State banks, \$33,176; miscellaneous corporations, \$85,000; fines and forfeitures, \$7,250; distilled spirits, \$41,680.50; miscellaneous receipts, \$13,000; total, \$1,858,536.29.

The number of school-children is 728,799, and the total estimate of the school fund enables the Superintendent of Public Instruction to declare a per capita of \$2.50.

It was announced on July 16 that the consolidation of the Presbyterian theological seminaries at Louisville and Danville, Ky., into one institution at Louisville, and the consolidation of Center College, at Danville, and Central University, at Richmond, Ky., into one university, at Danville, was completed.

Railroads.—The total earnings of the Louisville and Nashville Railroad Company for the fiscal year ended June 30 were \$28,022,206, an increase of \$279,828 over the preceding year. The total operating expenses were \$18,233,033, a decrease of \$70,373. The net earnings from all sources were \$10,493,861, an increase of \$704,844.

On July 20 a decision was given in the State fiscal court, refusing an injunction to restrain the Auditor from certifying to the local taxing authorities for county and municipal purposes the amount of franchise taxes assessed against the railroads by the Board of Valuation and Assessments. The railroads have not paid this tax since the adoption of the new revenue law of 1893 and the tax bills will amount to more than \$500,000.

Insurance.—The Auditor has ruled that life insurance companies doing business in Kentucky are liable for franchise taxes under the franchise revenue law of 1893.

Banks.—Complaints have been made by banks in the State of the strict enforcement of the law requiring reports which heretofore, as it appears, has been neglected. The law requires that every bank shall make quarterly reports, and that every other report shall be published in the paper of its county having the largest circulation, and imposes a fine of \$200 for failure so to publish.

A most flagrant case of bank-wrecking was discovered in November, 1900, in the German National Bank of Newport. Frank M. Brown, the individual bookkeeper and assistant cashier, was missing, leaving a shortage of about \$195,000.

The cashier was arrested in January on a charge that he knew in April, 1900, that his assistant was short.

Militia.—Under the allotment of the Secretary of War, the State received \$7,614 for its militia.

Products and Industries.—The preliminary census report on the manufacturing industries of Kentucky shows the capital invested to be \$101,030,791, an increase of 30 per cent. since 1890; 9,559 establishments, 63,206 wage earners, \$22,430,958 total wages, \$19,577,809 miscellaneous expenses, cost of material used \$82,768,955, and value of products \$154,590,069, an increase of 2 per cent.

The cotton product of 1900-1901, as estimated, was smaller than that of the preceding year; the consumption in mills was 23,985 bales, a decrease of 3,554.

The coal output of 1900 was 5,181,917 short tons, valued at \$4,730,698. The increase was 575,000 tons.

The product of oil is increasing rapidly. New fields are being investigated, and companies are forming for their development.

A new and rich district for the production of lead, zinc, and fluorspar is reported in Livingston and Crittenden Counties.

Under a plan agreed upon by the Kentucky distillers in July the production for the ensuing year was limited to 25,000,000 gallons. It is assessed for taxation at \$10 a barrel, an increase of \$2. In 48 of the 119 counties liquor is not allowed to be sold; of these, 31 are mountain counties.

Labor.—Hopkins County was kept in a state of turmoil during a large part of the year, in consequence of a strike of the United Mine Workers and their attempts to drive non-union workmen from the mines. The strikers were armed, and many of them were gathered in camps. Violent attacks were made on dwellings of officers and workmen, and they were forced away from the mines by strikers armed with rifles. The sheriff organized a posse to resist them, and the militia was finally called upon. On Oct. 23 the Governor recalled the militia, believing that the danger was over; but they were sent again on the recommendation of the adjutant-general, Nov. 14. On Nov. 18 3 men were killed and others wounded in a mine fight at Providence, and riots at other mines followed. The county judge ordered the camps broken up, and many of the men dispersed. About 25 who remained in one of the camps were arrested. Earlier in the year 9 men were arrested and taken to West Virginia, charged with terrorizing the miners on the West Virginia side of the river by shooting at all who could not give the proper strikers' sign as they passed and re-passed along the railroad. On Dec. 30 James D. Wood, president of the United Mine Workers of the twenty-third district, was arrested at Evansville on the charge of being accessory before the fact in the murder of Morton Bush, a colored non-union miner. Bush was shot from ambush.

The Goebel Murder Trials.—The Court of Appeals, March 27, granted new trials to Caleb Powers and James Howard, convicted in 1900 and sentenced, the former to life imprisonment, the latter to death, in connection with the murder of Gov. Goebel. The court held that Judge Cantrell's instructions to the jury were not what they should have been.

In the case of Howard, the entire court concurred; but in the Powers decision Judges Hobson, White, and Paynter dissented.

The trial of Caleb Powers began Oct. 8. The

prisoner's attorneys filed an affidavit setting forth that the court was partizan, that the presiding judge was a candidate for the United States Senate and deeply prejudiced against the accused personally, as well as politically, etc. Judge Cantrill refused to vacate the bench. The objections to him were probably based in part, at least, on instructions given by him, Sept. 9, to the grand jury at Frankfort. The jury was made up entirely of Democrats, and the defense asked that the entire jury be disqualified because it was composed exclusively of political enemies of the accused, but the judge overruled the motion, and the trial proceeded. It concluded Oct. 26 with the conviction of Powers, and he was again sentenced to imprisonment for life. A motion for a new trial was overruled, and the case will be appealed.

In April Capt. Garnett Ripley was tried on a charge of complicity in the assassination. Evidence was introduced to show that he had said that Gov. Taylor had told him before the shooting to bring a company to the Capitol, and that Goebel would be killed, or something to that effect. Ripley was acquitted.

In November Gov. Durbin, of Indiana, denied the requisition of Gov. Beckham for the return to Kentucky of ex-Gov. Taylor and ex-Secretary of State Finley, as Gov. Mount had done the year before. In his reply he said the trials that had taken place had shown that the two men whose surrender was demanded would not receive a fair trial. (See under INDIANA, in this volume.) Gov. Beckham replied, charging that Gov. Durbin was acting in pursuance of an agreement made before his election.

Lawlessness.—An alleged "Kuklux gang" was captured in Letcher County and put on trial in September for several crimes—murder, highway robbery, and attempts to wreck trains.

This Kuklux gang, it is alleged, is composed of the Reynolds and Wright families, and has been operating in Letcher and Bell Counties several years. The last crime with which they are charged is that of murdering a woman named Wilson in Letcher County. The trial was transferred to Pineville from Whitesburg, the county-seat of Letcher County, on application of the defendants' counsel, made on account of the intense feeling against the accused in that county. There were 13 to be tried. They were engaged in a bloody fight in April with a sheriff's posse at Boonesfork, when several were killed and others were taken.

A riot at Corbin, Jan. 16, resulted in the deaths of two or three persons, the wounding of others, and the destruction of a building by dynamite.

Lynchings were reported this year at Paris, Wickliffe, Shelbyville, and Hodgenville. All the victims were negroes. In the case of 3 hanged at Wickliffe in September, for what crime is not stated, the lynchers were negroes. Carter, hanged in February at Paris, was charged with assault upon a woman; Esters, hanged in October at Hodgenville, was charged with having forced a boy fifteen years old to commit a crime. Fields and Garnett, hanged at Shelbyville Oct. 2, were accused of having stoned a man to death Sept. 21.

The toll-gate raids have been renewed. In June a mob attacked a tollhouse 5 miles from Danville, soaked it with oil, and burned it to the ground.

Unconstitutional Act.—The so-called McCain law was pronounced unconstitutional in December, but an appeal will probably be taken. Under the law the warehouses were subject to fine for charging shippers \$1.50 a barrel and 1 per cent.

commission for selling, the law fixing the rate of charge at \$2 and no percentage commission. Several hundred suits had been filed against the warehousemen, which would have practically forced them out of business had the law been found constitutional.

Penalties ranging from \$25 to \$100 per hog-head are prescribed against all warehouses that do not include the weight of the sample in the selling weight of the hoghead.

On Aug. 11, 1900, the warehouses instituted an action in equity against the various plaintiffs in the common-law actions, and obtained a temporary injunction against them, requiring them to prosecute their actions in this suit upon the ground that all the said actions involved the same questions, and alleging that the statute in question, upon which the actions were based, is contrary to the Constitutions of Kentucky and the United States, for the reason that, as it relates only to tobacco warehouses, it is special legislation and does not give them the equal protection to which they are entitled, and for the further reason that the fees fixed by the statute are so unreasonably small that they can not continue their business, and it is taking their property without due process of law and without compensation.

The court held that so much of the law as attempts to regulate or affect the compensation of tobacco warehousemen must be held to be unconstitutional because they are unreasonable and deprive the warehousemen of the profits of their established business, and the temporary injunction heretofore granted must be made perpetual.

Political.—Elections were held Nov. 5 for members of the Legislature. The official count of the vote shows that the Democrats will have a majority of 60 on joint ballot in the General Assembly, as follows: House of Representatives, Democrats 73, Republicans 27; Senate, Democrats 26, Republicans 12. This Legislature will have the choosing of a successor to United States Senator Deboe.

At a primary election in Caney, Morgan County, in March, a dispute arose over the question of the right of certain persons to cast their ballots. Nearly every man at the polling-place was armed; and as the quarrel progressed, weapons were drawn. The first shot was the signal for a general fight; and when the smoke cleared away 10 wounded men were lying on the ground.

Three men in Bourbon County were held by the United States commissioner to answer charges of conspiracy to hinder negroes from voting at the November election.

A decision was given Nov. 20 by the Court of Appeals in the case of one of the offices in dispute at the time of the Taylor-Goebel contest. The office was that of Attorney-General, and was held by Robert C. Breckinridge against the Republican claimant, C. J. Pratt. The decision of the Republican majority of the court was in favor of Pratt, the 3 Democratic judges dissenting. The contests for the other minor offices were taken to the Court of Appeals, in 1900, and were decided by a political division in favor of the Democratic contestants, that party being then in the majority.

LOUISIANA, a Southern State, admitted to the Union April 30, 1812; area, 48,720 square miles. The population, according to each decennial census since admission, was 152,923 in 1820; 215,739 in 1830; 352,411 in 1840; 517,726 in 1850; 708,002 in 1860; 726,915 in 1870; 939,946 in 1880; 1,118,587 in 1890; and 1,381,625 in 1900. Capital, Baton Rouge.

Government.—The following were the State officers in 1901: Governor, William W. Heard;

Lieutenant-Governor, Albert Estopinal; Secretary of State, John T. Michel; Attorney-General, Walter Guion; Treasurer, Ledoux E. Smith; Auditor, W. S. Frazee; Adjutant-General, Allen Jumel; Commissioner of Agriculture and Immigration, Jordan G. Lee; Superintendent of Education, J. V. Calhoun; Registrar of the Land Office, J. M. Smith; Railroad Commission, C. L. De Fuentes, W. L. Foster, and R. N. Sims till April, when Mr. Sims resigned and was succeeded by Overton Cade; Chief Justice of the Supreme Court, Francis T. Nicholls; Associate Justices, Newton C. Blanchard, Joseph A. Breaux, Frank A. Monroe, and O. O. Provosty, the last-named appointed in March to fill the vacancy caused by the death of Lynn B. Watkins; Clerk, T. M. C. Hyman. All are Democrats.

The term of the State officers is four years. They are elected in April of the years of presidential elections. The Legislature meets biennially in May of the even-numbered years; the length of the session is limited to sixty days.

Census Figures.—Following are additional census statistics for Louisiana from a bulletin of July: Males, 694,733; females, 686,892; native, 1,328,722; foreign, 52,903; white, 729,612; colored, 652,013, of whom 650,804 are negroes, 599 Chinese, 17 Japanese, and 593 Indians. The percentage of colored population is 47.2; of foreign born, 3.8.

The males of voting age number 325,943, of whom 152,538 are native whites. More than 30 per cent. of the males of voting age are illiterate, and about half of the aliens. The males of militia age number 268,739, of whom 132,732 are native whites. There are 538,267 persons of school age, of whom 270,411 are native whites.

In explanation of the comparative decrease of the colored population of the State, a New Orleans correspondent says: "Much legislation against the negro has been placed upon the statute-book. He has been largely disfranchised, shut out from juries, compelled to ride in separate cars on the railroads, and prohibited from marrying either white or Indian. Popular sentiment has gone even further than the law, for he is shut out of hotels. In a number of localities, especially in Grant and Vernon, no negroes are allowed, and the communities are entirely white. But it is doubtful if these acts would have materially affected the population, so far as races are concerned, but for the rapid increase of the Italians and Acadians. The negro population of Louisiana increased 16.2 per cent. in the last decade, which is about normal; but the whites increased 37 per cent."

The percentage of urban population is 25.1.

Valuations.—The Auditor's tabulation of the assessment-rolls of the parishes shows a total for the State of \$301,215,222, an increase in one year of more than \$24,000,000.

Old State Bonds.—The Treasury Department and the authorities of the State are trying to secure a final settlement of the old Louisiana State bonds. These bonds, originally amounting to \$4,476,000, were confiscated by Gen. P. H. Sheridan, at Shreveport, La., on July 12, 1865; but as the capture occurred after the war had officially ended, the National Government has never claimed title to them. From time to time, upon identification by proper State officers, certain certificates have been delivered, until the value of those remaining in the treasury is not now more than \$545,000. It has been found that some of these bonds, amounting to several hundred thousand dollars, for which the national Treasury holds descriptive certificates, are apparently missing from the State treasury.

Education.—The school apportionment, distributed on a basis of a school population of 404,757, amounted in June to \$9,916,541.

The Normal School at Natchitoches is so crowded that at a meeting of business men of the place in October, \$10,000 was advanced by subscription for a new dormitory, the Legislature having made no appropriation. A class of about 20 was graduated in February, and more than 30 in May. The summer normals at Franklin, Shreveport, and Rayville were largely attended.

The State University, at Baton Rouge, had in October nearly 400 students, a number greater than ever before. A local paper says: "The course in sugar agriculture seems to become more popular every year, if we are to judge by the number of students adopting it. It is perhaps the most thorough course in the institution, requiring five years for its completion, and embracing every subject necessary to equip the student for every branch of work connected with the industry. Besides the theoretical work in this course given at Baton Rouge, the students spend the whole of the grinding season at the sugar experiment station at Audubon Park, New Orleans."

At a convention of parish superintendents in October resolutions were adopted advising the people to tax themselves to afford greater educational facilities.

Trouble arose in the State Board of Education in May over the question of the selection of text-books for the ensuing four years. A resolution favored by the Governor was introduced, proposing the appointment of a committee of 3 from the faculties of State educational institutions to examine books offered and report as to their fitness. This was voted down by 6 against 2. The majority objected to yielding up their responsibility, and one of them offered a resolution for the appointment of a committee of 5 members of the board for the purpose. To prevent the passage of this resolution, the mover of the former one called for an adjournment of the board for ten days. The majority of the board promptly voted this proposition down. After this vote the Governor arose and stated that, as the action of the majority indicated a want of unity and harmony in the board, he demanded their resignations. Four members of the 6, who were not *ex officio*, but had been appointed by the Governor, instantly ceased to take part in further proceedings and tendered their resignations. It appears that complaints have been made that the text-books in use were unfair to the South, and that this was the source of the trouble. At a meeting of the Louisiana Confederate Veterans in August, a committee appointed at a former meeting reported a list of books condemned, and recommended the formation of a permanent committee of censors. The following is the list: Eggleston's "First Book in American History" and "History of the United States," Montgomery's "Beginner's American History" and "History of the United States," John L. Wilson's "Story of the War," C. C. Coffin's "Building the Nation," Fiske's "History of the United States," "History of the United States" (Barnes), Field's "Grammar-School History of the United States," Matthews's "Introduction to American Literature," Noble's "Studies in American Literature," Young's "Government Class-Book," "The Children's Third Reader (Ginn & Co.)," "New Century Fourth Reader" (Rand, McNally & Co.), Brumbaugh's "Standard Reader," Williams's "Choice Literature," Book 2 (Sheldon & Co.), "Lights of Literature," Book 4 (Rand, McNally & Co.). The

committee offered resolutions declaring that "no histories or other school-books which may treat of questions involving the respective merits or demerits of the North or South should be taught in Southern schools unless written by one in thorough sympathy and affiliation with the South and its people, and unless intended to be used solely in Southern schools."

Banks.—The condition of the national banks of Louisiana, outside of New Orleans, on July 15 was as follows: Loans and discounts, \$4,926,132.78; overdrafts, \$992,755.40; stock securities, etc., \$1,075,010.39; 5-per-cent. redemption fund with Treasurer, \$585,713.50; total resources, \$9,361,780.85; capital stock paid in, \$1,147,500; surplus fund, \$448,200; undivided profits, less expenses, \$575,859.03; dividends unpaid, \$5,519; individual deposits, \$5,588,029.37; United States deposits, \$50,000; bills payable, \$150,000; average reserve held, 29.11 per cent.

The Convict System.—By the Constitution of 1898 the system of leasing convicts was done away with, and at the expiration of existing contracts they came wholly under the care of the State. The Board of Penitentiary Commissioners bought lands and erected buildings for the housing and care of those convicts who work outside the prison walls, and numbers of the able-bodied prisoners were set to work at raising cotton, food-crops, beef-cattle, and hogs for the support of the persons now undergoing confinement and hard labor. The Legislature placed at the orders of the board \$200,000 for the inauguration of the new system of State control. The total cash income from the State's two plantations this first year was \$180,000. The board will also have several thousand tons of hay, 40,000 bushels of corn, and enough peas and potatoes to carry the stock and men through the next crop year. The mortality among Louisiana's convicts has been reduced 50 per cent.

Railroads.—Authority to reduce rates has been granted the roads in many instances, and the conditions in transportation matters generally have been greatly improved. The work of the commission has been effective, and after three years of existence it finds itself comparatively free from litigation and its orders are promptly obeyed.

The number of formal questions heard and decided by the board since its organization is 196. Every road in Louisiana has been inspected and improvements suggested. There has been a marked improvement in the cleanliness and comfort of local accommodation trains.

In two years and five months the commission ordered 1,050 changes in rates, the majority of these changes being reductions.

Products and Industries.—By the report of Secretary Hester it is seen that the consumption of cotton in the mills of the State during the year amounted to 16,527 bales, an increase of 107 bales. The statistics of the Department of Agriculture estimate the production of Louisiana at 260 pounds of lint-cotton to the acre. By an estimate made in November by Latham, Alexander & Co., from data received from correspondents in the State, the total crop of Louisiana was placed at 755,000 bales, an increase over that of the year preceding.

The Rice Association of America was formed at Crowley, Dec. 11. The objects are declared to be to foster and promote the rice industry, also "to find and secure markets for the sale of all such rice products, to the best advantage of the rice-grower and manufacturer, to encourage the investment of capital in all rice enterprises."

An oyster commission has been appointed, to examine conditions and propose legislation for the encouragement of the industry. When the boundary-line of Mississippi is definitely fixed it is designed to afford such protection that the oyster acreage will be increased and the facilities for handling multiplied. A correspondent says: "The lower coast ships annually 700,000 barrels of oysters to New Orleans and other markets and, with proper amendments to the existing restrictive laws, this annual production of oysters could be increased to 5,000,000 barrels, as the average yield is 300 barrels to the acre."

The preliminary census bulletin on manufacturing industries gives the following figures for Louisiana: Number of establishments, 4,349; capital, \$113,039,564; wage-earners, 42,360; total wages, \$15,359,208; miscellaneous expenses, \$7,996,692; cost of materials used, \$83,161,444; value of products, including custom work and repairing, \$121,099,924.

For New Orleans the figures are: Number of establishments, 1,524; capital, wage-earners, \$46,035,331; average number, 19,663; total wages, \$7,541,710; miscellaneous expenses, \$4,762,093; cost of material used, \$44,248,231; value of products, including custom work and repairing, \$63,492,629.

Southwestern Louisiana shares with southeastern Texas the recently discovered oil-fields. A despatch of Oct. 19 says: "Nearly all the operations in Calcasieu Parish have brought oil to light, most of them at a depth of 250 or 500 feet, but the wells proved to be mere pockets that spouted out what little oil they held in a few hours. The real oil-vein has been struck at a depth of 1,200 feet. The oil itself is somewhat different from the Texan product, being browner and containing more asphaltum. It is more like the oil from southern California. While these facts are convincing, the old Louisiana trouble of quicksands remains."

New Orleans.—By a decision of the Supreme Court in November, the franchise of the Waterworks corporation was declared forfeited. In 1877 the water-supply franchise was owned by the municipality; but the work had been so mismanaged that the franchise was sold to a private corporation for fifty years for what is said to have been a grossly inadequate sum. The ground on which the decision rests is the failure of the company to comply with the conditions, in regard to both the quality and quantity of water supplied, and especially in the rates charged, which since 1883 have been greatly in excess of the franchise limit, the stipulation being that no more should be charged than was paid to the city March 31, 1877.

Statistics of New Orleans of the Department of Labor, September, 1900, show among many others the following:

Debt: Bonded, \$14,293,490; floating, \$263,225; total, \$14,556,715; net debt, \$14,556,715. Legal borrowing limit controlled by legislation. Assessed valuation of property: Real, \$103,000,000; personal, \$38,000,000. Tax rate per \$1,000: State, \$7; city, \$22.

The great floating steel dock, built near Baltimore for the United States naval station at New Orleans, was started on its journey to its destination about Oct. 15, in tow of several tugs, and reached its place about Nov. 6. It will be used to dock the great war-ships of the navy. The cost of the dock was more than \$800,000. It has a lifting capacity of 20,000 tons.

Lake Borgne Canal.—The canal connecting the Mississippi river with Lake Borgne was

opened to commerce in the summer. Including Bayou Dupre, it is 7 miles long and from 150 to 200 feet wide. The lock-chamber is 200 feet long, 50 feet wide, and 25 feet deep, and connects the canal with the Mississippi river. The canal gives New Orleans direct water communication with Mississippi Sound and the great rivers connecting with it, and shortens by 60 miles the distance by direct navigation to the deep water of the Gulf.

With the opening of the canal, the vessels carrying goods for foreign shipment can discharge their cargoes at the wharves of ocean vessels, and steamboats and barges from the river above can pass directly to and from the ports of Mississippi, Alabama, and Florida.

The canal enterprise was first brought forward about 1850, when a bill was passed in Congress for the fortification and protection of Ship island harbor. The first charter was granted in 1855, the second in 1869, and the third in 1884.

Lawlessness.—Lynchings have taken place this year at Dayline, St. Peter, Fenton, Shreveport, Alden Bridge, Rhodessa, Girard, Crowley, and Lake Charles.

The negro at Dayline had attempted to assault a white woman, and in being identified was shot to death.

The crime of the negro at St. Peter was the murder of a family of four, apparently for the purpose of robbery. Two negroes were lynched at Fenton in February. At Shreveport, March 6, a negro was shot to death for assault upon a woman. The negro lynched at Rhodessa—by a mob of negroes, it was supposed—confessed to having assaulted a little colored girl. The one hanged by a mob at Alden Bridge kept a negro gambling-house and had been ordered to leave, but refused.

John G. Foster, a planter living 5 miles east of Shreveport, was shot and killed, from a cabin, June 12, by Prince Edwards, a negro employed on the plantation. There were a dozen or more negroes in the cabin and they ran in all directions. The overseers were quickly joined by other men, and all the negroes were arrested, except Prince Edwards, who did the shooting. On June 19, two of the suspected negroes were taken from jail at Shreveport by a mob and hanged. They were "Prophet" Smith and F. D. McLand. Both denied that they had anything to do with the killing. Smith was the head of the "Church of God" movement in that section.

After the shooting of Foster, a search of Smith's rooms revealed a so-called Ark of the Covenant. It was a rudely constructed box, bearing within and without mystic symbols. When the officials laid hold of the box the negroes were panic-stricken. Further search revealed the minutes of the meeting of the society. Its members were denominated as princes and Smith as king.

At Crowley, July 19, an officer accosted a negro to learn his business. The negro fired upon the officer and then fled. He was caught and taken to jail, where a mob took him from the officers and lynched him.

At Herndon plantation, Nov. 23, about 8 miles below Shreveport, a negro, Frank Thomas, shot and killed a fourteen-year-old negro boy named Wilburn for a debt of 30 cents. In the morning a deputy sheriff arrested the murderer and was proceeding toward Shreveport when a mob of 200 negroes and 5 or 6 white men suddenly appeared, took possession of Thomas and hanged him on a tree.

At Lake Charles a negro was hanged in the center of the business portion of the city, at four o'clock on the morning of Dec. 7, by a mob of

about 50 citizens, for an attack upon a deputy sheriff and his wife.

At Balltown, in Washington Parish, a negro was burned for an assault upon a white woman. This was shortly followed by a riot, and though it was not the immediate cause. The riot arose over the attempt of a constable to arrest a negro who was running a refreshment stand at a camp-meeting without a license. In the riot that ensued two of the sheriff's posse were killed and another was badly wounded, and 9 negroes were killed—5 men, 3 women, and 1 small child. The accounts place the number of negroes dead at 13. A dozen or more negroes escaped to the woods and swamps with wounds that were believed to be mortal.

The State Constitution.—In the case of a criminal sentenced to be hanged in February, an appeal was taken to the United States Supreme Court on several points of error. The one most relied on was that the Constitution of Louisiana was void and of no effect, by reason of not having been referred to and ratified by the people of the State, and for a variety of other allegations as to its supposed insufficiency. The appeal failed, and the decision is regarded so far as a vindication of the validity of the Constitution.

In July a suit was filed to test the validity of the suffrage clause. It was a mandamus proceeding in behalf of a poor and illiterate negro, who had been a registered voter about thirty years; but in 1901 was refused registration under the provisions of the new Constitution. The mandamus was asked on the ground that the State Constitution's provisions on suffrage were unlawful, because they were in violation of the fifteenth amendment to the Federal Constitution. The suit failed because there is no question of the constitutionality of an educational qualification for voters, and the negro was illiterate.

MAINE, a New England State, admitted to the Union March 15, 1820; area, 33,040 square miles. The population, according to each decennial census since admission, was 298,269 in 1820; 399,455 in 1830; 501,793 in 1840; 583,169 in 1850; 628,278 in 1860; 626,915 in 1870; 648,936 in 1880; 661,086 in 1890; and 694,466 in 1900. Capital, Augusta.

Government.—The following were the State officers in 1901: Governor, John F. Hill; Secretary of State, Byron Boyd; Treasurer, Oramandal Smith; Attorney-General, George M. Seiders; Superintendent of Education, W. W. Stetson; Adjutant-General, John T. Richards, who resigned and was succeeded Dec. 1 by Augustus B. Farnham; Commissioner of Labor and Industrial Statistics, Samuel W. Matthews; Bank Examiner, F. E. Timberlake; Insurance Commissioner, S. W. Carr; Liquor Commissioner, James W. Wakefield; Commissioner of Sea and Shore Fisheries, Alonzo R. Nickerson; Railroad Commissioners, Joseph B. Peaks, Benjamin F. Chadbourne, Parker Spofford; Librarian, Leonard D. Carver; Land Agent and Forest Commissioner, Charles E. Oak, resigned and succeeded, Aug. 1, by Edgar E. Ring; Secretary State Board of Agriculture, B. W. McKeen; Registrar of Vital Statistics, A. G. Young; Assessors, George Pottle, Otis Hayford, F. M. Simpson; Superintendent of Public Buildings, E. C. Stevens; Factory Inspector, Charles E. Atwood; Commissioners of Inland Fisheries and Game, Leroy T. Carleton, Henry O. Stanley, Charles E. Oak; Chief Justice of the Supreme Court, Andrew P. Wiswell; Associate Justices, Lucilus A. Emery, William H. Fogler, W. P. Whitehouse, Sewall C. Strout, Albert R. Savage, Frederick A. Powers, Henry C. Peabody;

Clerk, W. S. Choate. All are Republicans except Justice Strout.

The term of the State officers is two years. The State election takes place on the second Monday in September of the even-numbered years. The Legislature meets biennially the first Wednesday in January in the odd-numbered years. The session is not limited.

Census Returns.—A bulletin of the Census Bureau gives the following figures for Maine: Males, 350,995; females, 343,471; natives, 601,136; foreign, 93,330; whites, 692,226; colored, 2,240, including 1,319 negroes, 119 Chinese, 4 Japanese, and 798 Indians. The percentage of urban population is 36.2.

Finances.—The regular reports of the Treasurer are made to the Legislature, and a summary of that for the biennium that closed at the beginning of the year will be found in the Annual Cyclopaedia for 1900. The Legislature this year adopted measures for increasing the revenue by special franchise taxes, increasing the rates for corporations, etc. The State tax levied at present is $2\frac{3}{4}$ mills, yielding from cities, towns, and organized plantations \$927,725. The State expenses average nearly \$2,000,000 annually. On account of the school tax, about \$665,000 was paid back to cities and towns in 1901; of the 422 towns and 79 plantations, 245 receive more than they pay into the State treasury. The increase by reason of the additional taxes on corporations amounted to about \$300,000. The steam railroads pay more than \$300,000 annually as their franchise tax. In addition, they are taxed on all their buildings, lands, and fixtures outside of their located right of way in each city and town in which these are located, as other property is taxed therein. The savings-banks pay a tax of $\frac{1}{4}$ and $\frac{1}{2}$ of 1 per cent. on all their deposits, $\frac{1}{4}$ of 1 per cent. on all deposits invested in securities beyond the limits of the State, and $\frac{1}{2}$ of 1 per cent. on their deposits invested in securities within the limits of the State. The total as assessed for the year was \$500,733.42. That on trust and banking companies was \$22,513.80. The telephone companies were taxed this year \$14,210, against \$11,020 in 1900. Telegraph and telephone companies whose receipts are under \$1,000 are not taxed. The minimum tax on general corporations is \$5; on a capital of \$1,000,000 it is \$50. The total receipts from corporation organizations and franchise taxes was about \$92,000. The Treasurer received, Nov. 1, \$20,154 for dog licenses; from this claims for damage to domestic animals are paid. The bounties on wild animals are abolished.

The State had claims against the Government on account of expenditures for the Spanish War amounting to \$87,434.80. Of this, \$34,675.70 was disallowed and suspended. The remainder is paid.

Valuations.—The valuation of the State has increased in eleven years from \$255,000,000 to about \$300,000,000. Penobscot and Arrostook Counties have made large gains, the former having increased in valuation \$901,000 in one year.

Education.—The total amount of the school fund and mill tax for 1901 was \$562,162.18, an increase over that of 1900, caused by the increase in the tax received from savings-banks (one-half of which goes to schools) and by the growth in the valuation of the State, the schools receiving as a mill tax 1 mill on every dollar of valuation.

The total number of pupils in the State is 211,834, an increase of 1,391 over last year, which gives \$2.65 to each pupil.

The graduating class at the Farmington Normal School in June numbered 44. The Castine Normal School opened with 130 in September.

At the State University, at Orono, 369 students were in attendance in May, of whom 297 were in the regular classes, 13 were specials, 22 in a short course in agriculture, and 37 in the law school. The faculty and staff numbered 56. A class of 41 was graduated in June. The university received this year \$25,000 from the Government, not including what was given for the experiment station.

Bowdoin College graduated 57 in June. At the opening of the one hundred and seventh year of the college, in September, more than 70 were registered in the entering class. Gen. Thomas H. Hubbard, of New York, has given \$250,000 for a new library building, which is in process of construction.

The enrolment at Bates College, Lewiston, in December, was 293, of whom 92 were freshmen—the largest class ever entered. Four instructors have been added to the faculty this year.

At Colby College, Waterville, 32 were graduated, of whom 6 were women. The question of continuing to receive girls at the college was thoroughly and warmly discussed at the meeting of the alumni association. Four petitions had been afloat among the graduates, and were numerous signed by adherents of the two sides. A motion was finally carried that it was the belief of the association that the college should be divided, and one for men and one for women be established whenever practicable.

The Maine Wesleyan Seminary and Female College, at Kent's Hill, has, it appears, been divided into two separate institutions. The seminary continues as before for those who do not take a full college course, for preparatory work, and with special departments for music, art, normal instruction, and business courses, and is open to both sexes.

The annual report of the library commission shows that 17 new traveling libraries, each of 50 volumes, have been added to the 42 purchased last year. Of these, 56 reported, showing a recorded circulation of 8,823, and 1,780 registered readers.

In the year free public libraries were established at Fairfield, Hiram, Jonesport, Sanford, Norridgewock, Buckfield, and Stetson. At Fairfield, a handsome library building, the gift of Edward J. Lawrence, was dedicated July 24.

Vital Statistics.—The Registrar finds difficulty in obtaining returns for his reports, and that for 1899 was published only in October, 1901. The births that year decreased by 646, compared with 1898, the marriages increased by 185, and the deaths increased by 414.

The birth-rate of living children in the State was 20.10 for every 1,000 inhabitants. In the cities the rate was 21.03, and in the country 19.66.

The number of marriages registered in the year was 5,229. In 1898 the number was 5,144.

The number of divorces granted was 790. In the previous year there were 764.

The deaths by accident numbered 374, and those by suicide 93.

There were 9 homicides.

Charities and Corrections.—The report of the Girls' Industrial School shows that in the year 4 girls were admitted, 11 came of age, 5 were permitted to marry, 5 were discharged, and 149 remained. The expenditures for the year were \$11,119.44, and the receipts \$13,930.52.

The Reform School for Boys had about 150 inmates at the beginning of the year.

There were 172 convicts in the State Prison Nov. 30, 1900. Thirty-eight life convicts were present at the beginning of the year, 4 of whom

were women. Four were pardoned in 1901, and 2 died, while 4 more were committed, leaving 36 at the beginning of 1902. The gain from goods manufactured during the year was \$5,937.74, and the expenditures amounted to \$16,136.59.

The new insane hospital at Bangor was finished this year, and 145 patients were transferred to it in July from the Augusta hospital, which has been overcrowded. The average number of patients there in 1900 was 763; there were 107 deaths in one year.

An electric road has been built from Augusta to Togus, the site of the eastern branch of the National Soldiers' Home. One hundred and thirty acres of land have been bought, and the reservation now contains 1,884 acres. The membership for the year was 2,764, an increase of 44.

Militia.—The annual encampment of the State Guard was held the third and fourth weeks of August. The Government appropriation for Maine was \$12,745.

Old Home Week.—The second annual Old Home Week, Aug. 11-17, was observed with reunions in many towns, and in some with local celebrations. Dexter and Leeds celebrated the centennial anniversaries of the settlement of the towns. There were elaborate celebrations also in Portland, Belfast, Waterville, and other places.

Banks.—Following is a summary of the reported condition of the 51 savings-banks in the State June 29: Number of depositors, 196,583; average rate of dividends paid (approximate), 0.0332; amount of dividends paid during the year, \$2,272,774.35; checks and other cash items, \$77,833; gold coin, \$27,872.65; gold certificates, \$6,320; silver coin, \$8,240.99; silver certificates, \$29,806; legal tenders, \$20,163.22; national-bank notes, \$50,753; total cash on hand, \$220,988.86. The liabilities of the savings-banks amount to \$73,420,236.94, and are divided as follow: Deposits, \$69,533,057.70; reserve fund, \$2,396,772.44; special reserve fund, \$21,832.64; profits, \$1,440,375.74; other liabilities, \$28,198.42.

For the 17 trust and banking companies the figures are: Total cash on hand, \$281,673.60; number of depositors, 15,344; amount of dividends paid on capital stock, \$77,740; checks and other cash items, \$60,364.66; gold coin, \$26,241.35; gold certificates, \$3,680; silver coin, \$15,877.98; silver certificates, \$50,414; legal tender, \$31,910.28; national-bank notes, \$56,081; unclassified cash, \$37,104.33. The liabilities of the trust and banking companies amount to \$14,653,598.76.

The 84 national banks had, Sept. 30, resources amounting to \$47,633,680; individual deposits amounted to \$23,468,533.95. The average reserve held was 28.41 per cent.

Railroads.—Twenty-one railroad corporations, located wholly or in part in Maine, whose roads are operated by steam, and 21 street-railways whose roads are operated, with one exception, by electricity, made their returns for the year ending June 30, 1901. At the beginning of that year there were 1,905 miles of steam railroad in the State, and 13.98 miles were added in the year. The gross earnings in Maine for the year ending June 30, 1901, were \$10,930,002.86, against \$10,008,502.50 in 1900. The number of passengers carried in Maine in the year ending June 30, 1901, was 6,171,014, against 5,417,759 in 1900. The number of tons of freight hauled in Maine for the corresponding year, 1901, was 8,387,688, against 7,681,808 in 1900. There were employed upon the steam railroads, as nearly as can be ascertained, 7,573 persons, including general officers, an increase over 1900 of 333.

The total street-railway mileage was 270.51,

an increase of 17.02 miles. The gross earnings for the year ending June 30, 1901, aggregated \$1,302,738.87, an increase of \$88,893.58 over 1900. The net earnings aggregated \$467,765.39, a gain of \$67,765.39. Five persons were killed and 6 injured, against 31 injured in 1900.

Industries and Products.—The State was the most prosperous ever known for the ship-building industry. Bath, the first New England city in this particular, launched 26 merchant vessels, with a tonnage of 30,065 tons, and 2 Government vessels, with a displacement of 3,367 tons. The industry has flourished also in Waldoboro, Belfast, Castine, Machias, and other districts. The total tonnage of documented vessels launched this year, not including the Government ships, is 42,631.

A census bulletin on the manufacture of paper and pulp credits Maine with 35 active establishments, with a capital of \$17,473,160, employing 4,851 persons and turning out a product valued at \$13,223,275. The census figures were of June, 1900, before the great mills at Millinocket or the enlargements at Rumford Falls, Madison, and elsewhere were in operation.

The sales of liquor by the State commissioner about doubled this year. His sales amounted to \$68,860. More than half, \$34,869, went to the city of Portland.

The number of cases of sardines packed in 1901 was 1,396,902; in 1900 it was 815,000.

The number of lobsters caught in State waters in 1901 was 7,990,265. In 1900 the catch was 8,232,115.

The number of deer taken in the State during the year was estimated at 25,000. According to records kept in Bangor, 200 bull moose had been killed when there still remained two weeks of the open season. The number in 1900 was 137.

Legislative Session.—The session of the Legislature began Jan. 2 and ended March 22. Politically it stood on joint ballot 162 Republicans to 20 Democrats, only 1 Democrat having been elected to the Senate.

Hannibal E. Hamlin was President of the Senate and Joseph H. Manley was Speaker of the House.

The following State officers were elected: Secretary of State, Byron Boyd; Treasurer, Oramandal Smith; Attorney-General, George M. Seiders; Assessor, for six years, F. M. Simpson; Printer, Clarence B. Burleigh; Binder, H. E. Smith; Executive Councilors, C. H. Prescott, C. S. Cook, M. C. Wedgewood, W. T. Haines, E. E. Chase, H. W. Mayo, D. A. H. Powers—each for two years except the Assessor.

United States Senator William P. Frye was renominated by acclamation in the Republican joint caucus, and was elected for the term ending in 1907.

Gov.-Elect John F. Hill was inaugurated Jan. 3. He reappointed most of the appointive State officials whose terms expired.

Eight bills were passed for increasing the State revenue. They raised the rate of taxation on steam railways, street-railways, telegraph and telephone companies, express companies, sleeping- and palace-car companies, corporations organized under the general law and not otherwise taxed, trust and banking companies, and collateral inheritances.

Heretofore the telegraph and telephone companies have been assessed on the valuation of the property as returned to the State. By the new law the taxes will be levied on the gross receipts in the State. Sleeping- and palace-car companies are to pay 4 per cent. on the earnings of their

cars on business done wholly within the State. The collateral inheritance tax was raised from 2½ to 4 per cent.

The State Board of Agriculture was abolished, and the office of Commissioner of Agriculture was created. The incumbent is to be elected by the Legislature for two years, and to receive a salary of \$1,500. The Legislature elected A. W. Gilman the first Commissioner of Agriculture, his term to begin Jan. 1, 1902. For the farmers' institutes \$3,000 was appropriated.

An act to establish a State flag provides that the flag "shall be buff, charged with the emblem of the State, a pine-tree proper, in the center, and the polar star, a mullet of five points, in blue in the upper corner; the star to be equidistant from the hoist and the upper border of the flag, the distance from the two borders to the center of the star being equal to about one-fourth of the hoist.

So many persons are killed every year by hunters who mistake them for game that an act was passed providing that any one wounding or killing any human being in this way shall be punished by imprisonment for not more than ten years or by fine of not more than \$1,000; and any county attorney or sheriff failing to investigate and prosecute in such a case is liable to a fine of not over \$1,000 and removal from office. This law seems to have failed of its purpose, since the number of such accidents increased in 1901.

Many new provisions were added to the game-laws, and acts were passed relating to hunting and fishing in special localities.

The acts for the schooling of children in unorganized townships, and for the conveyance of pupils, were amended, as was also the act on traveling libraries; and the truancy law was made more stringent.

The penalty for leaving camp-fires in woods unextinguished was reduced from \$100 to \$50, and a provision was added that half the fine should go to the complainant.

The appropriations were somewhat larger than those for the preceding period, amounting to \$4,544,501.88.

Efforts to have the prohibition question resubmitted were unsuccessful.

Other acts and resolves were:

Providing for voting by machines.

For improvement of State roads.

For taxing interest-bearing deposits in trust and banking companies.

Fixing the salaries of justices of the Supreme Court at \$4,000.

Authorizing cities and towns to establish manual-training schools.

Providing for topographical and geological surveys.

For the revision and consolidation of the public laws.

Authorizing the representation of the State at the Louisiana Purchase Exposition.

Appropriating \$1,500 each year as a fund for the detection and arrest of criminals.

Prescribing a penalty of fine not exceeding \$500 or imprisonment not exceeding one year, or both, for delivering false or libelous statements to any periodical and securing their publication.

Authorizing the Androscoggin Railroad Company to convey its interests to the Maine Central Company.

Amending the law of 1887 to abolish imprisonment for debt except in case of fraud.

To secure the preservation of testimony given in trials for murder.

For the assessment of a State tax for 1901

amounting to \$927,725.94, and an equal amount for 1902.

Making appropriations for the Penobscot and Passamaquoddy tribes of Indians.

Authorizing the compilation of the laws on sea and shore fisheries; also of the insurance laws.

MARYLAND, a Middle Atlantic State, one of the original thirteen, ratified the Constitution April 28, 1788; area, 12,210 square miles. The population, according to each decennial census, was 317,728 in 1790; 341,548 in 1800; 380,546 in 1810; 407,350 in 1820; 447,040 in 1830; 470,019 in 1840; 583,034 in 1850; 687,049 in 1860; 780,894 in 1870; 934,945 in 1880; 1,042,390 in 1890; and 1,188,044 in 1900. Capital, Annapolis.

Government.—The following were the State officers during the year: Governor, J. Walter Smith; Secretary of State, Wilfred Bateman; Comptroller, Joshua W. Hering; Treasurer, Murray Vandiver; Adjutant-General, John S. Saunders; Attorney-General, Isidor Rayner; Superintendent of Education, M. Bates Stephens; Commissioner of Insurance, Lloyd Wilkinson; Commissioner of Public Lands, E. Stanley Toadvin—all Democrats; Chief Judge of the Court of Appeals, James McSherry; Associate Judges, David Fowler, A. Hunter Boyd, Henry Page, I. Thomas Jones, John B. Briscoe, Samuel D. Schmucker, and James A. Pearce; Clerk, Allan Rutherford—all Democrats except Schmucker and Rutherford, Republicans.

The term of the State officers is four years; they are elected in November of the years preceding the presidential elections, and take office the next January. The sessions of the Legislature are biennial, beginning in January of odd-numbered years, and are limited to ninety days.

Population.—Charges having been brought that the Federal census figures of 1900 had been padded in some of the southern Maryland counties, a new census was taken in 3 of the counties, which resulted in a reduction of the figures originally given. A census was also taken by the State government. The following is the population of the State by counties, according to the State census of 1901: Allegany, 53,304; Anne Arundel, 34,791; Baltimore, 88,028; Baltimore city, 517,035; Calvert, 9,963; Caroline, 16,792; Carroll, 33,651; Cecil, 24,450; Charles, 16,602; Dorchester, 28,293; Frederick, 51,639; Garrett, 17,386; Harford, 28,307; Howard, 16,276; Kent, 17,788; Montgomery, 29,155; Prince George, 28,325; Queen Anne, 18,586; St. Mary, 16,890; Somerset, 25,628; Talbot, 20,314; Washington, 44,491; Wicomico, 22,908; Worcester, 20,805; total, 1,181,691.

Finances.—The amount received into the State treasury proper during the fiscal year ending Sept. 30, 1901, was \$3,243,154.12. This, together with \$849,885.16 in the treasury proper Sept. 30, 1900, and \$229,589.14 to the credit of the fund's account, makes a total of \$4,392,628.42. The revenue in the fiscal year was \$3,043,154.12. There was a large increase in the tax on gross receipts of corporations. There was received from this source \$361,125.75, against \$275,240.98 of the previous year. This amount, however, was not the result of an increase in the usual tax for 1901, but represents the accumulated taxes for several years of various railroad companies. Payment was resisted by the companies, but a compromise was eventually agreed upon.

The disbursements for the year aggregated \$3,120,626.37, being \$359,907.89 less than in the previous year, notwithstanding the fact that a much larger sum (\$110,356.98) was carried to the sinking-funds. The balance in the treasury proper

at the close of the fiscal year was \$972,412.91. The cash available to the ordinary expenses of the Government is only \$521,787.57.

There was received into the sinking-fund during the year \$633,972.60.

Of the actual receipts this year, \$33,972.60 represents the increment from investments, while the remainder is the amount of the actual cash transferred from the treasury proper to the funds' account, a sum largely in excess of the constitutional requirement to maintain the integrity of these funds.

The Oyster Navy, which had been showing a deficiency for several years, was more than self-sustaining this year, under the law passed in 1900. The balance to the credit of the fund Sept. 30, 1900, was \$5,365.74, which, added to the receipts of the year, amounting to \$74,974.32, aggregated \$80,340.06, leaving a balance of this fund Sept. 30, 1901, of \$20,471.49, against \$5,365.74 at the close of the previous fiscal year.

The funded debt of the State at the close of the fiscal year was \$6,509,326.13, an increase of \$200,000 over the year previous. The net debt of the State is \$2,662,344.29, which is an actual reduction since Jan. 1, 1900, of \$225,698.66.

The assessed value of property for State purposes aggregates \$643,812,408, an increase of \$27,092,626.

The receipts during the year on account of the public-school tax were \$727,314.41, which, added to the balance on hand, made \$1,077,270.48. There was disbursed during the year among the counties and Baltimore city \$720,455.85, leaving a balance on hand Oct. 1, 1901, of \$356,814.63, against \$349,956.07 for the same period of the previous year.

The receipts on account of the free-book fund were \$138,455.08, while the disbursements aggregated \$153,532.74.

The gross receipts of the State tobacco warehouses were \$79,223.62, while the disbursements were \$77,531.20.

National Banks.—There were in Maryland on Dec. 10, 1901, 78 national banks. Their aggregate resources were \$101,639,451.96; capital stock paid in, \$16,410,960; surplus fund, \$7,376,459.09; undivided profits, \$3,227,466.95; national-bank notes outstanding, \$5,944,705; loans and discounts, \$56,982,904.49; United States bonds to secure circulation, \$6,041,250; United States bonds to secure deposits, \$12,628,500; stocks, securities, judgments, and claims, \$8,022,264.96.

Industries.—There are 9,880 establishments in Maryland having \$163,422,260 invested in manufacturing and mechanical industries. The gross value of the products is returned at \$242,752,990, to produce which involved an outlay of \$7,383,263 for salaries of officials, clerks, etc.; \$38,761,551 for wages; \$17,226,623 for miscellaneous expenses; and \$144,539,680 for materials used.

Although Maryland is not preeminently a manufacturing State, there has been a steady growth in its manufacturing and mechanical industries during the half century. The population in these years increased from 583,034 to 1,188,044, or 103.8 per cent.; while the average number of wage-earners employed in manufacturing establishments increased from 30,212 to 108,361, or 258.7 per cent., embracing in 1900 9.1 per cent. of the entire population, compared with 5.2 per cent. in 1850.

The principal industries of the State are fertilizers, flouring and grist-mill products, foundry and machine-shop products, canning and preserving of fruits and vegetables, furniture, iron

and steel, lumber and timber products, planing-mill products, oyster-canning and preserving, slaughtering, textiles, and tobacco. These industries in the census year embraced 1,817 establishments, used a capital of \$44,990, gave employment to 37,241 wage-earners, and paid \$12,522,561 in wages. The value of their products was \$86,343,509.

The canning and preserving of fruits and vegetables is the most important industry in the State. The 271 establishments reported in 1900 gave employment to 7,505 wage-earners, and their products were valued at \$11,996,245. The increase in the value of the products during the decade was \$4,800,136.

Nine establishments were engaged in the manufacture of iron and steel in 1900, the industry second in rank, with 2,138 wage-earners, and products valued at \$8,739,405. Iron ore was marketed abroad, shipments being made to Asia, Africa, Australia, and England. The manufacture of foundry and machine-shop products ranks third among the industries of the State, with 113 establishments, 4,695 wage-earners, and products valued at \$8,443,547. There were 407 establishments engaged in the manufacture of flouring and grist-mill products in 1900, with 541 wage-earners, and products valued at \$8,035,343. Five establishments were engaged in the manufacture of chewing and smoking tobacco and snuff, with 2,002 wage-earners, and products valued at \$7,054,159. There were 382 establishments engaged in the manufacture of cigars and cigarettes, with 2,309 wage-earners, and products valued at \$2,842,769. There were 40 establishments engaged in the manufacture of fertilizers, with 1,016 wage-earners, and products valued at \$5,481,905. There were 14 establishments engaged in the manufacture of cotton-goods, with 4,727 wage-earners, and products valued at \$5,423,251. There were 53 establishments engaged in the manufacture of planing-mill products, with 1,323 wage-earners, and products valued at \$3,753,083. There were 4 establishments engaged in iron and steel ship-building, with 1,939 wage-earners, and products valued at \$3,299,491. There were 43 establishments engaged in wooden ship and boat building, with 676 wage-earners, and products valued at \$862,034. There were 42 establishments engaged in the manufacture of furniture in 1900, with 1,869 wage-earners, and products valued at \$2,976,494. There were 367 establishments engaged in the manufacture of lumber and timber, with 1,964 wage-earners, and products valued at \$2,650,082. There were 21 establishments engaged in the manufacture of paper and wood pulp, with 937 wage-earners, and products valued at \$2,589,540. There were 16 establishments engaged in the canning and preserving of oysters, with 1,444 wage-earners, and products valued at \$2,417,331. There were 1,199 clothing establishments, with a total capital of \$11,315,088; total wages paid, \$4,799,716; value of products, \$24,501,636.

In the manufacture of the cheaper grade of shirts, Maryland ranks second. There are 26 establishments engaged in the manufacture of distilled liquors, with a capital invested of \$2,326,272, and an output valued at \$1,616,362. For malt liquors there are 16 establishments, with an invested capital of \$13,857,323, and an output valued at \$4,133,797.

Farms.—The number of farms in the State is 46,012. They contain 5,170,075 acres, of which 3,516,352 are improved. The land is valued at \$120,376,550, the buildings at \$54,810,760, implements and machinery at \$8,611,220, and live stock at \$20,855,857. The expenditures in the

year are estimated for labor, \$5,715,520; for fertilizers, \$2,618,890.

Floating Steel Dry Dock.—The Maryland Steel Company, at Sparrows Point, completed and on Oct. 15, 1901, started down for Algiers, La., the large steel dry dock for the Government, the contract being \$810,000. The voyage of 2,000 miles was attended with great danger, but the great dock, towed by powerful seagoing tugs, reached the Government station safely. The dock has been tested, and it met all requirements. The new battle-ship Illinois was used for the test, and was easily floated. The dock also showed her ability to dock herself for cleaning and painting.

Johns Hopkins University.—On Feb. 22, 1901, Dr. Daniel C. Gilman tendered his resignation as president of Johns Hopkins University, having rounded out the seventieth year of his life and a quarter of a century as the head of the institution, which began its career under his guidance in 1876. Prof. Ira Remsen, who had been at the head of the department of chemistry, was elected to succeed him. Recently William Keyser, William Wyman, and several other citizens of Maryland made a gift to the university of a piece of ground valued at \$1,000,000, on the condition that the university raise another million for erecting and maintaining the necessary buildings on it.

Monument to Columbus.—While it is generally known that the first monument to George Washington was erected in Baltimore by the State of Maryland, few are aware that the first shaft in this country dedicated to the memory of Christopher Columbus is also there. In the grounds of the Samuel Ready Asylum, on North Avenue, stands a modest memorial, erected by a Frenchman, Charles Francis Adrian le Paulmier, Chevalier d'Amour. The chevalier was the first consul-general in Maryland. The monument was for nearly thirty years the only Columbus memorial in the New World, and for more than fifty years the only one in the United States. There was a question whether the shaft was really a monument to the discoverer of America, or a memorial erected by Zenus Barnum (who subsequently became possessed of the chevalier's estate) to a pet horse bearing the same name. An investigation made by Johns Hopkinsians has produced historical data to substantiate the statement that the enthusiastic Frenchman followed up the suggestion, made at a public dinner, to erect the first monument in this country to its discoverer. Until recently the monument was hidden in an obscure place on the estate that is the home of one of the most noteworthy charities of Baltimore, but it now occupies a conspicuous position exposed to the view of all who pass the institution. It is an obelisk 44 feet 4 inches high, made of stuccoed brick. The base is 6½ feet square and the top 2½ feet square. The base is 2½ feet high, with rounded corners of molded brickwork. The pedestal proper is 5½ feet square and 10 feet in height, and is surmounted by a capstone 1½ feet high. On the west side of the pedestal is a marble slab 2½ feet by 4 feet, upon which is the following inscription: "Sacred to the memory of Chris Columbus, Oct. XII, MDCCVIII."

Legislative Session.—Gov. Smith, on Feb. 13, 1901, called the General Assembly of Maryland to meet in special session on March 6. The reasons set forth for the call were: That errors in the enumeration by the United States census of the population of this State, if not corrected by an enumeration under State authority, would give to some sections of the State a disproportionate representation in the House of Delegates.

That there was urgent need for legislation to reform "manifest and great abuses in the election law of this State." That there was a demand from the mayor and city council of Baltimore for additional power in connection with sewerage of the city and the preservation of its sanitary condition.

The Legislature, having a Democratic majority, carried out the party program and adopted a ballot-law similar to the one in Massachusetts. Its effect is practically to require an educational qualification for suffrage, which was not necessary under the old law. Party emblems, which under the old law were as sign-posts to the illiterate voter, were abolished, and the voter is now required to make a mark beside the name of each candidate for whom he desires to vote. The names of the various candidates are arranged alphabetically according to surname, under the designation of the office. Assistance from clerks, which illiterates heretofore enjoyed, was abolished, only the blind and those physically disabled being now entitled to clerical assistance. A ballot is entirely invalidated if, under the designation of any office, the voter has marked more names than there are persons to be elected for that office. It is also invalidated if there is a mark of any kind on the ballot other than the cross-marks called for by the law. Many Marylanders holding office in Washington are cut off from voting by the section which provides that persons who have taken up a residence outside of the State will be conclusively presumed to have surrendered their right to registration as legal voters in this State unless within thirty days after the passage of the law they make affidavit that they did not so intend, and that they expected to resume actual residence in Maryland six months before the next general election.

The Legislature also passed a law for the enumeration of the population of the State, which was done under the direction of Buchanan Schley. The figures were reported to the Governor, who made the result known by proclamation issued July 23, 1901, and reapportioned the representation in the House of Delegates in accordance with the result. Under the national census of 1900, the total membership of the House of Delegates was 91. The State census of 1901 increases this membership to 95, giving an additional delegate to each of the following counties: Dorchester, Montgomery, Prince George, and Washington.

Political.—At the elections held on Nov. 5, 1901, the people of Maryland voted for a State Comptroller and clerk of the Court of Appeals, besides members of the Legislature and city and county officials. The result was that Dr. J. W. Hering, Democrat, was reelected Comptroller, defeating Herman S. Platt, Republican, by a plurality of 121, the total vote being Hering 96,477, Platt 96,356. For clerk of the Court of Appeals, Thomas Parran, Republican, defeated J. Frank Turner by a plurality of 1,389, Parran's vote being 96,658 and Turner's 95,269.

The chief interest in the Election Day is the Legislature, which is to elect a successor to George L. Wellington in the United States Senate. Former Senator Gorman is the only Democratic candidate for the office, and as the Democrats have a majority in both houses, there is no reasonable doubt of his election at the coming session.

MASSACHUSETTS, a New England State, one of the original thirteen, ratified the Constitution Feb. 6, 1788; area, 8,315 square miles. The population, according to each decennial census, was 378,787 in 1790; 422,845 in 1800; 472,040

in 1810; 523,159 in 1820; 610,408 in 1830; 737,699 in 1840; 994,514 in 1850; 1,231,066 in 1860; 1,457,351 in 1870; 1,783,085 in 1880; 2,238,943 in 1890; and 2,805,346 in 1900. Capital, Boston.

Government.—The following were the State officers in 1901: Governor, Winthrop Murray Crane; Lieutenant-Governor, John L. Bates; Secretary of State, William M. Olin; Treasurer, Edward S. Bradford; Auditor, Henry E. Turner; Attorney-General, Hosea M. Knowlton; Insurance Commissioner, Frederic L. Cutting; Prison Commission, F. G. Pettigrove, Margaret P. Russell, Henry Parkman, Mary V. O'Callaghan, Arthur H. Wellman; Chief of the Bureau of Labor Statistics, Horace G. Wadlin; Savings-Bank Commissioner, Warren E. Locke; Adjutant-General, Samuel Dalton; Secretary of the Board of Education, Frank A. Hill; Secretary of the Board of Agriculture, James W. Stockwell; Chief Justice of the Supreme Court, Oliver W. Holmes; Associate Justices, Marcus P. Knowlton, James M. Morton, John Lathrop, James M. Barker, John W. Hammond, and William C. Loring; Clerk, Henry A. Clapp.

The term of the State officers is one year. They are elected in November. The Legislature meets annually on the first Wednesday in January; the time of the session is not limited.

Census Figures.—Following are additional figures from census bulletins: Males in Massachusetts, 1,367,474; females, 1,437,872; native, 1,959,022; foreign born, 846,324; white, 2,769,764; colored, 35,582, including 31,974 negroes, 2,968 Chinese, 53 Japanese, and 587 Indians. The percentage of colored population is 1.3; of foreign born, 30.2. In Boston there are 274,922 males and 285,970 females, and 197,219 foreign born. The urban population constitutes 86.9 per cent. of the population.

Finances.—The Auditor's estimate of the amount of expenditures required for 1902 for all the departments is \$6,376,242.60. The actual State debt is \$26,996,423.30; the sinking-funds applicable to the debt amount to \$15,292,256.85.

Military.—In the militia apportionment of the Government, Massachusetts received this year \$31,862. The force consists of about 6,000 officers and men, in 5 regiments of infantry, 1 of heavy artillery, 2 cadet corps, 3 troops of cavalry, and an artillery battalion, besides a naval brigade in 10 divisions.

On Dec. 19 a monument was dedicated at Andersonville, Ga., to the memory of the Massachusetts soldiers who died there during the civil war. The monument was unveiled and presented by Major Charles G. Davis, chairman of the Memorial Commission, and addresses were made by Lieut.-Gov. Bates and Hon. J. J. Myers, Speaker of the House. Major Davis said, in the course of his address: "More than half as many sons of Massachusetts gave up their lives within the precincts of these few acres of land from March, 1864, until March, 1865, as were killed in action among the officers and men of the first 15 Massachusetts infantry regiments during the entire civil war. One son of Massachusetts died here for every 5 sons of Massachusetts killed in battle during the war. One son of Massachusetts died here for every 16 sons of Massachusetts who died in battle or of wounds or disease during the war. Nearly four times as many sons of Massachusetts were killed here as were killed in action in the United States army during the Spanish War." The number of the known men of Massachusetts who died there is 767.

The monument is on land bought by women of Massachusetts comprising the Woman's Relief

Corps, and deeded to the Commonwealth. It is entirely of Quincy granite and cost \$8,000.

Education.—Harvard University received this year a gift of \$462,000 from Mr. and Mrs. Nelson Robinson for an architectural endowment, and more than \$1,000,000 from J. Pierpont Morgan for 3 medical-school buildings to promote "applied biological research."

Within the year Wellesley College received gifts of more than \$325,000. Another noteworthy gift is that of a library of Italian literature, including 50 manuscripts, from George A. Plimpton. The degree of B. A. was conferred on 113 candidates.

Phillips Andover Academy graduated a class of 82 this year. A gift of \$250,000 was received.

At Amherst, in June, 67 students received the degree of B. A., and 16 that of B. S.

At the first public graduation exercises of the New Bedford Free Textile School, Oct. 23, there were 88 graduates, 79 in night courses of instruction and all mill operatives.

A college of horticulture, for women only, is announced to open soon at a farm in Groton, under the control of Mrs. E. G. Low, its sole promoter, who has given the institution the name Lowthorpe.

Charities.—The State Board of Charity reports that last year it cared for 4,085 persons at the State Hospital and Farm at Bridgewater, expending \$215,045.98 and having a balance of \$1,619.43 left. On the State Farm was expended \$153,294.82. The population of the farm is made up of prisoners, paupers, and insane.

Four nurses' homes have been built at Worcester Hospital, Taunton Hospital, Medfield Asylum, and at the State Farm in Bridgewater. These will accommodate 210 persons at a cost of \$149,000, furnished and equipped.

At Northampton Hospital an infirmary building is erected for 60 patients, the upper stories to furnish temporary quarters for 25 nurses. This will cost \$55,000. At Westboro Hospital \$50,000 has been spent in construction and repair of buildings to accommodate a colony of 100 patients. The Danvers farmhouse will cost \$25,000. For this total expense of \$130,000, 225 additional patients will be accommodated, at an average cost of \$577.77. In all, the additions this year will accommodate 435 additional patients, at a total cost of \$295,000.

Land has been bought in Gardner for a State colony for the insane, which was provided for by the Legislature of 1900.

Railroads.—The Boston elevated railway was opened in June. It was estimated that 300,000 passengers were carried on the opening day. The cost of the railway is estimated at \$10,000,000; the length of double track is 6 miles; of single track, $\frac{1}{2}$ mile. About twenty minutes is saved from the surface-car time in going from Sullivan Square to Dudley Street.

The trolley-line between Springfield and Palmer has taken away much of the passenger traffic from the steam roads.

Court Decisions.—The curfew ordinance of West Springfield was adjudged illegal in the Superior Court in June.

In May the Supreme Court affirmed the validity of a marriage entered into in the State during the existence of slavery in the South by a fugitive slave who maintained his actual freedom, on the ground that, being *de facto* beyond reach of his master's authority, he could marry as a freeman.

Anniversaries.—South Natick began on July 3 a two-days celebration of the two hundred and fiftieth anniversary of the founding of the town by John Eliot and his Indian followers. The town

was filled with visitors, among them being several hundred descendants of Eliot who held a reunion in connection with the celebration.

Services on the two hundred and fiftieth anniversary of the organization of the First Parish in Bridgewater and the one hundredth anniversary of the building of the present meeting-house in the parish, were held in the old church, June 23, which is now in West Bridgewater.

Legislative Session.—The Legislature convened Jan. 2, and was prorogued June 19. On joint ballot there were 214 Republicans, 64 Democrats, 4 Independents, and 2 Socialist-Democrats.

Rufus A. Soule was made President of the Senate, and James J. Myers was Speaker of the House.

United States Senator George F. Hoar was re-elected, to serve the term ending in 1907, his fifth term. He received 29 votes in the Senate and 169 in the House, against 8 in the Senate and 48 in the House for Richard Olney, the Democratic candidate, and 1 in the House for C. H. Bradley, Socialist-Democrat.

Laws to the number of 532, and 116 resolutions, were passed and signed, and 6 measures were vetoed.

The State being entitled under the act of Congress to one more Representative (14 in all), the congressional districts were reapportioned.

A metropolitan water and sewerage board was created. It is to consist of 3 members, appointed by the Governor and Council; the term is three years; the salary of the chairman is \$5,000; of other members, \$4,500. The Metropolitan Water Board and the Board of Metropolitan Sewerage Commissioners was abolished. Contractors employed in the construction of metropolitan water-works must give bonds to indemnify the community for expense on account of the introduction of pauper or indigent employees.

The office of prison commissioners was abolished. The Governor was authorized to appoint a board to take their duties, to consist of 5 persons, 2 of them women, to serve without salary except the chairman, whose salary is to be \$4,000; the term is five years. The board may remove any prisoners except those under life sentence from the prisons to the Reformatory.

The emission of smoke within a quarter-mile of a dwelling is to be deemed a nuisance, but annual permits may be given.

A bill presented on petition of the State Total Abstinence Society, providing that at annual town meetings the polls shall be open for the reception of votes upon the question of licensing the sale of intoxicating liquors from the organization of the meeting until the close of the polls for the election of town officers, was passed with the change of time to "at least one hour." Another amendment to the liquor laws provides that native wines may be sold in no-license towns only on the premises of the makers. A druggist may, on prescription of a physician, sell liquor to a person supported by public charity within the year.

The law on cigarettes was changed so as to make it a misdemeanor to sell or give to a person under eighteen, instead of sixteen, as formerly.

Wagering contracts in stocks or commodities where no purchase is intended were prohibited. The lack of the seller's ownership is to be taken as evidence of a wagering contract.

A commission appointed in 1900 to codify and revise the militia law reported this year. Some changes were recommended in the rank of staff-officers, and the number reduced; squadron and artillery battalion headquarters to be abolished,

and all drum-corps abolished, and other unimportant changes. It was estimated that a saving of \$19,500 a year would be effected.

Political party caucuses, except for special elections, are to be held on a day named by the State committee for the whole State. All delegates are to be elected and candidates nominated at the caucus, and the convention is not to be held within seven days after the caucus.

Other enactments were:

Requiring a corporation with a franchise for using public streets to pay 4 per cent. interest on deposits received from customers for payment of future expenses, if held more than six months.

Allowing charitable, religious, educational, and fraternal corporations to hold real estate of value not over \$1,500,000.

Requiring tax-collectors' deeds to be recorded within thirty days after sale; and after the expiration of five years such deeds shall be *prima facie* evidence of facts therein. Notice of intended sale need not be posted on the premises.

Exempting women from poll-tax.

Making penalty for non-payment of poll-tax seven days' imprisonment instead of twenty.

Providing that the civil-service act may apply to police and fire departments of any town where the majority vote to accept it.

Permitting city council or town meeting, if they accept the act, to retire on half-pay policemen incapacitated by injuries received in the service.

Allowing mutual-assessment accident insurance companies to insure against disability from illness.

Permitting insurance companies to insure against loss by breakage or accident to machinery.

Allowing street-railway companies to carry newspapers and United States mail.

Directing the Tax Commissioner to assess an annual tax of $\frac{1}{2}$ of 1 per cent. on average trust deposits of corporations with the Treasurer.

Providing that the defendants in actions for libel and slander may prove acts of the plaintiff tending to prove the charges true.

Making the penalty for kidnaping twenty-five years' imprisonment.

Fixing the New York boundary.

Allowing the United States to acquire a tract of land on Peddock's island, in Boston harbor.

Allowing bootblacks to work on Sunday till 11 A. M.

Forbidding the employment of minors under eighteen in the making of acids pronounced injurious to health by the State Board of Health, under penalty of \$100 for each offense.

Requiring 5-per-cent. inheritance tax on all property, instead of on property over \$10,000 only.

Providing that the affidavit of the subscribing witness to a will may be received as evidence for probate.

Prohibiting the sale of food containing antiseptic or preservative substances, with some exceptions. Articles of food and drink must be labeled with letters of a certain size showing the ingredients and with the manufacturer's name. Carcasses of food animals must be inspected except in establishments under Federal supervision.

Appropriating \$3,600 for instruction of adult blind persons at home.

Permitting cities and towns to regulate the speed of automobiles.

Authorizing a State highway loan of \$500,000—bonds at not more than 4 per cent., for not more than thirty years. Five per cent. of the highway fund must be spent in towns of valuation not over \$1,000,000; 5 per cent. may be spent in

towns over that if the town appropriates an equal amount over and above its average road expenditure.

Appropriating \$25,000 annually for ten years for the Massachusetts Institute of Technology.

Forbidding manufacture or sale of cloth or paper containing arsenic.

The Legislature was prorogued June 19, to meet again Nov. 13, for the purpose of considering such revision of the statutes as should be suggested by a special committee of 50.

At the special session the report of the committee was accepted, and provision was made for printing 7,500 copies of the Revised Statutes.

Resolutions expressing sorrow at the death of President McKinley were adopted unanimously by rising vote, Nov. 20.

Political.—The State election took place Nov. 5. Tickets were nominated by the Republican, Democratic, Democratic-Social, Socialist-Labor, and Prohibition parties.

The Democratic convention met in Boston Oct. 3, and nominated Josiah Quincy for Governor. The other nominations were: For Lieutenant-Governor, John W. Coughlin; Secretary of State, Willmore B. Stone; Treasurer, Joseph I. Chalfoux; Auditor, James F. Dean; Attorney-General, A. A. Putnam.

The opening sentences of the platform expressed sorrow for the death of the President, and denounced anarchy. A declaration favoring election of United States Senators by direct vote of the people was made, and the following:

"We are not only absolutely opposed to colonial imperialism abroad and to the commercialism reckless of everything but its own profit which supports it, but to every manifestation of the same reactionary and antidemocratic spirit at home.

"We demand that the efforts of our Government shall be directed toward preparing the people of the Philippines for the speediest and largest measure of self-government and for ultimate independence, under the protection of this country.

"We heartily indorse the broad statesmanship of President McKinley's speech at Buffalo. The people of Cuba, for whose welfare we have made ourselves trustees, are plainly entitled to the most liberal commercial arrangement with this country.

"All tariff duties upon articles produced by trusts which stifle competition at home or which favor the foreign at the expense of the American consumer, should be abolished.

"We urge, among other things, the admission into this country free of duty of all articles entering into the construction and repairs of ships."

The Republican convention, at Boston, Oct. 4, renominated Gov. Crane and most of the other State officers. The ticket was: For Governor, Winthrop Murray Crane; Lieutenant-Governor, John L. Bates; Secretary of the Commonwealth, William L. Olin; Treasurer and Receiver-General, Edward S. Bradford; Auditor, Henry E. Turner; Attorney-General, Herbert Parker.

The platform expresses sorrow for the death of President McKinley and pledges "loyal and unflinching support" to his successor; declares that the operation of mob law, which is the most flagrant form of anarchism, should be suppressed; that special penalties should be provided for those who shall murder, assault, or threaten the life of the President or the Vice-President; that the regulation of the hours of labor should be a national affair and in the hands of Congress. It reasserts the principle of protection of American labor by a protective tariff, and declares that "reciprocity

of trade with foreign countries is not inconsistent with an adequate measure of protective duties to American interests." On home affairs the platform calls for the improvement of Boston harbor; suggests that, in the use of highways by corporations, either an initial payment or a continuing tax should be required; and recommends the "careful consideration of a proper system of initiative and referendum in questions of local interest."

The candidates of the Prohibition party were: For Governor, John B. Lewis; Lieutenant-Governor, William H. Partridge; Secretary, Frederick W. Clark; Treasurer, George E. Batchelder; Auditor, John H. Smith; Attorney-General, Allen Coffin.

The Democratic-Socialist party made the following nominations: For Governor, George H. Wrenn; Lieutenant-Governor, Charles W. White; Secretary, Alonzo H. Dennett; Treasurer, Wendell P. Bosworth; Auditor, Frank Thompson; Attorney-General, Clarence E. Spelman.

The Socialist-Labor party named for Governor, M. T. Berry; Lieutenant-Governor, Alfred E. Jones; Secretary, Jeremiah O'Fihelly; Treasurer, Frederick A. Nagler; Auditor, Frank Keefe; Attorney-General, John T. Hargraves.

The Republican candidates were elected. For Governor the vote stood: Crane, Republican, 185,809; Quincy, Democrat, 114,362; Lewis, Prohibitionist, 4,780; Wrenn, Democratic-Socialist, 10,671; Berry, Socialist-Labor, 8,898; scattering, 6.

The executive councilors elected were all Republicans except Jeremiah J. McNamara, Democrat, elected in the Fourth District, in Boston, by a plurality of 10,586. The Republicans elected were David F. Slade, Arthur A. Maxwell, Henry D. Yerxa, David I. Robinson, S. Herbert Howe, Lucius Field, Julius H. Appleton.

At the city elections in December, Boston elected a Democratic mayor, Patrick A. Collins. Other cities that chose Democratic mayors were Cambridge, Lowell, Woburn, Pittsfield, and Lawrence. Independents were elected in Fitchburg, Quincy, Beverly, and Newburyport. No mayor was elected in Medford, and in the remaining 21 cities Republican candidates were successful. Nineteen of the cities voted for license.

MICHIGAN, a Western State, admitted to the Union Jan. 26, 1837; area, 58,915 square miles. The population, according to each decennial census since admission, was 212,267 in 1840; 397,654 in 1850; 749,113 in 1860; 1,184,059 in 1870; 1,636,937 in 1880; 2,093,889 in 1890; and 2,420,982 in 1900. Capital, Lansing.

Government.—The following were the State officers in 1901: Governor, Aaron T. Bliss; Lieutenant-Governor, Orrin W. Robinson; Secretary of State, Fred. M. Warner; Treasurer, Daniel McCoy; Auditor, Perry F. Powers; Attorney-General, Horace M. Oren; Superintendent of Public Instruction, Delos Fall; Commissioner of State Land Office, E. A. Wildey; Adjutant-General, George H. Brown; Labor Commissioner, Scott Griswold; Bank Commissioner, George L. Maltz; Insurance Commissioner, James V. Barry; Railroad Commissioner, Chase S. Osborne; Food Commissioner, W. E. Snow; Salt Inspector, F. P. Dunwell; Commissioner of Mineral Statistics, T. A. Hanna; President State Board of Health, Frank A. Wells; Tax Commission, James C. McLaughlin, A. F. Freeman, William T. Dust, Ira T. Sayre, Graham Pope; Coal-Mine Inspector, Charles Atwood; Game Warden, Grant M. Morse; Secretary Board of Charities, L. C. Storrs; Chief Justice of the Supreme Court, Robert M. Mont-

gomery; Associate Justices, Frank A. Hooker, Joseph B. Moore, Charles D. Long, Claudius B. Grant; Clerk, C. C. Hopkins—all Republicans.

The term of the State officers is two years; they are elected in November of the even-numbered years. The Legislature, consisting of 32 Senators and 100 Representatives, meets biennially in January of the odd-numbered years.

Finances.—The receipts of the treasury in the year ending June 30 were \$5,875,973, and the disbursements \$5,700,007. The balance remaining was \$2,627,523, of which \$2,097,704 was in the general fund.

The aggregate State tax for 1901 was \$3,835,844.97. The various objects for which the tax is levied, together with the amount each will receive, are as follow: University, \$457,525; Agricultural College, \$100,000; State Normal College, \$118,516.40; Central Normal School, \$91,250; Northern Normal School, \$79,130; College of Mines, \$88,812.50; State Library, \$13,875; Soldiers' Home, \$18,205; Home for the Feeble-Minded and Epileptic, \$156,350; State Public School, \$61,250; School for the Deaf, \$138,500.16; School for the Blind, \$41,728.75; Michigan Asylum, \$40,643.12; Eastern Asylum, \$16,000; Northern Asylum, \$52,644; Upper Peninsula Asylum, \$92,051.50; State Asylum, \$82,900; State Prison, \$8,000; Michigan Reformatory, \$16,635; Industrial School for Boys, \$121,750; Industrial Home for Girls, \$98,046.75; State Fish Commission, \$45,155; compiling and copying records of Adjutant-General's office, \$12,500; Dairy and Food Commission, \$26,500; State Dairymen's Association, \$3,000; State Library Commission, \$8,000; National Guard, \$121,149.10; Naval Brigade, \$20,511.06; State Board of Health, \$6,500; State Weather Service, \$1,000; war loan of 1898, \$197,262.50; Pan-American Exposition, \$43,000; State Agricultural Society, \$4,500; Horticultural Society, \$1,500; Geological Survey, \$2,800; bronze medals for Spanish War veterans, \$4,000; current expenses of prisons, \$70,000; current expenses of asylums, \$540,758.13; general purposes, \$700,000.

The total valuation of the State as equalized in 1901 is \$1,578,100,000.

The State had a Spanish War claim against the Government of \$446,000, of which \$358,000 has been paid. The Government has a counterclaim for \$68,000 of the Sault Canal fund.

Education.—The school population in 1900 was 721,698. The enrolment in the graded schools was 301,275, and in the ungraded schools 203,710. There were 9,651 non-resident pupils enrolled in the graded schools, and 7,555 in the ungraded schools. The average duration in months of graded schools was 8.54, and in ungraded schools 8.17. The estimated number of pupils attending private, select, or parochial schools was 52,239; the number of teachers necessary to supply the graded schools, 6,815; number necessary to supply the ungraded schools, 6,452.

There were 3,240 male teachers in public schools, and 12,684 female. The average monthly wages of men were \$46.73; of women, \$35.71.

The report of the Agricultural College for the year ending June 30 shows current expenses amounting to \$96,303.37. The total attendance of full-course students was 556, an increase of 5 over the preceding year. In the short courses were 91, an increase of 20.

The number of townships reporting libraries was 426; number of districts reporting libraries, 3,658; number of volumes in township libraries, 7,177; number of volumes in district libraries, 809,590.

The attendance at the University of Michigan,

at Ann Arbor, in 1901 was 3,482, not counting those who attended the summer school, which is an increase of 178 over the year before.

The Detroit branch of the International Association of Machinists, on June 15, forwarded to the president of the university a protest against the plan of certain Detroit employers of hiring undergraduates of the university to fill the places of striking machinists.

Militia.—By the law that passed the Legislature this year for the reorganization of the National Guard, the Governor now has greater power; the membership of the Military Board is increased by the addition of the brigadier-general and the commandant of the Naval Reserves; the board is empowered to increase the number of military companies to more than 40, and to muster in a company of colored troops; the State encampment will last ten days instead of six; and a more rigid military government will be the result of the new law. The allotment to the State from the Government appropriation for militia is \$29,728.55.

Products and Industries.—The coal-fields produced 843,476 tons in 1900. It was estimated that the product in 1901 would be 1,000,000 tons. The Labor Commissioner's canvass of about 80 per cent. of the coal-mine employees in 1900 gave the following statistics: Number of mines canvassed, 25; number of employees, 1,311; average age, 31.6; number native born, 693; number foreign born, 613; whole number of persons supported by those canvassed, 3,868; average for each employee, 3; average hours worked per day, 8.1; average number of days worked per month, 20.2; average daily wages, \$1.91; number who save from their earnings, 444; number who can not save, 867. The average daily wages of \$1.91 is an increase of 21 cents over the average daily wages of the previous year. The number of coal-mines in operation on Dec. 1, 1900, was 31; average in operation during the year, 25; average number of persons employed in all mines, 1,638.

The report of the Salt Inspector shows that there are 65 salt-blocks in the State, with a total capacity of 9,500,000 barrels of salt annually if worked to their full capacity. Sixty-two of these plants were operated during the year ending Nov. 30, 1901, and the amount inspected was 5,580,101 barrels.

The State is credited with a product in 1901 of gold to the value of \$29,000, and 120,000 ounces of silver.

The number of sheep in the State was 1,624,000.

The commissioner says few citizens know anything of the chicory industry, much less that there are in Michigan 7 factories, with a daily capacity of 190 tons of chicory root and an aggregate capital of \$175,000. Two of these factories manufacture the article complete, putting it on the market ready for use. The others merely slice and evaporate the water from the roots, selling the dried product in bulk.

The flax industry is new to the State, having been started in 1888, and is confined to the counties of St. Clair, Sanilac, and Huron. There are 6 factories, using about 4,000 tons of raw material. The yield averages about 2 tons to the acre; the average price paid to farmers is \$10 a ton.

Insurance.—The report on the fire and marine insurance for 1900 shows that 9 joint-stock companies were admitted to Michigan and 10 withdrew. Between January and June, 1901, 3 companies were admitted, making a total of 159. Three of these are Michigan companies, 111 companies of other States, and 45 companies of foreign countries.

Three mutual fire companies organized under the laws of Michigan went into the hands of receivers during the year, and 9 were authorized to begin business, making a total of 95 now in existence.

The farmers' mutuals, so-called, have had another successful year.

The whole number of life and casualty companies and fraternal societies doing business in Michigan is 187. Four life companies were admitted and 1 withdrew from the State during the year. Four casualty companies were admitted and 1 withdrew. Nine assessment companies were admitted, 2 withdrew, and 4 changed their names. Eleven fraternal societies were admitted, 7 ceased doing business in the State, and 3 changed their names. These have an aggregate of \$375,000,000 insurance in force.

The receipts of the State department of insurance for the year were as follow: From fire and marine companies of other States and countries, 3 per cent. tax on gross Michigan premiums, \$148,337.38; from life companies, 2 per cent. of gross premiums, \$116,122.41; from casualty and integrity companies, \$9,589.96; from assessment life, accident, and sick-benefit companies, \$785; from retaliatory taxes, \$18,304.65; total, \$293,139.40.

A decision rendered by the Supreme Court in October is against the claim of the sick and accident insurance societies that they are not liable when a claimant leaves his house during the time for which payment is claimed. The court held that a claimant may go walking or driving or even make a journey, on advice of his physician, without forfeiture.

Banks.—At the beginning of the year there were 192 State banks and 3 trust companies under supervision of the department. Two national banks were converted into State banks. Only 1 reduced its capital stock, while 7 increased theirs. Six new banks were organized. A net increase of \$635,000 capital stock is shown. One receivership was closed; several banks are still in the hands of receivers. On Dec. 19, 1900, the amount of cash in the 192 State banks and 3 trust companies was \$25,416,404.40, and in the 85 national banks \$18,670,048.72.

Railroads.—The aggregate income of the roads operating in the State in 1900 is given as \$39,607,833.37; the total tax based on this income and payable in 1901 was \$1,353,549.02.

Loan Associations.—During the year ending June 30, 1901, the Michigan Savings and Loan Association, of Detroit, went into the hands of a receiver; the Citizens' Building and Loan Association, of Flint, and the Muskegon Valley Building and Loan Association went into the hands of conservators; and the Holland Building and Loan Association, of Grand Rapids, and the Alpena Loan and Building Association wound up their business and filed notice of dissolution. The Savings and Loan Association, of Negaunee, and the Marquette Building and Loan Association have gone into voluntary liquidation.

The financial statement shows total assets and liabilities of \$9,336,764.07, and total receipts and disbursements of \$7,032,430.48. The number of shares of stock issued during the year was 83,137; number matured, 10,046; number retired, 6,313; number withdrawn, 48,737; number otherwise eliminated, 12,783; number in force at close of year, 270,897; number of investing members, 22,885; number of borrowing members, 8,902; total membership, 31,787. The aggregate of authorized stock is \$235,337,500; stock in force at close of year, \$25,682,243.52. There were 128 foreclosures in the year.

Legislative Session. The forty-first Legislature was in session from Jan. 2 to June 6. On joint ballot there were 130 Republicans and 11 Democrats.

R. B. Loomis was President *pro tem.* of the Senate, and John J. Carton was Speaker of the House.

There were 486 laws and 31 resolutions passed. United States Senator James McMillan was re-elected Jan. 15, being the unanimous choice of the Republican members, and receiving 50 votes in the House and 31 in the Senate.

The number of members of the State Tax Commission was raised from 3 to 5. The secretary's salary was fixed at \$2,000 instead of \$1,500. They are to assess and levy taxes on railroad car and express companies.

It was enacted that the Board of Auditors, consisting of the Secretary of State, the Treasurer, and the Commissioner of the Land Office, are to receive \$1,800 each annually in place of traveling expenses. The constitutionality of this act is questioned.

The laws affecting the militia were revised, the changes not to affect the naval militia.

The laws on State lands were amended by several acts.

A new garnishee law provides that a man who is a homesteader shall have 80 per cent. of his earnings exempt, but that the amount exempted shall never be less than \$8 nor more than \$30. Unmarried persons have a \$4 flat exemption, but their exemption in any case shall not exceed \$15.

A bill was passed prescribing the method for taking the next State census in 1904. The bill places the work in the hands of the Secretary of State. The census is to give statistics of population, manufacturing, mining, and mechanical products, and to be taken every ten years, beginning with 1904.

The section requiring candidates and election committees to report their expenditures under oath was repealed.

The factory-inspection law was revised.

The law for regulating building and loan associations was revised. A majority of the trustees of a fraternal society must be residents of the State. Death claims against such are not to be deemed valid if the deceased has died by unlawful act of the beneficiary.

The House passed a "general purpose" bill at the close of the session, to cover all matters not provided for by specific appropriation; it carried \$1,578,280.12, but was cut by the Senate to \$1,200,000. The total of appropriations was \$6,972,000, an increase over those of 1899 of \$293,000. Of this amount, \$700,000 is for new buildings at State institutions.

Other measures were:

Appropriating \$7,500 for farmers' institutes, reading courses, and lectures.

Providing for the withholding of State tax lands from homestead entry, and the fixing a minimum price for their sale.

Exempting from taxation lands and buildings owned and used exclusively by Grand Army posts or Women's Relief corps.

Raising the annual appropriation to the Pioneer and Historical Society from \$1,500 to \$2,000.

Making June 14 Flag Day.

Changing the age-limit of compulsory school attendance from sixteen to fifteen, with provisions against truancy.

Raising the minimum age for teachers from seventeen to eighteen.

Revising the game-law; protecting certain birds; protecting moose, elk, and caribou for ten years;

open season for deer, Nov. 8 to 30; squirrels, Oct. 15 to Nov. 30; partridge, quail, and waterfowl, Oct. 1 to Nov. 30.

Designating certain lands as a forest reserve.

Making it a misdemeanor to make and sell imitation butter; a misdemeanor to sell adulterated black pepper.

Permitting appointment of inspector of aparies.

Appropriating \$1,500 annually to the State Horticultural Society.

Appropriating \$2,000 annually to the Board of Health for leaflets on contagious diseases.

Providing for city boards to license plumbers.

For licensing embalmers of bodies dead of contagious or infectious diseases.

Making it a misdemeanor for an employee of a telegraph, telephone, or messenger company to divulge the contents of a message, forge the name of the receiver, or refuse or neglect to transmit and deliver.

Providing that the holder of a sheriff's certificate of sale may take a deed within ten years of the expiration of the redemption period, or within five years if that period has expired.

Appropriating \$2,800 to the Geological Survey, for printing reports and maps.

Permitting the State Librarian to loan books to grange libraries and women's clubs.

Regulating distribution of bodies to medical colleges.

Providing for the assessment of $\frac{1}{10}$ mill on \$1 valuation for the State Agricultural College and Experiment Station; maximum, \$100,000.

Providing for establishment of rural high schools on petition of one-third of taxpayers and vote of majority of electors.

Imposing a penalty of \$25 and thirty days in jail for defacing or defiling the United States flag or any representation of it.

Making veterans of the Philippine war admissible to the State Soldiers' Home.

Making it a misdemeanor to wear without right a G. A. R. badge or button, or a badge, rosette, or insignia of the Loyal Legion.

Appropriating \$4,000 for bronze medals to soldiers and sailors of the State who served in the Spanish and Philippine wars.

Providing for a soldiers' and sailors' monument commission.

Providing for completion of the military history of soldiers and sailors of the State in the civil war and the Spanish War.

Appropriating \$50,000 for establishing a psychopathic ward at the hospital of the State University, for accommodation of 40 patients.

Two constitutional amendments were proposed, to be submitted to voters in November, 1902. One permits the Legislature to provide for indeterminate sentences. The other is to abolish payment for the publication of general laws in newspapers.

State Prosecutions.—The cases against former State officials and others (see Annual Cyclopædia for 1900, page 579) were before the courts this year. Charles Pratt was convicted on the charge of bribery in November, and the trial of E. J. Adams for the same offense was to follow. The case against Gov. Pingree for contempt of court was continued to July 30, 1901, on account of his absence in Europe, where he died, June 18.

Decisions on Laws.—Several recent enactments of the Legislature have been brought before the Supreme Court and have been pronounced valid—the inheritance law, the parole law, the act abolishing the Detroit Park and Boulevard Commission and substituting therefor the office

of single Commissioner of Parks and Boulevards, and the act extending the term of the city officials of Detroit one year providing that no city election should be held till November, 1902.

The law of 1897 providing for a bounty on beet-sugar was declared unconstitutional as class legislation. It gave 1 cent a pound to manufacturers who paid \$4 a ton for beets.

Political.—A State election was held in April for a justice of the Supreme Court and two regents of the university, which resulted in the choice of Robert M. Montgomery, Republican, for justice of the Supreme Court, and Frank W. Fletcher and Henry W. Carey, Republicans, for regents of the university.

Two constitutional amendments were submitted, and both were rejected. One, providing that members of the Legislature be paid \$1,000 a term instead of \$3 a day, was lost by a vote of 112,883 in favor to 187,615 opposed. The other was to provide for additional circuit judges in one of the counties, and was lost by 110,885 to 130,108.

MINNESOTA, a Western State, admitted to the Union May 11, 1858; area, 83,365 square miles. The population, according to each decennial census since admission, was 172,023 in 1860; 439,706 in 1870; 780,773 in 1880; 1,301,826 in 1890; and 1,751,394 in 1900. Capital, St. Paul.

Government.—The following were the State officers in 1901, taking office the first Monday in January of that year: Governor, Samuel R. Van Sant; Lieutenant-Governor, Lyndon A. Smith; Secretary of State, Peter E. Hanson; Auditor, Robert C. Dunn; Treasurer, Julius H. Block; Attorney-General, Wallace B. Douglas; Commissioner of Insurance, Elmer H. Dearth; Adjutant-General, Elias D. Libbey; Chief Grain Inspector, E. S. Reishus, until Aug. 1, when he was succeeded by L. D. Marshall; Commissioner of Labor, John O'Donnell; Public Examiner, E. M. Pope; Chief Justice of the Supreme Court, Charles M. Start; Associate Justices, L. W. Collins, John A. Lovely, Calvin L. Brown, Charles L. Lewis; Clerk of the Supreme Court, Darius F. Reese—all Republicans.

The judges of the Supreme and district courts are elected by the people for six years. The clerk of the Supreme Court is elected every four years. The other court officers are appointed by the judges, except the deputy clerk and his assistants, who are appointed by the clerk of the court. State officers are chosen in November of even years. The Legislature convenes in January of odd years, and the session is limited to ninety legislative days.

Finances.—For the fiscal year ending July 31, 1901, the receipts of the State treasury were \$8,901,184.54, and the disbursements \$6,900,841.30, leaving a balance of \$2,000,343.24.

The State debt was \$2,009,000, having been reduced \$285,000 during the year. The permanent school and university funds were respectively \$7,599,218.32 and \$931,500.

The principal classifications of the treasury receipts for the year were: Revenue fund, \$4,457,707.93; permanent school fund, \$1,258,127.72; general school fund, \$1,906,670.77; general university fund, \$429,479.84. The disbursements were: Revenue fund, \$3,761,669.96; permanent school fund, \$876,686.16; general school fund, \$1,340,015.44; general university fund, \$398,939.47. The amount of railroad taxes paid was \$1,439,349.24. The total of insurance taxes paid to the State Insurance Commissioner's office was \$233,767.82.

Charities and Corrections.—Until the beginning of the new fiscal year in this department of

the State Government local boards of charities and corrections, assisted by the State Board of Charities and Corrections, acting as an advisory board, were charged with the management of the State institutions. By a legislative enactment, these local boards and the State board have been abolished, and in their stead a State Board of Control, of 3 members, named by the Governor, assumed the management of the affairs of these institutions, Aug. 1, 1901.

There are 3,639 inmates in the various State insane hospitals, distributed as follow: Anoka, 115; Hastings, 125; Fergus Falls, 1,325; Rochester, 1,104; St. Peter, 970. The populations of other State institutions are: School for Deaf, 232; School for Blind, 70; School for Feeble-Minded, 669; State Public School, 274; State Training-School, 380; State Reformatory, 139; State Prison, 527.

Lands.—The State has been a beneficiary during the past year of the enormous demand for lands due to a rush of settlers from Iowa, Illinois, Indiana, and other States, and 100,000 acres of school lands were sold for more than \$1,000,000, the average price per acre being about \$4.50 larger than was ever before received by the State. By these sales the permanent school fund has been increased proportionately. The demand for the State's mineral lands has also been very active, and almost every tract known to be within the mineral belt, as defined by the State geologist and subsequent exploration, has been leased. Several of the lessees have developed deposits of iron ore which promise to be very valuable and are roughly estimated to be worth to the State, in royalties, not less than \$3,000,000.

The timber on State lands, while steadily decreasing in amount, has greatly increased in value, and the 50,000,000 feet netted the State an average price of \$5 a thousand feet. The permanent school fund, which is derived from the sales of State lands and timber and mineral leases, amounted on July 31, 1901, to \$13,917,420.25, of which \$7,599,218.32 was invested in the bonds of other States and Minnesota school district bonds, \$5,936,760.37 was in outstanding land contracts, and \$381,441.56 in cash. The permanent university fund amounted to \$1,500,000, and the internal improvement fund to \$2,800,000.

Products.—In the past year 50 additional creameries have been established and 14 that have lain dormant have been resurrected, making a total of 646. These were supplied with milk from 430,965 cows, producing 1,254,639,088 pounds of milk in the year. The butter manufactured therefrom was 57,210,312 pounds. Of this there was shipped out of the State 46,808,415 pounds. The amount paid to patrons was \$9,047,888. Minnesota butter received the highest awards at all of the butter and produce expositions held in the United States.

The record of analyses made by the State Dairy and Food Inspector for Feb. 1, 1901, to Jan. 1, 1902, was 3,396, which was 8½ per cent. more than the total for the preceding two years. Of this number, 2,184 were found to be legal and 1,112 illegal. Many of the illegal analyses came as voluntary samples from jobbers and manufacturers both within and without the State.

A statement of the shipments of iron ore from the Mesaba and Vermilion ranges in the year just closed shows a total sent over the Minnesota railroads of 10,786,923 tons, against 9,424,861 tons last year. This is 44 per cent. of the total product of the Lake Superior basin.

Minnesota is the greatest wheat-producer of the United States. In 1901 the yield amounted to

about 80,000,000 bushels. The State produced very liberally of corn, sweet potatoes, but on account of a shortage in the potato and corn crops in the central part of the country, in the Ohio valley, a large part of the State's product of these crops went to fill that shortage, thereby raising the local prices far in advance of former years. The flax-crop was also a very good yield and commanded good prices.

Education.—There are in the State 129 high schools, and each receives special State aid of \$1,000. The total enrolment in these schools for the year ending July 31, 1901, was 15,278; the number of graduates was 1,673. There are 107 graded schools of not less than 4 departments, employing 623 teachers. In addition to these, there are 82 graded schools of not more than 3 departments, employing 274 teachers.

In the University of Minnesota there are 3,550 students, including 1,008 women. With one exception, it has the largest enrolment of any State university in the United States. The students are distributed as follow: College of science, literature, and the arts, 1,127; engineering, mines, and chemistry, 439; law, 490; medical colleges, 386; agricultural department, 605; dentistry, 104; pharmacy, 73; graduate department, 170; summer school, net 185; duplicates, 29.

The annual resources for current expenses are \$360,000; invested funds, \$1,250,000.

Labor.—The present Commissioner of Labor is directing his efforts toward lessening the employment of child labor, but at the same time keeping alive to the primary thought of not working a hardship to the welfare of the child or his immediate family by the suppression of its labor. This department is making a general investigation of wage-earners and their conditions, and has sent out a circular containing 40 general questions to be answered by these wage-earners. It has also taken up an investigation of the domestic wage-earners from the standpoint of employer and employee. Sunday work in addition to the regular week's work, as far as the present inspection has reached, includes 5,374 persons, or 6.29 per cent. of the weekly wage-earners, the largest number of Sunday workers being employed in electric-light, heat, and power plants, and the smallest number in flouring-mills.

Legislative Session.—The Legislature convened Jan. 8, 1901, and adjourned April 12, being in session seventy-nine working days. Two United States Senators were elected—Moses E. Clapp to fill the unexpired term of the late Cushman K. Davis, and Knute Nelson to succeed himself. The bills that became law included the following:

Providing for a commission to revise and codify the tax laws of the State.

Providing for a commission to revise and codify the statutes.

A primary election law, by which party nominees will be chosen directly by the people for all elective offices including congressmen, except State officers.

Raising the gross-earning tax on railroad properties to 4 per cent., to be approved by the people at the next general election.

An inheritance tax.

Raising the gross-earnings tax on express companies from 3 to 6 per cent.

Applying the Torrens system of land-title registration to the 3 largest counties.

MISSISSIPPI, a Southern State, admitted to the Union Dec. 10, 1817; area, 46,810 square miles. The population, according to each decennial census since admission, was 75,448 in 1820;

136,621 in 1830; 375,651 in 1840; 606,526 in 1850; 791,305 in 1860; 827,922 in 1870; 1,131,597 in 1880; 1,289,600 in 1890; and 1,551,270 in 1900. Capital, Jackson.

Government.—The following were the State officers in 1901: Governor, A. H. Longino; Lieutenant-Governor, J. T. Harrison; Secretary of State, J. L. Power, who died Sept. 24 and was succeeded by Joseph W. Power; Treasurer, J. R. Stowers, resigned Sept. 6 and succeeded by George W. Carlisle; Auditor, W. Q. Cole; Attorney-General, Monroe McClurg; Revenue Agent, Wirt Adams; Land Commissioner, E. H. Nall; Adjutant-General, William Henry; Superintendent of Education, H. L. Whitfield; Railroad Commission, John D. McInnis, A. Q. May, J. C. Kincannon; Chief Justice of the Supreme Court, Albert H. Whitfield; Associate Justices, S. H. Terral, S. S. Calhoun; Clerk, Edward W. Brown—all Democrats.

The term of the State officers is four years; they are chosen in November of the years next preceding those of the presidential elections. The Legislature meets biennially the first Tuesday after the first Monday of January of the even-numbered years. Every second session is a special session, the regular sessions coming quadrennially. The special sessions are limited to thirty days, unless extended by the Governor, and only appropriation and revenue bills may be considered, unless the Governor introduces other subjects by message.

Census Figures.—A bulletin of the Census Bureau says: "In Mississippi persons of school age are practically all of native birth, the foreign-born element of this class representing only a tenth of 1 per cent. of the whole number. Colored persons of school age in 1900 constituted in Mississippi 59.9 per cent. of the whole number of persons of school age. White males of militia age in 1900 are substantially all of native birth. Colored males of militia age constitute 57.8 per cent. of all males of militia age in 1900. The foreign-born males of voting age are only 1.4 per cent. of the total number. The colored element constitute 56.8 per cent. of the whole number of males of voting age in 1900. Among males of voting age the proportion of illiterates is 33.8 per cent., due almost wholly to the large number of illiterate negroes. Among the whites of native parentage, the proportion of illiterate males of voting age is 8.4 per cent. Illiterate foreign white males of voting age constitute 9.5 per cent. of the whole number of foreign white males of voting age.

Only 14.7 per cent. of the population live in incorporated places.

Finances.—The receipts for the two years ending Sept. 30, 1901, were: Cash on hand Oct. 1, 1899, \$333,765.80; received from ordinary sources, \$3,411,649.48; received from sales of college lands, \$575,844.47; received through revenue agent, \$348,151.90; received from minor sundry sources, \$12,188.05; outstanding warrants Oct. 1, 1901, \$4,257.91; total, \$4,685,857.61. The disbursements were: Outstanding warrants Oct. 1, 1899, \$11,342.36; account judiciary, executive, and other State departments, \$508,774.91; account educational institutions and public schools, \$1,983,639.24; account charitable institutions and pensions, \$678,855.70; account interest on bonds, \$107,662.56; account miscellaneous relief appropriations, \$26,539.10; account special warrants canceled, \$35; account 5-per-cent. bonds, series B, redeemed, \$338,000; account new State-house, \$202,554.80; cash on hand Oct. 1, 1901, \$828,453.85; total, \$4,685,857.61.

At the session of the Legislature of 1900 the State tax levy was decreased from 6½ to 6 mills. The condition of the treasury, as is pointed out by the Auditor, is not due to excessive taxation, but to the sale of college lands and collection of railroad back taxes.

The collections from privilege taxes amounted in the second year to \$365,792.56, of which the saloons paid \$149,700.

In litigation concerning the right of the State to certain railroad taxes, the United States Supreme Court affirmed the judgment of the State Supreme Court against the claim of the railroads for exemption under their charters.

On July 1 the Governor called in \$400,000 of 5-per-cent. bonds issued in 1896. In May the bonded debt of the State was given as \$1,003,000. The amount due to school funds on which only interest can be paid was \$1,884,658.89.

The total of the personal assessment in 1901 was \$62,236,476. The increase in the number of polls assessed was 11,382, the whole number being \$291,919. The payment is voluntary, but is a prerequisite to the right to vote; the collections go to the county school funds.

The railroad assessment of the State forms about 14 per cent. of the total property valuation, real and personal. In 1900 the assessment was \$27,549,788, as against \$26,337,353 for 1899, an increase of \$712,432.

Education.—The State provides for only four months' school during the year; the counties are authorized to levy an annual tax for additional support for schools, and some of them do so, but the majority have but the four months' term. It is stated that more negro than white children attend the public schools, and that only 65 per cent. of those enrolled are regular attendants.

The Agricultural and Mechanical College had an enrolment of 517 for the session of 1900-1901. The textile building, for which the Legislature of 1900 appropriated \$40,000, has been completed and is filled with students.

The attendance at the State University in 1900-1901 was 260; the preceding year it was 287.

At Millsaps College 14 young men took the bachelor's degree this year, and 12 members of the law class were examined for license to practise.

Charities and Corrections.—The Board of Penitentiary Control shows by its report that of the 1,035 convicts in the prison 513 were convicted of taking life or attempting to take it. The convicts for criminal assault numbered 27, and for attempts 44. The entire force is engaged in farm work. The receipts were \$179,674.05, the expenditures \$169,925.70. Improvements during the year cost \$42,525.07. Four plantations belonging to the State were cultivated, 1 was rented, and 9 were taken on shares. Some of the counties have tried the experiment of working convicts in the same way, and it has proved successful.

The State Insane Hospital is just north of Jackson. There are 31 wards, giving accommodations for 1,300 patients. The present population of the institution is nearly 1,100 and is increasing. The average number of patients in 1899 was 876, and in 1900 it was 978. There are 108 officers and employees. The trustees recommend an appropriation of \$115 per capita instead of \$110 as heretofore. The East Mississippi Insane Hospital had 450 patients during the year, and 193 were removed by discharge or death. The recoveries amounted to 23 per cent.

The Institution for the Blind had 48 students at the summer session. Three were graduated, and 3 recovered their sight.

The attendance at the Institution for the Deaf and Dumb increased 77 over that of the preceding biennial period.

Military.—There are 3 regiments of militia, but in June there were but 4 companies. The Adjutant-General thinks the appropriation should be raised from \$6,000 to \$10,000 a year; 2,000 of the present amount is held back as an emergency fund, leaving only \$4,000 for the encampment and other expenses. The State's apportionment from the Government fund is \$19,117.64.

The roll of pensioners shows a total of 5,624, against 4,394 in 1900. The law appropriates \$150,000 to be distributed among the pensioners, and provides that those who are totally disabled and incapacitated for work shall receive \$100 each; those who are partially disabled by the loss of a hand or a foot are to receive \$50 each. These are known as the preferred classes. The other disabled veterans, widows of veterans, and servants of veterans, etc., are thrown into one general class, known as the prorata class. Owing to the large increase in the number of the prorata class each pensioner received only \$25 out of the total fund; in 1900 the prorata class received \$32.50.

Insurance.—There were 48 fire companies doing business in the State in 1900. Two of these were engaged in reinsurance, 2 withdrew during the year and transferred their business to other companies. The risks taken by the other 44 companies amounted to \$49,877,487, upon which premiums were paid aggregating \$1,427,026.61. In 1899 the premiums were \$1,156,937, the increase for 1900 being \$270,089.61. The average rate of premiums was 2.1216. The losses incurred were \$669,519.60, and the losses paid were \$701,843.72. In 1899 the losses incurred were \$588,049, and the ratio of loss to premium was 0.5082. The ratio of loss to premium last year was 0.4745, which is a decrease over 1899 of 0.0337. During the first four months of 1901 12 new companies were admitted, making 58 doing business in the State.

The amount of life insurance paid in 1900 was \$1,454,191.

Banks.—The Auditor's statement on the condition of the State banks shows that while there were 107 reporting Sept. 30, 1900, there were 121 on Nov. 15, 1901. The aggregate resources showed a net increase of \$5,822,997.70, having been \$20,782,962.11 at the former date and \$26,605,959.81 at the latter.

Statements from the national banks in the State, to the Comptroller, show that on July 15 there were 12, with 10,009 depositors. Ten reported dividends paid; the average dividend was 11.65; the total resources were \$7,025,602.93.

Building and Loan Associations.—Suits have been before the courts this year involving the validity of contracts of the foreign building and loan associations. The suits were brought by the receivers of the New South Association of New Orleans and the National of Atlanta. The Supreme Court held that the rates charged were usurious and the claims could not be collected; but the Federal court decided that the interest is not usurious. The question remains to be settled by the United States Supreme Court. About 150 suits involving it are pending.

Railroads.—In the year past 140.75 miles were added to the trackage in the State. The total mileage in 1900 was 29,925.73. Reports show increase in the revenues of most of the roads over those of 1900. The assessed value of railroad property was \$26,337,353 in 1899, and \$27,549,788 in 1900. The Gulf and Ship Island road, which was opened to the coast in 1900, has had unexpectedly heavy traffic; and the company has decided to refund

the bonded debt and provide means for completing the terminals, enlarging the pier at Gulfport, and making other improvements. In November a convention was held at Gulfport for the purpose of securing appropriations from Congress for making that port a deep-water harbor.

Products and Industries.—The statistics of the Census Bureau on the manufacturing and mechanical industries of Mississippi for 1900 were announced in December. The State has a capital of \$35,807,419 in the 4,772 establishments reporting. The gross value of the products is reported at \$40,431,386 with a net value of \$27,813,332, representing the increase in raw materials resulting from manufacturing processes. This involves an outlay of \$1,167,020 for salaries of officials, clerks, etc.; \$7,471,886 for wages; \$1,476,855 for miscellaneous expenses, including rent, taxes, etc.; and \$21,692,092 for materials used. While the capital invested increased over 140 per cent., the population during the same period increased almost 156 per cent. Manufacture of lumber and timber products present the most important industry of the State, employing almost 37 per cent. of all wage-earners of the State, with almost 39 per cent. of the total value of all products of the State. There were 844 establishments for this industry in 1900, giving employment to 9,676 persons, and the products were valued at \$15,656,110.

The manufacture of cottonseed oil and cake ranks second, with 41 establishments, 1,521 wage-earners, and products valued at \$6,681,121.

There were 145 establishments engaged in the manufacture of turpentine and rosin in 1900, with 2,288 wage-earners, and products valued at \$1,772,435.

There were 6 establishments engaged in the manufacture of cotton goods in 1900, with 1,675 wage-earners, and products valued at \$1,472,835.

For 1901, the estimated production in pounds of lint-cotton to the acre was 205. The product, according to one estimate, was 1,500,000 bales; another estimate made it 1,330,000. The amount consumed in the mills of the State was 24,303 bales. During the harvesting of the crop of 1900, 3,934 cotton-gins were in operation, while 212 were idle.

The biennial report of the Secretary of State shows that for the two fiscal years covered by the report the aggregate of capital stock incorporated is \$26,430,500, while the total capital stock incorporated during the four years previous was only \$25,644,000. During the two-year period of this report the number of charters and charter amendments recorded is 510, against 565 for the four years previous.

Lawlessness.—Lynchings were reported this year at or near Ocean Springs, Macon, Terry, Scranton, Gulfport, Cleveland, Erwin, Carrollton, and Balltown, and in Perry County. Seven of those lynched were accused of murder, 2 of barn-burning, 3 of criminal assault, and 2 of attempts at criminal assault. Two were burned, 2 were shot, and others were hanged. One of those hanged was a white man—a Canadian—who shot his little stepson in a quarrel with his wife. Three negroes who were lynched at Cleveland, July 20, were accused of the murder of a plantation overseer; the negroes in the neighborhood were believed to be in a conspiracy against him and other planters who, as they thought, were working them too hard. A negro woman, her son, and her daughter were hanged at Carrollton, Aug. 1. They were taken from jail where they were awaiting trial for complicity in the murder of Mr. and Mrs. Taliaferro. Two Italians were killed by a

mob at Erwin in July. The Italian vice-consul at Vicksburg brought the matter before the State Department at Washington, and strenuous efforts were made to discover the murderers, but without success. The Governor expressed his belief that the killing may have been an assassination, the result of a tribal quarrel. In December the matter came up before the Italian Senate, when the Foreign Minister is reported to have said that the Government would ask for no indemnities as the price of the blood of its subjects, but it would not object if indemnities were given to the relatives of the deceased.

Political.—An election was held Nov. 5 to fill vacancies in two State offices. On Aug. 28 the Governor suspended the State Treasurer for violation of the law requiring that all the State funds shall be kept in the treasury. The Governor had found by a count of the funds, Aug. 15, that there was a shortage of \$107,621.44 in the amount on hand; on Aug. 20 the full amount was found in the treasury. The explanation given was that on account of the crowded condition of the safe, some of the funds had been deposited in banks on good security. The Governor appointed G. W. Carlisle to fill the office temporarily, and Sept. 6 the Treasurer resigned. The law says that the State Treasurer shall not "loan any portion of the public moneys, securities, stocks, or other public property entrusted to him for any purpose whatever."

The vacancy in the office of Secretary of State was caused by the death of the Secretary, Hon. J. L. Power, Sept. 24. The Governor appointed his son, Joseph W. Power, to be acting secretary.

At the election, Nov. 5, there were 5 candidates for the office of Secretary of State. Joseph W. Power was elected by a majority of 1,475. There were 2 candidates to fill the vacancy in the office of Treasurer, and G. W. Carlisle was elected by a majority of 3,508.

MISSOURI, a Western Mississippi valley State, admitted to the Union Aug. 10, 1821; area, 69,415 square miles. The population, according to each decennial census since admission, was 140,455 in 1830; 383,702 in 1840; 682,044 in 1850; 1,182,012 in 1860; 1,721,295 in 1870; 2,168,380 in 1880; 2,679,184 in 1890; and 3,106,665 in 1900. This is an increase since 1890 of 15.9 per cent. The city of St. Louis had in 1900 a population of 575,238. Capital, Jefferson City.

Government.—The following were the State officers during the year: Governor, Alexander Monroe Dockery; Lieutenant-Governor, John Adams Lee; Secretary of State, Samuel B. Cook; Auditor, Albert O. Allen; Treasurer, Robert P. Williams; Attorney-General, Edward C. Crow; Superintendent of Schools, William T. Carrington; Railroad and Warehouse Commissioners, Joseph P. Rice, Timothy J. Hennessey, W. E. McCully; Superintendent of Insurance, Thomas H. Wagner; State Geologist, Ernest Robertson; Supervisor Building and Loan Associations, Luther S. Hickman; Commissioner of Labor Statistics and Inspection, William Anderson; Inspector of Coal-Mines, Charles Evans; Inspector of other mines than coal, George K. Williams; Warden of Penitentiary, Frank M. Woolridge; Beer Inspector, Gyles Y. Crenshaw; Special License Commissioner, Thomas J. Martin; Adjutant-General, William T. Dameron; Factory Inspector, Clement J. Nordmeyer; Judges of the Supreme Court—Gavon D. Burgess, Chief Justice; Theodore Brace, Waltour M. Robinson, William Champs Marshall, Leroy B. Valliant, Thomas A. Sherwood, James D. Gantt. The only Republican State officer is Waltour M. Robinson, justice of the Supreme Court.

The Legislature holds biennial sessions. The Senate is composed of 25 Democrats and 8 Republicans. The House is composed of 88 Democrats, 31 Republicans, and 1 Populist. James H. Whitecotton, Paris, is Speaker.

Finances.—The bonded debt of the State on Jan. 1, 1901, was \$1,887,000, showing a reduction during the preceding two years of \$1,755,000. It is in the form of 3½-per-cent. refunding bonds dated Jan. 1, 1888, due Jan. 1, 1908, and redeemable at the pleasure of the State after Jan. 1, 1893. The bonded debt of cities and towns on Jan. 1, 1900, was \$26,055,192. This has been increased \$5,000,000 as a result of the adoption of an amendment to the Constitution for the benefit of the Louisiana Purchase Exposition. County and township bonds to the amount of \$9,003,158.60 have been issued in 53 counties, while 68 counties have no bonded indebtedness. The State certificates of indebtedness amounted on Jan. 1, 1901, to \$3,158,000.

Valuation.—The assessed valuation of real and personal property is \$1,093,091,264. The valuation of St. Louis property is \$355,396,387, on a rate of 66½ of the actual value. The farm areas are 41,479,159 acres, and the average assessed valuation is \$7.89.

Railroads.—The mileage of steam roads is 6,762 miles; increase since 1897, 113.26 miles; total valuation for taxation (1901), \$76,857,661. The mileage of street roads is 551 miles; valuation for taxation, \$21,171,431.

Insurance.—There are doing business in the State 135 stock fire insurance companies, 14 mutual fire, 39 stock miscellaneous, 3 assessment life, 7 stipulated premium, 4 association casualty, 82 fraternal, and 45 regular life. Life policies in force, 81,453; industrial, 358,456; issued during year, 22,075 and 156,745; claims paid, \$2,672,794 and \$532,131; premiums collected, \$6,653,099 and \$1,780,052. Stipulated premium life companies—policies in force Dec. 31, 1900, 3,804; amount, \$151,303; claims paid in 1900, \$135,200. Assessment life associations—certificates in force Dec. 31, 1900, 8,103; amount, \$15,752,600; assessments collected in 1900, \$126,206.04; claims paid, \$118,446.75. Assessment casualty associations—certificates in force, 1,848; amount, \$4,805,000; assessments collected in 1900, \$22,324,454; claims paid, \$10,247. Fraternal insurance in force Dec. 31, 1900, \$285,960,943.79; claims paid in 1900, \$2,464,924.

Education.—The State school fund amounts to \$3,158,973, the seminary fund to \$1,238,194.78, and the county, township, and district school funds to \$8,151,815.30. The State school system embraces the university, Agricultural College, School of Mines, 3 normal schools, 1 institute for colored teachers, 10,326 public schools, and 181 high schools and seminaries.

The State University, at Columbia, has 7 departments—academic, normal, law, medicine, military science and tactics, agriculture, and me-

ALEXANDER M. DOCKERY,
GOVERNOR OF MISSOURI.

chanic arts. The School of Mines and Metallurgy is at Rolla. The enrolment at Columbia is 1,038, and at Rolla 168.

The enrolment of the Normal School, at Kirksville, is 834; at Warrensburg, 863; and at Cape Girardeau, 402. Lincoln Institute is at Jefferson City. It has enrolled 146 males and 131 females.

State Superintendent Carrington reports 1,900 private institutions of learning, as follow: One sectarian university, 1 non-sectarian university, 36 sectarian colleges and academies and 17 non-sectarian, 14 professional schools, and 10 each separate male and female academies. Thirty-four private institutions are open to both sexes.

The enrolment of the School for the Blind at St. Louis in 1900 was: Boys, 61; girls, 64. The school has the largest Braille library in the United States. The estimated expenses for 1901-1902 were \$59,000. In the School for the Deaf and Dumb 350 students are enrolled. The estimated expense for 1901-1902 is \$147,000.

State Institutions.—The number of prisoners confined in the Penitentiary at the time of the last official report was 2,051. Number of white males, 1,267; white females, 17; colored males, 719; colored females, 48; persons of foreign birth, 116; native born, 1,935; serving life terms, 24. All the appropriation of \$80,000 made by the State for the support of the Penitentiary was returned, with \$50,000 additional saved from its earnings.

In the Reform School for Boys, at Boonville, there are 339 boys, of whom 110 were sent by the United States Government. Among them are a few Indians. The school biennially costs the State about \$45,000. It derives its maintenance from the counties from which the boys are sent.

The average annual expenditure for the Girls' Industrial School, at Chillicothe, is \$14,000.

There are 4 insane asylums—at Fulton, St. Joseph, Nevada, and Farmington—and a colony for the feeble-minded at Marshall. The last Legislature appropriated \$150,000 for the establishment of the Farmington asylum. The State also aids an insane asylum at St. Louis. The estimated annual expenses for the care of the insane and feeble-minded is \$160,600.

The estimated cost of the Confederate Home, at Higginsville, is \$46,000, and of the Federal Soldiers' Home, at St. James, \$20,000.

Agriculture.—The acreages and yields of the principal crops were as follow: Corn, acreage 6,400,000, yield 193,267,000 bushels; wheat, acreage 1,040,000, yield 1,600,000 bushels; oats, acreage 1,000,000, yield 30,000,000 bushels; flax, acreage 60,000, yield 540,000 bushels; timothy, acreage 2,218,000, yield 2,884,000 tons; cotton, acreage 64,200, yield 35,053 bales; tobacco, acreage 10,100, yield 758,000 pounds.

Legislation.—No question of purely State interest provoked so much discussion during the year as an amendment to the Constitution, which was adopted by the people in 1900, the principle of which was enacted into law by the Legislature in 1901. This law provided that the value of mortgaged property, less the value of the mortgage, should be taxed against the owner, and that the mortgage should be assessed against the holder. The law did not affect persons living in the State and loaning their money upon property within it, but it practically required those living in other States and loaning their money in Missouri to pay taxes on their mortgages twice—in the States in which they lived and in Missouri. The adoption of the amendment and the subsequent passage of the law were followed by the refusal of outside investors to make further loans in the State at the old rates, and by the with-

drawal of large sums of money. There was a practical suspension of all money loaning business, and real-estate values went down, while interest rates advanced from 4 to 12 per cent, all over the State. The real-estate and loan men finally met in Kansas City for a national organization, and prepared to fight the law. They proposed to attempt to invalidate it, and found that the preliminary steps for it had been taken to the people were not properly taken. This reasoning applied equally well to the other amendments adopted at the same time, however, and would have prevented the \$5,000,000 appropriation for the world's fair at St. Louis. A case was finally taken up from St. Joseph, in which it was contended that the amendment violated the terms of the Federal Constitution prescribing equality of taxation. The Supreme Court upheld the contention, and the amendment was annulled without prejudice to the others that were adopted with it.

The Legislature met Jan. 1 and adjourned March 9. Among the other measures passed were: A law creating a State board of arbitration, a law describing a system of registration to be used by party caucuses and conventions, and a law providing for apportionment of delegates and fixing other rules for the holding of conventions other than those for elections in cities of fewer than 300,000 inhabitants.

MONTANA. a Western State, admitted to the Union Nov. 8, 1889; area, 146,080 square miles. The population, according to each decennial census since admission, was 132,519 in 1890 and 243,329 in 1900. Capital, Helena.

Government.—The following were the State officers in 1901: Governor, Joseph K. Toole; Lieutenant-Governor, Frank Higgins; Secretary of State, George M. Hays; Auditor, J. H. Calderhead; Treasurer, A. H. Barret; Attorney-General, James Donovan; Superintendent of Education, W. W. Welch. These officers were elected on a fusion ticket of Democrats and Populists. Other officials were: Commissioner of Agriculture, Judson A. Ferguson; Adjutant-General, Lee McCulloch; Land Register, Thomas D. Long; State Examiner, William Hudnall; Coal-Mine Inspector, Howard Welch; Game Warden, W. F. Scott; Chief Justice of the Supreme Court, Theodore Brantley, Republican; Associate Justices, G. R. Milburn, W. T. Pigott, Democrats; Clerk, Henry G. Rickerts, Democrat.

The State officers are elected for terms of four years at the time of the presidential elections. The term of justices of the Supreme Court is six years. The Legislature meets biennially in January of the odd-numbered years.

Census Figures.—A census bulletin shows that, of the total population of the State, 149,842 are males and 93,487 females. This makes the percentage of male population 61.6. Of the population, 176,262 are native born and 67,067 foreign born. There are 1,523 negroes in the State, 1,738 Chinese, 2,441 Japanese, 597 Indians who pay taxes, and 10,746 who do not. There are 39 Chinese women in the State, 7 Japanese women, and 5,686 squaws.

Finances.—The report of the Treasurer for the year ending Nov. 30 shows receipts from all sources of \$1,343,838.75, and disbursements of \$1,303,779.04. The amount on hand was \$544,686.87.

The revenues of the Auditor's office for the same time were \$69,797.07, compared with \$59,027 the previous fiscal year. The insurance companies paid the larger amount of this sum as follow: Admission fees of 16 companies, \$4,800; filing of annual statements, \$3,150; certificates of 1,833

agents, \$9,175; licenses, \$46,546.47. Building and loan associations paid \$120.

The receipts of the Secretary of State's office were \$20,409.15, against \$13,532 in 1900. The State Land Office showed receipts of \$292,129, against \$200,275 the previous year.

The total amount collected by the counties in 1900 for occupation licenses was \$547,806.37. Of this 70 per cent. went to the county funds, 5 per cent. to the wolf bounty fund, and 25 per cent. to the State general fund.

JOSEPH K. TOOLE,
GOVERNOR OF MONTANA.

Valuations.—The taxable property of the State amounts to \$167,087,653, which is an increase of about \$14,000,000 over that of 1900. The total value of the real property is \$79,602,029 and the personal \$71,699,893, while the rail-

roads are assessed at \$15,485,761. In 1900 the railroad valuation was \$15,100,000.

The Attorney-General decided in July that the law requires telephone companies to pay an annual tax of 75 cents a year on every instrument in use, except those that are used in interstate business.

Education.—The State Normal School, at Dillon, graduated a class of 5 in June, making 21 in all that the institution has sent out. During the year covered by the report 129 pupils attended; the highest daily attendance was 71; of the whole number reported, 28 were pupils of the summer school.

The State University has registered constantly increasing numbers since its first year, 1895, when there were 118 pupils. In 1901 there were 253. The amount received from the Legislature, \$35,765, was all expended, with claims of about \$800 unprovided for.

The School of Mines, opened in 1900, had an attendance of 59 in December. Its appropriation of \$32,861 has been expended. A new department—mining engineering—has been established; the chair was endowed by Charles W. Clark.

At the State College of Agriculture, at Bozeman, has been instituted a course of about eleven weeks in winter for those desiring practical study in farming who can not remain through the year. The local board has been anxious to secure for present use the money in the college fund which was kept in the State treasury for the purpose of paying the interest and principal of the bonds, and asked permission of the State Board of Education to bring a friendly suit to determine whether the money could be applied to the expenses of the institution.

The last annual report of the superintendent shows that teachers receive relatively high salaries in the State, the average for men being \$130 monthly and for women \$80.

A memorial library was dedicated at Billings, Oct. 1, the gift of Frederick Billings, of New York, in memory of his brother, Parmly Billings, son of the late Hon. Frederick Billings, in whose honor the town was named.

The annual apportionment of State school funds

in February distributed \$105,842.20. In 1900 the amount was \$80,428.50. The superintendent is taking measures to enforce the compulsory education law, requiring at least twelve weeks of schooling for every child between eight and fourteen.

Charities and Corrections.—Since the Soldiers' Home, at Columbia Falls, was opened in 1897, 120 have been admitted, 23 have died, and 67 were remaining in May.

The insane asylum has about 480 inmates, 130 of them women.

The Orphans' Home closed the year with 104 inmates, an increase of 12 over the year next preceding. The average cost of maintenance was \$3.33 a week. The whole cost was \$18,459.

The Children's Home Society showed receipts amounting to \$2,889.89, and disbursements of \$2,554.71. The superintendent had charge of 58 children during the year, of whom 31 were new ones, and 27 former inmates. The average number at the home was 8. Since it was started the home has had charge of 178 children.

There were in December 404 convicts in the Penitentiary, of whom 1 was a white woman and 4 were colored women. The authorities say that lack of employment is the chief criticism to be made upon the institution, and they desire a change in the Constitution of the State which has a provision to prevent convict labor.

Products and Industries.—From a census bulletin on manufacturing industries it is learned that the number of establishments in the State in 1900 was 1,080, while in 1890 there were but 289. The percentage of increase in population is less than a third of the percentage of increase in the number of establishments during the past ten years. The population increased 75.2 per cent.; the increase in manufacturing establishments was 273.7 per cent. The value of products, including custom work and repairing, in 1890 was \$5,507,573, and in 1900 \$57,075,824. Anaconda, Butte, Great Falls, and Helena furnish 43.7 per cent. of the establishments of the State. The average number of wage-earners increased in the decade from 2,386 to 10,101, and the total wages from \$1,652,413 to \$7,956,830. Slaughtering, wholesale, is reported in 1900, with a product of \$934,640. The manufacture of malt liquors has increased from a product valued at \$204,645 in 1890 to \$1,276,331 in 1900. This industry has been stimulated by the quality of the barley grown in certain parts of the State. The lumber product was valued at \$2,949,992.

The report of Wells, Fargo & Co. credits Montana with an aggregate production of metals in 1900 of \$67,987,150 value. The gold product, as estimated by the Director of the Mint, was \$4,698,000; the silver, \$8,901,148. Oil has been discovered in the Kintia lake region.

The total production of the 21 coal-mine properties of Montana in 1900 was 1,693,773 tons of bituminous coal, valued at \$2,369,054. In that year the companies operating the coal-mines paid for labor \$1,743,052. The total coal acreage owned by organized companies and individuals amounts to 16,069 acres, 1,900 of which is regarded by the owners as worked out and having but little value as far as the deposit of coal is concerned.

The production of coke in Montana during 1900 amounted to 54,692 tons, valued at \$318,871.07. In all, 228 ovens were in operation.

The number of sheep in the State in 1901 was 4,527,000; it was estimated that \$4,000,000 was received for wool and pelts.

Insurance.—During the fiscal year closing May 17 new insurance companies were licensed

to do business in Montana. According to the statement of the Auditor 79 fire insurance companies wrote risks to the amount of \$45,001,910, for which they received gross premiums of \$925,339. They paid losses aggregating \$525,252, of which \$487,026 were incurred in 1900. Risks carried by the fire companies at the close of last year amounted to \$20,260,168. Nineteen life companies increased their risks by nearly \$3,000,000, making an aggregate of \$29,813,479. Insurance to the amount of \$6,155,612 was written. For this premiums to the amount of \$962,311 were received. The losses incurred amounted to \$222,824. Miscellaneous companies, including 16 accident, liability, boiler, and glass companies, wrote risks amounting to \$4,774,494, for which they received premiums of \$1,183,188. These incurred losses amounting to \$68,307, and paid losses of \$64,746. They carried risks aggregating \$7,633,897 at the end of the year.

Banks.—A table prepared by the Auditor in September shows that the State banks, with the exception of the *Ætna* (a new company in Butte, which did not report), have a capital stock of \$1,190,000, deposits of \$10,582,377.40, cash on hand \$1,379,470, and total resources \$13,337,791.77.

Irrigation.—An important public work was dedicated in October when the Dearborn irrigating canal was filled with water and opened for use. It is the first one built under the Carey act of Congress and the act created the State Arid-Land Grant Commission. The Dearborn valley is about 50 miles north of Helena, with Dearborn river on the south, Sun river on the north, Missouri river on the east, and the Rocky mountains on the west—a territory of about 782 square miles. The canal begins a short distance up the Grand Cañon of Dearborn river, diverting its waters and carrying them over the hills to Summit lake, where they are divided into smaller canals and streams, from which they are distributed to the small valleys known as Flat creek, Auchard creek, Dry creek, Simms creek, and Spring Coulee. The Dearborn Canal system comprises about 100 miles of main waterway, with several hundred miles of laterals. The reservoir system covers about 3,000 acres, with an average depth of 20 feet storing 60,000 acre feet. The main canal is 38 feet wide and 5 feet deep, with an average grade of 3.1 feet to the mile. Subsidiary canals range from 16 feet wide, on the bottom, to 7 feet.

Timber-Land Frauds.—It is alleged that great frauds have been committed to secure timber and stone lands in Montana and Idaho. The law provides that any citizen may file on 160 acres of timber land by paying \$2.50 an acre; but in making proof on his claim he must make affidavit that he is not taking the land for speculation, and that he has made no arrangement to sell to a second party. It is charged that agents of certain large proprietors induced numbers of persons to take lands on these conditions and transfer them to their principals, paying each locator \$100 above the cost of the land and other expenses. The Government has brought suit to recover the lands and the value of the timber that has been taken from them, and 102 indictments for perjury were found against individuals who secured lands in Montana by swearing falsely.

Lawlessness.—A white man alleged to have assaulted a girl of five years was taken from the jail at Helena in the early morning of Oct. 2, by a mob of about 200 masked men, and hanged to a telegraph-pole in Haymarket Square. A grand jury was called to investigate the lynching, and after several days' session, during which

38 witnesses were examined, the jury reported that it had been unable to procure sufficient evidence to find any indictments. It recommended the dismissal of the jailer who delivered the accused to the mob, and of one policeman found to have been derelict in duty.

Legislative Session. The regular session of the State Legislature began Jan. 7 and ended March 7. In the Senate were 18 Democrats, 9 Republicans, 1 Populist, and 4 Independent Democrats; in the House, 27 Democrats, 10 Republicans, 6 Populists, 9 Labor party, and 5 Independent Democrats.

George H. Stanton was President *pro tem.* of the Senate, Frank E. Corbett was Speaker of the House, and John Baker Speaker *pro tem.*

The new State administration was inaugurated Jan. 13.

Two Senators were to be elected—one for the seat to which W. A. Clark was elected by the Legislature of 1899, for the term ending in 1905, the other to succeed Senator Carter, for the term ending in 1907. W. A. Clark was elected Jan. 16 for the long term, by a vote of 57 against 31 for T. A. Carter, 4 for M. Maginnis, and 1 for R. B. Smith. The ballot for Senator for the short term continued through the session. On the sixty-sixth ballot, March 8, Paris Gibson was chosen by 47 votes against 33 for T. H. Carter, 11 for John MacGinniss, and 1 for H. L. Frank; the two last-named had withdrawn before the final ballot was taken.

Among the important measures passed was a bill making eight hours a legal day's work in all smelter-mills and underground mines. Another bill in the interest of miners was to prevent dealing in time-checks and the coercion of employees of companies that carry on general merchandise stores in connection with their mines or smelting-works. Wages are to be paid in lawful money or by bank-checks, and unpaid wages may not be assigned to employers.

The law against gambling, making it a felony punishable by imprisonment, was repealed, and a new law was passed limiting the punishment to a heavy fine. Proprietors of places having slot-machines are also subject to fine. The law provides that officers may break into suspected places to search for gambling devices and arrest gamblers.

In cities of more than 10,000 inhabitants the Governor is to appoint 6 park commissioners for terms of two years.

The offices of game and fish warden and coal-mine inspector were created. The Governor appoints the warden. No one is eligible to the office of coal-mine inspector unless he is at least thirty years old, has been engaged in coal-mining the ten years prior to his appointment, has a competent knowledge of all the systems of coal-mining and working and properly ventilating coal-mines and the nature and constituent parts of noxious gases of coal-mines and the various ways of expelling them from mines, and is a graduate of some recognized school of mines and holds a diploma, which shall be deposited with the Governor before appointment. Further, it is to be his duty, when he is not engaged in examining coal-mines, to inspect quartz-mines, if called upon by the Governor to do so. The term of office is four years, and the salary \$2,000.

A State board of health was created, to consist of the Governor, the Attorney-General, 4 members appointed by the Governor, and a secretary appointed by the Governor or the board. A board of 3 osteopathic examiners was authorized.

The Land Commissioners are authorized to sell

\$70,000 of bonds for additional buildings to the State University, the interest of the bonds to be paid by the revenue from lands of the university grant. A women's hall and gymnasium is to be built with part of the money. For completing and equipping the normal-school building \$20,000 of bonds are to be sold. Appropriations were made as follow: \$32,900 for building the main wing of the Asylum for the Deaf and Dumb at Boulder; \$12,500 for finishing the State Orphans' Home; \$1,500 for machinery and other improvements at the Reform School; \$152,000 for completing the equipment of the new State-House; \$2,000 for farmers' institutes.

Other acts were:

Changing the conditions under which foreign corporations may transact business in the State. Requiring that all bonding propositions submitted to the people be on separate ballots.

Making the school tax 2 mills (formerly 3 to 5), and providing that the tax for a special fund may not exceed 5 mills, instead of 10 as formerly; the decision to be with the school board, not with the electors as heretofore.

Empowering school trustees to issue bonds without submitting the propositions to the voters.

Allowing only taxpayers to petition for a change of county-seats.

Providing a penalty for voting at primaries of two political parties.

Prohibiting railroads from making tunnel charges, except for travel to or from points outside of the State.

Requiring a physician's or coroner's certificate for burial.

Requiring candidates for examination in dentistry to have practised or studied under supervision five, instead of three, years, or to be graduates of a reputable dental college.

Providing that a ton of mineral coal be 26½ bushels instead of 28 as formerly, and each bushel 76 pounds instead of 80.

Permitting fruit inspectors to disinfect or destroy suspected material.

Providing bounties of \$5 on a grown wolf, a wolf pup or coyote, and \$7 on a mountain-lion. The State bounty fund to be raised by a three-mill tax on live stock.

Providing that live stock brought into the State for grazing must be taxed.

Providing that proposed public improvements may not be made if two-thirds the property owners file objections; sewers may be made on petition of one-third the frontage of property affected.

Defining kidnaping, detention of a child under eighteen (formerly fifteen) against his or his parent's will, with intent to conceal from the parent.

Providing that veteran soldiers and sailors need not pay for peddling licenses.

Amending the game-laws: "It is unlawful to kill at any time moose, bison, caribou, buffalo, quail, Chinese pheasant, mountain-sheep, antelope, female elk, beaver, meadow-lark, bluebird, thrush, oriole, woodpecker, mocking-bird, gold-finch, snowbird, cedar-bird, stork, or any of the other singing birds; and to dump any sawdust or *débris* coming from sawmills into any stream. Every non-resident who is not a taxpayer in the State is required to procure a hunter's license. The license for large game is \$25 and for small or feathered game \$15. One license does not entitle the holder to hunt both kinds of game."

It was proposed to place the \$30,000 alleged to have been paid as bribes and delivered to the Legislature in 1899 into the school fund, but it was finally ordered paid into the general fund.

Making a tax levy of 2½ mills.

Bills were passed forming two new counties—Powell from a part of Deer Lodge, and Rosebud from Dawson. Afterward the name of Deer Lodge was changed to Daly, and Powell to Deer Lodge. The Governor vetoed an apportionment bill, because it had been drawn without the necessary reference to these changes. In April the change of name of Deer Lodge County was declared unconstitutional by the Supreme Court.

A bill that caused a bitter struggle was one permitting actions to be taken from the district courts and appealed to the Supreme Court on the ground of interest or prejudice on the part of the lower court; and the Supreme Court or a judge thereof might stay all proceedings until the matter of the alleged interest or prejudice should be determined. The bill was alleged to be in the interest of a particular company, to enable it to remove its actions from the district court. It was passed, but was vetoed.

NEBRASKA, a Western State, admitted to the Union March 1, 1867; area, 77,510 square miles. The population, according to each decennial census since admission, was 122,993 in 1870; 452,402 in 1880; 1,058,910 in 1890; and 1,068,539 in 1900. Capital, Lincoln.

Government.—The following were the State officers in 1901: Governor, Charles H. Dietrich, elected United States Senator in March, and succeeded in May by Lieut.-Gov. Ezra P. Savage; Lieutenant-Governor (succeeding Ezra P. Savage), C. F. Steele; Secretary of State, George W. Marsh; Treasurer, William Stuefer; Attorney-General, F. N. Prout; Auditor, Charles Weston; Adjutant-General, J. N. Kilian, succeeded by William Hayward, who in turn was succeeded by L. W. Colby; Superintendent of Public Instruction, W. K. Fowler; Commissioner of Public Lands, G. D. Follmer—all Republicans; Chief Justice of the Supreme Court, J. J. Sullivan, Democrat; Associate Justices, S. H. Sedgwick, Republican, and S. A. Holcomb, Fusion; Clerk, Lee Herdman.

The State officers are elected in even-numbered years, the term beginning in January of odd-numbered years. The Legislature holds biennial sessions, beginning in January of odd-numbered years.

Finances.—The Treasurer's report for six months ending May 31 showed a total balance on hand Dec. 1, 1900, of \$607,878.22; receipts, \$1,884,781.30; disbursements, \$1,626,434.42; balance on hand May 31, \$866,225.10. The report of receipts and disbursements showed the condition of the general, permanent, and temporary school funds and the sinking-fund to be as follow: General fund—balance Dec. 1, \$49,594.46; receipts, \$630,879.97; disbursements, \$599,486.69; balance May 31, \$80,987.74. Permanent school fund—balance Dec. 1, \$105,968.68; receipts, \$673,982.71; disbursements, \$522,166.09; balance May 31, \$257,785.30. Temporary school fund—balance, Dec. 1, \$297,047.90; receipts, \$385,374.24; disbursements, \$307,822.83; balance May 31, \$374,599.31. Sinking-fund—balance Dec. 1, \$56,165.23; receipts, \$11,617.58; disbursements, \$67,782.81.

The last Legislature transferred the sinking-fund to the general fund.

The cash in the treasury June 30 was \$591,634.66. In June the Treasurer's receipts were \$352,725.35, while the disbursements were \$627,315.79.

The semiannual report of the Treasurer, made in December, showed the receipts of the treasury from all sources from June 1 to Nov. 30, 1901, to have been \$1,483,434.30; disbursements, \$1,796,184.98; cash in depository banks, \$535,295.22;

cash in vault, \$18,179.20; leaving a balance to the treasury of \$553,474.42. The Treasurer had then invested educational trust funds to the amount of \$459,000 in county bonds of the State, and \$780,250.72 in warrants, making a total investment in bonds and warrants of \$1,239,250.72 for the first eleven months of the year. The total amount of educational funds that were invested in bonds and warrants at the date of this report was \$4,967,456.88, which was \$492,955.44 larger than at the beginning of the administration. There was on hand, Nov. 30, in the temporary school fund \$313,041.62, to be apportioned to the school districts of

EZRA PERIN SAVAGE,
GOVERNOR OF NEBRASKA.

the State immediately after the close of business on Dec. 2, 1901.

Valuation.—The valuation of the State, as returned by the assessors and county clerks, not including Wheeler County, was \$174,124,632.20. Taking the valuation of Wheeler County for 1900, the total valuation of the State would be \$174,422,870.30. In 1900 the total assessed valuation was \$171,747,593.41, or \$2,675,276.89 less than in 1901. This is the first increase in the valuation for several years.

Education.—In the biennial report of the Superintendent of Public Instruction, Jan. 1, 1901, were special reports from 72 counties showing that there were 7,364 teachers in those counties, the number then required being 6,943, indicating that more than 94 per cent. of those receiving teachers' certificates in Nebraska are actually needed to teach the schools. While the State Normal School, at Peru, is doing excellent work, its capacity should, the report says, be greatly enlarged.

The number of students in all departments at the State University at the end of 1901 was 2,256; instructors, 220; volumes in the library, 51,000. The September enrolment of more than 1,300 showed a slight gain compared with 1900. Courses were pursued at the summer session of the university, open to all who pay the entrance fee of \$2, but intended specially for teachers and superintendents.

The report of the Nebraska Institute for the Deaf and Dumb for 1899 and 1900 states that a new building was occupied in March, 1900, relieving the previously crowded condition of the school. The present buildings will accommodate 200 pupils. The number Nov. 30, 1900, was 165.

Products and Resources.—According to a report of the secretary of the State Board of Agriculture, the value of all the soil products in 1900 was about \$200,000,000. More than 1,000,000 tons of hay were harvested. The corn-crop, as well as others, was injured in 1901 by the prolonged drought, but the estimates at the end of the year indicated a good showing. Increasing attention to fruit-growing in the State is leading to satisfactory results. Reports in 1901 from the experiment stations recently established by the Nebraska

Horticultural Society show that their work has been of practical benefit to this industry.

An examination of the growth in Nebraska has been made by the United States Department of Agriculture, with a view to determining whether forest production on a large scale is possible in the State. The people of Nebraska are deeply interested in tree planting, and the State Park and Forestry Association was especially active during the year in disseminating information regarding species of trees suitable to the soil and climate of the State. In February, 1901, Gov. Dietrich issued an Arbor Day proclamation.

Alfalfa is now profitably grown in almost every county, and other forage plants still more largely, and these form a most important part of the annual products.

The report of the secretary of the State Dairymen's Association says that in 1900 more than 9,000,000 pounds of creamery butter were made in Nebraska. In June, 1901, the State Food Commissioner declared that the dairying business in Nebraska has taken a new start. This he attributes mainly to the fact that by means of the separators now in use (hand and power) one-third more of butter fat is obtained than formerly.

The growth of the sugar-beet is becoming yearly more important among Nebraska farmers. The sugar factory at Fremont in 1900 handled 100,000 tons of beets, the largest yearly quantity in its history.

The State Oil Inspector reported the number of barrels of oil and gasoline inspected by him in 1900 as 162,884; fees, \$16,284.40. In May, 1901, he reported inspection since Jan. 1 of 53,553 barrels; fees, \$5,355.30. To this statement the inspector adds: "I am pleased to report that not only has this department been self-sustaining, but after paying all salaries and expenses, balances paid to the State Treasurer for account of the general fund during two years amount to \$11,142.51."

There are indications that it will not be very long before great profit will accrue to the people of this State from the utilization of its extensive beds of clay, belonging to the Dakota formation, which occupies a strip in eastern Nebraska 200 miles long and 30 miles wide. At Table Rock a company is now turning out annually 5,000,000 bricks from a clay bank in the vicinity. There are hundreds of workable banks along the west bluff of the Missouri.

Irrigation and Agricultural Engineering.—The State Engineer has published a report to August, 1901, which shows nearly 4,000 miles of canals; estimated cost, \$4,773,984; acres covered, 1,698,831; estimated increase in land value, \$16,988,310, obtained by adding \$10 an acre to all land under irrigation. Fifty-four of the 90 counties have irrigation canals. In some counties the canals are less than one mile in length. The only one in Lancaster County is three-tenths of a mile long, and is used to water a celery field.

Legislative Session.—The session of the Legislature opened Jan. 1, and was organized by the Republican majority. On joint ballot the Republicans had 71 votes and the fusionists 62. One of the chief duties of this Legislature was the election of 2 United States Senators to succeed Senators Allen and Thurston. After a prolonged deadlock, during which more than 50 ballots were taken, Gov. Charles H. Dietrich was elected for the term expiring in 1905, and Joseph H. Millard for the term that expires in 1907.

Among the more important acts was a new and stricter game-law. The intent is to extend the protection of the law to new species of game and

song and insectivorous birds, to restrict the open season during which game may be killed, and to provide for more effective means of enforcing the law.

A compilation of the appropriation bills passed shows a total appropriation of \$2,789,590.01 for the biennium, or \$187,334.43 more than was appropriated by the former Legislature. Nearly all the State institutions received an increased amount. Some of the institutions received appropriations for new buildings and for the purchase of land.

A concurrent resolution was passed requesting Congress to call a convention for the purpose of proposing an amendment to the Constitution of the United States, providing for the election of United States Senators by direct vote of the people.

A law was passed for the registration and protection of trade-marks.

An inheritance-tax law was enacted.

Provision was made for a commission to investigate the Torrens system of registration for better securing title to real estate.

Another measure provides for traveling libraries.

Many new school laws were passed.

A law was enacted prescribing severe penalties for kidnaping and child-stealing.

Legal Decisions.—In December the Supreme Court of the State revived the law of 1897, which confers power upon the Governor to appoint fire and police commissioners for the city of Omaha. A law passed by the last Legislature empowers county boards to make and enforce quarantine regulations, and the Attorney-General in November asserted that reasonable regulations under this act will have the force of laws, and that county boards may detain, without bail, persons having infectious diseases. The boards may also maintain hospitals.

Lawlessness.—A young man, living on a farm near Humboldt, who had been accused of expressing satisfaction at the assassination of President McKinley but who denied the charge, was, on the night of Sept. 17, decoyed from his home, deprived of his clothing, and tarred and feathered by a mob. A local paper said, that "after telling the victim to go home, and warning him in future to be more careful of his utterances, the crowd, which numbered about 40, quietly dispersed."

Penitentiary.—The new officers of the Penitentiary entered upon their duties at the beginning of 1901 under trying circumstances, the institution having then recently suffered from a serious fire. But means were devised for proper care of the convicts, and an appropriation by the Legislature for rebuilding was applied, new steel cells were procured, and the 300 prisoners are reported to have proved tractable during a period when ordinary discipline was a matter of unusual difficulty.

State-Fair Grounds.—An appropriation of \$35,000 was made by the last Legislature for the purchase of permanent grounds for the State Fair, and land was bought at Lincoln. The fair of 1901 was unusually successful.

Banks.—The secretary of the State Banking Board made a tabulation showing the condition of State and private banks, including savings-banks, at the close of business March 4, 1901. The total number of banks was 417. A comparison of the report with that of March 12, 1900, shows an increase in the following items: Loans and discounts, \$1,750,935.68; legal reserve, \$3,653,864.95; surplus and profits, \$186,083.60; general deposits, \$5,851,163.35; and a decrease in redis-

counts and bills payable of \$392,301.10. A comparison with the report of Dec. 13, 1900, shows an increase in the following items: Loans and discounts, \$1,193,234.93; legal reserve, \$922,666.18; general deposits, \$2,311,992.67.

Insane Hospital.—Sept. 23, 1901, a fire destroyed a portion of the hospital for the insane at Norfolk, and 2 patients were burned to death.

Political.—The Republicans were generally successful at the State and county elections last November, electing their candidates for Associate Justice of the Supreme Court and regents of the University of Nebraska. S. H. Sedgwick, for Justice of the Supreme Court, received 98,993 votes, against 86,334 for his opponent on the fusion ticket.

NEVADA, a Western State, admitted to the Union Oct. 31, 1864; area, 110,700 square miles. The population, according to each decennial census since admission, was 42,491 in 1870; 62,266 in 1880; 45,761 in 1890; and 42,335 in 1900. Capital, Carson City.

Government.—The following were the State officers in 1901: Governor, Reinhold Sadler; Lieutenant-Governor, James R. Judge; Secretary of State, Eugene Howell; Treasurer, D. M. Ryan; Comptroller, Samuel P. Davis; Attorney-General, William Woodburn; Surveyor-General, E. D. Kelley; Superintendent of Public Instruction, Orvis Ring; Adjutant-General, J. R. Judge, *ex officio*; Chief Justice of the Supreme Court, William A. Massey; Associate Justices, Charles H. Belknap, A. L. Fitzgerald; Clerk, Eugene Howell, *ex officio*. All are of the Silver party except Superintendent Ring, who is a Republican. W. D. Jones resigned as Attorney-General, and Gov. Sadler appointed William Woodburn.

State officers are elected in November, once in four years. The next State election will be in 1902. An associate justice of the Supreme Court is elected in the alternate even-numbered years.

Education.—The school population is 9,130. The semiannual apportionment was \$69,918.43. The appropriation for the Nevada Indian School, which has 251 pupils, is \$33,400. The Government has allowed for the year 1901 \$12,200 for a new water system, \$3,500 for light and steam system, and \$2,500 for general repairs.

Finances.—The treasury, Dec. 31, 1901, had \$270,020.74 in coin. The State fund securities were: Irredeemable State school funds, Nevada 4-per-cent., \$253,100; Nevada 5-per-cent., \$380,000; United States 4-per-cent., \$825,000; total, \$1,728,120.74. In 1901 the Bond Commissioners redeemed \$25,000 worth of bonds and issued \$15,500. The Nevada war claims against the Government amount to \$462,000. The annual report of the Treasurer shows that the State is better in a financial way than it has been for some years.

Land.—The grants to the State were 2,732,884.70 acres, of which 33,000 acres are still due the State. There are 1,250,000 acres under contract at 6 per cent. per annum. The State has 400,000 acres of reverted lands, the greater part of which are for sale at \$1.25 an acre. The State has issued patents for 825,000 acres. There are approximately 61,250,000 acres of land owned by the General Government in the State.

Products.—The number of cattle in the State is estimated at 50,000, and the sheep from 5,000,000 to 7,000,000. The wool-clip was estimated at 7 pounds a head.

The latest mining discovery in this State is the Tonopah mines, in Butler, Nye County. The first settlement and work was begun a year ago. By Jan. 1 of this year the population was 80; by May 1, 225; now it is easily 1,000; and it is the

leading mining town of Nevada in the output of gold and silver. James L. Butler, the discoverer, brought no money into the desert to make a mine. He paid for his first assays by a deed to a twelfth interest in what he had found. The men who took first lessons from him were working miners, with no capital but knowledge, strength, and skill. The last returns received were of Nov. 2, 1901. For the first five days preceding the net returns amounted to \$40,562.14. The gold and silver product for this year is estimated at nearly \$4,000,000. The amount of gold, copper, lead, and antimony was greater than in any previous year.

Political.—The Republican State Central Committee met Dec. 27 and selected Aug. 14, 1902, as the day for the next State convention to be held at Reno.

The Legislature convened in Carson City on Jan. 21, 1901, and was in session fifty-five days, adjourning March 16. The Senate was presided over by Lieutenant-Governor James R. Judge and Senator J. H. Martin, president *pro tem*. The House elected C. D. Van Duzer, of Humboldt County, Speaker, and H. H. Coryell, of Elko County, Speaker *pro tem*.

NEW HAMPSHIRE, a New England State, one of the original thirteen, ratified the Constitution June 21, 1788; area, 9,305 square miles. The population, according to each decennial census, was 141,885 in 1790; 183,858 in 1800; 214,460 in 1810; 244,022 in 1820; 269,328 in 1830; 284,574 in 1840; 317,976 in 1850; 326,073 in 1860; 318,300 in 1870; 346,991 in 1880; 376,530 in 1890; and 411,588 in 1900. Capital, Concord.

Government.—The following were the State officers during the year: Governor, Chester B. Jordan; Secretary of State, Edward N. Pearson; Treasurer, Solon A. Carter; Adjutant-General, Augustus D. Ayling; Insurance Commissioner, John C. Linehan; Labor Commissioner, Lysander H. Carroll; Superintendent of Public Instruction, Channing Folsom; Bank Commissioners, Alpheus W. Baker, John Hatch, George W. Cummings; Railroad Commissioners, Henry M. Putney, Francis C. Faulkner, E. B. S. Sanborn; State Librarian, Arthur H. Chase; Chief Justice of the Supreme Court, Isaac N. Blodgett; Associate Justices, William M. Chase, Frank N. Parsons, Reuben E. Walker, James W. Remick; Chief Justice of the Superior Court, Robert M. Wallace; Associate Justices, Robert J. Peaslee, Robert G. Pike, John E. Young, Charles F. Stone; Attorney-General, Edwin G. Eastman.

The State elections are held biennially in November of even-numbered years. The Legislature meets in January of odd-numbered years.

Finances.—The cash in the treasury June 1, 1900, was \$456,527.32; receipts during the year, \$1,273,657.35; total, \$1,730,184.67. The disbursements during the year ending June 1, 1901, were \$1,282,277.65; cash on hand at same date, \$447,907.02; total, \$1,730,184.67. The liabilities June 1, 1900, were \$1,912,792.99; assets same date, \$793,994.05; net indebtedness June 1, 1900, \$1,118,798.94. Liabilities June 1, 1901, \$1,793,795.36; assets, \$785,162.45; net indebtedness June 1, 1901, \$1,008,632.91. The reduction of debt during the year was \$110,166.03.

Banks.—Under the supervision of the Bank Commissioners are 77 savings-banks, 11 banking and trust companies, 2 State banks, and 18 building and loan associations. The savings-banks and savings departments of the trust and banking companies in active operation show aggregate resources, June 30, 1901, to the amount of \$66,899,698.45. Due depositors, \$57,128,616.76, show-

ing an increase during the year of \$8,231,905.97; the guarantee fund, \$24,171,620.12, an increase during the year of \$2,478.55; the premium on bonds and stocks, \$1,578.57. The aggregate of interest dividends for the year was \$1,650,983.39, the average rate 4.25 per cent. The number of depositors, 1,142,160, an increase during the year of 112,160.

Railroads.—The combined length of the steam railroads in New Hampshire was 1,931 miles, of which the Boston and Maine carried 1,037.15, the Maine Central 100.13, and the Granite Trunk 52.06. The addition during the year was the Manchester and Milford branch, 18.54 miles. The tracks of these roads have an aggregate length of 1,708 miles.

In 1901 the earnings of the Boston and Maine and the Fitchburg roads (the latter now in possession of the Boston and Maine) were \$30,800,914.84, a gain of \$427,710.19 over 1900; and the operating expenses of the combined roads were \$21,522,187.38. The Maine Central's transportation earnings in 1901 were \$5,896,346.61, a gain of \$255,622.93 over 1900; and its operating expenses were \$3,962,338.90. The Atlantic and St. Lawrence earned \$1,457,632.96 in 1901, a gain of \$178,571.57; and its operating expenses were \$1,319,613.63.

In 1901 the Boston and Maine and Fitchburg roads carried 38,496,814 passengers an average of 16½ miles each, and 17,516,571 tons of freight an average of 87.82 miles per ton; the Atlantic and St. Lawrence carried 295,774 passengers and 1,708,897 tons of freight; and the Maine Central carried 2,633,331 passengers, and 3,740,709 tons of freight. The New Hampshire business over these roads was substantially the same as in 1900.

There are 185 miles of street-railway in the State with a total capitalization of \$4,288,934.

Insurance.—The report for 1900, issued May 1, 1901, shows the withdrawal of 5 companies from the State, and the admission of 7, all but 1 conducted on the stock plan. The number of companies now doing business in New Hampshire is 119—89 stock companies and 30 mutual companies.

The total business of all authorized companies in New Hampshire for the year is as follows: Risks written, \$102,949,565.76; premiums received, \$1,297,844.40; losses paid, \$831,675.33. In comparison with the business of 1899, there has been a decrease in risks written of \$724,615.30; a decrease in premiums received of \$70,344.53; and an increase in losses paid of \$84,346.43.

Agriculture.—The State grange held its twenty-eighth annual session in Concord, Dec. 17 and 18, with an attendance of nearly 300 voting members and delegates, and with State Master N. J. Batchelder in the chair. In his address he said: "Contrary to the quite common belief outside the State, there has been no decline in agriculture. The changed methods of farming have caused a moderate decline in acreage of improved land, that not adapted to the use of machinery being turned to pasturage, or devoted to growing wood or timber, but the cash value of the annual farm-products was never equal to that of the present time."

The census returns recently issued give the number of farms as 29,324, with a cash value of \$70,124,360, about equally divided between the value of buildings and the value of lands and improvements other than on buildings. Live stock and machinery swell the total value of farm property to \$85,842,096.

The present membership of the grange is 24,208, of whom 12,045 are men and 12,163 women, a net

gain during the year of 521. There are 17 Pomona granges, with a total membership of 7,355. The resources of the State grange are \$16,841.22; of the subordinate granges, \$103,100; and of Pomona granges, \$5,000.

Manufactures.—In 1900 the number of persons in the State engaged in all branches of manufacturing was 70,419. Since 1850 the population of New Hampshire has increased only 29.4 per cent., but the number of wage-earners in manufacturing has increased 159.9 per cent. In 1850 the gross value of the product of New Hampshire manufacturing was \$23,164,503. This had grown in 1900 to \$118,669,308. Eliminating the value of all materials purchased in a partly manufactured form, it is found that the net value is \$77,225,568. The boot and shoe industry now holds first place in New Hampshire manufacturing, the product in 1900 being worth \$23,405,558, while the value of cotton goods in the same year was \$22,998,249. The cotton and woolen industries are barely holding their own, the product of the latter being \$10,769,240 in 1900. Wool manufacturing, however, is still third in importance in the State. Other interests rank as follow: Lumbering, paper and wood pulp, foundry and machine-shop industries, tanning and currying of leather, hosiery and knit goods, flour and grist milling, and the factory production of cheese, butter, and condensed milk. A large proportion of New Hampshire's manufacturing is located in the southern portion of the State, not far from Massachusetts and the seaboard.

Dartmouth College.—On Sept. 24 and 25 the college celebrated the one hundredth anniversary of the graduation of Daniel Webster. Webster was not only the most notable graduate of the institution, but he rendered it a lasting service by defending it in the Supreme Court of the State and nation against the attempt of the State, in 1816-'19, to change its charter. In recognition of this fact and of his great public services the celebration was civic rather than academic, laying emphasis on his public relations and services to the country. The corner-stone of a new building, to be known as Webster Hall, was laid.

Education.—The employment of expert superintendents to manage the schools has gained in popularity. There are now 14 professionals devoting their entire time to this work, against 11 in 1900 and 8 in 1899. Of these, 8 have a single city each, 1 a single town, and 5 each a supervisory district. A high-school law was enacted by the last Legislature requiring towns not maintaining high schools to pay the tuition of their pupils in such high schools or academies as are approved by the State Superintendent of Public Instruction. The compulsory-attendance laws have been strengthened, and authority for their enforcement has been conferred upon the State superintendent. Towns of more than 5,000 inhabitants are required to maintain evening schools upon petition of 5 per cent. of the legal voters.

Summer Travel.—The most notable items concerning this important New Hampshire interest are, first, a liberal appropriation from the State for the building of a first-class and most attractive road from the Jefferson Notch to the Crawford Notch in the White mountains, running well up and along the western foot of the whole magnificent Presidential range; and, second, the building of a new and gigantic hotel, with every conceivable modern appointment and luxury, 4 miles from the foot of Mount Washington, on the line of the Mount Washington Railway, at a cost of \$1,250,000. The locations of both the road and the hotel are ideal.

Legislative Session.—The session of the Legislature began Jan. 2 and ended March 22, 1901, with 24 Senators (23 Republicans and 1 Democrat) and 397 Representatives (300 Republicans and 97 Democrats). Bertram Ellis was elected President of the Senate, and Cyrus H. Little Speaker of the House.

Chester B. Jordan was inaugurated, Jan. 3, the fifty-sixth Governor of the State and the forty-seventh person to fill the office.

In all, 243 bills (public and private) and 49 joint resolutions were passed. A few of the more important ones are here mentioned:

Guardians of minors and insane persons and trustees of estates may invest funds in certain defined steam-railroad shares.

Providing for the decrease in the number of State boards and commissions.

Public rights in New Hampshire to be protected. Providing for the restriction of communicable diseases.

To establish a laboratory of hygiene by the State Board of Health.

Regulating the sale of fertilizers.

Protection of lakes, ponds, and streams from pollution.

Providing for a judiciary system consisting of two courts—Supreme Court and Superior Court.

Revision of the fish and game laws.

For the protection of ornamental and shade-trees in the highways.

Providing for the care and education of feeble-minded children.

Providing for evening schools.

Defining the rights of husband or wife, surviving, in the estate of the deceased husband or wife.

Establishing the boundary-line between New Hampshire and Massachusetts.

NEW JERSEY, a Middle Atlantic State, one of the original thirteen, ratified the Constitution Dec. 18, 1787. Area, 7,815 square miles. The population, according to each decennial census, was 184,139 in 1790; 211,149 in 1800; 245,562 in 1810; 277,426 in 1820; 320,823 in 1830; 373,306 in 1840; 489,555 in 1850; 672,035 in 1860; 906,096 in 1870; 1,131,116 in 1880; 1,444,933 in 1890; and 1,883,669 in 1900. Capital, Trenton.

Government.—The State officers in 1901 were: Governor, Foster M. Voorhees; Secretary of State, George Wurts; Treasurer, George B. Swain; Comptroller, William S. Hancock; Attorney-General, Samuel H. Grey; Adjutant-General, Alexander C. Oliphant; Superintendent of Public Instruction, Charles J. Baxter; Commissioner of Banking and Insurance, William Bettle—all Republicans. Chief Justice of the Supreme Court, William S. Gummere; Associate Justices, Gilbert Collins, J. Franklin Fort, Jonathan Dixon, Mahlon Pitney, Bennet Van Syckel, Charles G. Garrison, Abram Q. Garretson, and Charles E. Hendrickson; Court of Errors and Appeals: Judges John W. Bogert, Gottfried Krueger, Frederic Adams, William H. Vredenburg, Peter V. Voorhees, and Garret D. W. Vroom. Chancellor, William J. Magie.

The Treasurer, George B. Swain, died Dec. 25.

A general election is held annually in November. The only elective State officer is the Governor, whose term is three years. The others, including the justices of the Supreme Court and the judges of the Court of Errors and Appeals, are appointed by the Governor, excepting the Treasurer and the Comptroller, who are appointed by the Legislature, which meets every year in January, the sessions not being limited.

Finances.—For the fiscal year ending Oct. 31, 1901, the receipts of the State fund, including bal-

ance from 1900, were \$5,832,033.45; disbursements, \$3,480,350.28; balance, \$2,351,683.17. The receipts of the school fund, including a balance from 1900, were \$759,680.87; disbursements, \$645,843.88; balance, \$113,836.99. The receipts from the State school tax were \$2,317,825; disbursements, \$2,317,825.

FRANKLIN MURPHY,
GOVERNOR OF NEW JERSEY.

The receipts of the Agricultural College fund were \$4,080, and the disbursements the same. The local tax on railroad corporations (received and disbursed) was \$405,589.85.

The principal disbursements were: Adjutant - General's department, \$10,496.34; Agricultural Experiment Station, \$19,000; Attorney-General's department, \$12,734.73; blind and feeble-minded, \$78,554.

14; Board of Fish and Game Commissioners, \$24,000; Bureau of Statistics, \$9,995.12; collateral inheritance tax, \$14,943.21; county lunatic asylums, \$198,431.63; Court of Chancery, \$76,823.37; Court of Errors and Appeals, \$11,891.90; deaf-mutes, \$43,000; banking and insurance, \$31,546.81; emergency, \$16,988.30; executive department, \$15,230.40; geological survey, \$13,000; Home for Disabled Soldiers, \$37,200; industrial education, \$43,000; inauguration of the President of the United States, \$10,000; law and equity reports, \$10,438.76; Legislature, \$88,169.24; loans to school fund, \$194,000; National Guard, \$106,841.74; Naval Reserve, \$14,543.47; Newark armory, \$50,000; New Jersey Home for Disabled Soldiers, Sailors, Marines, etc., \$15,198.61; New Jersey Reformatory, \$43,267.13; office of clerk in Chancery, \$33,679.33; office of clerk of the Supreme Court, \$22,937.37; office of the Comptroller, \$13,982.17; office of the Secretary of State, \$30,411.52; office of the Treasurer, \$13,407.23; Pan-American Exposition, \$27,500; printing, \$41,699.94; public roads, \$155,605; Quartermaster-General's department, \$12,089.86; Riparian Commission, \$12,477.58; State Board of Assessors, \$23,382.11; State Board of Health, \$15,737.68; State Board of Taxation, \$14,568.78; State Dairy Commissioner, \$13,000; State Home for Boys, \$61,195.61; State Home for Girls, \$38,464.83; State Hospital, at Trenton, \$78,409.34; State Hospital at Morris Plains, \$135,705.46; State-House Building Commission, \$50,000; State-House Commission, \$54,999.65; State-House Commission "Special," \$14,255.16; State Normal School, \$51,997.83; State Oyster Commission (Delaware Bay, etc.), \$17,155.42; State Prison maintenance, \$89,974.08; State Prison furniture, etc., \$11,670.40; State Prison salaries, \$99,795.29; State school tax, \$800,588.25; Supreme Court, \$107,248.84; Superintendent of Public Instruction, \$12,498.75; Tuberculosis Commission, \$10,490.95; Village for Epileptics, \$63,886.

The report of the Comptroller for the fiscal year ending Oct. 31, 1901, shows a cash balance in the treasury of \$2,351,683.17, the largest in the history of the State.

Corporation taxes for the year, amounting to \$800,588.25, appropriated from the surplus of the

State fund, reduced the school tax by about one-third.

Valuation.—The report of the State Board of Taxation, presented in November, shows an increase in the total State valuation over that of 1900 of \$27,181,456. Sixteen counties show a gain and 5 a slight loss. The counties showing a decrease were Burlington, Cumberland, Hudson, Salem, and Warren.

The total tax exemptions for the year were \$108,700,000, against \$104,000,000 in 1900.

Education.—The apportionment of school moneys by the State Board of Education for 1901-1902 distributed among the counties \$2,529,781.61.

The report of the State schools for the year shows a slight increase in the enrolment of the Normal School, at Trenton; 270 new students were received, and the limited accommodations prevented the admission of a larger number. The number of students enrolled in the year was 645, and 177 were graduated. The entire enrolment in September for the Normal and Model Schools was about 1,200, the Normal having its full complement and the Model a larger number than in former years. Changes have been made in the normal course, allowing a greater number of elective studies. The buildings of the Normal and Model Schools were thoroughly renovated this year.

At Trenton a new high school was dedicated in April, capable of accommodating 800 pupils. The cost of the lot and building was more than \$138,000.

An amendment of section 14 of the rules and regulations relating to the indorsement of certificates from other States was made by the State Board of Education in December, 1901, which requires two years of satisfactory teaching in New Jersey as a condition of such indorsement.

There were 6 graduates at the School for the Deaf in June. The building and grounds have been much improved. The average attendance for the year was 135.

State Institutions.—A new and commodious building, of modern design, was dedicated at the State Home for Girls in October, 1901. It contains quarters for the administration, and separate rooms for 60 to 100 girls. The underground dungeons formerly used here have been torn down, strait-jackets and straps abolished, other means of punishment modified, and moral influence more firmly established in the discipline. A report for the last year showed that all the 125 inmates were on the honor roll, and that not an escape had been made for a year and a half. These improvements have followed upon the execution of the new law for the government of the home passed by the last Legislature.

The annual report of the Board of Managers of the State Hospital for the Insane, at Trenton, submitted in December last, refers to the investigation of the hospital during the previous summer, and says: "The visits to the hospital by the board during the year, and the examinations of the conditions of the patients and of the buildings and grounds, demonstrate the untiring efforts both of the medical director and warden to promote the comfort of the patients, and the members desire to express their appreciation of the manner in which these officers have performed their duties. There were under treatment in the hospital last year 1,371 patients, 245 having been received during the year. Ninety-three patients were discharged as recovered, 23 as improved, 9 as unimproved, 90 died, 1 escaped, and 89 were removed to other institutions, leaving at the close

of the fiscal year 1,084 patients. This number is far in excess of the normal capacity of the institution."

The new wing of the State Hospital for the Insane, at Morris Plains, was formally opened in November. The new building, a quarter of a mile in the rear of the main structure, among the Morris hills, was begun in 1895 and completed at a cost of about \$325,000. It consists entirely of dormitories, and has accommodations for more than 1,000 patients. There were in December at this hospital 27 criminal insane and 69 convict insane. During the year 1,700 insane patients were under treatment. While the average of recoveries from 1881 to 1891 was 21 per cent. of the yearly admissions, from 1891 to 1901 it was 26 per cent., and for the last year 31.5 per cent., a ratio seldom attained in the history of institutions for the insane. The medical director accounts for this by the advance in hospital construction, better hygienic methods, employment of trained nurses, etc.

At the time of the annual inspection in February, 1901, by the legislative committee and physicians, the State Village for Epileptics, at Skillman, had 19 patients; of whom 11 were males. Two new cottages, completed in 1901, accommodate 100 patients, 50 of each sex. There are many epileptic patients who should be brought to the village from crowded institutions, where, according to the superintendent, they are now improperly cared for.

The State Reformatory, at Rahway, was formally opened in August. Four of the buildings had been completed at the time of the opening. The State granted this institution \$134,900 for the year.

In November the name of the New Jersey Home for the Education and Care of Feeble-Minded Children, at Vineland, was changed to the New Jersey Training-School for Feeble-Minded Girls and Boys.

The State last year granted the Soldiers' Home, at Kearny, \$17,400 for the purchase of an additional piece of land.

Board of Children's Guardians.—Within thirty days in the last year this board removed about 200 children from almshouses and placed them in private homes. The board anticipated excellent results from a new rule permitting them to receive children from the poormasters instead of taking them from the almshouses.

Children's Home Society.—This society, although not a State organization, is doing important work for the public welfare. There are similar societies in different parts of the State, and by conference and cooperation all are attaining unity of method and action. The New Jersey Children's Home Society has been in operation for eight years. In the year ending in June, 1901, it raised \$7,547.87, against \$6,765.06 for the previous year. The society received 139 homeless children this year, and has received 638 in all.

Legislative Session.—The Legislature of 1901 elected Gen. William J. Sewell to a third term in the United States Senate, every Republican member present in each House voting for him. Senator Sewell died at his home in Camden, Dec. 27. See obituary on page 467.

Among the more important acts of the Legislature at that session were the following:

An antispring election law, providing that city officers shall be voted for, not at separate elections in the spring as formerly, but with the same registration and upon the same official ballots required by law for the election of State and county officers.

Granting an appropriation of \$813,000 out of the State's surplus for the public schools.

The annual appropriation bill, carrying \$2,380,516.32, and the supplemental appropriation bill, carrying \$391,569.20.

Imposing an annual franchise tax upon companies not carrying on business in the State, and forfeiting charters of corporations for non-payment of other taxes previously imposed.

Placing convicts upon a probationary term.

Providing a general system for the improvement of roads.

Providing for the appropriation of lands for an interstate park along the Palisades, and for preservation of the Palisades scenery.

For protection of song-birds, and forbidding traffic in birds of plumage.

Appropriating \$15,000 for expenses of the State Tuberculosis Commission.

Enabling any married woman who is a trustee to sell real estate as a *femme sole*.

Authorizing the formation of free libraries in cities.

Providing for an additional Vice-Chancellor, to be appointed by the Chancellor for seven years.

Providing for an armory at Trenton, to cost not more than \$150,000.

Providing that a passenger arrested in a dispute as to his railroad fare may demand a hearing before the nearest magistrate.

Judicial Decisions.—The law abolishing spring elections was declared by certain citizens to be unconstitutional, but the Court of Errors and Appeals, in March, affirmed its constitutionality. The same court, in November, declared unconstitutional laws passed in 1901 to provide school boards for municipalities. A decision of the same court declared the act of 1888 providing that taxes in villages and other municipalities are a paramount lien until paid to be unconstitutional. The decision grew out of the South Orange case, and the court held that taxes in that village are a paramount lien upon property for three years only from the time they are payable.

In February the Supreme Court set aside as illegal a resolution of the Common Council of Paterson instructing the Printing and Stationery Committee to confine all orders for printing and advertising to offices and newspapers recognizing the Typographical Union. The justices declared that a resolution which excludes all persons from entering into certain contracts except those of a specified class tends to monopoly and the imposition of an additional burden upon taxpayers. Such action is void.

The Supreme Court in June rendered a decision in the case of the Newark tax officials against the North Jersey Street-Railway Company, in which the court held that all street-railway companies have a property interest in the streets through which they pass, which is taxable as realty.

Railroads and Canals.—The total assessed valuation for the year 1900 of railroad and canal property of the State, as reported by the State Board of Assessors, was \$219,656,014, and the amount of tax levied thereon by said board payable in 1901, for State uses, was \$1,098,280.07. Of this amount there was collected during the fiscal year ending Oct. 31, 1901, the sum of \$1,023,139.88, leaving a balance due the State for that fiscal year of \$75,140.19. The total assessed valuation of railroad and canal property of the State in 1901 was \$220,587,883, upon which was assessed a State tax of \$1,102,939.41, and local taxes of \$403,956.29.

The new Delaware Valley Railroad follows the

Delaware valley 45 miles. It passes through Monroe and Pike Counties, Pennsylvania, and leaves the State at Matamoras, opposite Port Jervis. Though built on the Pennsylvania side of the river, it affords an outlet for several hundred square miles of New Jersey territory formerly without transportation facilities.

The new Camden terminal of the Pennsylvania and the West Jersey and Seashore systems was opened in June, and next to the Jersey City station it is the finest in the State.

Railroading is New Jersey's greatest industry. According to the report of the State Bureau of Statistics for 1901, the number of railroad employees was 32,405; average hours' work per day, 10.7; aggregate amount of wages, \$18,023,604; average daily wages, \$1.82; average yearly earnings, \$556.11.

Banks.—The Commissioner of Banking and Insurance reported that on Sept. 30, 1901, there were in the State 27 savings-banks, with total resources and total liabilities of \$70,249,778.02; 19 State banks, with total resources and liabilities of \$12,861,037.09; and 33 trust companies, with total resources and liabilities of \$68,251,431.94.

Loan Associations.—The commissioner reported 364 building and loan associations, against 360 in 1900. In the year 17 were organized, 10 ceased business, 2 were dropped from the list as being of a different class, and 1 was reorganized under the laws of another State. Of the various associations, the commissioner says: "There are 32 'local,' 10 'State,' and 4 'national,' having combined gross assets aggregating \$52,891,594, representing an increase of \$1,766,544 over last year. The stock subscriptions paid on the shares outstanding amount to \$39,584,284, which is an increase of \$1,671,542. A total of \$3,727,973 is shown in other liabilities, which is an increase of \$164,793. The total profits or surplus, apportioned and unapportioned, are \$9,579,357, or \$69,791 less than the figures of the preceding year."

Products and Industries.—The State Geological reports that in 1900 there were 407,596 tons of iron ore mined, against 300,757 tons in 1899. This is the highest amount mined since 1892. The amount of zinc ore mined in the year was 194,888 tons, the largest in the history of the State and almost twice as much as two years previously.

The production of cement has increased enormously in recent years. This year a new company was incorporated, with an authorized capital of \$3,000,000, and has acquired 600 acres of land at Stewartsville, near Phillipsburg.

The annual report of the State Board of Agriculture shows an increase in the value of crops over 1900 of about \$3,000,000, owing chiefly to gains in quantity and quality of the corn-crop and the high price of potatoes. The values of the crops were: Corn, \$6,172,875.15; wheat, \$1,546,687.80; oats, \$760,024; rye, \$533,915.25; buckwheat, \$114,057; hay, \$7,320,168.24; white potatoes, \$2,571,898.50; sweet potatoes, \$2,260,000. The total value of live stock was \$18,756,553.

In the year-ending Sept. 3, 2,342 new companies were chartered by New Jersey. For incorporating these companies the State received \$558,369.54 in fees.

The number of canneries in operation in 1901 was 48, 11 of these handling both fruit and vegetables, and 37 vegetables only. The amount of capital invested in the industry was \$897,104; of this, \$185,590 was controlled by corporations or stock companies, and \$711,514 by private firms. The product of the principal vegetables and fruits was 27,708,480 cans.

The number of manufacturing plants of all kinds established in the State in 1901 was 119, and 34 old ones were abandoned. The increase thus made in the number of plants in 1901 is estimated at 18,000.

The latest census bulletin shows that the capital invested in the manufacturing plants exceeds \$500,000,000, and that it has more than doubled in the past ten years. The State employed 241,581 wage-earners in 1901, as many as in 1890, and the wages paid to them aggregated more than \$110,000,000 for the year.

Military.—At the Sea Girt ranges in September the New Jersey sharpshooters won the interstate military match. The number of New Jersey pensioners in December was 20,159, drawing from the national Treasury the annual sum of \$2,402,039.56. The State's claim against the United States on account of the Spanish-American War was \$346,155.92. At the end of 1901 the unpaid balance of this debt was \$80,704.43. The sum of \$161,898.75 has been paid as additional compensation to the volunteers who enlisted in the several regiments from this State in the war with Spain.

Battle of Trenton.—The one hundred and twenty-fifth anniversary of this event was celebrated Dec. 26 with elaborate observances, including a sham battle illustrating the historic engagement, and addresses and other exercises in the opera-house.

Street Improvement.—The Street and Highways Association of New Jersey, organized in May, 1901, has for its object "mutual aid and improvement in street work." Its membership is composed of street commissioners, superintendents, and other heads of street departments in towns and cities of the State.

Riparian Board.—The annual report of this board for 1901 shows the largest receipts since 1890, aggregating \$162,104.59. An increasing demand for State lands under water comes from persons wishing to locate large manufacturing industries in New Jersey.

Political.—The National Prohibition party held its State convention at Trenton, May 7. Joel W. Brown was the nominee for Governor.

The Republican State Convention was held at Trenton Sept. 26, and nominated for Governor Franklin Murphy. The platform demanded the enactment of laws for the suppression of teachings that justify or encourage assassination. The pledge of President Roosevelt that he would continue the policy of President McKinley was strongly approved, and President Roosevelt was declared to command the universal confidence of his countrymen. The policies of the Republican party, especially as the friend of labor, were emphasized, the administration of Gov. Voorhees approved, the achievements of the party in the State pointed out and its pledges renewed, and in its name the people were appealed to for continued confidence and support.

The Democratic State Convention, Oct. 1, nominated for Governor James M. Seymour. The platform, like the Republican, deplored the assassination of President McKinley, and demanded laws against anarchy. It objected to the State Republican administration as partizan, to discrimination in favor of trusts and corporations, to the impairment of the efficiency of the National Guard, and to the methods pursued in regard to the management and investigation of the State Hospital and the State Home for Girls. It demanded equal taxation, just protection for labor and fair adjustment of labor disputes, forest legislation, care of the water-supply, and action

upon the right of juries to award damages for suffering sustained in accident cases. Sympathy was expressed for the Boers. State expenditures were criticized. Election of United States Senators by the people was advocated. Republican shortcomings were pointed out, and Democratic pledges of better administration were given.

At the State election in November the Republicans were successful. Franklin Murphy was elected Governor by a plurality of 17,133, and the Legislature chosen had a Republican majority of 45 on joint ballot.

NEW MEXICO, a Territory of the United States, organized Sept. 9, 1850; area, 122,580 square miles. The population, according to each decennial census, was 61,547 in 1850; 93,516 in 1860; 91,874 in 1870; 119,565 in 1880; 153,593 in 1890; and 195,310 in 1900. Indians not taxed in 1900, 12,937. Capital, Santa Fé.

Government.—The Territorial officers in 1900 were: Governor, Miguel A. Otero; Secretary, J. W. Reynolds; Treasurer, J. H. Vaughn; Auditor, W. G. Sargent; Adjutant-General, William H. Whiteman; Attorney-General, E. L. Bartlett; Superintendent of Education, J. Francisco Chaves; Commissioner of Public Lands, A. A. Keen; Coal-Oil Inspector, John S. Clark; Public Printer, James D. Hughes—all Republicans. Supreme Court—Chief Justice, William J. Mills; Associate Justices, John R. McFie, Jonathan W. Crumacker, F. W. Parker, and Daniel H. McMillan; Clerk, José D. Sena—all Republicans. District Courts—First District (counties of Santa Fé, Rio Arriba, Taos, and San Juan), John R. McFie, judge, Santa Fé; Second District (counties of Bernalillo, Valencia, and McKinley), J. W. Crumacker, judge, Albuquerque; Third District (counties of Donna Ana, Sierra, Grant, Otero, and Luna), Frank W. Parker, judge, Las Cruces; Fourth District (counties of San Miguel, Guadalupe, Mora, Colfax, and Union), W. J. Mills, judge, East Las Vegas; Fifth District (counties of Socorro, Lincoln, Chaves, and Eddy), Daniel H. McMillan, judge, Socorro.

Population.—The Federal census of the Territory taken in 1900 is severely criticized by the press and people of the Territory, and all believe that the inefficient manner in which this work was done deprived New Mexico of the credit for at least one-third of its population. This conviction was so general and apparently so well-founded that the Governor instituted an investigation of the matter, and, taking the results of this investigation as a basis, he finds that the actual population at this time is 296,485, exclusive of 21,280 Indians, 8,343 of whom are citizens, living in villages, sending their children to school, and being in all respects good and valuable citizens. These facts are officially set forth in detail in the Governor's report to the Secretary of the Interior.

Finances.—The revenues of the Territory for the year were considerably in excess of expenditures, though the appropriations by the last Legislature were more liberal than ever. Certificates of indebtedness to the amount of \$48,800 have been called in and canceled, and there are now on hand trust funds for the redemption of outstanding bonds to the amount of \$71,658.07. The total present indebtedness of the Territory is \$1,180,800, and its 4-per-cent. bonds command a premium. From the funds derived from the sale and leasing of public lands large sums have been expended in the betterment of the public property and the institutions of the Territory.

Education.—By the school census taken in the summer, there are 53,008 children of school age (from five to sixteen years) in the Territory, and

of these 47,700 are enrolled as pupils, and the average daily attendance for the year was 31,800. These children are taught in 900 schools, employing 1,150 teachers, and the school property is valued at \$1,500,000. The largest amount expended for school-buildings at any one place is at Albuquerque, where the school-buildings now in use cost \$163,000, and bonds are being issued to the amount of \$30,000 for providing additional school room. This is in addition to \$100,000 expended by the United States in the erection of schools at this place for the education of Indian children. The percentage of illiteracy in the Territory, which was 85 by the census of 1870, was reduced to 65 in 1880, to 44 in 1890, and it is believed to be at present not more than 20. The reduction between 1870 and 1880 may be accounted for by the large immigration from "the States" at the time of the coming of the railroad, but whatever has occurred since 1880 has been due mainly to the public schools.

Indian Education.—The United States Industrial School for Indian children at Albuquerque, established in 1884, which for size and importance among institutions of its kind maintained by the National Government is excelled only by the school at Carlisle, was overcrowded during the year, and was obliged to turn away more than 200 applicants for lack of accommodations. The institution has proper accommodations for 300 pupils, and in 1901 it had an actual enrolment of 342—196 boys and 146 girls. As it is a boarding-school the attendance and enrolment are the same. These children are mainly Navajos, Isletas, Lagunas, and Zuñis, with a number of Apaches. In addition to the ordinary course of instruction commonly pursued in the public schools, the pupils receive practical training in industrial arts. The boys are taught carpentering, blacksmithing, tailoring, shoemaking, harness-making, and wagon-making, and on the model farm connected with the institution all receive a thorough training in farming and gardening; and the girls are trained in sewing, cooking, bread-making, and general housework. After leaving the school many of the boys find employment in the stores, shops, and factories of the town and become good citizens, while numbers of the girls go out to service and make the most reliable help. Both boys and girls as a rule are bright, and learn very quickly. They take readily to the customs of civilization, and after they have been at the school a few weeks, and become accustomed to their new environment and new costumes, there is nothing in their conduct or appearance, except their color, to distinguish them from other American boys and girls. According to the estimates of the principal of the school, there would be a regular voluntary attendance of about 800 if the accommodations were sufficient to admit that many. One fact worthy of special notice is the large attendance of girls. At first it was almost impossible to prevail on the Indians to let their girls go to school. But since they find that the girl graduates can earn from \$15 to \$20 a month, besides board and room, by doing housework in town, and are much more efficient at home than those that have not been educated, there are applications for the admission of almost as many girls as boys. There is another Indian school at Santa Fé, conducted on the same lines and of nearly the same capacity as the one at Albuquerque, and a general description of the character and work of one serves for both. The Territory also maintains ordinary public schools at nearly all the Indian pueblos, which are conducted in all respects the same as the district schools

for white children. The results in these are as favorable as in similar schools among the whites; but they are at a disadvantage as compared with the United States schools, because they are unable to carry out the industrial features of the latter. In addition to the two large industrial schools named, the United States Government also maintains smaller schools of like character in different parts of the Territory, and there are also several denominational schools conducted on the same general plan. The total number of Indian children regularly attending school during the year is given by the Superintendent of Education at 1,700.

The educational system of New Mexico is now as good as that of any State in the Union. Public schools on the "American plan" (with Spanish added in the country districts) are now regularly maintained in all parts of the Territory, while the higher branches are amply provided for at the University of New Mexico at Albuquerque, Territorial normal schools at Las Vegas and Silver City, the Agricultural College at Las Cruces, the School of Mines at Socorro, and the Military Institute at Roswell—all maintained through liberal appropriations by the Legislature, and open to all the young people of the Territory.

Mining.—The work of mining the precious metals went on steadily and quite successfully throughout the year. There were no "booms" or unusual "strikes," but the gross output is reckoned at \$6,000,000. A very large area of coal and iron land passed to private ownership this year, and the ore is rapidly being developed. The output of coal for the year is estimated at 1,500,000 tons, with a value at the mines of \$1,800,000. This industry gives employment to 2,000 persons. The coke production for the year was 42,732 tons, valued at \$117,576. Daily shipments of iron ore were made to the Bessemer Steel Works in Colorado, but no record of the volume of such shipments is obtainable, though the total amount is estimated at about 18,000 tons. Much attention has been given to coal-oil, and lands supposed to be oil-bearing have been bought in large tracts in different parts of the Territory. A good deal of work has been done in the way of prospecting and boring, but no oil has yet been found in paying quantities.

Legislative Session.—The session of the Legislature began Jan. 21 and ended March 21. Among the acts passed were an amendment of the school law; a public-land law, which regulates the lease and sale of lands granted by Congress for educational purposes; the law governing the administration of estates; and the property-rights law, which provides that property owned by husband or wife at the time of marriage, or such as may come to either party by inheritance or gift during coverture, may be disposed of by such party without the consent of the other, but does not affect the equal rights of the parties to all property acquired through the efforts of one or both during coverture.

The Commission on Irrigation and Water Rights, created by the last Legislature, was obliged to consume the greater portion of the year in examining and classifying the lands at its disposal. Contracts were entered into for reclaiming 50,000 acres of arid land, through the building of reservoirs and storing of water, and contracts are pending for the construction of works capable of storing a sufficient supply to reclaim an additional area of 145,000 acres.

General Development.—New Mexico made more progress in 1901 than in any other year since it became a part of the United States, ex-

cept possibly 1899. The most important achievement of the Atchison, Topeka and Santa Fe Railway, which was the first to enter the Territory, was the new main line from Albuquerque to settlement several hundred miles, and a considerable number of branch lines, which have opened for themselves in the Territory a new and practicable way to obtain water for stock and irrigation.

All that large portion of New Mexico between the Rio Grande and the Rio Pecos, extending from latitude 32° to 35°, has been practically closed to settlers and investors by reason of the lack of any modern means of communication. This district, as great as the 3 States of Massachusetts, Connecticut, and New Hampshire, now has 3 railroad lines, 1 of which, the Chicago, Rock Island and Pacific, projected diagonally through the region in question from northeast to southwest, was well-nigh completed during the year, while both the other roads are being pushed forward as rapidly as practicable. A portion of this district, a strip on the eastern slope of the Sandia, Manzano, and Oscura mountains, covering an area 20 miles east and west by 100 miles north and south, has a rainfall sufficient to enable it to produce good crops without irrigation, and these lands are especially sought for by settlers who come from the humid sections of the country. This section is also desirable because of its proximity to the mountains, where there is abundance of timber.

The good work by the United States Court of Private Land Claims in settling the titles to Spanish and Mexican land grants continued through the year. This tribunal has now nearly completed its mission. In 1901 it considered 3,669,716 acres claimed as grant lands, of which 25,667 acres were confirmed to the claimants, as being valid grants, and 3,644,049 acres were rejected as grant lands and added to the public domain.

The industrial development of New Mexico in 1901 is well illustrated by the unusually large number of companies formed for industrial purposes, exceeding the number organized in any other year in the history of the Territory. There were 149 incorporations, with a total capitalization of \$89,735,935. Of the incorporations for the year, 65 were for mining, milling, and smelting, having a combined capitalization of \$51,885,000; 47 for manufacturing and other industrial purposes, with a capitalization of \$2,817,425; and 19 for the development of coal-oil, capitalized at \$15,550,000.

The acreage of public land disposed of by the 4 United States land offices of the Territory was 673,161 acres, an increase of 151,516 acres over the amount disposed of in 1900. Fully half of all the land taken during the year was entered under the provisions of the homestead laws, showing that the lands were taken by persons who intended to live upon and cultivate them. Heretofore the bulk of the transactions consisted of mineral, coal, and desert entries, which are usually made for speculation.

The live-stock industry was more than usually flourishing during the year. High prices prevailed, favorable weather brought an abundant crop of grass on all the ranges, effective quarantine and cattle sanitary regulations prevented the introduction or spread of infectious diseases, and mild weather during the autumn and early winter brought the herds in all parts of the Territory up to the close of the year in good condition for market. The total number of sheep is placed by the Territorial authorities at 5,000,000 head, and the year's lamb crop is estimated at 1,200,000.

The wool-clip for 1901 is put at 20,000,000 pounds, which is somewhat above the average, but this advantage was offset by lower prices. The establishment of scouring works at several points in New Mexico, especially at Albuquerque and Las Vegas, has done much to benefit the wool interests.

Militia.—Gen. William H. Whiteman, the Adjutant-General of New Mexico, has thoroughly reconstructed the militia system of the Territory, and in 1901 he introduced reforms so sweeping that the militia has been transformed from a purely ornamental institution into a practical and useful division of the public service—one that is kept in constant readiness for work.

Health-Seekers.—The rapidly increasing number of invalids who seek health in the dry and mild climate of New Mexico has caused much attention to be given to this matter, and accommodations in the way of comfortable resorts for invalids have been provided in various sections of the Territory, and at altitudes ranging from 3,000 feet to 8,000 feet above sea-level. As a supplement to these efforts in the line of providing sanitaria, the University of New Mexico has added a department of climatology, and a building exclusively for this purpose has been erected at a cost of \$20,000. This building, known as Hadley Hall, has been thoroughly equipped with laboratory conveniences, and with the best apparatus obtainable for investigation and experiment in the line of work to which the department is devoted. It is the only institution in the United States devoted exclusively to the study of climatic conditions and peculiarities with respect to their influence in curing or preventing disease.

NEW YORK, a Middle State, one of the original thirteen, ratified the Constitution July 26, 1788; area, 49,170 square miles. The population, according to each decennial census, was 340,120 in 1790; 589,051 in 1800; 959,049 in 1810; 1,372,111 in 1820; 1,918,608 in 1830; 2,428,921 in 1840; 3,097,394 in 1850; 3,880,735 in 1860; 4,382,759 in 1870; 5,082,871 in 1880; 5,997,853 in 1890; and 7,268,012 in 1900. Capital, Albany.

Government.—The following were the State officers during the year: Governor, Benjamin B. Odell, Jr., Republican; Lieutenant-Governor, Timothy L. Woodruff; Secretary of State, John T. McDonough; Comptroller, Edward C. Knight; Treasurer, John P. Jaekel; Attorney-General, John C. Davies; State Engineer and Surveyor, Edward A. Bond; Superintendent of Public Instruction, Charles R. Skinner, whose term of office expired April 6, 1901, when he was reappointed; Superintendent of Insurance, Francis Hendricks; Superintendent of Banking Department, Frederick D. Kilburn; Superintendent of State Prisons, Cornelius V. Collins; Superintendent of Public Works, John N. Partridge; Commissioner of Labor Statistics, John McMackin; Railroad Commissioners, Ashley W. Cole, George W. Dunn, and Frank M. Baker; Chief Judge of the Court of Appeals, Alton B. Parker; Associate Judges, John C. Gray, Denis O'Brien, Celora E. Martin, Edward T. Bartlett, Albert Haight, and Irving G. Vann, together with Judson S. Landon, William E. Werner, and Edgar M. Cullen, who are judges of the Supreme Court, sitting in the Court of Appeals.

The term of the State officers is two years. They are elected in November of even-numbered years. The Legislature meets every year in January.

Finances.—According to the report issued by the State Comptroller, the balance in the treasury on Oct. 1, 1900, was \$7,289,802.55; receipts from

all sources, \$30,544,694.88; total, \$37,834,497.43. The payments were \$28,045,146.27, leaving a balance in the treasury on Sept. 30, 1901, of \$9,789,351.16, distributed as follows: Canal fund, \$883,247.27; school fund, \$398,965.34; general fund, \$8,254,621.09; and trust and miscellaneous funds, \$252,517.46. The total receipts from the corporation tax law were \$4,966,680.93, including \$1,398,799.30 from trust companies and \$705,333.12 from savings-banks. The organization tax yielded \$293,856.72, while the transfer tax, commonly called the inheritance tax, produced \$4,084,606.87. At the time that the tax rate was fixed by the Legislature, it was estimated that the receipts from these three sources would aggregate \$4,500,000, whereas the total was \$9,345,144.52.

The State tax was 1.20 mill (the lowest in forty years), compared with 1.96 mill in 1900, and 2.49 mills in 1899. The estimated revenue, including surplus, was \$15,511,418.13. The tax was distributed as follows: Canal, maintenance, 0.17 mill; canal, extraordinary repairs and new work, 0.15 mill; canal, payment of debt, 0.13 mill; free school fund, 0.75 mill; total tax levy, 1.20 mill. This tax is on the estimated valuation of property in the State of \$5,672,249,753, which will realize as follows: Canal maintenance, \$964,282.45; extraordinary repairs and new work, \$850,837.47; payment of canal debt, \$737,392.47; the free school fund, \$4,254,187.31; total, \$6,806,699.70.

Valuation.—The State assessors during the year were J. Edgar Leaycraft, George E. Priest, and Lester F. Stevens, each of whom received a salary of \$2,500. According to the report issued on Sept. 3, the total valuation of real and personal property available for State taxation was \$5,686,921,678, compared with \$5,461,302,752 for the preceding year, which was distributed among the different counties in the following proportion: Albany, 1.644; Allegany, 0.267; Broome, 0.590; Cattaraugus, 0.405; Cayuga, 0.574; Chautauqua, 0.546; Chemung, 0.450; Chenango, 0.288; Clinton, 0.167; Columbia, 0.406; Cortland, 0.217; Delaware, 0.248; Dutchess, 0.512; Erie, 5.310; Essex, 0.170; Franklin, 0.186; Fulton, 0.243; Genesee, 0.403; Greene, 0.232; Hamilton, 0.052; Herkimer, 0.373; Jefferson, 0.563; Kings, 12.615; Lewis, 0.161; Livingston, 0.465; Madison, 0.361; Monroe, 2.377; Montgomery, 0.466; Nassau, 0.459; New York, 50.295; Niagara, 0.684; Oneida, 1.061; Onondaga, 1.898; Ontario, 0.497; Orange, 0.756; Orleans, 0.266; Oswego, 0.469; Otsego, 0.379; Putnam, 0.122; Queens, 1.706; Rensselaer, 1.289; Richmond, 0.898; Rockland, 0.265; St. Lawrence, 0.578; Saratoga, 0.456; Schenectady, 0.337; Schoharie, 0.195; Schuyler, 0.117; Seneca, 0.253; Steuben, 0.551; Suffolk, 0.766; Sullivan, 0.099; Tioga, 0.228; Tompkins, 0.290; Ulster, 0.479; Warren, 0.135; Washington, 0.323; Wayne, 0.442; Westchester, 2.662; Wyoming, 0.262; Yates, 0.187.

Taxation.—The State Board of Tax Commissioners reported to the Legislature on Jan. 29 as follows: "A year's practical working has disclosed some changes which can be made in the special franchise law to its betterment in execution. The principle has thoroughly approved itself. There are several variations in administrative details which we shall ask you to consider in the form of proposed amendments. These relate chiefly to the procedure prescribed, and are as follow: First, restoration to local assessment of property upon highway crossings where the occupation is less longitudinally than 250 feet; second, the law should authorize and direct this board to equalize, after hearings, special franchise valuations found by it to conform with the local assessment of other real estate in the tax district where special

franchises exist, upon such proofs and information as the board can obtain; third, that certiorari proceedings be taken directly to the appellate division on appeal. In the enforcement of the new tax laws enacted last year, there has been no difficulty, excepting in the case of savings-banks. These institutions have taken the ground that interest accrued, but not yet due, does not constitute undivided earnings, and is therefore not the subject of taxation.

Banks.—The superintendent's report for the year ending Sept. 30, 1901, shows that the total resources of the institutions, as given by their reports, are as follow: Banks of deposit and discount, Sept. 12, 1901, \$403,477,311; savings-banks, July 1, 1901, \$1,105,076,764; trust companies, July 1, 1901, \$966,528,398; safe-deposit companies, July 1, 1901, \$5,475,091; foreign-mortgage companies, Jan. 1, 1901, \$5,690,620; building-and-loan associations, Jan. 1, 1901, \$59,653,737; total, \$2,545,901,921. This is an increase of \$283,899,506 over last year. The number of savings-banks is 128, the same as last year. In his report he condemns the so-called "national" associations, and asks that the banking laws be amended so as to place them under the supervision of his department and prohibit speculative investments and impairment of capital through the payment of large salaries. The words "national" and "local," he says, are not clearly defined by the statutes, and while they convey a comparatively clear idea to those conversant with their operations, their significance varies more or less from year to year, according to the changing methods of the corporations themselves.

Census.—The population of the State, as given by the census of 1900, is 7,268,012, compared with a population in 1890 of 5,997,853, which shows an increase during the decade of 1,270,159, or 21.2 per cent. The numerical increase in the population of New York was greater during the last decade than during any other ten-year period, and the percentage of increase has been greater than at any census since 1860. The present population of the State is more than thirty-one times as large as the population reported at the first census in 1790. The total land surface of New York is approximately 47,620 square miles, the average number of persons to the square mile being 152.6. Of the 61 counties in the State, 38 have increased in population since 1890. The counties showing the largest increase are Schenectady, 57.2 per cent.; Kings, 39.1 per cent.; New York, 35.3 per cent.; Erie, 34.3 per cent.; Richmond, 29.7 per cent.; and Westchester, 24.9 per cent. Out of the total population of the State, there are 3,614,780 males, or 49.7 per cent., and 3,654,114 females, or 50.3 per cent. There are 1,900,425 foreign born, and 112,013 colored. Of this number 99,232 are negroes, 7,170 Chinese, 354 Japanese, and 5,257 Indians. In New York city there were 1,067,660 native males and 1,099,482 native females, 658,045 foreign-born males and 632,035 foreign-born females; 33,587 colored males, of which 27,132 were negroes, and 33,717 females, of whom 33,534 were negroes.

Insurance.—The annual report of the Superintendent of Insurance for 1900 shows that the business of 182 fire and marine insurance companies represents aggregate receipts of \$167,371,063 and disbursements of \$161,316,628, being an increase of \$11,657,815 in receipts and an increase of \$2,669,430 in disbursements. The assets of the fire and fire marine insurance companies of this country and the foreign fire insurance companies of other countries, with United States branches, doing business in New York, aggregated \$312,-

580,551, classified as follows: New York joint-stock companies, \$91,504,111; companies of other States, \$111,124,080; marine insurance companies, \$77,722,741; New York mutuals, \$834,352; mutuals of other States, \$1,000,000. These figures show an aggregate increase of \$2,669,430. The liabilities of these companies, including surplus and capital, are \$148,200,331, an increase of \$240,207. The assets of life companies, \$147,737,722.52, an increase of \$147,400,000. New York State companies had \$191,231,315.90, an increase of \$89,950,741.43; companies of other States, \$681,419,890.63, an increase of \$57,152,307.82. The aggregate of premium notes and loans showed an increase of \$1,042,277.97, while deferred and uncollected premiums decreased \$3,819,167.31. The liabilities of the companies were \$1,565,459,780.86, the increase being \$213,527,714.09. The liabilities of New York State companies were \$945,734,272.02; companies of other States, \$619,725,508.84. The gross divisible was: New York State companies, \$96,583,559.87; companies of other States, \$61,694,381.79; aggregate, \$158,277,941.66. The New York State companies issued 402,439 policies, insuring \$816,741,691, and terminated 212,448 policies, insuring \$479,476,325. The companies of other States issued 284,566 policies, insuring \$540,027,962, and terminated 144,727 policies, insuring \$285,485,049. The aggregate of the above were 687,005 policies issued, insuring \$1,356,769,653, and 357,175 policies terminated, insuring \$764,961,374.

Excise.—The collection of the tax or excise is under the charge of a commissioner, and the incumbent was Henry H. Lyman, who died on May 4, and was succeeded on May 21 by Patrick H. Cullinan, who was appointed to fill the unexpired term. The annual report shows that the total receipts under the liquor tax law for the year ended on April 30, 1901, was \$12,532,600; rebates paid during above period, \$753,140.52; county treasurers' fees, \$54,704.70; net revenue, \$11,724,755; expenses of collection, county treasurers' fees, and expenses of department, \$343,495; ratio of expenses of collection to gross amount collected under liquor tax, 2.7 per cent., as compared with 8 per cent. for the last year under the old law. Total receipts under the old law for year ended April 30, 1896, were \$3,172,376; expenses of collection, \$252,782; net revenue in localities where licenses were issued, \$2,291,268; net revenue under the liquor tax law for five years from May 1, 1896, to April 30, 1901, inclusive, \$57,384,248; number of licenses or certificates issued during the last year under old excise, 33,437; under last year of liquor tax law, 26,839; decrease in places selling liquors under liquor tax law, 6,598. In 1898, under the old law, there were 659 license and 283 no-license towns in the State. In September there were 649 license and 285 no-license towns. There are 26 towns which only allow sales of liquor by pharmacists on physicians' prescriptions. The percentage of population in the State contained in no-license towns is 6.2.

Education.—In the latest annual report of the Superintendent of Public Instruction, he emphasizes the necessity of thoroughness in elementary studies, and expresses the conviction that the most urgent need of our public-school system is more thorough work in elementary subjects, such as language, arithmetic, history, and geography. The demands upon pupils' time now are excessive, and if more subjects are to be crowded into the curriculum it follows, as a principle of natural law, that something must be displaced. He urges the necessity of enlarging the powers of school

commissioners, particularly in reference to the consolidation of school districts and the transportation of school children who live remote from schoolhouses. The tendency of the rural population toward cities is forcefully illustrated by the figures quoted, and it is demonstrated that the rural-school problem is changing, and the question of furnishing adequate school facilities in such districts is rapidly becoming complicated. He calls special attention to the careful inspection of the State educational institutions which has been conducted during the past year, covering normal schools, Indian schools, and schools for defectives. As a result of this inspection, much valuable information has been secured, and important recommendations made. The Manual of Patriotism, which was authorized by the Legislature of 1900, has been supplied to every public school in the State, and has met with marked favor. While it is a debatable question in some minds whether patriotism can be taught, there is no question that it can be fostered and strengthened by the influence of the best literature on the subject. In the report of the college department, which includes universities and professional and technical schools, which are under the jurisdiction of the University of New York, it appears that there are 112 institutions, with net property valued at \$77,902,339.27, and with 29,795 students in attendance, as compared with 705 secondary schools, whose net property is valued at \$28,412,184.38, and whose students are reported at 79,365.

Vital Statistics.—These are under the supervision of the State Board of Health, which consists of the ten following members: S. Case Jones, president; Baxter T. Smelzer, secretary; Daniel Lewis, Owen Cassidy, Frederick W. Smith, William T. Jenkins, and Walter F. Willcox, and the Attorney-General, State Engineer, and health officer of the port of New York *ex officio*. According to their report for 1900, the number of deaths in the State was 128,468, which exceeded the number for the year previous by 6,647, and the average for the past five years by 8,000. The epidemic of influenza was unusually severe during the last six months, and probably added 11,500 to the total mortality. The number of deaths reported for December, 1900, was 9,889. Concerning smallpox, the annual report says: "Smallpox was brought from outside to seventeen places during the first half of the year, without spread. From August to November the State was free from it; then a traveling minstrel show left it at three localities in the eastern part of the State, whence it spread, and at the end of the year it exists at five places and their vicinities, with promise of further spread. Of 14 deaths, 4 have occurred outside New York city." This is probably the last report of the State Board of Health, as it was abolished by the Legislature on Feb. 14, 1901, and a single-headed commission was established in its place, to which Dr. Daniel Lewis was appointed on Feb. 28.

Charities.—These are under the care of a board, whose annual report is prepared from the sworn statement filed by the treasurers or other responsible officers of the charitable institutions, societies, and associations, subject to the board's supervision. The board consists of 12 members. Fourteen of the State charitable institutions come under their direction, and the receipts for these institutions for the year ending Sept. 30, 1900, were, from cash on hand, \$63,925.84; from public sources, \$612,471.90; from private sources, \$307,699.56; total receipts, \$984,097.30. Their total expenditures aggregated \$940,189.78. In their report the board made the following recommendation for

legislation: "That all of the special appropriations for the State institutions within the jurisdiction of the board be included in one bill, with such provisions as will insure in every instance the most careful and economical expenditure of the moneys appropriated, in exact accordance with the intentions of the Legislature. For the maintenance of these State institutions the Legislature appropriated \$1,053,000, and for extraordinary expenditures \$448,596.26, and the board in their report asked for an appropriation of \$1,108,800.89 for the maintenance of the charities and \$635,028.29 for extraordinary expenses. Much space is devoted to comment upon the decision of the Court of Appeals in the case of the State against the New York Society for the Prevention of Cruelty to Children, claiming, for the first time in a quarter of a century, by preventing the collection of reports from organized charities, it prevents the Legislature and the public from having any definite knowledge annually of the amount of dependence which exists in the State. For instance, the total number of dependent children in institutions can not now be definitely known through any official source; the protection which the State has hitherto extended to the inmates of such exempted institutions is removed; the protection to trust funds left by will or otherwise bestowed, for the use of the poor, amounting in some cases to hundreds of thousands of dollars, is also removed.

Lunacy.—The care of the insane is under the charge of a State commission, whose report for the year ending Sept. 30, 1900, showed that there were admitted to the hospitals during the year 4,795 new cases of insanity—an increase, compared with the preceding year, when the new cases were 4,201. The net increase at the close of the year was 714, and this included 61 cases received from the asylum for insane criminals at Matteawan to relieve overcrowding. There were 1,029 patients discharged recovered during the year, and 900 discharged sufficiently improved to return to their homes. During the year the commission removed to their homes in other States and foreign countries 115 non-resident and alien patients. This work becomes increasingly difficult each year, by reason of the repugnance of steamer authorities to accepting alien lunatics as passengers. A reduction of \$297,171.52 was made in the cost of maintenance of the 22,000 insane supported during the year, the individual rate having fallen from \$3.43 to \$3.18 a week—a reduction made in the face of an upward tendency in the price of staple articles of supply. The amount spent for new buildings, extraordinary improvements, etc., was \$662,948.99, against \$1,126,043.77 for the year 1899. There was collected from paying patients \$210,851.14. There was expended for salaries and wages in the State hospitals \$1,442,001.71. The total value of real estate of State hospital buildings was \$21,600,000, while the personal property of these institutions was \$1,670,000.

Prisons.—The sixth annual report of the State Commission of Prisons, issued during the year, made the following recommendations: (1) A new law for the parole of prisoners in State prisons, and providing for a probationary officer for each prison, who shall have charge of paroled convicts under the supervision of the Board of Parole. (2) The establishment of a State reformatory for male misdemeanants. (3) The enactment of a probationary law for drunkenness and other petty offenses, modeled on the lines of the Massachusetts law. (4) The enactment of a law abolishing the State prison districts, and requiring convicts to be sentenced to the nearest State prison, sub-

ject to transfer by the Superintendent of Prisons as now provided by law. (5) An appropriation to repair or rebuild the extension of the domestic building (used as a mess-hall), the engine and boiler house, and the manual-training building of the Elmira Reformatory. (6) An appropriation for a new iron-proof roof on the principal cell building of Ossining prison. (7) The erection of a separate building for the confinement and execution of condemned men. (8) The erection of a central power-house for Ossining prison. (9) A small additional appropriation for rebuilding the prison wall at Ossining with stone. (10) The erection of a new storehouse for Auburn prison. (11) Insert in the law providing for the new Palisades Park a provision authorizing the grading and the making of roads and paths of said park with convict labor. In 1895 an act was passed by the Legislature for the purpose of facilitating the identification of criminals, and in 1896 the department, under the supervision of the State Superintendent of Prisons, was organized for the collection of a series of cards for the identification of criminals by the Bertillon system. The office containing these cards is in the Capitol in Albany, and records of more than 35,000 criminals are catalogued. The new State Prison Commission was organized on March 5, 1901, and included Lisenard Stewart as president, State Treasurer John P. Jaekel as vice-president, and Superintendent of Prisons Cornelius V. Collins as commissioner, with George McLaughlin as secretary.

Canals.—The charge of the canals is under the care of the Superintendent of Public Works. The official opening of the canals was on May 7, 1901, having been postponed from May 4, owing to the heavy rains and damage to structures, and the closing was ordered on midnight of Nov. 30, although, as a fact, the severe cold had caused navigation to cease somewhat earlier. The annual report of the superintendent showed that the total tonnage for 1900 was 3,345,941 tons, against 3,686,051 tons for the previous year. Of the total freight carried, 2,115,151 tons went eastward and 1,230,790 tons westward. There were 1,362,550 tons of through and 1,983,391 tons of way freight. Of the through freight 857,607 tons went eastward and 504,943 tons westward, and of the way freight 1,257,544 tons went eastward and 725,847 tons westward. On March 15, the Governor sent a message to the Legislature that included all the reports on canal improvement, and recommended the continuation of the Seymour or 9-foot plan of deepening the canal, which was begun in 1895, and which required \$9,000,000 to improve one-third of the system. The cost estimated was \$19,797,828, and the Governor recommended the bonding of the State if the improvement proposition was accepted by the people in November, the bond issue to be redeemed in eight years, which would mean the raising of a little more than a million a year to redeem the bonds and pay interest thereon. The final cost, with interest added, will be more than \$20,000,000, it is expected, and may reach \$25,000,000. Subsequently, after a conference between the Governor, State Engineer, Superintendent of Public Works, State Comptroller, and other officials, a bill was introduced into the Legislature, calling for the improvement of canals, making a barge canal for 450-ton barges instead of a 300-ton-barge canal.

Railroads.—This department is cared for by three commissioners, each of whom serves five years, and receives a salary of \$8,000. According to their annual report for the year ending June 30, 1900, the gross earnings of the steam surface roads were \$247,087,779, and of street-railways

\$40,811,563, which is an increase of an average earning per passenger of about one mile. The operating expenses of the steam railroads were \$16,817,645.74 in 1900, as against \$16,817,645.74 in 1899, and the net earnings were \$16,817,645.74 in excess of the net earnings of 1899. The report also calls attention to the work under the new law. According to its provisions, the State is building new steam railroads at grade or over or under the grade of highways and bridges by the company. The expense of building new highway crossings at grade or over or under the grade of steam railroads must be borne half by the municipal corporation and half by the railroad company. The expense of abolishing existing grade crossings must be borne one-half by the railroad company, one-quarter by the State, and one-quarter by the municipal corporation. Since the passage of the law, 48 highway grade crossings have been actually abolished, and work at 10 others is nearing completion. Plans and specifications for doing the work have been approved in 16 cases. In 19 instances nothing has been done toward the abolishment of the crossings.

Geological Survey.—The Board of Regents of the University of New York have, in addition to their charge of educational matters, jurisdiction over the geological survey of the State. According to a report issued by them, the map of the State, which is under preparation in cooperation with the United States Geological Survey, will, when completed, have a north-and-south length of about 23 feet, and an east-and-west width of 25 feet. The scale of this map is one mile to the inch, so that every street in the towns, and outside of them every road and house, every stream and hill, will be shown; and, with contour lines drawn at 20-foot intervals, it is possible to tell at a glance the height of any hill or other selected spot. Nearly half of the area of the State has been covered. The map is divided by lines of latitude and longitude, 15 minutes apart, into quadrangles. Several of the quadrangles of this map, colored geologically, have been prepared under the direction of the State paleontologist; the Amsterdam sheet, parts of sheets composing Rockland County, and portions of Albany and Rensselaer Counties, Niagara Falls and vicinity, including the city of Buffalo, and others are in preparation, notably those of Olean, Salamanca, Canandaigua, Naples, Chittenango, and Tully, and the area will be increased as rapidly as practicable for the purpose of publishing geologic maps as accurate in detail as the geographic map that has served as the base for the geologic coloration. The enumeration of type specimens in the State Museum in Albany has been completed, showing that there are now more than 5,000 of these valuable specimens, which is several times greater than the number of New York types contained in all other museums and collections. A detailed catalogue of these type specimens is in preparation.

Forestry, Fisheries, and Game.—The Forest, Fish, and Game Commission, and the Forestry Preserve Board, as existing at the beginning of the year, were abolished by an act of the Legislature, signed on March 13, and a single-headed commission, known as the Forest, Fish, and Game Commission, was established in its stead. As organized on March 3, the commissioner appointed by the Governor was De Witt C. Middleton, who will serve for a term of four years, and receive a salary of \$5,000. The consulting commissioners named were Charles H. Babcock, of Rochester, and Timothy L. Woodruff, of Brooklyn, who re-

ceive no salary, and were appointed to serve until Jan. 1, 1903, after which date the Governor is given discretion to designate from time to time two commissioners of the Land Office, to act with the forest, fish, and game commissioner, and constitute the board for the purchase of forest lands. According to the new law, subsequent to Jan. 1, 1903, the forest, fish, and game commissioner may appoint a deputy commissioner at an annual salary of \$2,500.

National Guard.—The charge of the National Guard of the State of New York is under the supervision of the adjutant-general on the Governor's staff. The incumbent during the early part of the year was Edward M. Hoffman, who died in Albany on May 15. The assistant adjutant-general, Frederick Phisterer, was detailed as acting adjutant-general, and continued in charge of the department until the close of the year.

Pharmacy.—The State Board of Pharmacy, created by the Legislature of 1900, organized early in January, with Robert K. Smither as president, and Sidney Faber as general secretary. Dates were decided upon when examinations should be held in different parts of the State. According to the new law, every drug-store in every town, village, or hamlet having more than 500 population must be registered, and each store must have a licensed pharmacist. In places having a population of fewer than 500, stores may be conducted by a druggist. The law makes a distinction between a pharmacist and a druggist, the latter being equal to an assistant pharmacist, and being licensed as such after passing the required examination. The new law will have the effect of more uniform and practical examinations, and will result in the closing of many stores, as drugs have been sold by men who never passed any examination, and were not licensed pharmacists.

Palisade Park.—The agitation for the preservation of the Palisades of the Hudson and converting the adjacent land into an interstate park, was made the subject of a bill that passed the Legislature and received the approval of the Governor. Nothing east of the Rocky mountains equals the Palisades in scenic effect. The trap-rock precipice has not the distinct columnar structure of similar rock in various localities, such as Scotland's island of Staffa, and places on the Columbia river and its tributaries; but it is sufficiently columnar to present the striking appearance of a vast fortification with bastions and salient angles, and the effect is greatly enhanced by position directly on the border of the sea-like lower Hudson for more than 20 miles, the walls rising from 310 feet at Weehawken to 550 feet northward, and almost twice that in hills after it reappears still farther north and west. The great dike is from a quarter of a mile to a mile in width. The park will run from Fort Lee Ferry to Huyler's Landing, and will take in all land from the summit of the cliffs to the water's edge. The intention is to make a driveway along the base on the river side, with here and there a branching road to the top. The bill appropriated \$400,000 for the purchase of the property. The land owned by private persons on which the commission has options will cost \$500 an acre, and the cost of riparian rights has been fixed at \$10 a running foot. A similar bill, appropriating \$50,000, was passed by the Legislature of New Jersey, and received the signature of the Governor of that State. The Palisades Commission is composed of the following: New York—George W. Perkins, president; Abram S. Hewitt, vice-president; Ralph Trautmann, treasurer; J. Du Pratt White, secretary; Nathan F. Barrett, D. McNeely Stauffer, Col.

Edwin A. Stevens, Franklin W. Hopkins, J. Abram De Ronde, and W. A. Linn. New Jersey—Edwin A. Stevens, president; D. McNeely Stauffer, vice-president; Abram De Ronde, treasurer; J. Du Pratt White, secretary; F. W. Hopkins, George W. Perkins, Abram S. Hewitt, Ralph Trautmann, Nathan F. Barrett, and W. A. Linn.

Historian.—The work of looking up the records of the soldiers from New York who died during the civil war has been continued during the year, and the historian reports that he has found inscribed on burial-stones in the cemetery at Gettysburg the names of New York soldiers who are still alive. Considerable interest has been taken in the Battle-Ground Cemetery near Washington, where some of the New York soldiers now lie buried, having been called out to defend the capital during Early's raid in 1864. The records of the dead at that cemetery include names of soldiers of whom all trace had disappeared. The New York troops engaged in the action at Fort Stevens consisted of a regiment of cavalry, a battalion of heavy artillery, 11 regiments of infantry, and a battalion of another regiment of infantry.

Legislative Session.—The session of the Legislature began on Jan. 2, 1901, and continued until April 23. As elected, the Senate consisted of 35 Republicans and 15 Democrats, and the Assembly of 105 Republicans and 45 Democrats. Timothy E. Ellsworth was reelected President *pro tem.* of the Senate, and Samuel F. Nixon was again chosen Speaker of the Assembly. There were 1,701 bills introduced into the Assembly, of which 826 were passed; and 505 bills were introduced into the Senate, of which 409 were passed. There were 731 bills that received the approval of the Governor. Among the more important measures enacted were the following:

Authorizing the State to cede to the Federal Government the lower half of Esopus island in Hudson river.

Amending the charter of New York city so as to correct defects in the general charter amendment act, as follow: To require the written approval of the sinking-fund commissioners to contracts and leases by the dock commissioner. To require the distribution of school moneys subject to the same regulations as those imposed on the common schools of New York. Relative to the publication of city notices. Amending the educational provision relative to licensing of teachers. To allow the dock commissioner to appoint a deputy at a salary of \$4,500 a year, who shall be empowered to act in the absence of the commissioner. Also, empowering the commissioners of the sinking-fund to accept a proposition for leasing docks after refusal by the dock commissioner. Abolishing the bipartizan Police Board in New York city, and providing for the appointment of a single commissioner by the mayor, subject to removal, without charges, by either the mayor or the Governor. Authorizing New York city to exchange property in the Twelfth Ward with the College of the City of New York. Permitting New York city to accept the \$5,200,000 gift of Andrew Carnegie for a free library system. It authorized the city to purchase, erect, and maintain libraries, also to enter into a contract with Mr. Carnegie to accept his gift under the conditions named by him. Permitting library corporations in New York city to convey their property to the Public Library—Astor, Lenox, and Tilden foundations. Permitting the consolidation of libraries in New York city.

Incorporating the Naval Arch Association, to erect a naval arch on the water-front of Man-

hattan island to perpetuate the memory of the victories of the United States navy.

Providing additional terminal facilities on the Manhattan end of the New York and Brooklyn Bridge.

Increasing from \$2,000,000 to \$2,250,000 the appropriation for a bridge over Harlem river at New York city.

Classifying the positions in the State service, and regarding the salaries paid to the holders thereof.

Creating a single-headed State health department in the place of the present board of nine commissioners, with a commissioner of health to be appointed by the Governor within twenty days after the law is signed. The salary of the commissioner is fixed at \$3,500.

Authorizing the State commissioner of public health to inquire into the enforcement of the laws relative to tenement-houses in cities of the first class, and when requested by the Governor to report to him the result of his inquiry.

Providing that the State Board of Classification shall fix the prices of articles manufactured in State charitable institutions and sold to the State for other State institutions.

Placing building-and-loan associations under the partial supervision of the State superintendent of banks.

Amending the Greater New York charter to allow the park commissioners to authorize and regulate projections, and determine curb lines on streets and avenues in parks and places under the jurisdiction of the park commissioners.

Amending the Greater New York charter to provide that the fire commissioners shall select the grade of cloth required for uniforms, but shall not prescribe where or from whom the uniforms shall be purchased or the price to be paid therefor, and prohibiting any clothing contractor from having an office in any fire department building.

Authorizing the deputy fire commissioner to exercise all the powers of the fire commissioner of New York city during the absence of the latter official or the inability to perform his duties.

Providing that the commissioner of jurors in New York city shall select 200 persons a year in each municipal court district for municipal jury duty.

Authorizing the justices of the municipal court of New York city to appoint a commission, to consist of three justices from Manhattan Borough and one each from the Bronx, Brooklyn, Queens, and Richmond, to codify the laws, rules, and practices relating to the municipal court of that city.

The four tenement-house bills, which the Legislature passed on the recommendation of the Roosevelt Tenement-House Commission.

Authorizing New York city to appropriate \$55,000 annually for the maintenance of the Metropolitan Museum of Art.

Providing that the New York City Board of Estimate and Apportionment may set aside 70 acres of land in Forest Park, in Queens Borough, for the purpose of giving Brooklyn an additional storage-reservoir.

Giving to the State Engineer and Surveyor the power to make rules and regulations for the care of highways improved under the good roads act.

Providing that the president of the State Commission in Lunacy shall be a physician of ten years' experience, who has had five years' experience in the treatment of mental and nervous diseases, or two years' experience in the treatment of committed insane.

Amending the election law by providing that the entry of the country of a naturalized citizen's

nativity shall mean the place of his birth, irrespective of his former political allegiance.

Giving the State Department of Agriculture jurisdiction over animal and human contagious diseases.

Amending the election law by providing a misdemeanor to sell liquor within one hundred yards of a polling-place at a special election, and at a general election.

Amending the excise law, to provide that hotels shall keep a register of guests, and prohibiting the closing of saloons during the progress of an action.

Amending the mining law providing that at the expiration of twenty-one years from the time of discovery of a mine the discoverer or his heirs shall pay to the State a royalty of 1 per cent. on the market value of all products of such mine.

Amending the penal code by making it a misdemeanor for any person to ride a bicycle upon a sidewalk or footpath maintained for the exclusive use of pedestrians.

Amending the State pharmacy law to allow country stores to sell Epsom and Rochelle salts without a druggist's license; also, allowing physicians to compound prescriptions and sell poisons where there is no drug-store within three miles.

Amending the tax law relative to the taxable transfers of property by giving the State Comptroller power to open proceedings in the appraisal of estates.

Amending the tax law relative to taxable transfers by exempting therefrom bequests to Bible and tract societies.

Reducing the State tax on the organization of new corporations from $\frac{1}{2}$ to $\frac{1}{10}$ of 1 per cent.

Changing the color of the State flag from buff back to blue.

Amending the real-property law relative to the execution of conveyances of parties residing in Porto Rico, the Philippine Islands, and Cuba by providing that they may be made before a judge of a court of record, a mayor, or other city officer, a commissioner of the United States Government, or a commissioned officer of the United States army or navy.

Providing that the Secretary of State shall not grant a certificate of authority to do business in this State to any foreign corporation having the same name as an existing domestic corporation or a name so nearly resembling it as to be calculated to deceive.

Authorizing the courts to modify the terms of a charitable bequest, provided that it is found impracticable to carry out such terms as are fixed by the person who made the bequest.

Providing that a person convicted of felony shall be sentenced under an indeterminate sentence if he has never before been confined in a State prison, and if the crime of which he is convicted is punishable by imprisonment in a State prison for a period not exceeding five years.

Providing that the legal minimum standard for insurance contracts shall be the American experience table of mortality, with interest at $3\frac{1}{2}$ per cent. a year.

Providing if a juror is employed by a party to an action, or is employed by a stockholder of a corporation involved, or is a stockholder in a corporation party to the litigation, such fact shall constitute good ground for a challenge.

Providing that a certificate of incorporation of a corporation need not name more than three directors of such corporation.

Providing that corporations as well as individuals may be members of a news-gathering association.

Reducing from two to one the number of directors of a corporation of this State, who must reside in New York State.

Prohibiting the sale of consecrated property of the Protestant Episcopal Church or a rectory or parsonage without the consent of the bishop and the standing committee of the diocese.

Providing that an acknowledgment for use in proceedings in this State may be made in the Kingdom of Great Britain or Ireland or dominions of the British Empire before a notary public.

Providing that a foreign corporation can not maintain an action in this State unless authorized to do business here.

Providing that an insurance company shall not issue new policies if its capital stock is impaired to the extent of 50 per cent. after charging such corporation with a reserve liability, or, in case it has no capital stock, if its assets are less than its liabilities, upon the basis of charging it with the reserve liability.

Amending the law relative to the descent of real property left to the intestate by a deceased husband or wife.

Providing that a hotel or inn-keeper may sell at public auction, after one year, unclaimed baggage.

Exempting licensed engineers of steam-boilers from jury duty.

Providing for a fine of \$10 to be laid by highway commissioners upon any person who deposits or throws loose stones in the gutter or the grass adjoining a highway from which they may have been removed.

Increasing the maximum number of directors of a banking corporation from 24 to 30.

Making it a misdemeanor for an employee of a telephone or telegraph company to aid a criminal in violating the laws of the State by refusing to give evidence when required.

Providing that after Jan. 1, 1902, no common-law marriage shall be recognized in this State, except the parties thereto have signed a contract in the presence of witnesses and filed the same with the clerk of the town, village, or city in which the contract was made.

Providing that five of the commissioners of the Palisades Interstate Park Commission may be residents of New Jersey.

Appropriating \$400,000 for the purchase of the Palisades.

Authorizing the Governor to appoint a committee of seven to represent the State at the South Carolina Interstate and West Indian Exposition, to be held in Charleston, S. C., and appropriating \$15,000.

Annexing the village of Bath to the city of Rensselaer.

Authorizing towns of 5,000 inhabitants to appropriate \$50 yearly for the observance of Memorial Day.

Authorizing village trustees to make a contract with the fire department of an adjoining unincorporated village for fire protection for a period of ten years.

Authorizing villages to compromise claims for damages to property resulting from changes of grade of streets and bridges.

Authorizing villages of the fourth class to acquire private streets for parkways.

Reappropriating \$318,845 for the improvement of the State canals.

Appropriating \$325,000 for extraordinary repairs to the canals.

Authorizing town boards to establish sewer systems.

Amending the law relative to the San José scale by providing that transportation companies must

notify the State Commissioner of Agriculture of the receipt of all nursery stock.

Prohibiting the killing of quail until 1903 in the counties of Cayuga, Wyoming, Chautauqua, Erie, Richmond, Genesee, and Montgomery.

Including April and July as months in which striped bass shall not be taken with a net from the waters of Hudson river.

Extending until 1906 the law preventing hounding deer in this State.

Providing that ducks, geese, brant, and swan shall not be taken from April 30 to Aug. 31.

Appropriating \$100,000 for the promotion of sugar-beet culture.

Authorizing Buffalo to issue \$150,000 in bonds for defraying the expenses of police protection for the Pan-American Exposition.

Authorizing the Pan-American Exposition Company to issue second-mortgage bonds to the value of \$500,000.

Appropriating \$2,500 for a monument at Antietam to the memory of the soldiers of the Twenty-fourth New York Infantry.

Appropriating \$5,000 for a monument in honor of the memory of the members of the Seventy-first Regiment killed in the Spanish-American War.

Providing that cider vinegar made by a farmer from the product of his farm shall not be deemed adulterated if it contains 2 per cent. solids, and sufficient alcohol to develop the required amount of acetic acid.

Affording veterans in State, county, and municipal employ leave of absence, with pay, on Memorial Day.

Prohibiting the employment of women and children at polishing and buffing.

Prohibiting the opening of butcher shops on Sunday.

Making funeral expenses a preferred lien on the estate of the deceased, and payable before all other debts.

Providing that voting-machines shall be constructed so as to permit voting for independent electoral candidates.

The Senate and Assembly met in joint session on Feb. 13, and elected Charles R. Skinner to be Superintendent of Public Instruction and Robert C. Pruyn to the Board of Regents. Mr. Pruyn was chosen to the vacancy caused by the death of Hamilton Harris.

Political.—The usual election was held on Nov. 5, on which occasion 9 judges of the Supreme Court were chosen, 4 in the First District, 1 each in the Third, Fourth, and Seventh, and 2 in the Sixth District. The candidates were as follows: First District—Morgan J. O'Brien (Democrat), James A. Blanchard (Republican), John P. Clarke (Republican), and Samuel Greenbaum (Independent Democrat), all of whom were fusion candidates. Morgan J. O'Brien, Robert A. Van Wyck, Charles H. Knox, and Charles W. Dayton were the regular Democratic nominees. Third District—Aaron V. S. Cochrane (Republican), Levi F. Longley (Democrat), and Patrick Burke (Socialist Labor). Fourth District—Edgar A. Spencer (Republican), Robert P. Anibal (Democrat), William Green (Prohibition), John H. Bullard (Social Democrat), and John E. Wallace (Socialist Labor). Sixth District—Charles E. Parker and Gerrit A. Forbes (Republican). Seventh District—William H. Adams (Republican), Henry Beisiegel (Socialist Labor). The successful candidates were Morgan J. O'Brien, James A. Blanchard, John P. Clarke, and Samuel Greenbaum in the First District; Aaron V. S. Cochrane in the Third District; Edgar A. Spencer in the

Fourth District; Charles E. Parker and Gerrit A. Forbes in the Sixth District; and William H. Adams in the Seventh District. There was also an election in the Twenty-fourth Congressional District, to fill the vacancy caused by the death of A. D. Shaw, and the nominees for the vacant place were William H. Powell (Democrat), Charles L. Knapp (Republican), Charles W. Richards (Prohibitionist), and Raymond K. Bull (Social-Democrat), and Charles L. Knapp was elected. In addition two State Senators were chosen to fill vacancies caused by deaths in the Thirtieth and Forty-third Senatorial Districts, as well as the election of an entire new Assembly. The successful candidates for the State Senators were William D. Barnes (Republican) in the Thirtieth District, and Merton E. Lewis (Republican) in the Forty-third District. The next Senate, as elected, is composed of 35 Republicans and 15 Democrats, and the membership of the Assembly comprises 106 Republicans, 42 Democrats, and 2 Independent Democrats. On joint ballot the parties are represented as follow: 141 Republicans, 67 Democrats, and 2 Independent Democrats. An amendment to section 18 of Article III of the State Constitution, forbidding the Legislature to pass special tax exemption bills, was passed.

NORTH CAROLINA, a Southern State, one of the original thirteen, ratified the Constitution Nov. 21, 1789; area, 52,250 square miles. The population, according to each decennial census, was 393,751 in 1790; 478,103 in 1800; 555,500 in 1810; 638,829 in 1820; 737,987 in 1830; 753,419 in 1840; 869,039 in 1850; 992,622 in 1860; 1,071,361 in 1870; 1,399,750 in 1880; 1,617,947 in 1890; and 1,893,810 in 1900. Capital, Raleigh.

Government.—The following were the State officers in 1901: Governor, Charles B. Aycock; Lieutenant-Governor, W. D. Turner; Secretary of State, J. B. Grimes; Treasurer, B. R. Lacey; Auditor, B. F. Dixon; Attorney-General, R. D. Gilmer; Superintendent of Education, T. F. Toon; Commissioner of Agriculture, S. L. Patterson; Adjutant-General, B. S. Royster; Insurance Commissioner, James R. Young—all Democrats; Corporation Commission, Franklin McNeill, Samuel L. Rogers, D. H. Abbott; Commissioner of Labor and Printing, H. B. Varner; Librarian, M. O. Sherrill; Chief Justice of the Supreme Court, David M. Furches, Republican; Associate Justices, Robert M. Douglas (Republican), Walter Clark (Democrat), W. A. Montgomery (Democrat), and Charles A. Cook; Clerk, Thomas J. Kenan, Democrat.

The State officers are elected for terms of four years at the time of presidential elections. The Legislature meets biennially in January of the odd-numbered years. The time of the session is not limited, but legislators are paid for not more than sixty days.

Census Figures.—Of the 347 incorporated places in the State, only 35 had a population in 1900 of more than 2,000; of these 23 have fewer than 5,000 inhabitants; and 6 have more than 5,000 but fewer than 10,000; 6 have more than 10,000, namely, Wilmington, with 20,976; Charlotte, with 18,091; Asheville, with 14,694; Raleigh, with 13,643; Greensboro, with 10,035; and Winston, with 10,008 inhabitants. The urban population of the State is 8 per cent. of the whole. The figures for children of school age are: Whole number, 753,826, of whom 450 are foreign born, 263,044 colored, 377,611 males, and 376,215 females; there are 326,202 men of militia age, of whom 1,346 are foreign born and 99,626 colored. The men of voting age number 417,578, of whom 2,530 are foreign born and 128,314 colored.

Finances. The report in the treasury Nov. 30, 1900, was \$10,000,000. The receipts for the following year were \$10,000,000. The disbursements were \$1,685,556.68; the balance Dec. 31, 1901, \$18,263.02.

The statement of the year ending Dec. 31, 1900, is kept separate, as is found in the report for 1900, \$23,219.50; receipts from Jan. 1, 1899, to Dec. 1, 1901, \$17,620.10; total, \$40,839.60; disbursements, \$5,304.55; balance Dec. 31, 1901, \$35,535.05.

The expenditures of the State Government for the various institutions during the year ending Dec. 31, 1900, are as follow: Dangerous insane, \$7,446.44; hospital at Raleigh, \$73,356.22; hospital at Goldsboro, \$45,729.79; hospital at Morganton, \$112,633.93; School for the Deaf and Dumb, Morganton, \$48,718.81; State's prison, \$177,805.05; Agricultural Department, \$67,354.24; Soldiers' Home, \$14,818.17; Institution for the Deaf, Dumb, and Blind, \$68,011.22; pensions, \$113,291; College of Agriculture and Mechanic Arts, \$54,645.89; University of North Carolina, \$31,000; Colored Normal, \$18,250; State Normal, Greensboro, \$40,000; Oxford Orphan Asylum, \$10,000; Oxford Orphan Asylum (colored), \$6,600; sundry expenditures, \$795,895.92; total, \$1,685,556.68; balance Dec. 1, 1901, \$18,263.02.

The State of South Dakota brought suit in November in the United States Supreme Court to recover on bonds of the Western North Carolina Railroad Company, which were guaranteed by the State of North Carolina. The bonds were issued before 1870 and have been repudiated.

Education.—The receipts for the public schools this year were \$1,119,746.47, while in 1900 they were \$1,031,327.94. The sources of income were: State and county poll-tax, \$327,404.05; general property tax, \$525,257.15; special property, local tax, \$15,544.25; special poll, local tax, \$404.45; fines, etc., \$23,411.82; liquor license, \$79,279.62; auctioneers, \$23.75; received from State Treasurer, \$101,401.80; other sources, \$45,983.48. The white schools were in session nearly a week longer and the colored schools a week and a half longer than during the year preceding. The average for the former was 15.56 weeks and for the latter 14.49 weeks. This does not include the city schools, which were in session from thirty-two to forty weeks. The second \$100,000 of the extra legislative appropriation had not been issued, on account of the low state of the finances; it is to be distributed to the counties that have not funds sufficient for four months of school.

The enrolment in the public schools in 1901 was 290,178, an increase over the preceding year of 19,731. The average attendance in 1900 was 142,413; in 1901 it was 172,272.

The State Normal College received in the summer a gift from G. F. Peabody, of New York, of \$10,000, of which \$5,000 is to be used in developing an educational park on the college grounds, and the other \$5,000 is to become available as soon as a certain sum shall be raised by friends of the institution. The college owns 125 acres of land, about half of which is broken and in forest.

A practise and observation school building has been erected at a cost of about \$15,000. The regular annual appropriation is \$25,000.

At the College of Agriculture and Mechanic Arts, 23 were graduated in June. In September 315 students were present. The Board of Visitors recommended the establishment of professorships of animal industry and veterinary science and of biology, the establishment of the offices of field botanist and supervisor of the department of horticulture, and that 100 acres of the college land

be cleared for an experiment farm. Most of the recommendations were carried out; and the board established 120 agricultural scholarships, and appropriated \$2,000 to pay agricultural students for labor. Last year the students earned \$2,480. In the coming year nearly \$5,000 will be available for employment of student workmen. In December the Watauga building, in which were the dining-hall and kitchen and dormitory-room for 50 students, was burned. A fund was raised by subscription to indemnify the students for their lost property, but the majority refused to accept anything. The burned building was erected in 1894, cost \$9,000, and was insured for \$6,000.

The State University, at Chapel Hill, graduated a class of 50 in June, and the Law School graduated 70 in September. The number of students in the institution at that time was 537. New buildings and improvements have been added, costing, in the two years past, about \$120,000, and several instructors have been added to the faculty. The regular annual appropriation from the State has been \$25,000; this year it was increased to \$37,500.

The State board awarded \$990 to 99 schools that had raised each \$10 as a condition of receiving \$10 for a rural library; each county also contributes \$10.

In January a free library was dedicated in Raleigh, the gift of Richard B. Raney. The cost was \$41,000, and it is estimated that the rent of stores and hall in the building will yield an annual income of \$1,500.

By the will of Mrs. Virginia B. Y. Swepson, educational institutions in the State receive about \$45,000.

The public-school authorities of Asheville have been severely criticized by newspapers in the State for including the name of John Brown in an outline of study to guide the teachers of the sixth grade. The directions said: "Use freely stories from lives of great men and women—as Washington, Franklin, Jackson, Lincoln, Grant, John Brown, Lee, Jackson (Stonewall), Edison, Audubon, Garrison, Longfellow, Agassiz, Clara Barton, and others. The name was omitted from subsequent editions of the course of study.

Charities and Corrections.—The State School for the Deaf and Dumb, at Morganton, had an enrolment of 230 in the year ending in June. Improvements that were undertaken were delayed by the washing away of bridges during the floods and the scarcity of laborers and materials.

There were 225 in the Institution for the Blind at Raleigh. A census list shows 189 blind children in the State who are not in the school.

The State insane asylums have been so crowded that it was decided to notify paying patients to seek accommodations elsewhere, and decline to receive any more sent for inebriety. The Constitution requires that the indigent insane be cared for at State expense. The report of the Central Hospital for the Insane shows that on Nov. 30 there were 420 patients, of whom 168 were men. The expenditures amounted to \$83,195; the receipts to \$82,127.

The financial report of the Penitentiary shows that for the two years 1899 and 1900 the expenditures, not including old debts and amounts spent for permanent improvements, were \$385,801.12, an average of \$16,079.17 a month. From April 3 to Sept. 7, under new management, the average was \$10,390.86 a month. The State farms were badly damaged by the floods, which washed away the dikes.

Industries and Products.—The preliminary census report of the manufacturing industries of

the State shows a total capital of \$76,503,894, an increase of 133 per cent. during the decade; number of establishments, 7,226, an increase of 97 per cent.; average number of wage-earners, 70,570; total wages, \$13,868,430; cost of material used, \$53,072,368, an increase of 132 per cent.; and value of products, including custom work and repairing, \$94,919,663, an increase of 135 per cent. The city of Wilmington, which is separately reported, shows a total of 123 establishments, capital, \$1,819,333, an increase of almost 4 per cent.; 1,469 wage-earners; total wages, \$446,413, a decrease of more than 3 per cent.; and value of products, including custom work and repairing, \$2,246,237, an increase of 18 per cent.

The number of companies granted articles of incorporation during the year ending Nov. 30 was 375; their capital stock amounted to \$26,458,385; 3 of the companies were authorized to issue \$1,000,000 in capital stock.

There was a large increase in 1901 in the sale of fertilizers; the revenue from the sales was \$67,988.24, an increase of \$12,740.55.

The Government report on the turpentine industry shows for the State, in 1900, 361,729 barrels of crude turpentine with a total value of \$1,055,685.

Estimates of the cotton-crop vary, but the most reliable one appears to be that placing it at 328,040 bales, which is a falling off from the preceding year's record of 514,000.

The estimates on the tobacco-crop make the acreage 89 per cent. of that of 1900, and the crop 75 per cent. On the other hand, the prices were much higher. The industry, while better this year, is not as profitable as it was ten years ago. There are fewer manufacturers, the trust having absorbed many of the larger independent plants.

Banks.—The condition of the banks at the close of business April 24 was reported to the Corporation Commission as follow: Capital of State banks, \$2,488,750.77; of private banks, \$151,500; of savings-banks, \$172,351.39; total resources, \$16,321,160.68; deposits subject to check, \$9,824,011.20. A new ruling has been adopted by the Tax Commission in regard to the taxation of bank stock—that owners can not deduct the amount of their debts from the amount of their stock, but must pay taxes on the full value. Thirty-two building and loan associations were doing business in the State.

Railroads.—The total railroad mileage at the beginning of the year was 3,637, an increase in a year of 63.

The value of this track is \$38,010,426; of the rolling-stock, \$3,320,882; of the other property, \$770,693, making a total valuation of \$42,102,002. The gross earnings of railroads of North Carolina aggregate \$14,919,832; of this amount \$9,336,881 are expended in operation, leaving an income of \$5,582,950. The number of persons employed by the railroads of the State is 10,609. The number killed in the year was 87, of whom 28 were employees and 51 trespassers; the number injured was 992; of these, 805 were employees and 74 trespassers.

Eight telegraph and telephone companies have lines in the State, 36 companies operate steam-boat lines, and 7 electric railways are in operation.

The commission reduced the fertilizer rates; the Seaboard company brought suit against the reduction, depositing more than \$6,600 with the Treasurer to be paid back to shippers if the commission should be sustained. The decision was in favor of the corporation commission, and the shippers receive nearly all the indemnity money.

Insurance.—The receipts from insurance companies for the year ending April 1, 1901, were \$91,072.92, divided as follow: Taxes, \$60,599.75; licenses, \$24,741.67; fees, \$5,731.50. There are 173 companies doing business in the State and 4,698 local agents. On Jan. 1 there were but 154 companies. Of the 173 companies, 33 are life, 94 fire, 17 miscellaneous, and 29 fraternal.

Lawlessness.—Lynchings were reported this year at or near Carthage, La Grange, Smithfield, Wadesboro, and Weldon. All but one of the victims were negroes, and all were accused of assaults upon women. The Governor has announced that hereafter he will offer a reward of \$400 for the apprehension of each and every participant in a lynching.

Legislative Session.—The Legislature convened Jan. 9, and final adjournment was taken April 4. On joint ballot there were 140 Democrats, 25 Republicans, and 5 Populists.

On Jan. 22 Furnifold M. Simmons was elected to the United States Senate for the term ending in 1907. Richmond Pearson was the Republican candidate. The vote in the Senate was 36 to 8; in the House 88 to 18.

The laws passed numbered 1,209, and the resolutions 56.

A resolution was passed in the House for the impeachment of the Chief Justice of the Supreme Court, David M. Furches, and Associate-Justice Robert M. Douglas, for "high crimes and misdemeanors in office." The accusation, as given in the resolution, was based on the clause in the Constitution which says that "the Supreme Court shall have original jurisdiction to hear all claims against the State, but its decisions shall be merely recommendatory. No process in the nature of execution shall issue; they shall be reported to the next session of the General Assembly for its action."

The Legislature of 1899 passed a law providing that the Treasurer should "not pay any compensation to any person or persons claiming the same for services rendered concerning the shell-fish industry, unless such person or persons are authorized to render such services under the provisions of the act entitled 'to provide for the general supervision of the shell-fish industry of the State of North Carolina.'" But Theophilus White brought an action of mandamus against the Treasurer and the Auditor to compel them to issue a warrant for his salary for services rendered concerning the shell-fish industry, and these two justices ordered them to do so, whereupon they paid Mr. White \$831.15. The resolutions censured the Treasurer and the Auditor, and impeached the justices. The resolution was debated four days and was passed by a vote of 62 to 33. Of those voting in the negative 18 were Republicans and 2 Populists. All voting in the affirmative were Democrats. The case came to trial before the Senate, and resulted in a vote, March 28, of acquittal. Thirty-four votes were necessary to convict, but only 27 were for conviction; the 23 votes against it were from 10 Republicans, 12 Democrats, and 1 Populist.

The Governor sent a special message about Feb. 4, officially announcing the settlement of the railroad cases. In 1899 the Corporation Commission assessed the Atlantic Coast Line, the Southern, and the Seaboard Air Line at \$35,579,870, an increase of more than \$9,000,000 over the assessment of 1898; and in 1900 the three were assessed at \$36,373,382. The roads secured an injunction restraining from collection of taxes on the amounts in excess of the assessments of 1898, claiming that there was a systematic undervaluing of the

other property in the State. The positions for settlement were made by the State, resting upon reduction of the taxes on the property, but offering to pay upon that basis. The State property should not be less than the other property. There should be another assessment of the property in the State. The Governor of the State agreed to the latter position, but insisted that no reduction should be made in the assessment for either 1899 or 1900, and upon this basis the agreement was reached.

As the revenue of the State had been inadequate to meet the demands upon it, a new revenue law was a necessity, and one was passed. In addition to the general property tax and the poll-tax, the law now calls for taxes upon incomes and inheritances, banks, building and loan associations, corporations, and various occupations and privileges. The tax on incomes is 1 per cent. on all over \$1,000. No inheritance under \$2,000 is taxed, and only inherited personal property is subject to the tax, the lowest rate of which is 75 cents; the rate increases with the amount of the legacy and the distance in kinship of the legatee. No city or county is permitted to levy any income or inheritance tax. The tax on insurance companies of other States was raised from 2 to 2½ per cent. on their gross premium receipts, and the fees for agents' licenses were doubled. The tax on premium receipts of home companies was doubled.

This law was criticized as unconstitutional, unjust, impracticable, inquisitorial, and promotive of perjury and litigation. The Fayetteville Chamber of Commerce requested the other chambers in the State to cooperate with it in appealing to the Governor to call a special session of the Legislature to amend it. This the Governor refused to do, saying that he had no reason to believe the Legislature would change the act, and that it could not make radical changes without leaving the treasury bankrupt, or being forced to issue bonds.

The public-school law was amended in important particulars. The bill provides that "if the tax levied for the State for the support of the public schools shall be insufficient to maintain one or more schools in each school district four months, then the Board of Commissioners of each county shall levy a special tax to supply the deficiency." An addition of \$100,000 was made to the annual appropriation for schools, so that the term may extend to the required four months. The law for granting license to teach without examination was repealed. The State board was authorized to consolidate the several normal schools for colored students into a smaller number. Oct. 12 was set apart as North Carolina day, to be observed in the schools. A text-book sub-commission was created and authorized to examine and report upon the best books to be used in the schools; their report goes to the State board; the books when adopted are to be used five years.

A new libel law makes "any person who states, transmits, or delivers by any means whatsoever, to the manager, editor, or publisher of any newspaper or periodical for publication therein, any false and libelous statement," guilty of a misdemeanor.

The management of the Agricultural and Mechanical College was placed in the hands of the State Board of Agriculture, and a board of visitors to act with that board was appointed.

An act designed to prevent the shipment of large quantities of timber to mills outside the State provides that no corporation shall be allowed to hold more than 300 acres of land, or

the timber on more than 300 acres, or the privilege of cutting the timber on more, unless that corporation shall operate mills in the State, at which the timber shall be manufactured. Large companies have been buying or leasing great tracts for this purpose.

A new election law provides for a State Board of Elections, composed of 3 men, of whom not more than 2 shall be of the same political party. The county boards, likewise, shall be composed of 3 persons, only 2 of whom can be of the same party. Of the 4 judges of election, not more than 2 can be of the same political party, and these 2 must be selected from lists of 5 furnished by the county chairman of their party. The clause in the present election law taking away the right of a writ of mandamus is stricken out.

Permanent registration is provided for those entitled to vote under the Constitution.

The board of corporation commissioners was made a board of State tax commissioners with general supervision over assessors and power to revise assessments. New regulations were made as to tax sales and redemption.

The Department of Agriculture was placed under an amended law. Only practical farmers are to be eligible. The commissioner is to be elected for four years and receive a salary of \$2,000. The Governor is to appoint 1 member from each congressional district.

The pension law was amended; there are 4 classes of pensions, carrying \$30 to \$72; veterans totally blind since the war are to receive \$120 a year; widows must have been married before April 1, 1865, in order to be eligible for pensions.

Other enactments were:

Repealing the law prohibiting the formation of a corporation with a capital of more than \$1,000,000.

Requiring corporations transacting business in the State to have an agent there.

Providing for State banks of circulation.

Requiring railroad companies to provide separate and equal accommodations for white and black passengers, except that branch and narrow-gauge lines and mixed trains may be exempted by the Railroad Commissioners.

Providing for a State board of embalming.

Making Labor Day a legal holiday.

Fixing the penalty for gambling in a hotel at not less than \$500 and imprisonment not less than six months—formerly \$10 and thirty days.

Amending the insurance laws.

Revising the antitrust law.

Directing that executions of capital offenders be private.

Making twenty years' imprisonment the maximum penalty for kidnaping.

Providing for defense of officers or persons prosecuted in Federal courts for acts committed in performance of State duties.

Incorporating a State hospital for the dangerous insane.

Authorizing the Corporation Commission to prescribe rates for street-railways.

Requiring railroad companies leaving freight unshipped for more than five days, unless by agreement, to forfeit to the owner \$500 for each day, and damages.

Requiring public warehouse proprietors to give bonds of not less than \$25,000.

Requiring street-railway companies to use vestibule fronts on cars from Nov. 15 to April 1.

Requiring any municipality that has collected a tax or license on property outside the corporate limits to refund the same. This act had unexpected results. Several city charters gave the

privilege of imposing license for the sale of whisky immediately outside the city limits. Under this act suits were entered to compel the return of money so collected.

Extending the time for registering land grants three years.

Increasing the number of Superior Court judges to 16, and redividing the judicial districts.

Authorizing the Governor to appoint 3 examiners to visit State institutions, without notice, and report to him.

Providing that the Commissioner of Agriculture and the State Geologist form a highway commission, select a secretary from the Department of Agriculture, make rules for employment of prisoners on the roads, and have general supervision of roads, bridges, and ferries.

The increase in appropriations for pensions was \$100,000; for public schools, \$100,000; for the judiciary, \$10,000; and for the Corporation Commission and other objects, \$35,000. The amounts to the State institutions were: School for Deaf and Dumb, \$43,500; Institution for Deaf, Dumb, and Blind, \$65,050; University of North Carolina, \$37,500; Normal and Industrial College, \$40,000; North Carolina College of Agriculture and Mechanic Arts, \$30,260.81; Agriculture and Mechanic College (colored), \$10,000; hospital, Raleigh, \$77,750; hospital, Morganton, \$165,000; hospital, Goldsboro, \$75,000; Soldiers' Home, \$13,000; dangerous insane, \$8,000; colored normal schools, \$19,500.

A committee of the Legislature appointed to investigate the accounts in the Treasury Department found a shortage of \$16,550.52 in the State Prison account, due to a defaulting clerk. Most of the amount having been taken during the incumbency of the former Treasurer, W. H. Worth, the present Treasurer made demand upon him for it; he in turn asked it from the surety company in which the defaulting clerk was bonded; but the company refused on the ground that the Treasurer's books were each year examined by a legislative committee and pronounced correct, and but for that the company would never have rebonded Major Martin year after year. Mr. Worth then turned over all his property to his bondsmen to insure them against loss in case the company should be successful in resisting the claim, not even reserving property that could not have been taken under the law. The clerk was sentenced to ten years' hard labor in the Penitentiary.

Historical.—Exercises were held in Raleigh, in November, to inaugurate a movement for erecting a statue in the city of Sir Walter Raleigh.

Preparations are in progress for a celebration next summer of the landing of the Sir Walter Raleigh colony on Roanoke island.

NORTH DAKOTA, a Northwestern State, admitted to the Union Nov. 3, 1889; area, 70,795 square miles. The population was 182,719 in 1890 and 319,146 in 1900. Capital, Bismarck.

Government.—The following were the State officers in 1901: Governor, Frank White; Lieutenant-Governor, David Bartlett; Secretary of State, E. F. Porter; Treasurer, D. H. McMillan; Auditor, A. N. Carl bloom; Attorney-General, O. D. Comstock; Superintendent of Public Instruction, Joseph M. Devine; Adjutant-General, E. S. Miller; Commissioner of Insurance, Ferdinand Leutz; Commissioner of Agriculture and Labor, Rollin J. Turner; Railroad Commission, C. J. Lord, J. F. Shea, J. J. Youngblood; Commissioner of Public Lands, D. J. Laxdahl; Oil Inspector, P. B. Wickham, succeeded in April by L. W. Schruth; Superintendent of Public Health, H. H. Healey; Commissioner of Forestry, W. W.

Barrett till July 1, when the office was abolished; State Examiner, H. A. Langlie, succeeded in March by R. E. Wallace; Chief Veterinarian, J. W. Dunham; Board of Pardons, the Governor, the Chief Justice, the Attorney-General, T. E. Fox, and R. S. Adams; Game Warden, George Watson; Chief Justice of the Supreme Court, Alfred Wallin; Associate Justices, N. C. Young, David E. Morgan. All are Republicans.

The State officers are elected for terms of two years in November of the even-numbered years. The Legislature meets biennially in January of the odd-numbered years.

Finances.—The Treasurer's report for the first half of the year shows the cash balance in all funds at the beginning of the year to have been \$158,164.33. The receipts from all sources in the six months were \$833,060.11. Of this amount, the fees to the several State departments, insurance taxes, and other incidental sources of revenue were \$208,231.60. The insurance companies paid nearly \$40,000 in taxes. Interest and income for the tuition fund amounted to over \$70,000. About \$51,000 was received from the sale of school and institution lands.

Mileage and per diem of the last Legislative Assembly amounted to \$32,521.70; per diem of the officers and employees of the Legislative Assembly, \$26,960. Insurance on public buildings cost \$6,620. About \$1,700 was paid out for expenses of extraditing criminals. Transportation of convicts cost \$2,254, and of patients to the insane asylum \$6,154. For the care of the blind \$1,428 was paid. The permanent school fund paid \$26,700 for purchase of bonds from school districts. The sum of \$19,866 was paid out of the operating fund of the twine and cordage plant. The Treasurer redeemed \$16,787 of wolf bounty certificates.

The total expenditures during the six months were \$743,238.57, and the balance on hand in all funds July 1 was \$247,985.87.

Valuations.—The total valuation of real property, as equalized by the State board, was \$77,739,637. There are 18,929,742 acres of land on the tax rolls. The value of the land, exclusive of structures, is \$62,790,487. Structures on the land are assessed at \$3,450,466. Town lots in the State are assessed at \$4,983,920, and structures on lots at \$6,514,764.

The total value of personal property was fixed at \$27,849,290. Nearly half of this sum is represented by live stock. Elevators are assessed at \$1,519,488, warehouses at \$98,800, and grain therein at \$93,916. The railroad property is valued at \$17,993,367; express companies, \$139,220; telephone companies, \$108,297; telegraph companies, \$287,290.

The rate of taxation for all State purposes was 9 mills.

Education.—The total school population, June 30, was 97,055; in 1900 it was 92,437.

Eight students received degrees at the commencement of the Agricultural College, at Fargo, in June. In the summer more than \$60,000 was expended for new buildings, repairs, and apparatus.

The first law class was graduated at the State University, at Grand Forks, in June. The enrolment was 175 the first day of the fall term.

The Valley City Normal School opened with 102 pupils, 30 more than in the year previous. The graduating class numbers 19.

Penitentiary.—There were 115 prisoners in June, 30 fewer than the year before. Fifty work in the twine factory; about three-fourths of the product had been disposed of. The State sells binder twine to the farmers as nearly as possible at cost.

Products and Industries. The census returns show 1,139 agricultural establishments were reported for North Dakota in 1900. Wage earners employed, 1,239,000; wages, \$1,147,470. The product of agriculture, \$1,147,470.

Flour-milling gave a product of 1,147,470 bushels, or 45 per cent. of the total product of all the manufacturing industries in the State. Between 1890 and 1900 the number of acres of the State increased 6,290,602 acres.

The wheat-crop of 1901 was estimated at 11,000,000 bushels, and the flax-crop at near 11,000,000 bushels. Half of the flax grown in the country is raised in this State.

The corn-product amounts annually to about 1,000,000 bushels; barley, 6,000,000; oats, 1,800,000; and rye, 500,000. The potato-crop amounts to about 2,000,000 bushels, and the hay-crop to 1,500,000 tons. There are more than 100 creameries. The wool-product of 1900 was 1,800,000 pounds.

The largest industrial organization ever formed in the State has been incorporated for the buying, selling, and mining of coal and other lands, the buying and selling of merchandise of all kinds, manufacturing and selling brick, tile, and sewer-pipe, erecting, maintaining, and operating electric railway and telephone-lines, etc. The capital stock is \$1,000,000.

Banks.—The abstract of the condition of the 131 State banks, Sept. 30, shows large gains in the holdings. There was an increase of over \$1,500,000 in the deposits subject to check over the statement of July 15, and of over \$209,000 in certificates of deposit. The total resources of the banks of the State are more than \$9,500,000.

Insurance.—A table giving details of fire insurance in the various States covers for North Dakota the twelve years 1889-1900, and shows that the risks taken in those years aggregate \$285,019,136, while the premiums paid in that time reach \$5,733,147. The total amount paid on life policies in 1900 was \$233,852.

Land.—Some of the school lands were sold in the autumn for the purpose of getting a part of the endowment in productive form. The amount sold was 29,288.13 acres, of which 120 acres were institution land, the remainder being common-school land. The total amount received is \$429,371.23. The highest average price was in Cass County, \$17.43 an acre. The general average was \$14.70.

At Minot, where is one of the five United States land-offices in the State, there were in the year 5,621 original homestead entries.

Legislative Session.—The Legislature convened Jan. 8, and adjourned March 8. Robert M. Pollock was Speaker of the House. On joint ballot there were 92 Republicans and 11 Democrats. During the session 216 laws and 4 resolutions were passed.

A committee was appointed to investigate the departments and report as to their management and the possibility of reducing expenses, and another for devising ways and means for increasing the revenues. Many of their recommendations were embodied in the laws.

It was provided that no party should have more than one list of nominees on the official ballot, and none should be represented by more than one organization. Delegates from caucuses are required to have a plurality only of the votes cast, not a majority, as formerly. The State was redivided into 40 senatorial districts, providing for 40 Senators and 100 Representatives.

Hereafter no insurance company not incorporated under the laws of this State shall write or

place any policy upon property in this State except after the risk has been approved by an agent who is a resident of this State, who shall receive the commission on the premium and make a record of the transaction, to the end that the State shall collect its taxes thereon.

The church property entitled to exemption from taxation was defined as including all real property not exceeding an acre, upon which there is church edifice or a building used for residence of bishop, priest, or rector.

Counties were authorized to issue bonds to buy seed grain for needy farmers, the value of the seed to be a lien upon the crop.

A State board of pardons was created, to consist of the Governor, Attorney-General, Chief Justice of Supreme Court, and 2 electors.

A State board for holding farmers' institutes was created, with an annual appropriation of \$1,500.

A stringent pure-food law was passed.

The tax in cities for public libraries was increased to 4 mills, at the option of voters.

A board of trustees was created for an institute for the feeble-minded at Grafton, with authority to select a site and erect a building.

A new game-law makes the open season for prairie-chickens begin Sept. 1 instead of Aug. 20. The killing of antelope is prohibited for ten years, and the sale of game of any kind is forbidden.

A board of barbers' examiners is created; every practising barber must be examined and pay a license fee.

Insanity was removed from the list of causes for divorce. The remarriage of divorced persons within three months from the time the divorce is granted is prohibited. It is provided that any one speaking disparagingly of the character of a woman shall be liable to a fine and imprisonment in the county jail.

The law for a bounty of \$3 on wolves was repealed, but another was made requiring the commissioners of each county to offer a bounty of \$2 on wolves and coyotes; they may offer \$5 to \$20 on buffalo and timber wolves.

It is made a misdemeanor to expose dressed beef for sale without having the hide on display for ten days.

Among the appropriations were \$88,600 for the Penitentiary; \$32,000 for maintenance of the Capitol for two years; \$5,000 for the Mayville Normal School; \$15,000 for Valley City Normal School; \$14,000 for the State Industrial School at Ellendale; \$17,500 for the Deaf School; \$20,300 for the Soldiers' Home for two years; \$18,000 for the Agricultural College; \$133,100 for the State Asylum at Jamestown.

A special tax of 1 mill was laid upon property for the support of the schools until a fund is realized from the land sales.

Other enactments were:

Abolishing the office of Commissioner of Irrigation and Forestry.

Repealing the law appropriating \$500 annually to promote immigration.

Permitting the sale of real estate by executors or administrators of estates when deemed for the interests of the estate.

Making the penalty for kidnaping five to twenty years imprisonment.

Requiring bonds from contractors on public buildings or works, to protect laborers and those furnishing materials.

Repealing bounties on starch, on spinning fiber, and on twine.

Requiring the minimum of capital of State banks to be \$10,000 in cities of 1,000 inhabitants.

Providing for a levy of a sinking-fund of one-thirtieth of bonded indebtedness of the State each year after 1901.

Providing that the Agricultural College shall cooperate with the United States in completing a survey of the State.

Directing the State Board of Equalization to assess at actual value franchise and property of express, freight, car, telegraph, and telephone companies, and apportioning mileage value to each organized county.

Taxing stock ranged in the State by non-resident owners.

Making it a misdemeanor to deface the United States flag or use it for advertising.

Providing for coal-mine inspection.

The constitutional amendment proposed by the Legislature of 1899 and referred to this, authorizing school funds to be invested in municipal bonds, was not repassed. Four amendments were proposed and referred to the next Legislature, as follow: For empowering the Legislature to provide for taxing grain in storage; for removing the Institution for the Feeble-Minded from Jamestown to Grafton; for changing the name of the Deaf and Dumb Asylum to School for the Deaf and Dumb; regarding sale of public lands.

Decisions on Laws.—Several laws of the State were tested in the courts this year. In May the United States Supreme Court sustained the State law relating to assessments for improvements by municipalities. The question of changes in county boundaries came before the Supreme Court, which held that they were in no wise changed by the act passed by the Legislature in 1895, previously held unconstitutional by the court, or by the curative act passed in 1899. The Attorney-General holds that the law imposing a tax of 50 cents a head on stock grazed through the State in transit is unconstitutional.

OHIO, a Central Western State, admitted to the Union in 1803; area (according to the geological survey), 41,060 square miles, of which 300 are water surface. The population, according to each decennial census since its admission, was 230,760 in 1810; 581,295 in 1820; 937,903 in 1830; 1,519,467 in 1840; 1,980,329 in 1850; 2,339,511 in 1860; 2,665,260 in 1870; 3,198,062 in 1880; 3,672,316 in 1890; and 4,157,545 in 1900. It ranks fourth among the States in point of population. Capital, Columbus.

Government.—The State officers during 1901 were: Governor, George K. Nash; Lieutenant-Governor, John A. Caldwell; Secretary of State, Lewis C. Laylin; Auditor of State, Walter D. Guilbert; Treasurer of State, Isaac B. Cameron; Attorney-General, John M. Sheets; Judges of the Supreme Court, Thad A. Minshall, Marshall J. Williams, Jacob F. Burket, William T. Spear, William Z. Davis, John A. Shauck; Clerk of the Supreme Court, Josiah B. Allen; Commissioner of Common Schools, Lewis D. Bonebrake; Dairy and Food Commissioner, Joseph E. Blackburn; Board of Public Works, Washington G. Johnston, Frank A. Huffman, Charles A. Goddard—all Republicans.

The term of the Governor, Lieutenant-Governor, Treasurer of State, and Attorney-General is two years, beginning in January of the even-numbered years; of the Secretary of State two years, beginning in January of the odd-numbered years; of the Dairy and Food Commissioner two years, beginning in February of the odd-numbered years; of members of the Board of Public Works and Clerk of the Supreme Court three years, beginning in February; of the Commissioner of Common Schools three years, beginning in July; of the

Auditor of State four years, beginning in January of even-numbered years; for judges of the Supreme Court six years, beginning in February. All are elected in November. The Legislature meets biennially in January; there is no limit to the length of the session.

Finances.—The balance in the treasury to the credit of the general revenue fund at the beginning of the fiscal year Nov. 16, 1900, was \$1,151,217.48. The total receipts of this fund during the year ending Nov. 15, 1901, amounted to \$5,272,177.97. The amount paid from the revenue fund during the fiscal year was \$5,196,370.99. During this fiscal year the sum of \$291,961.03 in excess of the previous year was actually paid for expenses of the State Government, owing largely to improvements on the Capitol grounds and buildings, monuments for the Shiloh battle-field, salaries of the Decennial Board of Equalization, expenses of the commissioners at the Pan-American Exposition at Buffalo, and expenses of the topographic survey.

The total receipts of the sinking-fund during the year, including the balance from the preceding year, were \$771,033.63. The total disbursements during the year were \$566,716.72, including a payment upon the funded debt of \$250,000. The funded debt will be totally extinguished by the payment on July 1, 1903.

The receipts of the State common-school fund during the fiscal year ending Nov. 15, 1901, including the balance, were \$1,914,359.41. This was all expended for the purposes of the fund except \$138,591.51 remaining in the treasury at the end of the year. The amount received to the credit of the University fund from taxes was \$364,330.27, and the balance on hand at the beginning of the year was \$84,220.56. During the year payments were made to the Ohio State University, Miami University, Wilberforce University, and Ohio University, at Athens, aggregating \$334,200.17. The total cost of the Government during the year, including general expenses, State debt and interest, common schools and universities, was \$7,873,615.78.

State Institutions.—The State educational, benevolent, and penal institutions include the Ohio State University, at Columbus; Ohio University, at Athens; Miami University, at Oxford; combined normal and industrial department of Wilberforce University; Ohio Institution for the Blind, at Columbus; Ohio Institution for the Education of the Deaf and Dumb, at Columbus; Ohio Institution for the Education of Feeble-Minded Youth, at Columbus; Girls' Industrial Home, at Rathbone; Ohio Soldiers' and Sailors' Home, at Sandusky; Ohio Soldiers' and Sailors' Home, at Xenia; Boys' Industrial School, near Lancaster; Athens State Hospital; Cleveland State Hospital; Columbus State Hospital; Dayton State Hospital; Longview Hospital, at Carthage; Massillon State Hospital; Ohio Hospital for Epileptics, at Gallipolis; Toledo State Hospital; Ohio Penitentiary, at Columbus; Ohio State Reformatory, at Mansfield. Omitting the 4 universities for these institutions, the State expended in 1901 \$3,251,319.96, of which \$2,492,366.64 were for current or ordinary expenses and the remainder for new buildings or permanent improvements. The daily average of inmates of these 17 institutions was 15,885, an increase over the previous year of 824, and the number of employees was 2,267, or 1 employee for each 7 inmates. The average cost per capita of all ordinary expenses and food was \$158.42, but there was a wide range from \$114 per capita in the State Hospital at Athens to \$237.68 in the State Reformatory, at Mansfield.

Military.—The Ohio National Guard is composed of 8 regiments, 1 of which has 12 companies each, 111 of which have 8 companies each, and 28 companies have 4 companies; a battalion of cavalry, and 2 troops of cavalry, and 1 troop of mounted rifles. The total number of men in the Guard is 14,000.

Railroads. The report of the State Commissioner shows that at the beginning of the year there were in the State 3,881 miles of track, a gain of 24.75 miles. The total mileage in this total for 3,881.69, an increase of 24.75. The taxes paid by the railroad companies aggregated \$2,642,400.79 (\$354.47 per mile of track) against \$2,556,946.64 (\$343.67 per mile) the year before. There were 66,249 railroad servants at work in Ohio last year. Of these, 176 were killed at their work and 5,589 (1 in every 12) were hurt. Passengers, 7 killed, 304 hurt; highway travelers, 82 killed, 160 hurt; "trespassers" (tramps, fool-hardy boys, etc.), 342 killed, 394 hurt.

There are 68 electric roads in operation, and 96 new companies (aggregate capital stock, \$24,361,000) were incorporated last year. The trolley companies report their gross earnings last year as \$13,582,851, which is \$2,281,479 more than in the preceding year.

Convict Labor.—By authority of the General Assembly, Gov. Nash appointed a commission of 4 citizens to investigate in regard to the employment of prison labor in the penal and reformatory institutions of the State. On Nov. 15, 1901, the commission submitted its report. It gave as the judgment of the commission that all convicts should be employed a reasonable number of hours each day, and in productive labor, "for without this there can be no health, no discipline, and no progress toward reformation." They further said that "idleness in prisons is dangerous, in that it gives free reign to the passions and is destructive of moral influence."

The Legislature.—There was no adjourned session of the General Assembly in 1901.

Political.—The Republican State Convention was held in Columbus, June 25, and the following ticket was nominated: For Governor, George K. Nash; Lieutenant-Governor, Carl L. Nippert; Judge of Supreme Court, James L. Price; Attorney-General, John M. Sheets; Clerk of Supreme Court, Lawson E. Emerson; Treasurer of State, I. B. Cameron; Member of Board of Public Works, W. G. Johnson. The platform adopted recapitulates and approves the acts of the Republican party, and then proceeds:

"We reaffirm all declarations heretofore made by the Republican party in favor of reciprocity, and urge the making of such additional treaties, based on the protective principle, as will further extend our commerce.

"We favor the further strengthening of our navy, and such legislation as will restore our merchant marine to preeminence upon the sea.

"We urge the speedy construction of an American ship-canal through the American isthmus as an imperative public need.

"We recognize the right of both labor and capital to combine, when such combinations are wisely administered for the general good, but combinations which create monopolies to control prices or limit production are an evil which must be met by effective legislation, vigorously enforced.

"The near expiration by limitation of the Chinese exclusion act calls for a renewal of the wise provisions by which the unrestricted immigration of Chinese into this country has been prevented.

"We demand that representation in Congress and in the electoral college shall be based on the actual voting population, as provided in the Constitution, proportionate reduction being made for any State in which the right of suffrage is denied, except for crime."

A series of resolutions approved the course of the national administration in regard to China, Cuba, Porto Rico, Hawaii, and the Philippine Islands, and approved also the State administration of Gov. Nash. The platform then proceeds to say:

"We favor such revision of the tax laws of the State as will require all classes of property to bear their equal and just share of taxation."

"During the last ten years the General Assembly has increased the revenue of the State by forms of taxation other than by levies upon real and personal property. We favor further legislation in this direction, to the end that the burden of taxation upon property may be lessened, and we denounce as unjust any scheme which aims to cast the entire burden of taxation upon real estate."

The Democratic State Convention was held in Columbus, July 10. The ticket nominated was as follows: For Governor, James Kilbourne; Lieutenant-Governor, Anthony Howells; Supreme Court Judge, Joseph Hidy; Clerk of Supreme Court, Harry R. Young; Attorney-General, M. B. McCarthy; State Treasurer, R. Page Aleshire; Member of Board of Public Works, James B. Holman. The platform makes a declaration of principles and policies, in which it says the government of municipalities of the State should be radically reformed, and wise general laws be enacted to correct abuses and prevent their recurrence.

"The Democratic party therefore calls upon the people to unite with it in placing the conduct of municipal affairs upon a business basis, that they may be administered by the people in the interest of all the people on the principle of home rule. No franchise, extension, or renewal thereof ever to be granted by any city or village without first submitting the same to a vote of the people."

"All public service corporations shall be required by law to make sworn public reports, and the power and duty of visitation and public report shall be conferred upon the proper State and local auditing officers to the end that the true value of the privileges held by these corporations shall be made plain to the people."

"Steam and electric railroads and other corporations possessing public franchises shall be assessed in the same proportion to their salable value as are farms and city real estate."

"The Republican majority of the General Assembly deserves the condemnation of the people for its reckless extravagance and the creation of useless offices, while it enacted no legislation for the benefit of the people."

"The reserved rights of the States and people to be upheld. Centralization which would destroy them to be condemned. A strict construction of the Constitution. The greatest individual liberty consistent with public order and welfare."

"The abolition of the so-called protective system and the substitution in its place of the traditional Democratic policy of a tariff for revenue, so levied as not to burden one industry for the benefit of another."

"We demand the suppression of all trusts and a return to industrial freedom. As a means to that end, all trust products should be placed on the free list and the Government should exercise a more rigid supervision of transportation lines and abolish, in fact, all discrimination in rates."

"Our merchant marine to be restored to its former greatness and made the ally of the people against monopoly by the repeal of antiquated and restricted navigation laws. But no subsidies for favored ship owners."

"The Democratic party has never favored, and now opposes any extension of the national boundaries not meant to carry speedily to all inhabitants full equal rights with ourselves. If these are unfitted by location, face, or character to be formed into self-governing territories and then incorporated into the Union of States in accordance with the historic policy of the republic, they should be permitted to work out their own destiny."

Other resolutions expressed sympathy for the Boers; upheld the Monroe doctrine; favored a navy commensurate with the international importance of the United States; demanded the faithful observance and wider application of civil-service principles, especially as regards our diplomatic and consular representatives; favored a constitutional amendment requiring the election of United States Senators by the direct vote of the people; and upheld the right of labor to combine for the assertion of its rights and the protection of its interests.

The Prohibition convention was held in Akron, May 16, nominated a full ticket, and adopted the usual platform. The only point of special interest in the proceedings was a contest over a plank advocating woman suffrage. Finally all reference to this matter was struck out, and for the first time since 1885 the Prohibition platform contained no plank on that subject. Union-Reform, Social-Labor, and Socialist tickets were also put in nomination.

The election was held Nov. 5, and resulted in the choice of the Republican candidates by pluralities varying from 67,567 for Gov. Nash to 84,663 for Justice Price.

In the election of the Legislature for 1902 the Senate stands—Republicans 21, Democrats 12; House—Republicans 68, Democrats 54.

OKLAHOMA, a Territory of the United States, organized in 1890; area, 38,715 square miles. The population in 1890 was 61,834; in 1900 it was 398,331. Capital, Guthrie.

Government.—The following were the Territorial officers in 1901: Governor, Cassius M. Barnes (Jan. 1 to May 13), William M. Jenkins (May 14 to Nov. 30), Thompson B. Ferguson (Dec. 9-31); Secretary, William M. Jenkins (Jan. 1 to May 13), William Grimes (May 14 to Dec. 31); Treasurer, Frank M. Thompson (Jan. 1 to Sept. 30), Cassius M. Rambo (Oct. 1 to Dec. 31); Attorney-General, J. C. Strang; Auditor and Superintendent of Public Instruction, L. W. Baxter; Chief Justice of the Supreme Court, J. H. Burford; Associate Justices, B. F. Burwell, B. T. Hainer, John L. McAttee, and C. F. Irwin. All are Republicans except Justice McAttee, who is a Gold Democrat.

The chief executive officers of the Territory are appointed by the President. A Territorial election is held in November of the even-numbered years, when the voters elect a Delegate to Congress and members of the Legislature, which holds biennial sessions, beginning in January of odd-numbered years.

Finances.—The special committee to investigate the Treasurer's office reported that the amount in the hands of the Treasurer Feb. 28, 1901, was \$316,752.88. The Treasurer's report showed that on March 30 the cash on hand was \$282,815.46. The total bonded and warrant indebtedness of the Territory was \$412,000. Terri-

torial warrants at that date were worth 0.98 and 0.99 on the market. The Legislature of 1901 authorized the use of the public building fund, amounting to \$125,212.52, in payment of certain indebtedness. The Territorial Board of Equalization in July reported the total valuation of the Territory at \$60,464,696, against \$49,338,661 in 1900, an increase of more than 18 per cent. In January, 1901, the amount to the credit of the common-school fund was \$119,395.95, which was distributed among the districts. The amount of taxes collected for 1900 available in January and June, 1901, was \$228,245.85.

Education.—In his message to the Legislature Gov. Barnes called attention to the report of the Superintendent of Public Instruction, from which it appeared that about one-fifth of the children of school age in Oklahoma did not attend any public school, and that the average daily attendance at all the public schools was but little more than two-thirds of the total enumeration.

Valuable geological researches have recently been made under the auspices of the University of Oklahoma. The work of the university in 1901 was successful. The graduating class in pharmacy, one of the largest ever graduated in the department, numbered 15. The last Legislature appropriated \$90,000 to the university for new buildings and improvements, and these, with a liberal gift of land from the city of Norman, will doubtless insure its permanent location there.

The Territorial Normal School, at Edmond, has completed its first decade. The enrolment for 1900-1901 was about 400.

The enrolment at the Northwestern Normal School, at Alva, reached about 500, and 354 students were enrolled at the opening in September.

Thirty-five students were graduated at the Agricultural and Mechanical College, at Stillwater.

A building for the new preparatory school of the University of Oklahoma has been erected at Tonkawa.

Important sessions were held in January, at Guthrie, by both white and colored Territorial associations of teachers. Both teachers' associations gave earnest attention to a presentation by the superintendent of the Children's Home Society of the work and needs of this "child-saving agency of Oklahoma."

The Insane.—Under the contract of the Territory with the Oklahoma Sanitary Company, an asylum for the insane is provided at Oklahoma City, to which quarterly visits of inspection are made by a committee of medical men appointed by the Governor. The reports during the year were very favorable to the management and success of this institution.

Banks.—At the beginning of 1901 there were on deposit in the banks more than \$6,000,000, or about \$16 for each inhabitant of the Territory. The bank reserve was much greater than the law required. The railroad extensions have led to rapid increase in the number of banks, and the securing of bank locations has become almost a special business. The number of Territorial banks, as shown by the Bank Commissioner's report, March 21, 1901, was 91, a gain of 12 over 1900. July 15, 1901, there were 113 reporting; Sept. 30, 127. At the last date the resources and liabilities amounted to \$8,508,826.17; increase of deposits from July 15, \$811,740.96; increase of loans and discounts, \$646,409.81, equal to 19½ per cent.; increase of cash and sight exchange, \$197,743.24.

Legislative Session.—Among the acts of the Legislature were these:

Providing for additional buildings for the Uni-

versity of Oklahoma; creating a Agricultural and Mechanical College; and authorizing the latter was \$12,000, the sum appropriated by Gov. Barnes, but Congress had already granted a writ requiring it to be paid. The Legislature of the Territory, on the ground that the money was in the Governor's hands, refused to pass a bill within which a veto could be avoided.

Creating a Territorial Board of Agriculture, to consist of 6 members and the Governor, 3 members to be elected by annual sessions of delegates from county farmers' institutes.

To establish a normal school in the southwestern portion of the Territory. In pursuance of this act, Gov. Barnes, in May, appointed a board of regents for this institution, the location of which was assigned to Greer County.

To prohibit the sale or offering for sale or bringing into the Territory for the purpose of sale, or giving away, any cigarettes, cigarette-paper, or substitute thereof, and making it a misdemeanor for any person except parents or guardians either for himself or for another, to give away cigars, chewing-tobacco, or tobacco in any form, to a minor under the age of fifteen years.

To establish at Tonkawa a preparatory school for the University of Oklahoma.

Land Opening.—By a proclamation of President McKinley, July 4, 1901, about 3,000,000 acres of land in the southwestern part of the Territory were opened to settlement under the provisions of the United States homestead and town-site laws. The excitement attending the occupation of the new country aroused an interest throughout the Union only second to that awakened by the original rush to Oklahoma twelve years before. The district was speedily populated, and an official estimate places the present number of settlers at 50,000. The new country has been divided into three counties, named Comanche, Caddo, and Kiowa, after the former Indian reservations in this section. The county-seats are Lawton (Comanche County, estimated population, 8,000); Anadarko (Caddo County, estimated population, 3,000); and Hobart (Kiowa County, estimated population, 3,000).

Productions.—Nowhere is diversification of crops more practicable than in Oklahoma. When any cereal crop is destroyed, in its place may be planted Kafir-corn, cotton, broom-corn, melons, Irish or sweet potatoes, or peanuts. The Territory produces the finest quality of cotton.

The salt industry at Geary has stimulated interest in the development of the salt resources of the Territory, which are said to be ample for the needs of the Southwest.

Oil was found last summer on a farm near Moscow, in Woodward County, with indications that created considerable excitement and increased land values in the vicinity.

Railroads.—The railroad mileage was much increased in 1901. Important extensions into the heart of Oklahoma have been made by the Rock Island Railway Company, chief of which is a line to Lawton and continuing southwest into the center of the newly occupied homestead country. This is a direct branch from the Mangum line, which extends almost due west from Chickasha. Another new branch runs south.

Lawlessness.—In May a resident of Ioland, Day County, was taken from his home by a posse of cattlemen, and hanged. The victim had been suspected of poisoning the water that the cattle drank, and "he was lynched as a warning to others." This is said to have been the first lynching in Oklahoma since the organization of the Territory. In the preceding March a mob had

attempted to lynch a man for murder in Noble County, but was prevented by a sheriff.

Statehood.—A special committee of the Legislature submitted to the President and Congress a memorial in which they said: "We represent a constituency of nearly 500,000 people, increasing with unexampled rapidity, who inhabit nearly 40,000 square miles of fertile soil, and who own \$150,000,000 of wealth produced in a single decade from the wild prairies and the wilderness. They have built and are supporting more than 2,000 common schools, 6 great institutions of learning, and more churches according to population and wealth than anywhere else in the world. They are a law-abiding and a law-enforcing people. We submit that such a people ought not to be longer held in political subjection, but are and of right ought to be entitled to immediate admission into the American Union."

Political.—The retirement of Cassius M. Barnes, the fourth Governor of Oklahoma, and the inauguration of William M. Jenkins, the fifth, marked a period of deep interest to the people of the Territory. During the three years of Gov. Barnes's administration there had been remarkable development in all directions, and the new executive entered upon his office at a moment when opportunities were to be still further enlarged, and when the prospects of Oklahoma were particularly bright.

OREGON, a Pacific coast State, admitted to the Union Feb. 14, 1859; area, 94,560 square miles. The population was 13,294 in 1850; 52,465 in 1860; 90,923 in 1870; 174,768 in 1880; 313,767 in 1890; and 413,536 in 1900. Capital, Salem.

Government.—The following were the State officers in 1901: Governor, Theodore T. Geer; Secretary of State and Auditor, Frank I. Dunbar; Treasurer, Charles S. Moore; Attorney-General, R. D. N. Blackburn; Superintendent of Public Instruction, J. H. Ackerman; Adjutant-General, C. U. Gantenbein; Chief Justice of the Supreme Court, Charles E. Wolverton; Associate Justices, Robert S. Bean and Frank A. Moore; Clerk, J. J. Murphy—all Republicans.

The term of the State officers is four years, and they are elected in June of even-numbered years, alternating with the presidential elections. In June of all the even-numbered years members of Congress, the Legislature, and a justice of the Supreme Court are elected. The Legislature holds biennial sessions, beginning in January of odd-numbered years, and continuing forty days. It consists of 30 Senators, elected for four years, and 60 representatives.

Population.—According to a Census Office bulletin 56.3 per cent. of Oregon's population are males. The males number 232,985; females, 180,551; native-born population, 347,788; foreign-born, 65,748. The population consists of 394,582 whites, 10,397 Chinese, 4,951 Indians, 2,501 Japanese, and 1,105 negroes. The white population is mostly native, 256,125 being born of native parents and 84,596 of foreign parents, while the foreign whites number 53,861. In the city of Portland there were 34,777 native and 18,351 foreign-born males, and 29,773 native and 7,525 foreign-born females; 9,138 colored males, all Chinese and Japanese, except 458 negroes and 763 colored females.

Finances.—The fixed, or current, expenses of the State amount annually to nearly \$620,000. To raise this sum annually a levy of 5.16 mills upon an assessed valuation of \$120,000,000 is necessary. The Treasurer reminds the taxpayers that the revenue needed will increase from year to year, and makes recommendations for raising it.

The receipts of the treasury for 1900 were \$1,894,004.59; disbursements, \$1,690,697.62; balance Dec. 31, \$944,623.40.

The Treasurer's report for the six months ending June 30, 1901, gives the receipts for that period, including the balance at the close of 1900, as \$2,053,123.54; disbursements, \$958,185.43; balance July 1, 1901, \$1,094,938.11. The receipts of the general fund were \$615,980.17, and the disbursements \$465,878.58. The receipts of the common-school fund were, principal \$246,849.28, and interest \$79,619.14; disbursements from the principal, \$297,497.10, and from the interest, \$7,704.01.

From the report of the Treasurer for the six months ending Dec. 31, 1901, it appears that the receipts, including the balance of July 1, were \$1,759,246.46; disbursements, \$930,949.21; balance Jan. 1, 1902, \$828,297.25. The receipts of the general fund for the second six months were \$170,403.09, and the disbursements \$391,653.77. The receipts of the common-school fund were, principal \$285,321.65, and interest \$103,306.48; disbursements from the principal \$270,531.30, and from the interest \$175,903.97. July 20 the aggregate of funds loaned to the counties on account of the common-school fund was \$2,210,400.57; Agricultural College fund notes, \$131,556.37; university fund notes, \$83,997.31. In 1901 the loans from the common-school fund made a net gain of \$218,000, representing the increase of the interest-drawing fund whereby the revenue of the common schools was increased about \$13,000 a year. The total amount of outstanding notes of the school fund, Dec. 31, was \$2,308,371.49, against \$2,090,623.32 the preceding year.

The revenue of 1901 was \$670,000. Under an act of the Legislature of that year, each county will hereafter contribute to the expenses of the State in the proportion of its average assessments to those of all the counties for five years past.

Education.—Statistics for the year ending March 4 showed a school population of 135,818, a gain of 2,637 over 1900. There were losses in the northwestern counties, which were more than offset by the increase in the southern and eastern parts of the State. On the basis of the school population the Treasurer, Aug. 1, made the annual apportionment, distributing \$165,697.96, the proceeds of the irreducible common-school fund, among the counties. In 1900 the per capita was \$1.56; in 1901 it was \$1.22. The amount disbursed in 1900 was unusually large, owing to the fact that in order to secure a reduction in the rate of interest on their loans, borrowers had been paying up arrearages of interest. The rate of interest was cut from 8 to 6 per cent., and this accounts for a part of the decrease in the amount disbursed.

The State University, at Eugene, in June completed the twenty-fifth year of its work, and commemorative exercises were held. The number of instructors during the year was 62; number of students, 456; graduates, with the bachelor's degree, 31; volumes in the library, 15,000. A new light and power station was provided for by the last Legislature. There were substantial additions last year to the corps of instructors and to the general equipment.

The Agricultural College, at Corvallis, had an enrollment of 430, and an average attendance larger than in any previous year. The graduates in June numbered 34. A new business course has been established. The new mechanical hall is finely equipped. The regents made arrangements early in the year for carrying out the act of the last Legislature for establishing an experiment station at Union. Six hundred acres of branch-

asylum lands have been deeded to the college for this purpose. The action of the regents in 1900 prohibiting participation by the students in intercollegiate athletic contests was followed last year by the adoption of a resolution permitting such competition, provided that agreement should be had with other colleges for reforming the rules governing the games.

The Monmouth Normal School graduated a class of 24; Eastern Oregon State Normal School, at Weston, 11; Southern Oregon State Normal School, at Ashland, 4; Albany College, 15.

In July the Oregon Text-Book Commissioners finished their work of selecting text-books for adoption by the State, which were to be in use in all the schools within fifteen months. The estimated cost of the change of books was about \$99,600, or \$1.10 per pupil.

Charities and Corrections.—The legislative committee for the inspection of the Oregon Soldiers' Home made a satisfactory report of its condition, and recommended a general appropriation of \$24,000 and several special appropriations.

Feb. 18 the patients at the Oregon Insane Asylum numbered 1,200, more than there had ever been before at one time. In July there were 1,236 under treatment.

March 31 the number of convicts in the Oregon Penitentiary was 295, an increase of 17 from the beginning of the year.

Productions.—The wheat-crop of 1901 was estimated at more than 14,000,000 bushels, about half that of Washington. The hop production, which in 1900 reached 82,000 bales, was estimated in 1901 at 60,000 to 65,000 bales, but the crop was said to be of the first quality. In October the Secretary of Agriculture estimated the beet-sugar production of Oregon at 2,000 tons, the same as that of Washington. In November the estimate of the salmon pack, spring and autumn, placed it at about 240,000 cases.

The report of Oregon manufactures for 1900 returns 3,088 establishments, against 1,523 in 1890. The capital represented in 1900 was \$33,422,393; salaries, \$1,323,155; average number of wage-earners, 17,236; total wages, \$8,333,433. The miscellaneous expenses were \$2,242,795; cost of materials used, \$26,099,853; value of products, including custom work and repairing, \$46,000,587. The percentage of population engaged in manufactures was 4.2. The assessed value of real estate represented was \$117,804,874; value of land and buildings invested in manufactures, exclusive of rented property, \$10,282,493. The share of Multnomah County in the total value of manufactures was \$24,750,579, and that of the city of Portland \$23,451,132.

Among the more important industries in which gains were made between 1890 and 1900 were fish canning and preserving, flouring and grist-mill operations, lumber manufacture and woodworking, wooden ship-building and boat-building, slaughtering and meat-packing, and the manufacture of woolen goods.

About 900,000,000 feet of lumber were sawed in Oregon in 1900, the value of which was \$8,802,500. The output of 1901 was much larger, about one-third of the whole being cut in Portland.

The Oregon Women's Flax Fiber Association has demonstrated the practicability of establishing a profitable flax-growing industry in the State. The association has received encouragement from the United States Department of Agriculture, to which its samples have been submitted, and is making earnest and well-directed efforts to place the industry under State control.

Under direction of the United States Department of Agriculture, a large amount of work has been made of the poison which has been doing great loss to the stock-raising industry. The expert of the department has been sent to the State, as well as through the various counties, to spread poisonous plants, such as the yellow canna, camass, larkspur, water hemlock, etc.

Legislative Session.—The Legislature convened on Jan. 14, 1901, with John H. Mitchell United States Senator. Among the enactments of the session were the following:

Relating to primary elections in cities of more than 10,000 inhabitants, and to counties of 50,000 or more, and such other counties as may voluntarily adopt the act. The act is to govern all the operations of political parties within a single county.

Looking to the election of United States Senators by direct vote of the people.

For the protection of union labels.

Providing for submission to the people of the amendment for the initiative and referendum. Thereby 8 per cent. of the voters may propose any amendment to the Constitution, or any desired law to be voted upon at a general election. Furthermore, on petition of 5 per cent. of the voters, approval or disapproval of any State legislation, except some emergency laws, is, under the initiative and referendum, left to the vote of the people.

Creating the office of State bacteriologist.

Providing for enforcement of respect for the United States flag.

Enacting the Torrens system of public-land registration.

A new bicycle law, authorizing county courts to construct bicycle paths and to levy a license tax of \$1 upon each person riding a bicycle in the county.

Providing for a \$3 road poll-tax, from which active members of the National Guard are exempt.

Establishing an experiment station at Union.

Making personal property taxable in the city or county where it is located.

Appropriating \$8,000 for a monument to the Oregon soldiers.

A new game code, and a new scalp-bounty law.

The general and special appropriations of this Legislature were considerably larger than those of the one preceding. The total amount in 1899 was \$1,389,044.25; in 1901, \$1,792,911.88. Of this sum, \$787,222.43 was for State institutions.

Scalp Bounty.—The amount of bounty warrants issued under the old law was \$120,000. Upon these there was due in September, 1901, about \$12,000 interest, making a total of \$132,000. The last Legislature levied a tax of 1 mill, which produced approximately \$117,000, which sum has been paid into the State treasury from the several counties.

Transportation.—Oregon has about 2,000 miles of railroad. A recent addition is that of the Columbia Southern, which in October had in operation 70 miles, from Biggs to Shaniko, and was projected 100 miles farther south. It is allied with the Oregon Railroad and Navigation Company, which has about 600 miles of track, besides its 290 miles of water lines in the State. The Southern Pacific Company now operates about 700 miles in Oregon.

Portland.—Many laws of the last Legislature affecting Portland have an important bearing upon the administration and expenditures of the city, making, on the whole, a large reduction of expenses. The Portland charter bill, which the Legislature passed, was vetoed by the Governor.

The city's charter commission, which consists of 33 members, representing the political and business interests of Portland, will submit a charter to a vote of the people in 1902. If ratified, it will be presented to the Legislature of 1903 for "approval or rejection, as a whole, without the power of alteration or amendment."

Trolley-lines now connect Portland with Oregon City, 15 miles south, and with Vancouver, Wash., 7 miles away.

State Monument.—In honor of the 52 men who organized the provisional Government of Oregon, May 2, 1843, a monument erected by the State was unveiled May 2, 1901, at Champoege. The monument is of polished Oregon granite, 7 feet high, including the pedestal. On its face it bears the following inscription: "Erected on Thursday, May 2, 1901, in honor of the first American Government on the Pacific coast, organized here Tuesday, May 2, 1843, 52 persons voting for, 50 against. The names of the former, as far as obtainable, are hereon inscribed."

Centennial.—The official name of the exposition to be held at Portland in 1905, as decided upon by the Oregon and Washington commissioners, is "The Lewis-and-Clark Centennial and American-Pacific Exposition." The legend chosen to lead the title-pages of all the literature on the subject is the familiar clause, "Where rolls the Oregon," from Bryant's *Thanatopsis*.

PENNSYLVANIA. A Middle State, one of the original thirteen, ratified the Constitution Dec. 12, 1787; area, 45,215 square miles. The population, according to each decennial census, was 434,373 in 1790; 602,365 in 1800; 810,091 in 1810; 1,047,507 in 1820; 1,348,233 in 1830; 1,724,033 in 1840; 2,311,786 in 1850; 2,906,215 in 1860; 3,521,951 in 1870; 4,282,891 in 1880; 5,258,014 in 1890; and 6,302,115 in 1900. Capital, Harrisburg.

Government.—The following were the State officers in 1901: Governor, William A. Stone; Lieutenant-Governor, J. P. S. Gobin; Secretary of the Commonwealth, William W. Griest; Secretary of Internal Affairs, James W. Latta; Treasurer, James E. Barnett; Auditor-General, E. B. Hardenbergh; Attorney-General, John P. Elkin; Adjutant-General, Thomas J. Stewart; Superintendent of Public Instruction, N. C. Schaeffer; Insurance Commissioner, Israel W. Durham; Commissioner of Banking, Frank Reeder; Secretary of Agriculture, John Hamilton; Commissioner of Forestry, J. H. Rothrock; Dairy and Food Commissioner, Jesse Cope; Zoologist, H. T. Fernald; Factory Inspector, James Campbell; Veterinarian, Leonard Pierson; Librarian, George E. Reed; Superintendent of Public Buildings and Grounds, T. L. Eyre; Chief Justice of the Supreme Court, J. B. McCollum; Associate Justices, J. Hay Brown, James T. Mitchell, William P. Potter, John Dean, D. Newlin Fell, and S. L. Mestrezat; Prothonotaries, Charles S. Greene, William Pearson, and George Pearson; Justices of the Superior Court, C. E. Rice, J. A. Beaver, William D. Porter, George B. Orlady, P. P. Smith, William W. Porter, and John I. Mitchell. N. C. Schaeffer and Judges McCollum and Smith are Democrats; the others are Republicans.

The Governor, Lieutenant-Governor, and Secretary of Internal Affairs are elected in even-numbered years for a term of four years; the Treasurer in odd-numbered years for a term of two years. The Secretary of the Commonwealth, the Attorney-General, and the Adjutant-General are appointed by the Governor at pleasure, and the Superintendent of Public Instruction for four years. The Legislature holds biennial sessions, beginning in January of odd-numbered years.

Senators are elected for four years, and Representatives for two years.

Finances.—For 1901 the State revenues were estimated by the Treasurer in March at \$13,125,503.50, and the expenses at \$12,684,871.50. In items of expense the Treasurer included \$6,000,000 for the public schools and \$100,000 for purchase of land for State forestry reservations. The estimates contemplated the restoring of \$500,000 deducted from the school appropriation two years before. The Treasurer's estimates did not include any expenditure for the State Capitol, for which the Legislature had appropriated \$4,000,000. A large part of the increase in net receipts for 1900 came from delayed payments for 1899. The net indebtedness of the State has been reduced to less than \$800,000. No State loans will fall due till 1912.

"On the whole," the Treasurer says, "the business of the department has felt the prosperous condition of the country in a marked degree, both in the prompt payment of taxes and in the increased receipts."

Valuation and Taxation.—As shown by the latest report of the Secretary of Internal Affairs, the value of all real estate is \$3,069,371,624, an excess over the figures of the preceding report of \$41,722,325. In Philadelphia County the year's increase was from \$985,682,064 to \$1,003,899,449, and in Allegheny County from \$540,490,185 to \$549,301,515. The value of real estate exempt from taxation is stated at \$302,541,939, against \$299,485,963 for the year previous. Of taxable real estate, the total amount is given as \$2,766,829,685, a gain over the year before of \$38,666,349. The total amount of taxes collected for all purposes is reported at \$57,649,889, against \$55,808,585 the previous year. Of this the amount assessed for State purposes is \$2,900,536. The year before it was \$2,732,757.

Education.—The annual report of the Superintendent of Public Instruction for the year ending June 30, 1901, presents these facts concerning the public schools: Number of school districts, 2,516; schools, 29,046; graded schools, 16,625; male teachers, 9,194; female teachers, 20,850; average salary of male teachers per month, \$44.14; average salary of female teachers per month, \$38.23; whole number of pupils, 1,161,524; average attendance, 847,445; teachers' wages, \$11,355,334.47; cost of text-books, \$766,987.10; cost of other supplies, \$433,597.76; fuel, contingencies, fees of collectors, and other expenses, \$5,275,382.32; total expenditures, \$22,813,395.14.

The new compulsory education law, approved July, 1901, went into effect in September. The age limit includes all children between eight and sixteen years, and provides that those between thirteen and sixteen may be excused if they can read and write the English language intelligently and are regularly employed.

Building and Loan Associations.—The annual report of the Banking Department furnishes these figures upon building and loan associations: Number chartered under the laws of the State reporting to the department, 1,155. Assets, total, 1900, \$110,493,510.31; 1899, \$112,120,436.61; decrease, \$1,626,926.30. Liabilities, total, 1900, \$110,493,510.31; 1899, \$112,120,436.61; decrease, \$1,626,926.30. Receipts, total, 1900, \$55,565,030.19; 1899, \$53,137,355.77; increase, \$2,427,674.42. Disbursements, total, 1900, \$55,565,030.19; 1899, \$53,137,355.77; increase, \$2,427,674.42.

Banking.—The Commissioner of Banking, in the annual report of his department, returned the following corporations as under its supervision Nov. 30, 1900: Banks, 101; trust companies, 111;

savings institutions, 17. Statement of capital: Banks, \$8,774,380; savings institutions, \$110,200; trust companies, \$41,682,615; total, \$50,567,195; increase over 1899, \$5,450,577.50. Surplus: Banks, \$6,517,978.50; savings institutions, \$7,758,754.99; trust companies, \$21,932,994.30; total, \$36,209,727.79; increase over 1899, \$9,613,869.54. Deposits: Banks, \$79,031,082.19; savings institutions, \$107,621,381.19; trust companies, \$168,824,969.11; total, \$355,477,432.49; increase over 1899, \$30,596,726.65.

Insurance.—From the annual report of the Insurance Department it appears that the life insurance business done in the State in 1900 was as follows: The companies of the State issued 8,480 policies, insuring \$23,562,971 upon the lives of residents of the State, an increase over the preceding year of 864 policies and \$3,467,512 insurance. Companies of other States issued 637,944 policies in Pennsylvania, insuring \$195,165,204. The total losses paid by all life companies in the State in 1900 was \$12,458,677.49, of which home companies paid \$1,485,217.90 and companies of other States \$10,973,459.59. The expenditures of Pennsylvania companies in 1900 were \$13,905,739, of which \$9,423,616.35 was paid to policyholders.

The fire and marine insurance business of 1900 is thus summarized: Number of joint-stock companies, 36; assets, \$45,468,198; liabilities, except capital, \$23,611,707; capital, \$11,702,875; surplus, \$10,166,584; premiums received, \$17,971,288; total receipts, \$20,633,184; losses paid, \$11,978,839; dividends paid, \$1,248,969; disbursements, \$20,747,935; risks in force, \$2,802,971,128. The increase in fire risks over 1899 was \$1,227,174,817; in marine and inland risks, \$553,772,260; in fire losses paid, \$3,902,212.95; decrease in marine and inland losses paid, \$1,473,349.62.

Railroads.—The report of the State Bureau of Railways, covering the year ending June 30, 1901, gives the capitalization of the steam railroads of Pennsylvania as \$3,086,690,205, which is nearly one-third of the entire railroad capitalization of the United States. The assets were \$3,200,353,755; total mileage, 26,975.86; mileage in Pennsylvania, 10,697.68—more than in any other State except Illinois; locomotives, 12,133; passenger-cars, 10,930; freight-cars, 537,409; employees, 335,865, an increase during the year of 28,128; compensation to employees, \$189,204,533, an increase for the year of more than 7 per cent; total income, \$534,214,627, against \$498,012,493 in 1900. The total expenditures of all kinds, excepting dividends, were \$467,159,172; dividends paid, \$38,610,816.

The same report says: "This year the total earnings of street-railways from operation were \$26,424,396; income from other sources, \$973,747. There were paid out for operating expenses \$13,111,492; for taxes, \$1,676,746; interest on funded indebtedness, \$2,336,753; rentals, \$6,473,729; other expenses, \$938,170. To this may be added dividends paid, \$1,506,289, making a total of \$26,038,159. Now the length of single-track and branches operated is 1,768.90 miles, with a total length of all tracks of 2,167.91 miles.

Industrial.—The annual report of the Bureau of Industrial Statistics, submitted July 1, 1901, gives these figures for the pig-iron production in 1900: Capital invested, \$72,188,784; gross tons, 6,371,688; realized value, \$105,499,923; average realized value per ton, \$16.55; average days in operation, 323; working people employed, 15,785; aggregate wages paid, \$8,500,194; average earnings for the year, \$538.50; average daily wage, \$1.67.

The production of pig-iron in 1900 was: Bessemer, 4,500,000 tons; open-hearth, 1,871,688 tons; crucible, 64,500 tons; total, 6,371,688 tons. The value of the production was \$105,499,923.

The production of pig-iron in 1900 was: Bessemer, 4,500,000 tons; open-hearth, 1,871,688 tons; crucible, 64,500 tons; total, 6,371,688 tons. The value of the production was \$105,499,923.

The combined production of tin and tenné plate by the black-plate works (17 plants) and the dipping works (6 plants) was 297,854,000 pounds, having a total value of \$13,044,487, and an average value per 100 pounds of \$4.38.

For the year ending June 30, 1900, there were 127 glass factories reported as having plants, machinery, etc., valued at \$22,162,429, and employing 23,033 workmen, a little less than half of whom were classed as skilled. The aggregate wages amounted to \$10,548,257; average earnings for the year, \$457.96; average daily wage, \$1.95, varying from \$3.03 for skilled workmen to \$1.32 for unskilled, 84 cents for women, and 60 cents for children. The market or selling value of the products was \$21,186,246.

The report of the Bureau of Mines for 1900, presented May 1, 1901, states that the strike in the anthracite region, in September and October, caused a decrease in the production of anthracite from 54,034,224 tons in 1899 to 51,217,318 tons in 1900. The production of bituminous coal in 1900 was 79,318,362 tons, an increase of 6,251,419 tons over 1899. The combined production of anthracite and bituminous coal reached a grand total of 130,535,680 tons, an increase over that of 1899 of 3,434,408 tons, and the largest production for a single year. In 1900 the production of coke was 12,185,112 tons, a decrease of 7,458 tons from that of 1899. The number of employees in and about the anthracite mines in 1900 was 143,826—3,243 more than in 1899; in and about the bituminous mines, 109,018, an increase of 17,578 over 1899. The reduction of fatalities, compared with 1899, was 103, or 0.39 per cent. per 1,000 persons employed.

As reported by the Secretary of Agriculture, the number of horses and mules returned in 1900 was 618,234—probably fewer than half the actual number owned in the State—of which the value was given at \$24,520,924; number of neat cattle under four years of age, 637,109, valued at \$12,070,073. The cows were estimated at about 1,100,000, producing nearly 100,000,000 pounds of butter annually, from which the income was nearly \$20,000,000, while the milk product was valued at \$35,000,000.

Legislative Session.—The general appropriation of the Legislature of 1901 carried more than \$15,900,000 for payment of the ordinary expenses of the State Government for the ensuing biennial period. The appropriation for public schools was \$11,000,000. The grand total of all appropriations was \$28,427,575.33. From this amount a reduction of about \$2,250,000 was made by the Governor for the purpose of keeping within the estimated State revenues for the biennial period, which were \$26,500,000.

There were enacted 541 laws, of which 386 were repeals, and 40 resolutions were approved by both houses. Some of the measures enacted were:

Providing for submission at the next general election of three constitutional amendments: (1) Requiring personal registration of votes; (2) pro-

viding that personal registration laws may be enacted to apply to cities only; (3) authorizing the use of voting-machines at elections.

A new charter act, allowing the formation of corporations for any lawful purpose.

To enforce the provisions of section 4, Article XVII of the Constitution. It provides that no railroad or transporting company shall consolidate with or own a controlling interest in parallel or competing companies.

Providing that it shall be a misdemeanor for any person connected with any line of telegraph or telephone within the State to divulge the contents of any despatch.

Prohibiting the employment of children under eighteen years of age for theatrical or athletic performances, without the consent of their parents or guardians.

To provide for the centralization of high schools, and to provide high schools for townships.

Making it unlawful for first cousins to be joined in marriage.

To encourage the planting of trees along the roadsides.

Prohibiting the sale and furnishing of tobacco to persons under sixteen years of age.

Providing for the establishment of night-schools for manual training.

For the erection of a monument to John Burns, of Gettysburg, who served in the Iron Brigade.

For registration and protection of trade-marks.

Making it a felony to take the waste or packing from any journal-box of a locomotive—"an act apparently aimed at violence to prevent the running of trains."

Requiring an examination as to competency for plumbers.

Creating a forestry commission.

Judicial Decisions.—In October the Supreme Court handed down a decision declaring certain acts of the Legislature of 1901, popularly known as the "ripper" bills, to be unconstitutional on the ground of special legislation. The bills provided for the election of 3 persons in each county that is coextensive in boundary with a city of the first class, "to serve as members of the Board of Revision of Taxes," etc. "This description," says the court, "can not apply, either at the present time or in the proximate future, to any county but Philadelphia, and for that reason the act is distinctly local and special."

A Superior Court decision in October, confirming the ruling of the Quarter Sessions Court of Philadelphia, declared that any ingredient injurious to health can not be used as a food preservative, even in quantities not harmful, without violating the pure-food act of 1895.

Mason and Dixon's Line.—In the reestablishment of this famous boundary good progress had been made at the end of the year. Such stones as remain in fit condition are reset in solid cement bases, and missing and broken stones are replaced with iron markers. The boundary stones are a mile apart. They have "M" on the Maryland side and "P" on the Pennsylvania side. The 5-mile stones are larger than the others, and have on the Maryland side the coat of arms of Lord Baltimore and on the Pennsylvania side the coat of arms of the Penns.

Floods.—Storms and floods of memorable severity occurred in April in the western part of Pennsylvania, Pittsburg and Allegheny suffering immense property losses, and many other places adding to the list of damages and disasters. In December the eastern and central portions of the State were visited by a still more widespread

disturbance, involving loss of life as well as enormous destruction of property.

Political.—At the election in November Frank G. Harris, Republican, was elected State Treasurer by a plurality over E. A. Coray, the Democratic candidate, of 131,543. Coray also received 93,213 votes as the Union candidate and 4,302 as candidate of the Municipal League, while the vote of Harris was increased by 11,542 cast by the Public-Opinion voters, who made him their candidate. Porter, Prohibitionist candidate, received 18,044 votes. William P. Potter, Republican, was elected a justice of the Supreme Court. The 3 constitutional amendments submitted to the voters were carried at the polls.

RHODE ISLAND, a New England State, one of the original thirteen, ratified the Constitution May 29, 1790; area, 1,250 square miles. The population, according to each decennial census, was 68,825 in 1790; 69,122 in 1800; 76,931 in 1810; 83,015 in 1820; 97,199 in 1830; 108,830 in 1840; 147,545 in 1850; 174,620 in 1860; 217,353 in 1870; 276,531 in 1880; 345,506 in 1890; and 428,556 in 1900. Capital, Providence.

Government.—The following were the State officers in 1901: Governor, William Gregory; Lieutenant-Governor, Charles D. Kimball; Secretary of State, Charles P. Bennett; Treasurer, Walter A. Read; Attorney-General, Willard B. Tanner; Auditor and Insurance Commissioner, Charles C. Gray; Commissioner of Education, Thomas B. Stockwell; Adjutant-General, Frederick M. Sackett; Railroad Commissioner, E. L. Freeman; Commissioner of Industrial Statistics, Henry E. Tiepke; Record Commissioner, R. Hammett Tilley; Factory Inspectors, J. Ellery Hudson, Helen M. Jenks; Surgeon-General, George H. Kenyon; Inspector of Beef and Pork, James R. Chase; Inspector of Lime, Herbert Harris; Commissioners of Sinking-Funds, John W. Danielson and Henry B. Metcalf; Inspector of Cables, S. B. Hoxsie, Jr.; Inspector of Scythe Stones, W. H. Comstock; Chief Justice of the Supreme Court, John H. Stiness; Associate Justices, Pardon E. Tillinghast, George A. Wilbur, Horatio Rogers, W. W. Douglas, Edward C. Dubois, and John T. Blodgett; Clerk, B. S. Blaisdell. All the State officers are Republicans.

The State officers are elected annually in November, the term beginning in the following January. The Legislature holds annual sessions, beginning in January. The length of the sessions is not limited, but the legislators can draw pay for only sixty days.

Population.—A census bulletin published Sept. 10, 1901, gives the population by sex, nativity, and color in the State as follow: Males, 210,516; females, 218,040; foreign born, 134,519; colored, 9,506, of which 9,092 are negroes, 266 Chinese, 13 Japanese, and 35 Indians. The State had in 1900 7,524 more females than males. The foreign-born element constitutes a large proportion of the total population, being nearly one-third, or 31.4 per cent.

This is the analysis for Providence: Males, 57,864 native, 27,208 foreign born, 2,548 colored; females, 61,878 native, 28,647 foreign born, 2,548 colored.

Finances.—The balance in the treasury Dec. 31, 1900, was \$178,589.08; receipts for the year ending Dec. 31, 1901, \$1,577,294.41; total, \$1,755,883.49; payments for the year, \$1,597,505.78; cash in hand at the end of the year, \$158,377.71. The Treasurer's estimates of receipts for 1902 amounted to \$1,515,450, and of payments, exclusive of temporary or special appropriations, to \$1,344,835; estimated balance in the treasury Dec. 31,

1902, \$328,887.71. Of the \$3,000,000 of State-house construction loan bonds which had been issued, bonds amounting to \$22,000 were retired during the year, leaving a total bonded indebtedness of \$2,978,000, while the amount of interest paid on the bonds was \$87,000.

The statement of the sinking-fund is as follows: Balance Dec. 31, 1900, \$338,036.35; Treasurer's check, \$32,000; premium on sale of third State-house bonds, \$28,770; interest on investments for 1901, \$13,185.50; total, \$411,991.85; bonds due in 1904 purchased and retired, \$22,555.24; total, \$389,436.61. The State-house construction loan account had a balance Jan. 1, 1901, of \$119,775.61; interest on deposit, \$3,081.03; sale of third State-house bonds, \$700,000; miscellaneous, \$10; total, \$822,866.64; payments to Dec. 27, 1901, \$350,981.49; cash available, \$471,885.15.

All work on the State-house is expected to be finished during the current year, and the entire cost as estimated by the Board of State-house Commissioners will be \$3,114,402, of which the total cost to the State will be \$2,924,402, the land given by the city of Providence being valued at \$190,000. The cost of the building proper, including boiler-house and tunnel, is placed at \$1,953,821.49.

In further settlement of the State's Spanish War claims against the Federal Government

the total amount of cash returned to the State treasury during the year, including interest on deposit, was \$74,071.51.

Education.—The school enrolment in 1900 was 64,537, or 15.39 per cent. of the population of the State; average daily attendance, 46,087; total number of teachers, 1,913.

Brown University had in 1901 899 students and 75 instructors. The library had grown to 115,000 volumes.

The State College of Agriculture, at Kingston Hill, opened for the winter term with 88 students in the regular and special courses, of whom 10 were natives of other States, and 6 natives of Cuba, 1 of Porto Rico, and 1 of Costa Rica. In addition to these students there were in December 30 applicants for admission to the special poultry course. During the year there were between 40 and 50 special students in agriculture, and 90 in engineering. In January, 1901, the college suffered a loss of about \$3,500 by the burning of its stable, on which there was no insurance. The student's fire brigade rendered valuable service in saving other college buildings.

At the State Home and School, where regular quarters are provided for 125 children, more than that number require the care of the institution, and the growing demand for enlargement of its facilities is receiving official recognition by the erection of a new double cottage. The average number in the home for the year was 143.

At the Institute for the Deaf the average number of pupils was 67.

Charities and Corrections. The new buildings for the relief of the poor, the State Hospital for the Insane, and the new building with a seating capacity for 100 patients, a new building for cooking and dining, a new boiler-house, and a ward building, were completed.

The number of soldiers and sailors in the quarters of the Soldiers' Home, at Barrington, was 185. The average number of patients in the year was the largest in the history of the home, and the quarters were practically full. The number of persons aided during the year from the relief fund of \$12,000 was more than 100.

At the sixth annual meeting of the Association of the Overseers of the Poor for the State there was a large attendance and excellent work for the year was reported. The attention of the association was especially given to the subject of more equitable settlement laws, and a committee was appointed to bring this question before the Legislature.

A report was made at the annual meeting of the Rhode Island Society for the Prevention of Cruelty to Children, surveying and summarizing its work for twenty years. The statement for 1901 showed that 291 new cases had been dealt with in the year, involving 578 children.

Militia.—Continued improvement in the brigade of militia is officially noted, and at the last summer encampment the attendance was larger than ever. Increased interest in rifle-practise was shown by the attendance of 837 at the range, the number of men qualified being 735, the largest in the history of the State militia.

Banks.—For the year ending June 29, 1901, returns were filed by 34 savings banks and institutions, 9 of which were in process of liquidation. The aggregate resources were \$78,529,180.94, an increase of \$15,690.72 since Nov. 20, 1900. The amount of deposits was \$74,390,794.86, a decrease of \$455,964.44 from that reported in 1900. Statements were filed by 11 trust companies, 2 of which were in liquidation. Their aggregate capital stock was \$4,121,398.47, an increase of about \$13,000 over the amount reported in 1900. Their deposits in "participation account" were \$19,789,760.38, an increase from Nov. 20, 1900, of \$2,944,907.50. Since the "participation account" of these companies is essentially a savings account, the increase here more than offsets the decrease of deposits in the savings-banks.

Railroads.—The capital stock of the steam railroads operated in Rhode Island is \$105,582,475; funded debt, \$69,231,517.77; floating debt, \$8,434,889.69; total indebtedness, \$77,726,407.46; total receipts, \$43,676,907.85; total expenditures, \$37,033,884.79; net earnings, \$6,643,023.06; miles of road in the State, 209+; miles of single track, 437+.

The capital stock of the electric roads is \$16,972,000; funded debt, \$5,719,700; floating debt, \$785,119.80; total indebtedness, \$6,504,819.80; total receipts, \$3,065,491.89; expenditures, \$2,286,483.78; net earnings, \$779,008.11; miles of road in the State, 252+; miles of single track, 316.

Judicial Decisions.—A statute relating to action to be taken when a pauper is not properly cared for by the town in which he resides, which has stood unquestioned since 1857, has been declared unconstitutional by the Appellate Division of the Supreme Court.

An opinion of the Supreme Court was rendered in May to the Governor which affirmed the constitutionality of the legislative act creating the Newport Board of Police Commissioners, and declared it to be a State board. The decision bore upon a difference of opinion and of action in the

CHARLES DEAN KIMBALL,
GOVERNOR OF RHODE ISLAND.

premises between the Governor and the Attorney-General, the Governor being sustained by the court.

Industries.—In October the Director of the Census issued a bulletin of Rhode Island manufactures from which this appears to be the most distinctively manufacturing State in the Union, standing fourth in textiles and, although smallest in area, fifteenth in general manufacturing. The capital invested in manufacturing and mechanical industries in 1900 was \$183,784,587, exclusive of the capital stock of incorporations. The gross value of products is returned at \$184,074,378, to produce which involved an outlay of \$5,552,189 for salaries of officials, clerks, etc., \$41,114,084 for wages, \$12,199,283 for miscellaneous expenses, including rent, taxes, etc., and \$96,392,720 for materials used, mill supplies, freight, and fuel.

In their latest report the Factory Inspectors say: "We have during the year ending Dec. 31, 1901, inspected 617 establishments, a net increase over the number reported last year of 22. The number of employees found in the various establishments was divided as follows: Males of sixteen years of age and over, 47,304; females of sixteen years of age and over, 34,192; total, 81,496. Males under sixteen years of age, 2,732; females under sixteen years of age, 2,336; whole number of children, 5,068. Total number employed, 86,564."

The value of the 5,498 farms in Rhode Island, according to a bulletin of the Census Bureau, was estimated to be \$23,125,260 in 1900. Of this amount \$9,706,490 represents the value of buildings, and \$13,421,770 the value of land and improvements. For the State the average value of land was \$29.46 an acre.

The revenue to the State in rents from the lands leased for the raising of oysters is \$25,691.25 for the year. In 1901 additional lands to the number of 1,858 acres were leased.

The New State-House.—In the new State-House the Legislature convened on New Year's Day, 1901, from which dates the public occupancy of the "Marble Palace." Grand as it is in design and beautiful in embellishment, to the throngs that gathered for the opening ceremonies there was no less to gratify the practical than the esthetic sense, for the perfect adaptation of the building to its uses was manifest. The formal exercises were simple and impressive.

Legislative Session.—Among the enactments of the Legislature in 1901 were these:

An amendment to the caucus law.

Providing that the trustees of the Rhode Island Normal School may admit to the classes of said school persons not intending to teach in the public schools of the State, upon payment of tuition fees.

Amending the laws relating to the State Library, and annually appropriating \$800 for the purchase of books.

Changing the laws relating to registration of voters.

Designating June 6 as "Nathanael Greene Memorial Day," in response to the request of the societies of the Sons and Daughters of the American Revolution.

To protect the public morals by prohibiting schemes and devices in the nature of lotteries.

Providing for a police commission for Providence.

Providing, in pursuance of a constitutional amendment, that no person shall vote in the election of the city council of any city, or on any proposition to impose a tax, or for the expenditure of money in any town or city, unless he shall, within the year next preceding, have paid a tax

upon his property therein valued at not less than \$134.

Limiting the liability of stockholders and officers of manufacturing corporations, for the debts or obligations of such companies, to the shares of such members paid up to the par value thereof, and repealing the law requiring the filing of annual returns as to the value of property and the amount of debts and liabilities.

Revising the law relating to the use of voting-machines, with a view to improve and extend this method of voting.

Making it a misdemeanor to distribute "trading-stamps," as in stores, to attract custom.

Creating a commission, each member of which must be a cyclist, for constructing and maintaining side-paths.

Providing that the United States flag shall be displayed over the public schools during school hours.

March 29 the Legislature adjourned until after the November election, when it reassembled and held a short session.

By the death of Gov. William Gregory, Dec. 16, 1901, an unusual sorrow was brought upon the State, for no Governor had died in office since 1805. He had been Governor since May, 1900, and had been elected to serve until January, 1903. Lieut.-Gov. Kimball served as acting Governor until January, when he qualified as Governor for the new term.

Providence.—The bank clearings of this city for 1901 were the largest in its history, reaching a total of \$354,384,000, as against \$326,299,700 in 1900. All the great industries were in good condition at the end of the year. The total amount spent during the year for new buildings was \$4,739,720. The number of building permits granted was 1,302, or nearly 200 more than in 1900. The annual report of the school committee shows that the school census has recently increased more rapidly than that of the general population, and that the average attendance in the schools has increased much more rapidly than even the school population. For the last decade of the nineteenth century the increase of school population was 36.1 per cent., while the increase of average attendance was 54.6 per cent.

Political.—At the Democratic State Convention, at Providence, Oct. 15, these candidates were nominated: For Governor, L. F. C. Garvin; Lieutenant-Governor, A. R. Archambault; Secretary of State, Frank E. Fitzsimmons; Treasurer, Clark Potter; Attorney-General, D. J. Holland.

The platform inveighed against the existing State Government and the "pocket-borough system" of representation in the General Assembly, and denounced the purchase of favor "from the boss who controls the State Legislature," by "individuals and corporations seeking public franchises and privileges." It declared: "This control of the State Government has been made more secure by the enactment of election and caucus laws which have all but incorporated the machine as the legally authorized manager of the State Government." It charged the existing State Government with waste of public money. The first step toward reform was declared to be the adoption of a new Constitution, providing for a new system of legislative representation, greater powers for the Governor, limitation of the power of the General Assembly, and amendment of the Constitution by constitutional convention.

The Republican State Convention met at Providence Oct. 16 and made these nominations: For Governor, William Gregory; Lieutenant-Governor, C. D. Kimball; Secretary of State, C. P. Lin-

[illegible]

The cash balance at the close of the year was \$44,720. Among the payments made during the year were: salaries, \$301,592.98; cost of printing, \$6,000; interest on bonds, Colored College, \$27,000; interest on bonds, State House, \$41,869.68; purchase of land, \$1,000; school fund, \$100,000; expositions, \$1,000; interest on notes of Governor and Treasurer, \$1,000; State-House contract, \$123,164.00; interest on State-House, \$15,000; printing, \$6,000; interest on commissioners sinking-fund, \$41,273.80; interest on sinking-fund, \$102,270; investment, sinking-fund, \$90,760.28; monument at Chickamauga, \$4,620.08; dispensary, account proper, \$2,005,297.45; transferred to school fund, \$100,000; interest on the public debt, \$270,643.79.

Valuations.—The taxable property, as made up for 1901, amounted to \$189,333,107, of which \$103,258,440 was real estate, \$59,030,424 personal property, and \$27,044,243 railroad property. The net increase over the valuations of 1900 is \$9,618,577. There were decreases in only three items in the schedule—value of credits, value of bonds and stocks, and 50 per cent. penalty—amounting in all to \$833,075.

Education.—The enrolment of white children in the public schools in 1901 was 127,230, and the average attendance 94,548. There were 157,976 negro children enrolled, and their average attendance was 113,566. The average length of the schools for whites was 21.17 weeks; of those for negroes, 14.12 weeks. The average annual salary of white teachers was \$188.91; of negro teachers \$80.30. The total expenditure for the year for white schools was \$726,825.44; for negro schools, \$211,287.56.

At Winthrop College 297 pupils were enrolled in the normal department at the close of the year, an increase of 120 in two years. A new dormitory has been built. The entire appropriation from the Legislature this year was \$69,672.

The South Carolina College has just entered upon its second century. Its number of students is increasing; while there were 162 four years ago, there were 227 at the last session of 1901. The Legislature appropriated \$42,557 to the college.

The Colored Normal College received for its support \$8,000 from the Legislature. The total disbursements for the year ending in June were \$32,350.

The annual appropriation to the State Military Academy was raised this year to \$25,000, with a view of reducing the charges to the cadets from \$300 to \$250 per annum. This reduction was made by the Board of Visitors.

For the Agricultural College a new dormitory has been built in order to make room for the increasing number of applicants. The college property was considerably damaged by the breaking of dikes during the floods of December.

Charities and Corrections.—The Insane Asylum received 459 patients in 1901; the whole number was 1,493; the daily average, 1,068; the total cost, \$135,316; the per capita, for support, \$103. The institution has just entered the eightieth year of its existence.

The fifty-third annual report of the Institution for the Deaf and Blind shows an average attendance for the year of 163. The cost of maintenance was \$21,227.92; the per capita cost, \$130.23. A building has been completed for the colored pupils, and a new school-building is in process of erection; for this the Legislature appropriated \$20,000.

The whole number of convicts in the Peniten-

tiary at the beginning of the year was 795; 243 were received during the year; 178 were discharged and 26 pardoned, 16 escaped, 27 died, 1 was killed while trying to escape, and 2 were accidentally killed, leaving 788. The receipts were \$74,756.61; the current expenses, \$47,726.46; the cost of permanent improvements, \$15,243.13.

Products and Industries.—The Census Bureau's preliminary report on the manufactures of South Carolina shows 3,762 establishments with products in 1900 valued at \$58,748,731 and total capital of \$67,356,465. Other figures are: Average number of wage-earners; 48,135; wages, \$9,455,900; miscellaneous expenses, \$3,111,587; and cost of materials used, \$34,027,795. The capital shows an increase of 130 per cent. over 1890 and value of products an increase of 84 per cent. The cost of materials increased 80 per cent. The city of Charleston, separately reported, has a total of \$12,473,187 in capital invested and \$9,562,387 in value of products. These are increases of 70 and 6 per cent. respectively. Charleston has 364 establishments, 5,027 wage-earners, getting \$1,489,966 in wages.

Charters were granted to 31 new cotton-mills in 1900, with an aggregate capital of \$4,850,000.

During the year 14 established mills increased their capital—the aggregate being \$2,945,000—making the total investment in mills that year \$7,795,000.

The principal investments during the year were in small industries and manufacturing enterprises, new railroads and land-investment companies.

The production of gold in 1901 was \$120,900 in value; of silver, 316 fine ounces.

The records of the phosphate business for the year ending Nov. 30 show that 82,656 tons were mined, against 119,208 in 1900. The number of tons shipped was 90,740, an increase, as but 78,692 tons were shipped in 1900; the royalties to the State amounted in 1901 to \$23,108; in 1900 to \$24,937.47.

The census report credits the State with the production in 1900 of 190,095 barrels of crude turpentine, of \$787,656 value.

The estimated production to the acre of lint cotton in 1901-1902 was 141 pounds. The total cotton-crop of 1900-1901 was given as 780,782 bales as made up from reports to the statistician, but as equalized the figures appeared 911,000. The estimates for 1901-1902 vary, but 820,328 bales is given as the final estimate. Secretary Hester places the amount of consumption in the cotton-mills of the State for 1900-1901 at 510,486 bales, an increase of 13,340 bales.

Militia.—The share of the State in the Government militia appropriation of \$1,000,000 is \$19,117.64. In May the State monument at Chickamauga was unveiled. The Adjutant-General formed a provisional regiment of nine companies from the National Guard to attend the exercises.

Lawlessness.—In his message to the Legislature of 1902, the Governor says: "There have been two lynchings in the State during the past year, both of which are to be regretted and would have been prevented if possible; but so long as fiends in human form continue to commit outrages upon our women, they may expect swift and summary justice, and I doubt if emergency courts or any other remedy will stop the administration of such justice when it is known the right fiend is found. The only way to stop the punishment is to stop the crime."

The Dispensary.—The Governor says in his message that the dispensary method of dealing with the liquor problem is growing in favor with the public; and that the management of the busi-

ness in 1901 was businesslike and satisfactory. The report of the directors shows that the cost of liquors, wines, and beer, etc., purchased in the year amounted to \$1,617,973.42, and that the gross sales amounted to \$2,228,681.21, exclusive of sales of fresh beer by beer dispensary. The net profits (to the State) for amount of the school funds is \$120,962.25. The net profits that have been assigned to the counties and towns, divided equally, are \$424,285.87.

The Charleston Exposition.—Of the exposition, which opened at Charleston, Dec. 1, the Governor says in his message to the Legislature of 1902: "At your last session you wisely made an appropriation of \$50,000 for the erection of a State building at the South Carolina Interstate and West Indian Exposition. The State building is perhaps the handsomest on the exposition grounds. The collection of the exhibits, which are entirely creditable, was largely under the personal supervision of Superintendent Love, who worked in conjunction with the authorities of the Exposition Company. The exposition is a decided success, and reflects credit upon the State and upon the South."

Henry Timrod.—A monument to the poet Timrod was unveiled May 1 in Washington Square, Charleston. It consists of a bronze bust in heroic size and panels by Valentine, on a granite pedestal and base. The fund was raised by the sale of Timrod's poems.

Legislative Session.—The annual session of the Legislature extended from Jan. 8 to Feb. 16. There were no Republicans in the Senate, and there was but one in the House. W. F. Stevenson was Speaker of the House. Benjamin R. Tillman was reelected to the United States Senate. The Legislature passed 155 laws and 19 resolutions. There was little opposition to the exposition bill and the appropriation of \$50,000 for a State building.

Two important taxation bills were passed. The first sends to the Board of Equalization all the returns of textile, cotton-seed oil, and fertilizer factories, and canals furnishing power for hire. The second bill declares the stock of textile manufacturing companies to be real estate as regards its legal status, and exempts the holder from taxation when the corporation is taxed. This act was attacked on the ground that it interferes with the settled law of South Carolina declaring all shares of stock personal property. Its object is to induce foreign capital to invest in the State because such investments will not be taxable at the homes of the owners.

Several measures affecting railroad companies were passed. One provides that consolidation of railroads is to be subject to the limitations of the Constitution as to parallel and competing lines. On consolidation a charter is to be issued to the new company. The Railroad Commissioners are to fix rates of storage to be charged by railroad companies in the State, to prescribe regulations for charging the same, to prescribe how suit shall be brought for overcharges, to fix the measure of recovery, and to regulate the freight charges on melons.

The act relating to the running of trains on Sunday was revised so as to provide for the transportation of passengers to and from religious services. Street-railway employees are to have the same remedies for personal injury as employees of other railroads. An amendment to the law on damages permits punitive or exemplary damages where death has been caused by recklessness, wilfulness, or malice.

Other acts affecting corporations were those

regulating the issue of preferred stock, providing for the election of trustees or directors of corporations by cumulative voting, providing for the extension and renewal of charters of corporations chartered by special act before the charters have expired, and the act allowing compensatory damages against telegraph companies for mental anguish caused by negligence in transmitting messages.

It was made illegal to pay wages in orders, checks, or tokens payable otherwise than in lawful money, unless negotiable and redeemable at their face value. Bills were introduced to abolish or regulate child labor, but they were not passed. There is as yet no compulsory-education law.

The two constitutional amendments voted upon in 1900 were ratified. One empowers the Legislature to provide for the condemnation of lands for drainage, and the assessment of lands drained. The other removes the limitation of bonded indebtedness from certain counties as regards bonds for water-supply and sewerage.

The office of State geologist was created. A board of entomology was established in order to provide for the inspection of fruit-trees, vineyards, and vegetable farms.

An act was passed introducing the system of struck juries in the trial of civil cases. Under this system a list of 24 jurors is presented to the attorneys on each side, who alternately strike off 6 until a jury of 12 remains.

Appropriations for new buildings were made to the Institution for the Deaf, Dumb, and Blind, to Winthrop College, and to South Carolina College.

It was made unlawful to sell, transport for sale or carry, whether concealed or not, a pistol less than 20 inches long and 3 pounds in weight.

The appropriations amounted to \$1,130,534. The State levy was left at 5 mills.

The anti-free-pass law was repealed by an act which the Governor vetoed.

Other measures adopted were:

Granting certain lands in Charleston County for a naval station to the city council of Charleston.

Ceding to the United States certain lands in Moultrieville, Sullivan's island.

Consenting to the acquisition by the United States of such lands in the State as may be needed for the establishment of a national forest reserve.

Permitting the owner or mortgagee of lands sold for taxes to redeem them within six months by paying taxes, penalties, and costs, and 8 per cent. interest.

Making it a misdemeanor to sell stock affected with contagious diseases.

To provide for the establishment of chain-gangs in incorporated cities, towns, and villages in counties that have no county chain-gangs.

To set apart for Confederate souvenirs and relies a room on the third floor in the State Capitol, and to give the Daughters of the Confederacy control of it.

To increase the pension fund to \$150,000.

A joint resolution to provide for the keeping and preservation of the flag and records of the Palmetto Regiment, and also of the Jackson vase.

To validate and confirm the original bonds and all renewals thereof, known as railroad bonds, amounting to \$75,000, issued by Laurens County, pursuant to an election held in that county on June 7, 1881.

To require the superintendent of the State Penitentiary to hire convicts to the counties to work on the public highways, and not to hire them out for farming.

Amending the laws governing the practice of physicians.

Extending the powers of the State Board of Health, providing that the board should not enforce compulsory vaccination.

The Quarrel of the Senators.—A notable political event of the year was the quarrel of a joint resignation by the two United States Senators, Senator Tillman and Senator Mc Laurin. Senator Tillman was elected to his term in 1890, and was re-elected in the State primaries in 1900 to succeed him. He was accordingly reelected by the Legislature in 1900. Senator Mc Laurin, whose term will expire in 1901, had drawn upon himself the condemnation of a large section of his party in the State by speaking and voting in the Senate in favor of Republican administration measures. In the Legislature resolutions of censure upon his course were offered, but they were not passed. By a vote of 58 to 44 the House tabled a resolution of condemnation, the preamble of which set forth that the Senator had "manifested opinions at variance with those of the Democratic party of South Carolina through his vote favoring the ratification of the treaty of Paris, whereby the Republican administration at Washington was enabled to pursue an infamous war at a first cost of \$20,000,000, to which many hundreds of millions of dollars have been added, together with the loss of thousands of precious American lives, all with lamentable failure, the war in the Philippines being no nearer a conclusion to-day than when the first shot was fired; through his vote favoring an increase of the standing army to 100,000 men in a republic whose strength in the past and whose hope in the future, in times of trouble, have lain in her free-born citizens, loving their homes and firesides, who have never failed to defend the same, if need, with their blood and their lives; and through his speech in advocacy of the ship-subsidy bill, a most gigantic and monstrous plan to permit the huge shipping interests of the United States to plunder the public treasury, under the guise of legal authority—a bill introduced and managed on the floor of the United States Senate by that great friend of monopoly and the trusts, Mark Hanna, the embodiment of plutocracy, which to-day controls and shapes the policy of the Republican party, and conceived out of a desire to repay to those interests from the people's treasury the money contributed by them to the Republican campaign fund."

Some members who voted to table the resolution explained that they did so because they thought such a resolution should have no place in the Legislative proceedings, and their votes were not intended as an expression of their opinion on the merits of the case.

On May 25 the two Senators met in joint debate at Gaffney, Senator Mc Laurin advocating his theory of commercial democracy and Senator Tillman attacking it. He said that if Mc Laurin were not a Republican he ought to be, since he had supported and advocated Republican measures, and that the only proper thing for him to do was to resign and go before the people for their verdict on his course. Mc Laurin challenged Tillman to resign with him. This was agreed to, and the joint resignation was sent to the Governor, naming Sept. 15 as the time for the resignations to take effect. The understanding was that the Senators would speak through the State in October and November, and that a primary would then be held; that if Mc Laurin were successful he should fill out Tillman's term (till 1907), and if Tillman, he should be reelected. But the Governor refused to accept the resignations. He said, in part: "It was only last year

that our people had the excitement and turmoil incident to a campaign, and in another year we will be in the midst of further political strife. The people are entitled to one year of peace and freedom from political battles and bitterness. The indications are that a campaign such as would be precipitated by vacancies in these two exalted positions would be a very acrimonious one, and personal, rather than a discussion of issues, and from such a canvass our people should be spared."

Senator McLaurin then withdrew his resignation. Senator Tillman at first refused to do so, saying that the Governor had transcended his authority, and intimating that his action was in the interest of "would-be aspirants" who were not yet ready to go into a canvass for a seat in the Senate. The Governor, in his reply, said: "If you still wish to resign your commission, and will send to this office an unconditional resignation, I will exercise the authority and power vested in me by the people."

Senator Tillman then withdrew his resignation, protesting against the right of the Governor to reject it.

The State Democratic Executive Committee adopted a resolution, July 25, by a vote of 25 to 5, declaring that "Senator J. L. McLaurin, from the standpoint of honesty and self-respect, should tender his unqualified resignation immediately." In reply Senator McLaurin said, in part: "I hold my commission from the Democratic voters of South Carolina. I recognize no authority but theirs, take no orders from any source but them, and shall in due course appeal to them for judgment on my course as a Senator and my character as a man and a Democrat. I regard what you have done as merely expressing the malice and the fears of one individual—Senator B. R. Tillman. But for this always evil and indecent influence, ordinary respect for the proprieties would probably have prevented the four of you who are my declared competitors for the seat I now have the honor to occupy, from attempting to use the power given to you by your party to remove a rival from your path. I shall ask the people to say whether they prefer the Senator who has tried to retain for South Carolina the honor and dignity won by a long line of illustrious sons and glorious deeds, or the Senator who has postured as buffoon and bully, and who proclaimed on the floor of the Senate that he represented a constituency of ballot-box stuffers and murderers who wanted their share of the stealage."

The matter came up in the United States Senate in December, when Senator McLaurin arose to a question of personal privilege, and proceeded to explain what he said was a conspiracy to discredit him in his own State for acts and views that did not meet the approval of certain Democratic leaders. From Mr. Tillman this brought forth a review of the whole controversy, in the course of which Mr. Hoar took occasion to express the opinion that it was very doubtful whether both the South Carolina seats in the Senate were not in reality vacant. He contended that when the resignations were offered last spring to the Governor they could not thereafter be withdrawn, but that they became immediately operative. The climax came when Senator Tillman challenged Mr. McLaurin to join with him in preparing their joint resignations and handing them to the presiding officer of the Senate. This challenge Mr. McLaurin did not accept.

SOUTH DAKOTA, a Western State, admitted to the Union Nov. 3, 1889; area, 77,650

square miles. The population, according to each decennial census since admission, was 328,808 in 1890 and 401,570 in 1900. Capital, Pierre.

Government.—The following were the State officers in 1901: Governor, Charles N. Herreid; Lieutenant-Governor, George W. Snow; Secretary of State, O. C. Berg; Auditor, J. D. Reeves; Treasurer, John Schamber; Attorney-General, John L. Pyle; Superintendent of Public Instruction, E. E. Collins; Commissioner of School and Public Lands, David Eastman; Adjutant-General, S. J. Conklin; Insurance Commissioner, H. C. Shober; Public Examiner, Henry M. Cooper; Oil Inspector, Emil Brauch; Railroad Commission, Messrs. Kirkpatrick, Smith, and Le Cocq; President State Board of Agriculture, John Armstrong; Secretary Historical Society, Doane Robinson; Veterinarian, Dr. Foster; Chief Justice of the Supreme Court, Dighton Corson; Associate Justices, Dick Haney, H. G. Fuller; Clerk, Frank Crane. All are Republicans.

State officers are elected for terms of two years in November of the even-numbered years. The Legislature meets biennially in January of the odd-numbered years.

Population.—Of the 78 counties in South Dakota in 1890, 15 have since been annexed to other counties, leaving the State divided into 63 counties. All but 16 increased in population during the decade. The percentage of urban population is 7.2.

Finances.—The total indebtedness of the State, July 1, 1901, was \$863,300. This was composed of \$370,800 of coupon bonds; \$242,500 of registered bonds; and \$250,000 of revenue warrants. The cash on hand in the treasury was \$764,888.46.

The highest interest paid by the State is $4\frac{1}{2}$ per cent., on some of the bonds which have come down as a debt from the old Territory, most of the bonded debt being for $3\frac{1}{2}$ and 4 per cent.

Prices received for school lands this year averaged \$14 an acre, about 25 per cent. higher than in 1900. The amount now in the school fund is about \$4,000,000, which is all loaned at 6 per cent. interest.

The taxes due the State and unpaid amounted in June, 1900, to \$308,207.54.

Valuations.—The assessment figures this year show a total valuation of \$173,206,733, an increase of \$951,648 over the assessment returns of last year on all classes of property. Of this increase, real estate shows \$1,280,339; railroads, \$174,631; telephone companies, \$9,410. Town lots show a reduction of \$398,636, and personal property of \$113,496.

Education.—There are 119,579 children of school age, and the seating capacity of the school-houses is 110,743. The cost of maintaining the schools was \$1,130,914.37, and in addition \$158,701.41 was paid for the redemption of bonds, and for the interest \$48,015.41. The total indebtedness of the school districts of the State, including cities, is \$1,231,561.57, and the net decrease of indebtedness in the year was \$112,995.55; 5,516 persons were enrolled in teachers' institutes last year. The cost of conducting the institutes was \$13,293.92.

The Legislature appropriated \$40,000 for a new science hall at the university. The enrolment in October was 310, an increase of 40 over the highest enrolment heretofore.

Seventy students were in attendance at the School of Mines in October.

New buildings have been in process of erection at the Agricultural College and the Asylum for the Blind.

Charities and Corrections.—Two members of the Board of Charities and Corrections resigned in December, 1900, and Gov. Lee appointed H. P. Smith and F. H. Bacon, Populists, to the vacancies. The State Supreme Court had decided in the case of Finerud, member of the Board of Regents, that an appointment made by the Governor during a recess to fill a vacancy was for the full term of six years and did not require confirmation by the Senate. Gov. Herreid, however, appointed Messrs. Lavin and Rice in place of Gov. Lee's appointees, but the court decided in favor of Smith and Bacon, holding that the Governor could fill a vacancy for the full term, though the Senate may have failed to confirm. The Legislature then passed a law amending the section on the Board of Charities and Corrections providing that "when an appointment has heretofore been made to fill a vacancy or shall hereafter be made, such appointee shall hold only until the close of the regular legislative session immediately following his appointment, at which time the term of office of such appointee shall expire." An emergency was declared to exist, and the act to be in force immediately. This limited the terms of Bacon and Smith to March 8, and the Governor reappointed Lavin and Rice. The case came again before the Supreme Court, hinging on the right of the Legislature to pass emergency measures and omit the referendum. The court held that the Legislature has such right, and that Bacon and Smith were holding the offices without authority of law.

The reason given for the declaration that an emergency existed was the result of investigation by a legislative committee of the management of State institutions, which appeared to be, at the least, unbusinesslike and wasteful. Later in the year a change was made in the management of the Reform School, and it was alleged that an investigation of the former management showed gross irregularities.

The number of inmates of the Penitentiary was 146 in January. The capacity of the part in use is 144.

The average number at the State Soldiers' Home was 194.

A Government asylum for insane Indians has been opened at Canton, with accommodations for 75 patients.

Insurance.—Reports of the Insurance Department show \$28,944,734 of fire risks written or renewed in 1900-1901. The premiums received amounted to \$460,153, against \$444,125 for 1899-1900. The losses paid were far in excess of those of 1899-1900, being a total of \$413,484.

Industries and Products.—The preliminary census bulletin on manufactures shows an increase in all branches in the State. The number of establishments has risen in the decade from 499 in 1890 to 1,638 in 1900; the capital invested from \$3,207,796 to \$7,277,895; the number of wage-earners from 2,011 to 6,121; the wages from \$832,692 to \$1,511,289; the miscellaneous expenses from \$268,014 to \$479,861; the cost of material from \$3,523,840 to \$7,827,110; the value of the product, including custom work and repairing, from \$5,692,748 to \$12,229,489.

The production of the State in 1901, as estimated by the secretary of the State Historical Society, amounts to \$113,652,750, itemized as follows: Wheat, 39,000,000 bushels, value \$20,000,000; corn, 32,725,000 bushels, value \$14,726,250; oats, 17,670,000 bushels, value \$5,831,100; barley, 3,432,000 bushels, value \$1,544,400; rye, 90,000 bushels, value \$40,000; flax, 2,780,000 bushels, value \$3,861,000; potatoes, 2,200,000 bushels,

value \$1,620,000; hogs, 1,200,000, value \$2,500,000; live stock, \$25,000,000; and other products, \$8,509,000; orchards, 1,000,000; wool and hides, \$2,000,000.

The preliminary census of the United States Mint gives South Dakota a value of \$1,601,800 in value, and the value of the gold and silver in the State is \$1,601,800.

Petroleum has been discovered in quantities sufficient to warrant the leasing of a large area of land by a corporation to sink wells.

Railroads.—In August a decision was rendered in the United States court against the Interstate Commerce Commission in the matter of rates. The judge declared that the schedule of maximum rates and charges fixed by the State Railroad Commissioners is in violation of the Constitution of the United States, in that it would operate to confiscate the property of the railroad companies without due process of law or without just compensation. The commissioners, therefore, are perpetually enjoined from putting into effect the maximum rate schedule. The case has been in the courts since 1897 and was once decided in favor of the commissioners.

Caves.—Commissioner Hermann, of the General Land Office, has instructed the special agent of the Interior Department to reopen "the Wind Cave," in the Black Hills, to inspection by the public. The cave belongs to the Federal Government and comprises about 1,000 acres. It was withdrawn by order of Jan. 16, 1900.

Wind Cave is so called on account of the strong rushing current of air through the entrance. Several hundred feet below the surface a level is reached from which miles of arched avenues radiate in every direction, embracing a succession of imposing chambers. The ceilings are pendant with gems of stalactite formation, while around the walls in niches carved out by the action of the water are specimens of deftly wrought statuary, fragile foliage, chaste columns of the most elaborate architecture, and forms resembling birds and animals.

The Black Hills have two other caves that are coming to the notice of tourists. Crystal Cave is a short distance southeast of Deadwood. More than 50 miles of passageways have been opened up, there being more than 200 chambers.

About 16 miles west of Custer a new cave has been discovered, which has promise of becoming a rival of Wind and Crystal Caves.

Legislative Session.—The session of the Legislature began Jan. 8 and ended March 8. Politically the two houses were divided as follows: Republicans in the Senate, 39; in the House, 78; fusionists in the Senate, 6; in the House, 9.

J. M. Lawson was President *pro tem.* of the Senate, and A. G. Somers was Speaker of the House.

Robert J. Gamble was elected United States Senator to succeed Richard F. Pettigrew, by a vote of 113 to 13 for Senator Pettigrew, who was the candidate of the fusionists.

The Legislature passed 188 laws and 21 resolutions.

Some changes were made in the election laws.

Three constitutional amendments were proposed, and are to be submitted to vote in November, 1900. The first is to limit public debts to 5 per cent. on valuation of taxable property, except for purposes of providing water and sewerage, or in cities of 8,000 for providing street-railways and lighting. The second is to change the rate of interest on educational funds from 6 to 5 per cent. The third is to provide that a county-seat may be changed on a two-thirds vote at a gen-

eral election; if the change is needed to bring it near a railroad station, on three-fifths vote.

It was provided that boards of education may call elections and submit to voters propositions to issue bonds for educational purposes. The moneys of the fish fund go to the common-school fund, as also fines for violation of State laws. School attendance for twelve weeks is made compulsory.

Library bills were passed—one providing for the establishment of libraries in cities on petition of a majority of the legal voters, and one to provide a fund for libraries in country schools.

Provision was made for the organization of a State historical society, and an appropriation was made for a geological survey.

A bill was passed providing for a commission of 3 to revise and codify the laws, the Governor to appoint the commission, and their work to be submitted to the Legislature of 1903. The act carried an appropriation of \$14,000. The Governor appointed Bartlett Tripp, Gideon C. Moody, and James D. Brown.

Several measures were passed affecting assessment and taxation, looking to increase of the revenue and collection of delinquent taxes. County treasurers are authorized to employ men on commission to search out property that is escaping taxation, a measure similar to the so-called "tax-ferret" law of Iowa. It was provided that non-resident owners of live stock must pay, in addition to other taxes, 50 cents a month for each head of stock feeding on the State ranges.

State officers are required to pay into the treasury all moneys received as fees or perquisites; and moneys received by State institutions also are to be paid into the treasury for their use.

The office of food and dairy commissioner was created.

A change was made in the liquor-license law, one of the provisions of which is to prevent druggists from handling liquor for any purpose, placing the sale entirely with licensed saloon-keepers.

An act was passed for the reorganization of the State militia.

The wolf-bounty law was entirely changed. The total amount that can be used for that purpose in any one year is \$5,000.

The Governor may remove State officers not liable to impeachment.

The game-laws were amended. Provisions were made for the preservation of buffalo, elk, deer, and mountain-sheep. The Governor is authorized to appoint county game-wardens from Nov. 1 to Jan. 1. It is made unlawful to hunt antelope before Jan. 1, 1911.

The salaries of the Governor and the Supreme Court judges were raised to \$3,000; circuit judges are to receive \$2,500, unless the circuit is less than 5,000 square miles, when the salary is \$2,000.

Other measures were:

Making it a misdemeanor to desecrate the United States flag or use it for advertising.

Changing the name of the Industrial School and Institute of Technology, at Aberdeen, to Normal and Industrial School.

Prohibiting the employment of a child between eight and fourteen years of age without a certificate that he has attended school at least twelve weeks.

Providing for school instruction on the humane treatment of animals, making experiments on live animals unlawful.

Declaring gambling places nuisances.

Providing that cities, towns, and villages may suppress the illegal sale of liquors.

Making the punishment for perjury on trial of

indictment or information for felony, imprisonment one to twenty years, instead of, as formerly, not under ten years.

Ceding to the United States jurisdiction over offenses committed on Indian reservations.

Providing for guardianship of dependent, neglected, and abused children by societies incorporated for their care.

Making it a misdemeanor to make, sell, give away, or use air-guns or cannon firecrackers.

United States Senator.—Senator James H. Kyle died at his home, in Aberdeen, July 1. On July 11 the Governor appointed Alfred B. Kittredge to fill out the term, which ends in 1903.

TENNESSEE, a Southern State, admitted to the Union, June 1, 1796; area, 42,050 square miles. The population, according to each decennial census since admission, was 105,602 in 1800; 261,727 in 1810; 422,771 in 1820; 681,904 in 1830; 829,210 in 1840; 1,002,717 in 1850; 1,109,801 in 1860; 1,258,520 in 1870; 1,542,369 in 1880; 1,767,518 in 1890; and 2,020,616 in 1900. Capital, Nashville.

Government.—The following were the State officers in 1901: Governor, Benton McMillin; Secretary of State, John W. Morton; Treasurer, Beau E. Folk; Comptroller, Theodore F. King; Superintendent of Agriculture, Thomas H. Paine; Superintendent of Instruction, Morgan C. Fitzpatrick; Adjutant-General, W. M. Brandon; Attorney-General, George W. Pickle; Commissioner of Labor, Robert A. Shiflett; Live Stock Commissioner, W. H. Dunn; Factory Inspector, Martin J. Noonan; Railroad Commissioners, N. W. Baptist, J. N. McKenzie, and Thomas L. Williams; Prison Commissioners, W. M. Nixon, W. A. Carter, and John S. Denton, who succeeded A. J. McWhirter; Librarian, Jennie Lauderdale; Chief Justice of the Supreme Court, David L. Snodgrass; Associate Justices, W. C. Caldwell, John S. Wilkes, W. K. McAllister, W. D. Beard; Clerk, A. W. McMillin; Justices of the Court of Chancery Appeals, M. M. Neil, S. F. Wilson, R. M. Barton, Jr.; Clerk, James Turney. All are Democrats.

State elections are held biennially in November of the even-numbered years. The Legislature meets biennially in January of the odd-numbered years.

Population.—The population in 1900 consisted of 1,021,224 males and 999,392 females. Of the total 2,002,870 were of American birth and only 17,746 foreign born. The total white population was 1,540,186, of whom 1,522,600 were native born, and of these latter 1,481,636 were born of native and 40,964 of foreign parents. There were 782,702 white males and 757,484 white females. The foreign white population consisted of 10,291 males and 7,295 females. The total colored population was 480,430, of whom 480,243 were negroes or partly of negro descent, comprising 238,388 males and 241,855 females; 75 were Chinese, including 2 females; 4 were Japanese; and 108 were Indians, of whom 57 were males and 51 females. The aggregate number of persons of school age, including all between the ages of five and twenty years, was 780,421, of whom 298,169 were native white males, 289,804 native white females, 754 foreign white males, 724 foreign white females, 95,006 colored males, and 95,964 colored females. The male population of militia age was 384,249, comprising 290,313 native whites, 4,408 foreign-born whites, 89,452 negroes, and 86 other colored. The number of males of voting age was 487,380, of whom 477,739 were native born, the total comprising 365,537 native whites, 9,509 foreign whites, and 112,334 colored. Of the native white male population of voting age born of native parents

14.5 per cent. were illiterate; of native whites born of foreign parents, 3.7 per cent.; of foreign whites, 7.7 per cent.; of colored males of voting age, 47.6 per cent. Of the foreign-born males of voting age 59.8 per cent. were naturalized, 2.9 per cent. had filed their first naturalization papers, 13.1 per cent. were reported as aliens, and of 24.2 per cent. no information was given. The number of deaths reported in Tennessee for 1900 was 30,572—15,334 among males and 15,218 among females, 21,029 among whites and 9,543 among colored, 20,257 among native and 511 among foreign whites.

Education.—The number of pupils enrolled in the public schools in 1901 was 488,655, of whom 385,006, or 79 per cent., were white, and 103,649, or 21 per cent., were colored. The average school term was a little less than five months. The number of teachers employed was 9,484, giving more than 50 pupils to each teacher, although 279 teachers had been added during the year. The average salary paid to teachers was \$28.60 a month, making the average cost per pupil 74 cents. The number of new schoolhouses erected during the year was 205. The money received for public schools was \$2,600,000, and the expenditures were \$1,800,000.

Forests.—There is a Forest Association for the purpose of preserving the forest wealth of the State. The present rate of depletion threatens to use up the most valuable timber in twenty years. The walnut has disappeared, and the cedar forests, once the finest in the world, can scarcely supply the local demand for fence-posts. There are about 500 sawmills, consuming 400,000,000 feet of timber per annum; 60,000,000 feet are needed for cross-ties on 3,000 miles of railroad, and 180,000 farms require 100,000,000 feet for fuel, fencing, and building. Including the area destroyed by fires in the mountainous districts, the forest area of 9,300 square miles is diminishing at the rate of 480 square miles a year. The United States Government, by the action of the State Legislature, is authorized to acquire land in Tennessee to be utilized in connection with a forest reserve.

Production.—The output of bituminous coal in 1900 was 3,904,048 tons. The production of pig iron was 362,190 tons; of charcoal iron, 3,119 tons. There were 114 coal-mines in 1901, an increase of 14 over the previous year; number of persons employed, 8,691. The value of coal produced was \$4,294,928 at the mines; coke produced, 494,438 tons, value \$1,186,655; iron ore, 378,376 tons of brown and 321,376 tons of red; copper ore, 116,000 tons; zinc blende, 3,968 tons; barytes, 16,605 tons; phosphate rock, 450,856 tons. The number of ovens was 1,923, of which 1,662 were in blast, 188 new ovens having been built in 1900. The corn acreage for 1900 was 2,849,894, producing 56,997,880 bushels, of the value of \$27,928,961; wheat acreage, 1,181,123, crop 11,696,088 bushels, value \$9,239,910; acreage under oats, 350,010, producing 5,810,166 bushels, value \$2,033,558. The cotton-crop in the season of 1901 was estimated at 275,000 bales.

Legislative Session.—The record of the Legislature, which closed its sessions on May 2, was marred by charges of corruption, especially in connection with two liquor bills which failed to pass, and which led to an investigation that proved that a fund had been raised among wholesale dealers, the purpose of which was explained to be the presentation of their case before the Legislature and the testing of the constitutionality of the measure in case of its enactment. After the failure of the first bill, the second one, more thorough and stringent, passed the lower

house, but was defeated in the Senate. A bill was passed concerning the regulation of street car charters, and by a vote of 19 to 10 the bill was passed.

A law to legalize the sale of liquor in small quantities went into operation.

A stock law requiring the fencing of lands on their own line was passed. The law imposing damages applies only to certain counties. A trespass law was passed for the benefit of farmers. A bill was passed providing that teachers in public schools should be of the same race as the pupils. The age of majority for women was raised from sixteen to eighteen years. An act penalizes insurance companies that refuse to pay claims by making them pay 25 per cent. additional in case their refusal is not upheld judicially. If a taxpayer fails to report notes or other evidences of debt to the assessor in order to escape taxation, he can not recover the debt through the courts until he has paid the tax and a penalty of 25 per cent. per annum additional.

Good Roads.—A Good-Roads Convention held at Jackson in June formed a permanent association and recommended State legislation to secure intelligent supervision by a Highway Commissioner, to provide adequate revenue, and to secure a permanent system of road construction and maintenance. The first annual meeting of the Tennessee Good-Roads Association was held at Nashville on Oct. 8. The value of good roads to Tennessee farmers for the transportation of produce to market is estimated at \$1.50 a year per acre, and they are furthermore a condition for the successful introduction of free rural postal delivery.

Confederate Reunion.—The annual convention of Confederate veterans was held in Memphis at the end of May. The commander was Gen. John B. Gordon, and 4,000 survivors of the Confederate army marched in the parade. The number of delegates present was 2,309, representing 1,359 camps. Gen. Gordon was reelected, and the annual convention for 1902 was appointed to be held in Dallas, Texas. Resolutions were adopted petitioning Congress to provide means for the care of Confederate dead in Northern cemeteries, asking that such dead be restored to their native States at the desire of memorial associations, and thanking Congress for providing for the reinterment of Confederate dead in the National Cemetery at Washington. It was resolved to erect monuments to the women of the South and to Jefferson Davis. The Memorial Committee, after the convention, proceeded to Richmond, Va., to make arrangements for laying the corner-stone of Battle Abbey, which is to be the great Confederate memorial. The Tennessee Legislature, before the meeting, passed acts increasing the State pension to disabled Confederate veterans from \$15 to \$25 a month, and granting an annual pension of \$100 to ex-Confederate soldiers over seventy years of age.

TEXAS, a Southern State, admitted to the Union Dec. 29, 1845; area, 265,780 square miles. The population, according to each decennial census since admission, was 212,592 in 1850; 604,215 in 1860; 818,759 in 1870; 1,591,749 in 1880; 2,235,523 in 1890; and 3,048,710 in 1900. Capital, Austin.

Government.—The following were the officers of the State for the year: Governor, Joseph D. Sayers; Lieutenant-Governor, J. N. Browning; Secretary of State, John G. Tod, appointed by the Governor; Treasurer, J. W. Robbins; Comptroller, R. M. Love; Superintendent of Public Instruction, Arthur Lefevre; Commissioner of Agriculture, Jefferson Johnson; Railroad Commissioner, L. J.

Storey; Adjutant-General, Thomas Seurry; Commissioner of the General Land Office, Charles Rogan; Attorney-General, C. K. Bell; Chief Justice of the Supreme Court, Reuben R. Gaines; Associate Justices, Thomas J. Brown and F. A. Williams; Clerk, Charles S. Morse—all Democrats.

The term of State officers is two years. They are elected on the Tuesday after the first Monday in November of the even-numbered years. The Legislature meets biennially on Jan. 2 of the odd-numbered years. The session may continue indefinitely, but the members receive \$5 per diem for the first sixty days, after that \$2 per diem. There are 31 Senators, elected for four years, and 128 members of the House of Assembly, elected for two years.

Population.—The population in 1900 was divided, as to sex, into 1,578,900 males and 1,469,810 females; as to nativity, into 2,869,353 of native and 179,357 of foreign birth; as to color, into 2,426,669 whites and 622,041 colored, the latter comprising 620,041 negroes, 836 Chinese, 13 Japanese, and 470 Indians. Of the native whites, 2,249,088 in number, 1,959,762 were born of native and 289,326 of foreign parents, and they comprised 1,166,760 males and 1,082,328 females, while the foreign-born whites, 177,581 in number, comprised 100,910 males and 76,671 females. The total white population consisted of 1,267,670 males and 1,158,999 females. The colored population consisted of 310,135 negro males, 310,587 negro females, 823 Chinese males, 13 Chinese females, 9 Japanese males, 4 Japanese females, 263 Indian males, and 207 Indian females, making the total number of colored males 311,230 and of colored females 310,811. The total number of persons of school age was 1,215,634, including all between five and twenty years of age, of whom 483,286 were white males, 472,260 white females, 128,015 colored males, and 131,713 colored females. Of the 955,906 whites of school age 927,987 were native born, comprising 469,295 males and 458,692 females, and 27,919 were of foreign birth, comprising 13,991 males and 13,928 females. Of 259,728 colored of school age 259,491 were negroes or had negro blood. The male population of militia age was 599,221, comprising 434,637 native whites, 50,584 foreign-born whites, 113,343 negroes, and 657 Indians and other colored. The number of males of voting age was 737,768, of whom 514,188 were native and 85,773 foreign-born whites, making 599,961 whites in all, and 137,807 were colored, of whom 136,875 were negroes. Among the native white males of voting age 5.3 per cent. of those of native parentage and 10.6 per cent. of those of foreign parentage were illiterate; of foreign whites, 7.7 per cent.; of colored males of voting age, 45 per cent. Of the foreign-born males of voting age 43.1 per cent. were naturalized, 5.3 per cent. had their first naturalization papers, 15.1 per cent. were returned as aliens, and of 16.9 per cent. no details were given. Of the naturalized citizens 3.2 per cent., of those who had taken out their first papers 6.2 per cent., and of the aliens 13.9 per cent. were illiterate.

There were 34,160 deaths reported in Texas in 1900, of which 18,045 were males and 16,115 females, 26,216 whites and 7,944 colored, 23,526 native and 2,133 foreign whites.

Finances.—The appropriations voted for the biennial period ending Aug. 31, 1903, amount to \$5,752,685, compared with \$4,860,328 for the last biennial period; but, taking special appropriations into account, the Legislature voted only \$292,945 more than its predecessor.

Productions.—There were 4,553,495 acres under corn in 1900, yielding 81,962,910 bushels, val-

ued at \$38,522,568; 1,271,517 acres under wheat, yielding 23,395,913 bushels, valued at \$14,973,384; and 744,164 acres under oats, yielding 28,278,232 bushels, valued at \$8,483,470. The estimated cotton-crop of Texas for 1901 was 3,550,000 bales. The drought that affected the Western States in 1901 was a serious blow to Texas. Corn was not more than half a crop, and wheat was a failure, the wheat-louse having destroyed a large part of the crop. Cotton was attacked by the new enemy, the Mexican boll weevil, against which the planters fought with energy as soon as the destructive nature of the pest was appreciated. In some districts they made up a purse to pay a bounty for dead insects. It is estimated that its ravages reduced the year's crop by 242,500 bales. The weevil never appeared in dangerous numbers before 1900, but in 1901 it infested the river counties of southern and central Texas and appeared in isolated localities in the north. In some sections only a tenth of a crop was harvested. The acreage of cotton was 7.1 per cent. greater than in 1900. The destruction of wheat and oats by the aphid caused farmers in the north to plant more cotton, and the higher prices led to planting on new land, but in the south diversification of crops kept the cotton area down to the average. Rice is a new crop for Texas, but its culture in the coast district and on bottom-lands by means of irrigation is already an important industry. A great deal of capital has been put into pumping-stations and irrigating canals, and a great deal more is being attracted to the rice industry, which has led to a great advance in the price of suitable land. In 1901 the area planted to rice was three times as much as in 1900. The crop was seriously affected by scarcity of water. Still it reached 1,000,000 sacks, twice as much as was raised the year before. Another new development is the cultivation of vegetables and fruits for northern markets, especially in the belt of black land in eastern Texas, which produces without fertilizing. Tomatoes and peaches are the principal crops, and after these strawberries, cantaloups, cucumbers, cabbages, cauliflowers, and sweet potatoes.

In the cattle-ranches of western and northwestern Texas the long-horned cattle have given place to herds bred up to the best strains of Herefords, shorthorns, or red-poll cattle. There are vast regions that with irrigation can be made as productive as any part of the country, though now unfit for agriculture. The failure of food-crops and pasturage from drought and the consequent loss of cattle reduced the people of Zapata County and parts of adjacent counties in 1901 to a state of destitution. Deaths occurred from starvation before aid could be brought from outside. The live stock of Texas is officially estimated at 1,500,000 horses, 250,000 mules, 800,000 milch cows, 6,000,000 other cattle, 2,500,000 sheep, and more than 3,000,000 swine. The State produced only half as much wool in 1900 as in 1893. The raising of hogs and poultry, on the other hand, has grown in connection with the diversification of farming. Splenic fever having appeared in the southeastern counties, quarantine was enforced against these infected districts and against one in Oklahoma from Nov. 1, and from May 1, 1902, against Louisiana to keep out anthrax; furthermore, all persons were warned to report any case of anthrax or of glanders among their live stock. The Secretary of the Interior intended to open to settlement, on Aug. 4, the Kiowa, Comanche, Wichita, and Apache reservations, on which Texas cattlemen had 150,000 head of immature cattle, but at their request he re-

served pasture-lands on which they could get their stock ready for market.

The pine-lands of Texas, in the absence of forest laws, are being stripped of trees of all sizes. There are less than 40,000,000,000 feet of pine lumber still standing, and it is being cut down at the rate of 1,000,000,000 feet a year.

There are extensive fields of cinnabar in western Texas, on which operations were begun in 1901. Successive ranges of mountains conceal the mineral treasures of this region, which has been very imperfectly explored. The Attorney-General having given an opinion, when miners applied for mineral lands, that only such were open to mining claims as the State Geological Survey designated as mineral lands, many persons applied as agricultural settlers for land in the quicksilver districts of western Texas, on some of which mining companies had erected expensive works, and which these applicants sought to obtain for \$1 an acre, the lands having been classified as agricultural lands and valued at that price, and the claimants having settled on the sections they claimed before the mines were opened. The State Land Commissioner refused to grant patents, leaving it to the courts to solve the difficulty. An act of 1895 provided for filing certain descriptions of unsurveyed land under the mineral act, while an act of 1900 appropriated all unsurveyed lands to the permanent school fund. The Land Commissioner, recognizing these contested lands as mineral lands, raised the price to \$100 an acre, whereas if they were sold as grazing or agricultural lands at 25 cents to \$1 an acre the school fund would receive no benefit, since they are unfitted for grazing or agriculture, would be used only for mining, and the purchasers, paying only 2½ per cent. of the purchase price down and interest on the remainder, would abandon them when the minerals were exhausted, which would be long before the forty years expire, at the end of which the State can demand the balance.

Texas has two large bituminous coal-fields, and there are deposits of lignite of superior quality in many parts of the State. This material has not been much utilized, although it can be made into briquettes and has been found to be a good fuel for industrial or smelting purposes, when saturated with crude petroleum. In 1900 lignite formed one-third of the coal-production, the total of which was 1,022,827 tons. Mineral oil was first struck in Corsicana. On Jan. 10, 1901, A. F. Lucas, boring at Beaumont, struck a gushing well at a depth of 1,300 feet, which threw a 6-inch stream of oil 175 feet into the air. Speculators and oil experts gathered from all parts of the country. Land was bought or leased at many times the former price, and the new price was multiplied when a piece again changed hands. A company headed by D. R. Beatty, of Galveston, sunk a well close to the first one, which flowed with equal volume when the pipe tapped the reservoir. On March 29 and April 3 productive wells began to flow which were driven for a syndicate formed by J. M. Guffey, of Pittsburg, which controlled the first well and a great part of the oil-field. The Higgins company found oil on April 6, the Guffey company completed another well on April 8, and on April 18 the Heywood well began to flow. It was several days before the Lucas well was got under control, and it was not until the pipe was sunk below the cap-rock that it was safe from being clogged with sand. The drillers learned the depth at which they could expect oil, and were ready to close the valve before the rush of oil became uncontrollable, but not until the geyser in some instances had

ejected the pipe, and the well-spent gas at the start of the well, and the most violent burst forth at a point where no such violent burst was expected, and debris and broken pipes were lost by breakage. In order to close the valve, apparatus was used which had broken loose, and were used to close the valves. Only 20 wells were struck in August, but in that month 25 were struck in September 19. All these were in Spindletop hill, within a radius of less than half a mile from the first wells that were struck. On this hill oil was found at depths of 600 to 1,300 feet, always at the same great pressure, but not in every spot. Some holes were drilled on the hill which brought no oil. Outside in all directions hundreds of places were tried, and no oil was found. All the productive wells came from a reservoir that apparently had a very limited area. Indications of mineral oil have been noticed in many places in Texas since Americans first settled there, and many persons have tried to find the sources. After the strike on Spindletop oil was found with pressure both at Sour Lake and at Jennings, but the pipes became clogged with sand. The larger companies at Beaumont built pipe-lines to the railroad and to tidewater at Port Arthur, which is only 16 miles distant. When the smaller companies and individuals who had gushers began to offer their oil at lower prices, arrangements were made by the others to take it to market for them. A demand soon arose for the Texas oil as fuel. Manufacturers of neighboring cities put in appliances for feeding their furnaces with oil through small pipes, and found it half as dear as coal. Steam-vessels and railroad locomotives were fitted to use it as fuel. It was shipped to London to be used in combination with coal for the manufacture of illuminating-gas. Tank steamers supplied it as a substitute for steam-coal to cities on the Gulf seaboard, and tank-cars to cities of the Mississippi valley. Refineries were started which extracted 21 per cent. of illuminating-oil without impairing the value of the oil for fuel. The price at the wells was kept at 30 cents a barrel of 42 gallons. The oil is a heavy compound like the Russian oil, having a strong odor of sulfuretted hydrogen, containing naphtha, benzine, paraffin, lubricating-oils of superior quality, common asphaltum, and asphaltum used in paints, and more than 50 per cent. of illuminating-oil. In the summer the production reached 1,000,000 barrels a day, and in the autumn many new wells were opened without reducing the pressure. The development of the Corsicana field made progress also, and oil was struck in other counties. The changes and shortcomings of the Texas land and mining laws left open a question as to the rights of the oil operators. From 1883 to 1889 the law reserved the mineral rights of State lands sold for schools, and this affects some of the oil-fields.

Legislative Sessions.—The Legislature met on Jan. 14, 1901, and closed its session on April 9. Most of the general legislation was merely intended to cure defects in existing statutes. A law on civil libel defines what is actionable clearly enough to enable publishers to avoid giving cause for suits. An act prohibiting the playing of cards in any place save a private residence occupied by a family was intended to close a loophole which existed for the evasion of the law against gambling. An act regulating the practise of medicine shuts out persons who have bought diplomas, without study or experience, from fraudulent colleges. A law was passed prohibiting the black-listing of employees. Shipments of liquor into

local-option districts to be paid for on delivery are prohibited in order to make prohibition in such districts more effective. An offset to this bill is one absolving saloon-keepers from the penalty attached to sales of liquor to habitual drunkards, provided they make such sales unknowingly. Aliens who have resided twelve months in Texas and have declared their intention to become citizens are entitled to vote. A constitutional amendment to be submitted to the people provides that the payment of the poll-tax shall be a prerequisite to the right to vote. A law against barratry makes it a criminal offense for a lawyer to seek employment in any suit or action either by personal solicitation of his own or by procuring another person to solicit for him. The Legislature amended and extended the laws relating to public roads in many counties. A mineral survey of State lands was ordered, and provision was made for an official analysis of mineral specimens. A general land bill opens certain State lands to settlement. There was a demand for the abrogation of leases to cattlemen, to enable settlers to select agricultural lands thus leased, or at least a correction of the abuse by which these lessees are able to obtain the fee simple with the help of employees or other agents who take up sections for them at half or two-thirds of the price that settlers are willing to pay. Acts regulating railroads extend the police powers of the Railroad Commissioners and prescribe a general penalty for violation of the railroad laws where no penalty was specified, empower the commission to regulate crossings, and require railroad companies to prevent Johnson grass or Russian thistles from going to seed on their right of way. Various special railroad acts were passed, and certain companies were allowed a longer time to complete their lines. A general act permits companies to issue stock and bonds in extensions without regard to the stock and bonds outstanding on the part of the railroad already completed. The Attorney-General had given an opinion that, under the law as it stood, the Railroad Commission, in treating applications for the issuance of stock and bonds, consider the capitalization of the entire line, since the extension would also be affected by the mortgage covering the railroad. The Railroad Commission believed many of the older lines to be overcapitalized, and under this rule would have to deny applications for the right to issue new stock and bonds for extensions, which would cause a suspension of railroad building in Texas. Railroad construction in this State in 1901 exceeded that in any other, amounting to 583 miles, and a still greater mileage was projected for 1902. The venue of suits against railroad companies for damages on account of personal injuries was fixed by a new law in the county in which the injury occurred, or that in which the plaintiff resides. This act and the one defining barratry were intended to remedy a disreputable species of legal practise to which the Railroad Commission called attention in its annual report. Another act permits the formation of companies for growing fruit, vegetables, or tobacco. Another permits land companies chartered in Texas to do business outside of the State. An act regulating mutual fire insurance companies requires evidence of their solidity, and thus supplies an omission in the existing act. An act affecting practically lumber and mining companies prohibits the payment of employees with merchandise checks.

The Legislature met in special session on Aug. 10 to vote appropriations for the two years beginning Sept. 1, 1901, and to redistrict the State. The Governor thought that both measures could

be dealt with, but the legislators were determined to have two special sessions of thirty days or less. The bills apportioning the State into districts for Senators and Representatives in the Assembly, on the basis of the last census, were passed, but not the bill dividing the State into judicial districts. The State was divided into 16 congressional districts. The general appropriation bill was not passed before the session ended on Aug. 31, and a second special session had to be called on Sept. 3. Bills were passed permitting owners of lands and town lots that had been sold for taxes to redeem them; authorizing Galveston to build a breakwater, and to compromise its indebtedness; providing for the maintenance of deaf, dumb, and blind children; granting unincorporated towns and villages permission to incorporate for school purposes only.

The Treasurer having placed State funds in a bank that failed and the Comptroller being charged with assessing his clerks for his campaign expenses, the Legislature ordered a general investigation of the departments. The appropriation bill having been agreed to, the session ended on Oct. 1. Confederate pensions were increased from \$100,000 a year to \$150,000 by the last Legislature, and were now increased to \$200,000. There were 6,225 pensioners at the beginning of the year, and several hundred were added afterward. The salaries of clerks in various departments were raised, while appropriations for charitable institutions were cut down, and very little was voted for permanent improvements. The Legislature, in furtherance of the policy to do away with the convict-labor system, sanctioned the purchase of 2,500 acres adjoining the leased farm on Brazos river bottom, making the whole convict farm 8,000 acres, on which 500 negro convicts will be employed in growing sugar-cane.

Prosecutions.—The Attorney-General and his subordinates prosecuted companies and associations that were violating the State antitrust law of 1899. Several Texas breweries lost their charters for entering into a combination to regulate prices, and penalties were collected from them and from foreign brewing companies. The master plumbers' association was dissolved. The local oil company distributing the products of the Standard Oil Company was prosecuted vigorously, although it had been reconstituted so as to conform to the statute. Proceedings were begun against the associated companies that bale cotton for foreign destinations with patent compresses.

The Damage by Storm.—The storm that caused damages to the extent of \$20,000,000 to Galveston and millions more to other parts of the coast region, on Sept. 8, 1900, and the loss of about 8,000 lives, drew contributions from all parts of America and from some of the countries of Europe. The sum expended in relief amounted to \$1,948,414, of which \$1,518,467 were devoted to the people of Galveston. The Legislature voted to allow Galveston to use State taxes for the next two years assessed on its property, for raising the grade. The Government is dredging the docks at Galveston to a depth of 25 feet, and has plans for a channel of that depth through Buffalo Bayou to Houston.

Houston.—This city, which in ten years increased in population to 44,633 in 1900, was already an important railroad center and manufacturing city and a mart for the lumber, rice, sugar, and tobacco of southern Texas before the discovery of oil, and now the trade in fuel-oil and its local use in manufacturing have increased the city's growth and importance. Including suburbs, it has about 65,000 inhabitants, having doubled

35.9 bushels; product, 918,214 bushels; average price, 44 cents. Barley—acreage, 5,964; yield per acre, 36.5 bushels; product, 217,686 bushels; average price, 55 cents. Rye—acreage, 3,383; yield per acre, 17.5 bushels; product, 59,202 bushels; average price, 52 cents. Potatoes—acreage, 5,500; yield per acre, 118 bushels; product, 649,000 bushels; average price, 48 cents. Hay—acreage, 192,398; yield per acre, 2.65 tons; product, 509,855 tons; average price, \$7.95. Cotton—40 acres; product, 26 bales, or 13,000 pounds; value of crop, \$934.80. Wool—product, 14,136,981 pounds unwashed and unscoured; 4,947,943 pounds scoured; average weight of fleece, 6.25 pounds.

The live-stock interests made great strides during the year. The number of horses and mules in 1901 was 85,632, of a total value of \$1,874,753, compared with a value of \$1,414,693 in 1900. The cattle in 1901 numbered 348,557, with a value of \$8,576,952. In 1900 there were 192,216 cattle, with a value of \$3,199,789. The number of sheep grazing in the State in 1901 was 2,264,837, and their value was \$8,150,330. For the previous year the number of sheep was 1,566,101. The number of hogs in 1901 was 53,488, and the value \$372,114, compared with 15,848 in 1900, with a valuation of \$45,656.

In agriculture the most notable feature was the great increase in acreage of potatoes and sugar-beets. These are the most profitable crops for the farmers, and more attention is being given to them.

The number of mortgages in the State is 10,822, amounting to \$22,854,943.

Mining.—The development of the mining industry was the most powerful factor in the great prosperity of the State during the year. Capital poured in from outside to develop the great mineral resources, and Utah money was used for the same purpose. The greatest advance was in the production of copper. The old camp of Bingham, worked for many years for its silver-lead values, is now known principally for its copper, and a large section of Beaver County, where silver-lead mining was formerly prosecuted, is developing and shipping great quantities of copper, combined with silver and gold. Other parts of the State are also developing copper in great quantities. The production of this metal in 1901 was \$3,750,254.20, compared with \$2,514,597.40 in 1900. There have been advances in other branches of metal mining. The silver product increased from \$6,248,610.07 in 1900 to \$6,801,816.18 in 1901. The production of lead in 1901 was \$3,210,967.50, and for 1900 it was \$3,122,863.25. Gold showed a slight falling off, owing principally to litigation involving some of the most important producers. The output in 1901 was \$3,817,420, and in 1900 it was \$4,125,220. The total output of these four metals was \$17,580,457.88 for 1901, and \$16,011,290.72 in 1900. The dividends paid by Utah mines in the year amounted to \$4,592,058, compared with \$2,452,300 for 1900. This does not include several mines owned by private persons or close corporations that do not give out statements of profits.

Petroleum.—Early in the year attention was directed to the oil resources of the State. Oil-springs were discovered and located in several places, and boring began in different fields. Oil was struck in moderate quantities at no great depth, and the year closed with a large number of corporations and individuals preparing to sink wells to great depth. The Utah oil so far discovered has been principally of the lubricating variety, although there have been some discoveries of illuminating-oil and some of fuel-oil.

Railroads.—The year was marked by railroad activity. The San Pedro, Los Angeles and Salt Lake road and the Oregon Short Line both began the construction of lines to connect Salt Lake directly with southern California. The former road began building from Los Angeles, having already a road to San Pedro harbor. The Oregon Short Line in April acquired the Utah and Pacific road, thus giving it a line from Salt Lake to Uvada, and began construction from the Utah end. The Rio Grande Western road passed, July 1, into the hands of the Denver and Rio Grande, which acquired it by purchase. Several million dollars were appropriated for improvements in Utah by the Union Pacific, Oregon Short Line, Southern Pacific, and Rio Grande Western.

State Lands.—The sale of State lands in 1901, with interest on previous sales, amounted to \$233,885.25. The funds principally benefited are the common-school, university, reservoir, Agricultural College, and School of Mines funds, in the order named. The rest is distributed among various public institutions. The total land surface in the State is 82,096 square miles; the total water surface, 2,832 square miles. The land surface is divided as follows: Surveyed, 29,813.14 square miles; unsurveyed, 52,282.86 square miles; reserved, 8,574.48 square miles; appropriated, 7,090.5 square miles. A large proportion of the unappropriated land is valuable for agriculture, grazing, or mining. The unappropriated land belongs to the Federal Government, except certain grants made to the State for the support of various institutions, as follow: University of Utah, 155,836.15 acres; Agricultural College, 200,000 acres; Deaf and Dumb Asylum, 100,000 acres; Insane Asylum, 100,000 acres; Institution for the Blind, 100,000 acres; Miners' Hospital, 50,000 acres; normal schools, 100,000 acres; public buildings, 64,000 acres; Reform School, 100,000 acres; reservoirs, 500,000 acres; School of Mines, 100,000 acres. For the common schools were set aside four sections in every township, and 5 per cent. of the proceeds of sales of public lands within the State.

Coal.—The production of coal in 1901 eclipsed all previous records. The production was 1,382,470 tons, compared with 1,233,978 tons for 1900. The number of persons employed was 1,780. Nine lives were lost. The production was 777 tons for each employee. The total value of the output was \$1,631,314.60. Considerable work was done in developing new mines. The State has immense undeveloped deposits of coal.

Industries.—Great advances were made in the leading manufacturing industries, especially smelting and beet-sugar manufacture. The value of the product of the smelters was \$25,000,000. Several new and large smelters were started this year. The beet-sugar factories had an output of 32,000,000 pounds, valued at \$1,760,000. The average price for the beets was \$4.75 a ton, affording a handsome profit to the farmers. By the close of the year, nearly 25,000 acres of beets had been contracted for in the crop of the ensuing year.

The flouring industry suffered through the shortage of wheat, due to drought and grasshoppers. The Utah mills were kept running on wheat from Washington and Oregon.

The silk industry is encouraged by the State, a bounty of 25 cents a pound being paid on cocoons. The total value of the crop for the year is placed at \$2,604.

The total products of the State during the year are placed at \$52,228,137.

Legislation.—The Legislature convened Jan. 14 and adjourned March 14. Laws were passed

providing for a State School of Mines, making it a misdemeanor to work men more than eight hours a day on public works, forbidding the making it compulsory on the employees of any firm or corporation to trade at a certain store or patronize a designated boarding-house, forbidding the unauthorized wearing of the insignia of the Grand Army of the Republic, the Loyal Legion, or medals presented to volunteers in the Spanish-American War; requiring street-railway companies to vestibule all cars used during the winter months; creating a bureau of statistics to collect and arrange information about the State; providing for a reservoir fund for aiding in the irrigation of arid lands; providing that fire and accident insurance companies must do all business in the State through resident agents; providing for rigid inspection of the coal-mines; forbidding the keeping of slot-machines for gambling or exhibiting unchaste pictures; providing for the destruction of ground-squirrels; providing for the establishment in cities of the first and second classes of municipal courts superseding police and justice courts; providing for the regulation of irrigation under the supervision of the State engineer; requiring fire protection and safety appliances on the hoists in mines; providing for more stringent protection of fish and game; increasing the appropriation and facilities for the commission to encourage the growing of silk; providing for a bounty for the destruction of coyotes, lynxes, wild cats, wolves, mountain-lions, and bears; and making the docking of horses' tails a misdemeanor.

Mormonism.—Important changes took place in the Mormon Church. George Q. Cannon, first counselor, for many years a guiding spirit in the Church, died April 12. President Lorenzo Snow, generally considered the ablest president of the Church since the death of Brigham Young, died Oct. 10. A week later Joseph F. Smith, nephew of the founder of the faith, was chosen president, with John R. Winder and Anthon H. Lund as his counselors. The Mormon Church gained many converts in 1901 through its active proselyting, but it lost in political power. The principal reason for its waning prestige is the great influx of non-Mormons, who form the majority in the principal cities.

Political.—A United States Senator was elected to fill a vacancy which existed for two years owing to the failure of the previous Legislature to elect. The Republicans had a majority of the Legislature, and they held a caucus Jan. 18. The first ballot resulted as follows: W. S. McCormick, 9; A. L. Thomas, 8; Thomas Kearns, 8; Arthur Brown, 5; George M. Cannon, 4; O. J. Salisbury, 1; Reed Smoot, 1; C. E. Allen, 1. Balloting was continued four days. Jan. 22 Thomas Kearns received a majority in the caucus, and the next day he was elected by a solid Republican vote, the Democrats voting for A. W. McCune.

VERMONT, a New England State, admitted to the Union March 4, 1791; area, 9,565 square miles. The population, according to each decennial census, was 154,465 in 1800; 217,895 in 1810; 235,966 in 1820; 280,652 in 1830; 281,948 in 1840; 314,120 in 1850; 315,098 in 1860; 350,551 in 1870; 332,286 in 1880; 332,422 in 1890; and 343,641 in 1900. Capital, Montpelier.

Government.—The following were the State officers in 1901: Governor, William W. Stickney; Lieutenant-Governor, Martin F. Allen; Secretary of State, Fred. A. Howland; Treasurer, John L. Bacon; Auditor, Orion M. Barber; Adjutant-General, William H. Gilmore; Superintendent of Education, W. E. Ranger—all Republicans; Su-

preme Court, Chief Justice, Charles W. Allen; Associate Justices, John W. Rowell, John C. Allen, and William M. Tyler, and William W. Allen, all Republicans.

State officers are elected for a term of one year, except the members of the even-numbered years. The Legislature meets biennially in October. There are 30 Senators and 150 Representatives. The town system of representation is maintained.

Population.—According to the census of 1900, and color, the population is divided as follows: Males, 175,138; females, 168,503; native born, 298,894; foreign born, 44,747; whites, 342,771; negroes, including all persons of negro descent, 826; Chinese, 39; Indians, including those taxed and not taxed, 5. According to school and voting age, the division is as follows: Total of school age, five to twenty years, 98,614, including 98,357 whites and 255 negroes. Total of voting age, 108,356, including 87,465 native born, 20,891 foreign born, 108,027 whites, 289 negroes, and 8,544 illiterates. The average density of population to the square mile is 37.6.

Finances.—The Auditor of Accounts has issued a statement showing the revenue and disbursements of the State of Vermont for the fiscal year ending June 30, 1901.

The receipts were: Cash on hand and in banks, \$117,161.20; Agricultural College fund, \$8,130; Bennington Battle Monument fund, \$32.17; from savings-banks and trust companies, salary and expenses of Inspector of Finance, \$1,555.53; commercial fertilizer companies, license fees, \$900; Insurance Commissioners, fees collected of foreign companies, \$8,372.25. United States Government—Aid to Soldiers' Home, \$3,692.67; endowment of Agricultural College, \$25,000; account reimbursement for expenses incurred in war with Spain, \$2,248.85. Judges of probate, fees, \$26,714.53; county clerks, judgments, and balances, \$25,026.18; Burlington city court, fines and costs, \$3,224.73; State Prison, \$21,127.41; Industrial School, \$900; House of Correction, \$15,233.58; State Hospital for Insane, \$5,151.95; peddlers' licenses, \$375; collateral inheritance taxes, \$50,758.14; license taxes of 1901 and arrears of previous years, \$12,385; corporation taxes, \$453,543.42; charter fees, \$1,295; Secretary of State, charter fees, \$2,800. Towns—balance of State tax of 1899, \$4,412.79; balance of State school tax of 1900, \$2,065.82; balance of State highway tax of 1900, \$2,065.82; State school tax of 1901, \$88,621.81; United States deposit money, for redistribution on census of 1900, \$42,055.27; excess profit on liquor agency sales, year ending February, 1901, \$3,012.77; account highways and bridges, \$537.50. Temporary loans, act of 1898, \$110,000; temporary loans, act of 1900, \$150,000; interest on bank balances, etc., \$788.72; sundries, \$6,160.08; total, \$1,283,970.

The disbursements were: University of Vermont and State Agricultural College, United States endowment of agricultural colleges, \$25,000; Bennington Battle Monument fund, \$32.17; interest, \$24,727.37; temporary loans, act of 1898, \$110,000; temporary loans, act of 1900, \$50,000; arrears of State pay, act of 1861, 70 cents; extra State pay, act of 1898, \$352.36; amounts advanced to soldiers, \$530.84; towns—distribution of State school tax of 1900, \$87,805.89; distribution of State highway tax of 1900, \$88,305.45; redistribution of United States deposit money on census of 1900, \$49,891.25; debentures of General Assembly, session of 1900, \$54,805.40; Auditor's orders, \$690,958.64; cash on hand and in banks June 30, 1901, \$101,559.93; total, \$1,283,970.

The sources of revenue for the fiscal year July 1, 1901, to June 30, 1902, are: State tax, \$265,000; corporation taxes, estimated, \$425,000; collateral inheritance tax, estimated, \$35,000; total, \$725,000.

The liabilities payable during the year are: Due to soldiers, war of 1861-'65, unpaid balances, \$8,028.72; due to soldiers, war with Spain, unpaid balances on claims filed to date, \$54.75; unpaid Auditor's orders, \$8,139.88; excess of ledger liabilities over assets less registered loan due 1910, \$182,242.35; total, \$198,465.70. Balance available for the payment of current expenses July 1, 1901, to June 30, 1902, \$526,534.30.

Agriculture.—Official reports published this year show that the area, product, and value of Indian corn, wheat, and oats in the State during 1900 were as follow: Corn, 48,477 acres produced 1,930,080 bushels, valued at \$969,540; wheat, 3,489 acres produced 81,992 bushels, valued at \$63,954; oats, 106,581 acres produced 3,719,677 bushels, valued at \$1,339,084.

Education.—The latest available returns show that Vermont has 3 institutions under the heading of universities and colleges of liberal arts, with a total income of \$111,327. In the public schools there are 65,964 pupils, with 3,742 teachers, and an average daily attendance of 47,020.

VIRGINIA, a Southern State, one of the original thirteen, ratified the Constitution June 25, 1788; area, 42,450 square miles. The population, according to each decennial census, was 747,610 in 1790; 880,200 in 1800; 974,600 in 1810; 1,065,116 in 1820; 1,211,405 in 1830; 1,239,797 in 1840; 1,421,661 in 1850; 1,596,318 in 1860; 1,225,163 in 1870; 1,512,565 in 1880; 1,655,980 in 1890; and 1,854,184 in 1900. Capital, Richmond.

Government.—The following were the State officers in 1901: Governor, J. Hoge Tyler; Lieutenant-Governor, Edward Echols; Secretary of State, Joseph T. Lawless; Attorney-General, A. J. Montague; First Auditor, Morton Marye; Second Auditor, John G. Dew; Treasurer, A. W. Harman, Jr.; Adjutant-General, W. Nalle; Superintendent of Public Instruction, Joseph W. Southall; Commissioner of Agriculture, George W. Koimer; Railroad Commissioner, James C. Hill; Commissioner of Labor, J. B. Doherty; Register of the Land Office, J. W. Richardson; President of the Supreme Court of Appeals, James Keith; Justices, A. A. Phlegar, John A. Buchanan, George M. Harrison, and Richard H. Cardwell. All are Democrats.

Three of the State officers—Governor, Lieutenant-Governor, and Attorney-General—are elected by the people. They each serve four years. The election for these officers took place in November. Other elective State officers are elected by the Legislature for two years, except the Railroad Commissioner and Superintendent of Public Instruction, each for four years. The Adjutant-General is appointed by the Governor for four years, the Commissioner of Agriculture and Commissioner of Labor each for two years. The Legislature meets biennially, the first Wednesday in December in odd years. There are 36 Senators and 86 members of the House.

Population.—According to sex, nationality, and color, the population is divided as follows: Males, 925,897; females, 928,287; native born, 1,834,723; foreign born, 19,461; whites, 1,192,855; negroes, including all persons of negro descent, 660,722; Chinese, 243; Japanese, 10; Indians, including those taxed and not taxed, 354. According to school and voting age, the division is as follows: Total of school age, five to twenty years, 704,771, including 435,612 whites and 268,962

negroes; total of voting age, 447,815, including 436,389 native born, 11,426 foreign born, 301,379 whites, 146,122 negroes, and 113,353 illiterates. The average density of population to the square mile is 46.2.

Finances.—The operations of the treasury for the fiscal year ending Sept. 30 are summarized as follow: "The State has met all current expenses, including the expenses of the extra session of the Legislature; has paid the expenses of the Constitutional Convention; has given \$170,000 to disabled Confederate soldiers (an increase of \$27,500 over the previous year); gave an increase of \$21,000 to the public schools; put \$435,500 to the credit of the sinking-fund, \$68,000 to the credit of the literary fund, and has on hand at this time \$700,000."

The receipts and disbursements were as follow: Amount on hand Oct. 1, 1900, \$791,321.84; receipts from all sources during the year, \$3,633,156.39; total, \$4,424,478.23. Disbursements, \$3,597,881.17. Balance on hand Oct. 1, 1901, \$826,597.06. The disbursements include \$292,000 turned over to the Commissioners of the Sinking-Fund, with which to purchase State bonds.

The public debt now in the hands of the public is: Riddleberger bonds, \$4,572,226.88; century bonds, \$16,966,770.09; total, \$21,538,996.97. With schools and colleges, \$2,466,455.85; total, \$24,005,452.82. The literary fund holds \$1,710,227.28.

Valuations.—The Auditor of Public Accounts reports that the value of real estate in Virginia has increased \$22,844,095 since 1895. The increase by reassessment of 1900 in cities over reassessment of 1895 was \$8,842,449. The total increase over assessment of 1899 was \$1,689,597. The increase by reassessment of 1900 in counties and cities over reassessment of 1895 was \$22,844,095. The increase over assessment of 1899 was \$13,526,775.

Education.—Since 1897 the appropriations for public schools have increased \$162,235. The present enrolment of pupils exceeds that of 1897 by fully 7,000. Three hundred new schools have been opened during that period, and the value of school property has increased more than \$500,000.

Penitentiary.—The earnings of the Penitentiary for the fiscal year were nearly \$5,000 in excess of those in 1900. The net earnings were \$43,053.71. The net balance of profits for the fiscal year was \$42,944.86. The number of prisoners receiving conditional pardons was 115. The average number of convicts in the Penitentiary was 1,199. To feed, clothe, and guard these for the twelve months ending Sept. 30 entailed an expenditure of \$80,707.85. It cost the State \$67.31 to keep each convict in prison for the year.

State Industries.—The Bureau of Labor reports, issued in January, gives many valuable facts regarding the industries of Virginia. The following are among the most important mentioned: Requests for figures were sent to 86 tobacco manufacturing firms, and replies were received from 40. The reports from the 40 show value of goods manufactured in 1899, \$7,152,224.55. This is an increase over the previous statement of \$4,971,718.72. The amount of capital invested was \$3,566,390.76. The amount paid in wages during the year by the 40 firms reporting was \$962,722.86.

The report on cotton presents statistics from 7 mills, all that the State contains. The value of goods manufactured in the year was \$5,656,199.16; the value of manufactured goods on hand in January, 1900, was \$265,360.38; value of all stock and materials used (fuel, light, water-power, boxes, barrels, etc.) during year, \$156,497.37; value of stock and material on hand

in January, 1900, \$2,984,603.56; amount of wages paid in the year, \$651,297.23. Capital invested, \$2,984,603.56—an increase of \$586,203.56, compared with the previous year. The number of employees in all branches was 2,864, of which number 1,214 were females.

One plant reported a change of wages, which was an advance of 10 per cent.

Statistics are presented from 13 woolen-mills. The total value of goods manufactured in the year was \$387,404.75. For the year previous (nine reporting) the amount was \$287,700. Value of manufactured goods on hand January, 1900, \$56,855.24; value of stock or material used in the year, \$224,414.72; value of supplies used, \$9,221.24; value of stock or material on hand Jan. 1, 1899, \$73,906.15; capital invested, \$268,508.39; amount paid in wages, \$57,952.54.

Eight reports received from knitting-mills show the amount of wages paid during the year, \$291,491.88; capital invested, \$200,070; value of all stock and material used, \$307,532.71; value of all goods manufactured, \$879,631.05. The reports, almost without exception, say the condition of the knitting industry is good, but there is complaint of the scarcity of labor in Virginia.

The value of cigars and cigarettes manufactured in the year was \$4,465,760.80. The value of manufactured goods on hand, January, 1900, \$52,338.35; value of all stock or material used in 1899 was \$2,508,640.94. The value of supplies used in 1899 was \$24,171.80; value of stock and material on hand Jan. 1, 1900, \$188,533.21; amount paid in wages, \$483,795.07. Amount of capital invested, \$400,362.31.

Reports from iron foundries and machine shops (27 in number) showed the value of all goods manufactured in 1899 to have been \$5,570,484.70; value of goods on hand January, 1900, \$4,185,938.29; value of stock or material used, \$375,826.77; amount paid in wages, 1899, \$3,980,670.10; capital invested, \$7,502,075.20.

The value of all goods manufactured by brewers in 1899 was \$702,434.50, an increase of \$152,563.42 over the previous year, when the same establishments reported. Value of manufactured goods on hand January, 1900, \$95,635.55; value of all stock or material used, \$163,168.30; value of stock or material on hand January, 1900, \$23,119.04; amount paid in wages, \$100,070.35; capital invested, \$830,000.

Oyster-Fisheries.—The last Legislature appropriated \$5,000 to defray the expenses of resurveying the oyster-grounds. This work has been completed in York, Warwick, and Isle of Wight Counties, and some of the work has been done in several other counties. Of the amount appropriated, \$3,952 was expended up to Oct. 1.

The gain over 1900 from the planting ground was \$8,192.22, while the increase from tonging was \$1,737.02, and from dredging, fish-nets, etc., there was a small decrease. In the three and a half years of the operation of the law the net revenue to the State to Oct. 1, 1901, was \$103,272.72.

Political.—On Jan. 23 the Legislature was convened in extra session to arrange for the convention to formulate a new Constitution. This convention began its work on June 12. Hon. John Goode was made permanent chairman. On Oct. 23 a bill of rights, being Articles I, II, and III of the new Constitution, was agreed to. The following are its more important passages:

"ARTICLE I. 1. That all men are by nature equally free and independent, and have certain inherent rights, of which, when they enter into a state of society, they can not, by any compact,

deprive or destroy; that among these rights are the enjoyment of life, liberty, and property, and the means of acquiring and possessing them, and of peace and obtaining happiness.

"2. That all powers of government are consequently derived from the people, and that all magistrates are their trustees, and are at all times amenable to them.

"3. That government is instituted to protect and secure for the common benefit, the safety and security of the people, nation, or community, in all the various modes and forms of government, that is best which is capable of producing the greatest degree of happiness and safety, and is most effectually secured against the danger of maladministration; and that, when any government shall be found inadequate or contrary to these purposes, a majority of the community hath an indubitable, inalienable, and indefeasible right to reform, alter, or abolish it, in such manner as shall be judged most conducive to the public weal.

"4. That no man, or set of men, are entitled to exclusive or separate emoluments or privileges from the community, but in consideration of public services, which, not being descendible, neither ought the offices of magistrate, legislator, or judge to be hereditary.

"5. That the legislative, executive, and judicial departments of the State should be separate and distinct; and that the members thereof may be restrained from oppression, by feeling and participating in the burdens of the people, they should, at fixed periods, be reduced to a private station.

"6. That all elections ought to be free, and that all men, having sufficient evidence of permanent common interests with, and attachments to, the community, have the right of suffrage, and can not be taxed, or deprived of, or damaged in, their property, for public uses, without their own consent, or that of their representatives.

"10. That general warrants, whereby an officer or messenger may be commanded to search suspected places without evidence of a fact committed, or to seize any person or persons not named, or whose offense is not particularly described and supported by evidence are grievous and oppressive, and ought not to be granted.

"11. No person shall be deprived of his property without due process of law. In controversies respecting property, and in suits between man and man, a trial by jury is preferable to any other, and ought to be held sacred; but the General Assembly may, by law, in such cases, prescribe any number less than twelve, but not less than seven, to constitute a jury for the trial of all civil cases not now triable before a justice of the peace, and any number not less than five for the trial of civil cases now triable by a justice of the peace.

"12. That the freedom of the press is one of the great bulwarks of liberty, and can never be restrained but by despotic governments, and any citizen may speak, write, and publish his sentiments on all subjects, being responsible for the abuse of that liberty.

"17. That neither slavery nor involuntary servitude, except as lawful imprisonment may constitute such, shall exist within this State.

"18. The rights enumerated in this bill of rights shall not be construed to limit other rights of the people not therein expressed.

"ART. II. The Constitution of the United States, and the laws made in pursuance thereof, and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land.

"ART. III. The legislative, executive, and judiciary departments shall be separate and distinct."

The Democratic State Convention, on Aug. 15, nominated A. J. Montague for Governor, Joseph E. Willard for Lieutenant-Governor, and W. A. Anderson for Attorney-General.

The Republican State Convention, on Aug. 21, nominated J. Hampton Hoge for Governor, Robert W. Blair for Lieutenant-Governor, and D. Lawrence Groner for Attorney-General.

At the election in November, A. J. Montague received 116,682 votes and Hoge 81,366 votes, giving the former a plurality of 35,316.

The following were the votes on amendments:

In reference to the tax imposed on any citizens of the State for the privilege of taking or catching oysters from the natural beds with tongs—for, 12,230; against, 1,259.

Providing for the consolidation of spring elections with those held in the fall—for, 15,139; against, 7,254.

WASHINGTON, a Pacific coast State, admitted to the Union Nov. 11, 1889; area, 69,180 square miles. The population, according to each decennial census since admission, was 349,390 in 1890 and 518,103 in 1900. Capital, Olympia.

Government.—The following were the State officers in 1901: Governor, John R. Rogers; Lieutenant-Governor, H. G. McBride; Secretary of State, S. H. Nichols; Treasurer, C. H. Maynard; Auditor, J. D. Atkinson; Attorney-General, W. B. Stratton; Land Commissioner, S. A. Calvert; Superintendent of Public Instruction, R. B. Bryan; Adjutant-General, E. H. Fox—all Republicans except Rogers and Fox, who are Democrats; Chief Justice of the Supreme Court, James R. Reavis; Associate Justices, R. O. Dunbar, Mark A. Fullerton, T. J. Anders, Wallace Mount, W. H. White, H. E. Hadley; Clerk, C. S. Reinhart—all Republicans except Reavis and White, who are Democrats.

State officers are chosen for terms of four years, at the time of the presidential elections. The Legislature meets biennially in January of odd-numbered years. It was composed of 34 Senators and 80 Representatives, until at the regular session of 1901 the number of Senators was increased to 42 and the number of Representatives to 93.

Finances.—According to the report of the Treasurer, there was a balance in the treasury Sept. 30, 1901, of \$770,226.56. Some of the amounts on hand in the several funds were: General fund, \$105,415.21; current school fund, \$160,528.76; permanent school fund, \$52,276.17; military fund, \$70,895.65; revolving funds, Penitentiary, \$128,655.22; State Capitol Commission fund, \$168,299.74.

The State tax levy for 1901 as made by the State Board of Equalization was in the aggregate $7\frac{3}{4}$ mills, segregated as follows: For schools, 5 mills; general, $2\frac{1}{4}$ mills; interest, $\frac{1}{4}$ mill; military, $\frac{1}{4}$ mill; total, $7\frac{3}{4}$ mills. The total State levy for 1901 was $1\frac{1}{2}$ mill greater than that of the preceding year. The excess of $1\frac{1}{2}$ mill went to the current school fund, the per capita having been raised by the Legislature from \$8 to \$10 for school-children.

The railroad property as equalized was as follows: Main line, \$6,000 per mile, which is rated as first class; second class, \$2,280; third class, \$3,168; fourth class, \$2,000; fifth class, \$1,320. All equalized values were approximately higher by 5 to 20 per cent. than in 1900.

The amounts of taxes were computed as follow: State general tax, \$574,923; State school tax, \$1,306,644; tax for interest fund, \$52,265; for mili-

tary fund, \$52,265; grand total to be raised from all counties, \$1,986,097.

Education.—The apportionment of the current school fund, made by the State Superintendent for the quarter ending Oct. 31, 1901, was at the rate of 1 cent a day's attendance, and amounted to \$146,571.65 for all the counties.

The University of Washington, at Seattle, has graduated, since its organization, 304 students. Of these alumni, 290 were living at the end of the last year. The instructors in 1901 numbered 53; students, 614; volumes in the library, 13,000.

A successful year was reported by the Agricultural College and School of Science, at Pullman. The enrolment during the year was 628, including the summer science school for teachers, and 475 exclusive of that school. In the enrolment all but 5 of the counties in the State were represented. The faculty, including professors and instructors, and exclusive of tutors, numbered 36. The college had 7 buildings, including 2 dormitories, to which were added last year a new chemistry building and an armory and gymnasium. Besides the allied agricultural courses, the college has a preparatory school, a school for artisans, and a school of business. A recent branch of work is a short winter course for horticulturists.

Whitman College, at Walla Walla, graduated a class of 10. During the year it had 19 instructors and 300 students, and the library contained 9,000 volumes.

What is known as the Gunderson act, passed by the Legislature in special session over the Governor's veto, went into effect in September. The law provides that the county superintendent shall be *ex officio* president of the board; 2 of the members shall be lawfully qualified teachers engaged in teaching in the county, and 2 citizen taxpayers. Their term of office is four years. The board will have the power to name the text-books that shall be used in the schools of the county, subject only to the provision that they must be changed every five years.

Charities and Corrections.—In 1901 Washington was boarding, clothing, and caring for 2,100 persons in the institutions under the Board of Control. This task required the employment of 200 officials, and entailed an expense of \$700 daily for maintenance, besides large sums spent on buildings, repairs, etc. A member of the board is quoted thus: "About half of these 2,100 persons are in the hospitals for the insane at Medical Lake and Steilacoom, and many others are in the Reform School and the School for Defective Youth. In every case the full burden of their support and care is thrown on the State."

Under date of Dec. 14, 1901, Gov. Rogers issued a proclamation offering a standing reward of \$50 "for the arrest and delivery to the Penitentiary authorities of any person who has escaped from the State Penitentiary at Walla Walla."

Legal Decision.—What is said to be one of the most important decisions ever handed down by the Supreme Court of the State of Washington was made in April, 1901, in a case involving an application for a writ of prohibition by the State University regents against the State Land Commission. According to this decision, the Supreme Court is an appellate court only, except that it has original jurisdiction in habeas corpus, quo warranto, and mandamus proceedings as to State officers; the Legislature could not confer upon the Supreme Court original jurisdiction by enlarging the functions of any common-law writ, such as a writ of prohibition; the Legislature might enlarge the functions of such writs, but with this

original jurisdiction lies in the Superior Court, and not in the Supreme Court, to enforce the added remedies, and the Supreme Court only has in such cases appellate jurisdiction.

Productions.—Official figures place Washington fourth in rank among the States in the amount of wheat grown in 1900. The number of bushels raised in Washington is given as 25,096,661. Next before this State was California, with 28,543,628 bushels, and next after Washington was Nebraska, with 24,149,684 bushels. Of corn, Washington in 1900 produced 106,140 bushels, and of oats 3,016,226 bushels. For 1901 the wheat-crop was estimated at 29,000,000 bushels, the acreage having been considerably larger than the year before. The wheat exports from Seattle and Tacoma last year were greatly increased over all former years.

Prof. W. J. Spillman, of the Washington Agricultural College and Experiment Station, was engaged last year in originating new varieties of wheat particularly adapted to eastern Washington. He is one of a small number of men in the United States who are employed in such propagation.

There is a steady increase of the beet-sugar product of the State, which for 1901 the Secretary of Agriculture estimated at 2,000 tons. Home estimates were higher, indicating a crop nearly three times as large as that of 1900, with a correspondingly increased output of sugar. The sugar-beet is said to be well adapted for cultivation in Washington.

A large number of oil companies were formed in the State last year, and several have actively engaged in drilling.

Legislative Session.—The general appropriation bill of the last Legislature carried \$2,228,000. Some of the details were: Steilacoom Asylum, \$261,700; Medical Lake Asylum, \$181,300; Penitentiary, \$131,250; Reform School, \$52,200; School for Defective Youth, \$64,400; Soldiers' Home, \$35,200; Supreme Court, \$68,300; Superior Courts, \$72,700; State University, including money for maintenance and the construction of a science hall and a new power-plant, \$270,000; Agricultural College, \$94,800; Whatcom Normal School, \$93,800; Ellensburg Normal School, \$40,000; Cheney Normal School, \$45,000; revolving fund for the Penitentiary, \$150,000; maintaining the National Guard, etc., \$62,540. Among the enactments were the following:

For the purchase of the county court-house and grounds at Olympia for a State Capitol, and directing the Capitol Commission to make such additions to grounds and building as should be necessary to fit them for the use of the State, all at a cost not to exceed \$350,000. The new "House and Senate chambers and committee rooms shall be ready for the Legislature of the State of Washington when it assembles in January, 1903."

Regulating the practise of medicine in the State. The Governor vetoed it because it did not recognize osteopaths, but it was passed over the veto.

Establishing a system of traveling libraries, and providing for a State library commission to manage them.

Making it a misdemeanor to use or operate a nickel-in-the-slot machine of any character whatever, under penalty of a heavy fine or imprisonment.

Prohibiting horseshoers from practising their trade in cities without first passing an examination and obtaining a license.

Making it unlawful to sell, barter, or give away cigarettes to minors.

Creating a new judicial district.
Increasing the number of Justices of the Supreme Court.

For the examination of notary public, and the regulation of notaries.

To make kidnapping a crime punishable by imprisonment of not more than one year, or a fine of not more than one year, or a fine of not more than \$100, nor less than \$100.

Gov. Rogers convened the Legislature in an extraordinary session June 11. In his opening address he said: "The purpose for which this session is called together is, that it may pass a law to confirm, or amend the law relating to capital punishment." The reference is to a law of the last regular session providing a new rule for the execution of murderers condemned to death, which was thought to be so faultily drafted as to make it partially inoperative. The law in question was promptly repealed at the extra session, and an effectual substitute, embodying its purpose, was passed. The extra session lasted only two days, but several new bills were passed.

Militia.—By act of the last Legislature, radical changes were provided for in the National Guard. The reorganization practically places the militia of Washington on the same footing as the United States infantry. The chief provisions are the abolishment of the brigade staff, reducing the companies from 16 to 12, and increasing the number of men in each company to the full quota.

Constitutional Amendment.—May 1, 1901, Gov. Rogers announced by a proclamation that at the general election in the preceding November the constitutional amendment regarding exemption was ratified and had become a part of the Constitution of the State. The amendment reads: "The Legislature shall have power, by appropriate legislation, to exempt personal property to the amount of \$300 for each head of a family liable to assessment and taxation under the provisions of the laws of this State of which the individual is the actual bona fide owner."

State Capitol.—The bill to purchase the Thurston County court-house for a Capitol was signed by the Governor March 2, 1901. The amount received by the county from the State for the purchase was \$166,000, in payment of which the \$150,000 of Thurston County bonds held by the State were taken into consideration. Plans for making additions to the building were under way almost as soon as the act of the Legislature had become a law. The court-house is a fine building, fireproof, commodious, and elegantly fitted.

Geological Survey.—By the last Legislature the State Board of Geological Survey was created to supersede the Mining Bureau, which was abolished. The Legislature appropriated \$5,000 for the maintenance of the board for two years. By law the board must meet twice a year, on the first Tuesday in April and in November.

Game-Laws.—As amended by the last Legislature, the game-laws of Washington remain almost the same as in 1899, but there is one important addition, the main features of which are: That it is now unlawful for any resident or non-resident of the State, of the age of sixteen or over, to hunt any of the animals or birds protected by the State laws without a license from the county auditor. Furthermore, the law provides that a fee of \$1 for each license issued to a resident of this State, or of Oregon or Idaho, and a fee of \$10 for any other non-resident of this State, shall be collected by the county auditors for the game-protection fund. The recording of the license makes an additional cost of 75 cents.

Soldiers' Monument.—The Legislature of 1901 made an appropriation and provided for a commission for the erection of a State monument to 9 unclaimed dead of the First Washington Volunteers, buried in the Masonic cemetery at Olympia. The design adopted consists of a pedestal of Walla Walla polished granite 10 feet high, surmounted by a bronze figure of a soldier 6 feet tall, in fatigue uniform similar to that of the regiment.

WEST VIRGINIA, a Southern State, admitted to the Union June 19, 1863; area, 24,780 square miles. The population, according to each decennial census since admission, was 442,014 in 1870; 618,457 in 1880; 762,794 in 1890; and 958,800 in 1900. Capital, Charleston.

Government.—The following were the State officers in 1901: Governor, A. B. White; Secretary of State, W. M. O. Dawson; Treasurer, Peter Sillman; Auditor, Arnold C. Scherr; Attorney-General, Romeo H. Freer; Superintendent of Schools, Thomas E. Miller; Adjutant-General, S. B. Baker; Librarian, S. W. Stark; Bank Examiner, C. B. Kefauver; Secretary of the Board of Agriculture, J. O. Thompson; Labor Commissioner, I. V. Barton; Mine Inspector, J. W. Paull; Game and Fish Warden, E. F. Smith; Presiding Judge of the Supreme Court of Appeals, M. H. Dent; Associate Judges, Henry Brannon, H. C. McWhorter, George Poffenbarger. All the State officers are Republicans except Judge Dent.

State officers are elected for terms of four years at the time of the presidential elections, and are inaugurated on the 4th of the following March. The Legislature meets biennially in January of the odd-numbered years.

Finances.—The receipts in the Treasurer's office for the fiscal year ending Sept. 30, 1901, were: State fund, \$1,672,644.39; general school fund, \$436,877.96; school fund, \$79,263.92; total, \$2,188,786.27. The disbursements were: State fund, \$1,606,241.89; general school fund, \$458,133.14; school fund, \$151,134.10; total, \$2,215,509.13. Balance to credit of State fund Oct. 1, 1900, \$228,819.96; general school fund, \$387,460.71; school fund, \$518,468.55; total, \$1,134,749.22. Total of receipts and balance, \$3,323,535.49; subtracting disbursements leaves a balance in 1901 of \$1,108,026.36.

In addition to this there was to the credit of the State, Sept. 30, 1901, in bonds, stocks, and other investments of the school fund, \$649,249.50. The amount paid out for criminal charges for the year was \$125,000.

The chief sources of income for the year ending Sept. 30, 1901, were these: Licenses, \$306,277; corporation license on charter, \$380,506; railroad taxes, \$78,041; interest on deposits and stocks and bonds, \$68,549; sundries, fines, etc., \$26,977; capitations, \$157,055; land, \$295,023; buildings on land, \$53,435; lots, \$58,299; buildings on lots, \$92,887; intangible personal property, \$101,376; tangible personal property, \$86,974.

The large increase of receipts in 1901 arises principally from the operation of the new corporation law, the increase from this source being \$240,000 over the previous year. There was also \$88,000 increase in receipts from license taxes, and \$32,000 from redemption of lands, owing to the enactment of the law diverting these taxes from the irreducible school to the general fund.

Militia.—The Adjutant-General's report for 1901 gives an enrolment of 1,049 men in the State militia, with 125,000 available.

Education.—In 1901 there were employed 7,350 teachers in the public schools, which numbered 6,000. The total enrolment was 235,000,

and the total cost of the schools \$2,250,000. The total enrolment of the university at Morgantown and the 2 preparatory schools at Montgomery and Keyser was 1,013, the university enrolment being 882. The appropriation for the university was \$137,700. There are 6 normal schools.

Public Institutions.—The State in 1901 maintained the following institutions: Home for Incurables at Huntington; insane asylums at Weston and Spencer; Deaf, Dumb, and Blind Asylum at Romney; Boys' Reform School at Pruntytown; miners' hospitals at Welch, McKendree, and Fairmont; colored institutes at Kanawha and Bluefield; Home for Girls at Salem; Storer College.

The second building of the Asylum for Incurables was opened in February.

In 1901, 189 United States prisoners and 265 State prisoners were received at the Penitentiary, at Moundsville.

The West Virginia Historical and Antiquarian Society reports for the year 1901 more than 6,000 volumes, 4,000 pamphlets, many valuable manuscripts, maps, and a large collection of valuable autographs. The museum contains tens of thousands of relics, curios, and a fine exhibit of the timber, coal, marble, building-stones, fire and brick clays, and other products of the State, with specimens of its manufactures. A historical magazine, to be issued quarterly, was established in 1901.

Resources and Products.—West Virginia stands third in the production of coal, the quality of which is unsurpassed, as it is particularly free from sulfur. In 1901, 23,000,000 tons of coal were mined, 380 mines being in operation in 52 counties; 20,290,991 tons, valued at \$18,104,391.90, were produced in 21 counties. In 90 of the mines 390 electrical machines were used, which reduced the number of miners from 33,000 to 32,386. Forty new mines were opened, one in Mingo County being the largest in the world. The average number of days spent in mining coal was 225, the average wages per man \$46.65 per month.

The United States Steel Corporation leased from the Pocahontas Coal Company 50,000 acres of coal-field, also 3,000 coke-ovens which had an output of 1,500,000 tons of coke. The price paid was \$20,000,000.

In the production of coke West Virginia stands second. In 1901, 3,000,000 tons of coke were produced, valued at \$3,635,051.76, the ovens being in operation two hundred and thirty-five days. The State stands first in the production of petroleum, 20,000,000 barrels being produced in 1901. The State also leads in oil and natural gas, the famous white-sand oil being considered the best in the world. The gas-wells are the largest to be found. In 1901 the manufacture of glass was trebled, many capitalists coming to this State from Indiana, where they had shut down large factories because the gas in that region had given out. The oil line is extending toward Pennsylvania. Gas-wells are now in operation for 1,000 square miles around Charleston.

Perhaps the greatest source of wealth is the timber, there being 15,000 square miles of fine timber-land. Here are the largest mills in the world for hardwood, 100,000,000 feet of which was produced in 1901. The output of poplar was 150,000,000 feet, and of spruce 60,000,000 feet.

Although called the Mountain State, West Virginia's area is from 25 to 30 per cent. in fertile valleys, especially adapted to stock grazing and growing of small fruits. The largest orchard in the world is in Randolph County. It covers 1,740 acres, and contains 200,000 trees.

Production.—Wisconsin in 1900 raised 49,547,240 bushels of corn, of the value of \$16,350,589,

from 1,238,681 acres; 61,971,552 bushels of oats, of the value of \$14,253,457, from 1,936,611 acres; and 13,166,599 bushels of wheat, of the value of \$8,426,623, from 849,458 acres.

Legislative Session.—The Legislature made more laws than any of its predecessors. Nearly 600 bills were passed. A tax of 1 per cent. was imposed on legacies and inheritances devolved to children, parents, husbands, wives, brothers, sisters, or sons- or daughters-in-law, and 5 per cent. on all others, except gifts or bequests to charitable institutions. The age of compulsory school attendance was extended to fourteen years, from the former limit of thirteen years. One of the regents of the State University shall be a woman. Periodicals and books devoted to police news and stories of crime are prohibited. If the proposition is ratified by the people at the election of November, 1902, the State Superintendent of Schools will be an elective officer. It was made criminal for a telegraph operator or a messenger to divulge the contents of private messages or to neglect to deliver them. A homestead can be claimed against creditors in a house and a farm of 40 acres or a town lot of $\frac{1}{4}$ acre, not to exceed \$5,000 in value. A divorced person can not marry again within a year of the decree of divorce. Towns are empowered to impose a road tax of $\frac{1}{2}$ mill to $2\frac{1}{2}$ mills, and counties to maintain schools of agriculture and domestic economy. Physicians must be graduates of a medical college having a course of four terms, and must submit to a medical examination before being entitled to practise, and in addition to the schools of medicine already recognized, the practise of osteopathy is legalized—a measure which the regular physicians resisted vigorously. Pharmacists to obtain a license must be graduates of a school of pharmacy and have two years' experience in dispensing medicines, or, if not graduates, must have ten years' experience in a drug-store. A bill was passed to license architects. Bicycle side-paths may be constructed in any county, but in deference to the objections of farmers the town board can forbid their construction in any particular township. Any person who shall advise the commission of murder is punishable with one to three years' imprisonment when no attempt is made to commit the crime. An employee of a lumberman or a builder who does not get his wages when they are due can demand a promissory note. An act was passed to allow a widow the household furniture, wearing apparel, ornaments, and other family effects and also \$200 worth of personal property, irrespective of any waiver on her part or any provision for her in the husband's will. In an action brought by the State against a public officer for official misconduct, no person is excused from testifying on the ground that his evidence will incriminate himself, but his evidence can not be used against him except in an action for perjury. Breaking into a warehouse, shop, office, vessel, or railroad-car with felonious intent is made a felony. Any person desiring to alter his name can do so by filing with the county register of deeds the name he is known by, with his address, birth-place, and age, the reason for making the change, and the new name that he adopts. It is made a misdemeanor to mutilate horses by docking. To print advertisements or place any device on the United States flag is a misdemeanor. Cities are authorized to build or purchase light plants, as well as waterworks, and give bonds therefor, bearing not more than 5 per cent. interest, the majority of the electors having previously given their approval by ballot. To make or sell filled cheese or imitation butter is constituted a mis-

demeanor, though it is lawful to manufacture uncolored oleomargarin. For the protection of insect-destroying wild birds it was made unlawful for any person to kill any except game-birds, or to have them in his possession, living or dead, or their skins, plumage, nests, or eggs, the English sparrow, the crow, hawks, and owls being excepted. A person who has been adjudged insane can demand a reexamination, or a friend, relative, or guardian can demand it for him. Persons riding on street-cars who annoy passengers by boisterous conduct or foul or profane language are punishable as misdemeanants. To counterfeit a railroad ticket or pass is made a crime. No child under fourteen years of age can be employed in a factory or mine, nor, except during school vacation, in a mercantile establishment, or in messenger service or the like. The elements of agriculture are to be taught in district schools, and manual training and household economy in graded schools. When an insolvent debtor makes a voluntary assignment, the assignee must represent the creditors and protect them against fraudulent transfers, otherwise he is held liable. The use of coloring-matter or of chemical preservatives or antiseptics in sausages is prohibited. Foreign corporations to do business in Wisconsin must file their articles of incorporation and pay a license fee of \$1 for every \$1,000 worth of capital stock represented by their property and business in Wisconsin. Free employment offices are created in all cities of 30,000 inhabitants or more. A law making it bribery to give a railroad pass to any member of a political committee, any official, or any candidate for office, or for such person to receive one, will be submitted to the vote of the people in November, 1902. The sale of a stock of merchandise in bulk, or in any way except in the regular course of trade, shall be presumed to be fraudulent unless the seller or the buyer notifies the creditors beforehand. New powers are given to the fish and game wardens; also to the inspectors of noxious weeds, who can compel owners to clear such weeds from their lands.

A commission appointed to study the revision of taxation recommended an increase in the taxation of railroads, on the principle that they should pay on their property in the State a rate equal to that assessed on other property, real and personal. The Tax Commissioners have elaborated a plan for equalization of taxes, whereby corporations would have to bear the same relative burden that is imposed on private property, which will be laid before the next Legislature. This was one of the changes advocated by the immediate adherents of the Governor. The Legislature, however, rejected the bill to increase railroad taxes \$600,000.

The conflict between the Governor and his supporters and the majority of the Legislature became exceedingly bitter when the primary-election bill came up. The Republican party had pledged itself, in its last convention, as the Democratic party had done two years earlier, to the principle of the nomination of all candidates by the direct vote of the people at a primary election, in lieu of nominations by delegates through the machinery of caucuses and conventions. A group of men were believed to control the commonwealth by the selection of pliable nominees for State officers and members of the Legislature, which the conventions afterward ratified. The agitation for primary elections, where citizens can select the candidates of their party from among those who shall have been called out by the written request of a given percentage of the vote cast at the pre-

ceeding election, had been going on four years. The Legislature, however, defeated the bill that embodied the principles that had been approved by the party, and one was substituted which was said to be unworkable. Gov. La Follette vetoed this bill in a message in which he charged the opponents of the original measure with employing lobbyists who swarmed in both houses and tracked members to their hotels. The Senate, which lacked only two votes of a two-third majority to pass the bill over the Governor's veto, adopted a resolution repudiating the imputation of corruption conveyed in the veto message. The Governor vetoed a bill taxing mortgages, because it exempted a certain class of mortgages. He vetoed a bill to tax dogs, on the ground that farmers, to whom watch-dogs and sheep-dogs are a necessity, are already overtaxed, while corporations are taxed inadequately or escape taxation altogether. He vetoed a great many bills, most of them so carelessly drawn that they would not accomplish the object intended.

Under a new law, lobbyists are required to report their emoluments in fees and expenses. They made reports which were returned to them as insufficient.

WYOMING, a Northwestern State, admitted to the Union July 10, 1890; area, 97,800 square miles. Population in 1890, 60,705; in 1900, 92,531. Capital, Cheyenne.

Government.—The following were the State officers during the year: Governor, De Forest Richards; Secretary of State, Fennimore Chatterton; Treasurer, G. E. Abbott; Auditor, Le Roy Grant; Superintendent of Public Instruction, T. T. Tynan; Attorney-General, J. A. Van Orsdel; Adjutant-General, Frank A. Stitzer. Supreme Court: Chief Justice, C. N. Potter, Republican; Associate Justices, Samuel T. Corn, Democrat, and Jesse Knight, Republican; Clerk, R. C. Morris, Republican.

Finances.—The Treasurer's statement of Sept. 30, 1901, shows a net balance in the general fund, after allowing for outstanding warrants, of \$31,570.71, a net gain of \$9,266.28 over 1900. The Treasurer's cash statement is as follows: Cash balance Oct. 1, 1901, \$218,706.40; receipts from all sources, \$413,863.68; disbursements, \$386,876.83. This shows an increase in the cash balance of \$47,021.32 over the cash balance of 1900; also a gain in disbursements during the year of \$102,324.88.

Every department of State, county, municipal, and school government in the State is on a cash basis. The bank deposits amount to \$6,250,000, giving Wyoming a per capita deposit of approximately \$68.

Valuation and Taxation.—The Treasurer's report shows the total valuation of property within the State in 1901 to be \$39,581,216.55; number of cattle, 402,574, valuation \$6,902,311; number of sheep, 2,848,711, valuation \$5,737,219.50. The taxes levied in 1901 were as follow: State, \$256,255; county, \$326,996; general school, \$53,450; interest on county bonds, \$79,278; library tax, \$4,123; judgment and State deficiency, \$8,229; special school, \$168,445; payment of school bond interest, \$22,120; payment of county bonds, \$28,657; total, \$947,556.

State Lands.—The rentals for State lands increased from \$79,070 in 1900 to \$86,618 in 1901. The receipts from sale of State lands, given by Congress, increased from \$6,856 in 1900 to \$22,095 in 1901. The State owns 3,001,905.48 acres of school sections. Of this amount more than 1,250,000 acres have been leased.

Mining.—Several large copper-mines were discovered in Wyoming in 1901. In one of these,

the New Rambler, in the southeast portion, platinum and iridium were discovered. The output of copper for 1901 from the State was valued at \$1,500,000; iron, \$300,000; gold, \$500,000; silver, \$52,000; platinum, \$5,000; oil, \$100,000; coal, \$5,490,621.25. Five new coal-mines were opened this year, making 25 mines, with an output of over 600 tons of coal a day. For the first time in the history of the State the output for a year amounted to more than 4,000,000 tons.

Early in the year the richest illuminating-oil ever found in the world was discovered in the southwest corner of the State. The oil is 97 per cent. pure. A dozen drills are now being driven in the district. Oil discoveries near Lander and Casper and in Big Horn County created great excitement, and in the spring hundreds of wells will be bored.

Legislative Session.—The Legislature convened on Jan. 8, and adjourned on Feb. 16. Among the laws enacted were the following:

Providing that no divorce shall be granted unless the plaintiff shall have resided in the State for one year immediately preceding the time of filing the petition.

For teaching in the public schools humane treatment of animals.

For payment of bounties on predatory wild animals, and appropriating \$40,000 therefor.

For the permanent location of public institutions in the State, and that the question shall be submitted to a vote of the people in 1904.

For the protection of song and other birds.

Changing the name of the Stinkingwater river to the Shoshone.

Providing for the creation of the office of State geologist.

For the establishment of a State board of health.

For the repeal of laws licensing gambling, to become effective Feb. 26, 1902.

For levying a tax on railroad-cars owned by other corporations than a railroad company.

For the refunding of county bonds.

For the publication of a State pamphlet descriptive of Wyoming.

For a new legislative representation according to the population as returned by the census of 1900. Under this provision the legislative membership will be increased to 23 in the Senate and 49 in the House.

UNIVERSALISTS. The trustees of the Universalist General Convention reported at its meeting in October the following summary of the statistics of the denomination for Dec. 31, 1900: Number of parishes, 983; of families, 51,174; of church-members, 52,873; of members of Sunday-schools, 57,529; value of parish property, less debts, \$9,933,453; amount of parish expenses and contributions, \$1,264,555. Several new parishes had been organized and received into fellowship, although, on account of the dropping of inactive and moribund parishes by several of the State conventions, the whole number of parishes was apparently less than in the previous year. Fourteen new church buildings had been erected or purchased. The year's receipts for the funds and various interests of the convention, including several bequests and large gifts, had been \$72,131; the Twentieth Century fund of \$100,000 had been completed, and the amount contemplated for it even promised to be exceeded.

The General Convention met in Buffalo, N. Y., Oct. 17. The Hon. Charles L. Hutchinson was chosen president. The general superintendent reported concerning his labors during about three years, in the course of which he had visited and

held services in 26 States, the District of Columbia, and the provinces of Ontario, Quebec, and Nova Scotia, attending State conventions, appointing superintendents or missionaries, visiting schools and colleges, etc. His office was continued. The value of the work of the Southern missionary was recognized, and that office was likewise continued, to be under the control of the general superintendent. A committee of five, the general superintendent being one of the number, was constituted, to be appointed biennially to confer with the like committee of the American Unitarian Association, with the understanding that the committee should not have or exercise joint missionary functions; that it should be its duty only to consider cases where there might be a conflict of interest or duplications of missionary efforts, or where friction had arisen or was likely to arise, between the representatives of the two bodies, and that it should endeavor to promote harmony by wise and judicious Christian counsel, and in case of failure, should report to the Board of Trustees. The mission in Japan, which is supported by special gifts, and only to a small extent out of the general funds, was commended. In view of the year of the next biennial session of the General Convention (1903) being the one hundredth anniversary of the adoption at Winchester, N. H., of the Universalist profession of faith, provision was directed to be made for a special observance of the occasion in connection with the meeting; and the observance of the centennial was recommended to the churches, Young Peoples' Unions, and Sunday-schools throughout the country. The thirty-second annual meeting of the Woman's Centenary Association was held in Detroit, Mich., May 29, Mrs. C. A. Quinby presiding. The treasurer reported that the receipts for the year had been \$7,329, and the expenditures \$4,170. Of the balance of \$3,159, \$2,600 went into the permanent fund, and was not available for general purposes. The permanent fund had been largely increased during the year by life memberships and special gifts, and now amounted to \$19,478. More than \$600 had been contributed toward the \$1,000 which had been pledged to the Twentieth Century fund.

URUGUAY, a republic in South America. The legislative power is vested in the Congress, consisting of a Senate of 19 members, elected in the departments which they represent by electoral colleges for a term of six years, and a House of Representatives containing 69 members, elected for three years by the direct votes of all adult male citizens who can read and write. The President of the republic is elected for four years. Juan Lindolfo Cuestas is President for the term ending March 1, 1903, and José Battle y Ordoñez is Vice-President. The Cabinet at the beginning of 1901 was composed as follows: Minister of War and Marine, Gen. Pedro Callorda; Minister of the Interior and Justice, Eduardo MacEachen; Minister of Agriculture, Industry, Education, and Public Works, Gregorio L. Rodriguez; Minister of Finance, Dr. Anacleto Dufour y Alvarez; Minister of Foreign Affairs and Worship, Dr. Manuel Herrero y Espinosa.

Area and Population.—The area of Uruguay is 72,110 square miles. The population of Montevideo is estimated at 266,000. In the other departments a census was taken on March 1, 1900, which makes their population 629,364, which, added to that of Montevideo, gives a total of 895,364; but allowance being made for imperfect enumeration the population of the republic is estimated at 900,600. There were 90,199 foreign-

ers enumerated, and if their average proportion is the same throughout the republic they exceed 135,000. The number of immigrants landed at Montevideo in 1900 was 8,892 and the number of persons who sailed away was 6,705, against 9,006 emigrants and 5,830 emigrants in 1899. Among the immigrants arriving in 1900 were 3,211 Italians, 2,815 Spaniards, 685 Brazilians, 451 French, 290 Germans, and 252 British. The number of marriages registered in 1899 was 4,463; of births, 31,613; of deaths, 12,343; excess of births, 19,270.

Finances.—The estimate of revenue for the fiscal year 1900 was \$16,124,325, of which \$10,200,000 are derived from customs, \$1,850,000 from the property tax, \$940,000 from trade licenses, \$258,866 from additional duties, \$530,000 from the factory tax, \$500,000 from internal-revenue duties, \$300,000 from stamps, \$270,000 from bank profits, \$340,000 from posts and telegraphs, and \$935,459 from other sources. The expenditure for 1901 was estimated at the same amount, \$363,904 being for the Congress, \$65,976 for the President, \$137,669 for the Ministry of Foreign Affairs, \$2,270,105 for the Ministry of the Interior, \$958,658 for the Ministry of Finance, \$1,126,038 for the Ministry of Agriculture, Industry, Education, and Public Works, \$1,745,460 for the Ministry of War and Marine, \$357,091 for courts of law, and \$9,099,382 for national obligations. The final account of expenditures has not been published for several years. There has been increased expenditure on the army, officially stated to number 3,504 officers and men, besides 3,200 armed police and 20,000 militia. The effect of new taxes was to cause a decline in the revenue.

The foreign debt on Jan. 1, 1900, was stated to be \$100,161,606; international obligations, \$3,996,025; internal debt, \$23,101,898; total debt, \$127,159,529. On Jan. 1, 1901, the foreign debt was \$99,660,680; international debts, \$3,656,275; unified internal debt, \$5,451,600; guaranteed debts, \$3,576,700; liquidation debt, \$1,003,948; loan of 1897, \$7,304,600; treasury bills, \$4,849,950; total, \$125,502,753. The cost of the public debt for 1900 was \$4,957,722 for interest and \$165,776 for amortization; total, \$6,144,498.

The Army and Navy.—The permanent armed force provided for in the budget of 1900 was 1 regiment of field-artillery, consisting of 250 men; 4 battalions of rifles, of 400 men each; 5 regiments of cavalry, of which 3 contain 300 and 2 contain 250 men; the President's escort of 50 men; 60 men in the garrison of Fort Artigas; 1 company of train, containing 100 men; and 40 cadets and 31 men in the military academy. The infantry weapon is the Mauser rifle of the model of 1893, having a caliber of 7 millimeters. There are about 3,200 men in the police, and 96,997 men are enrolled in the National Guard. The naval force in 1900 consisted of 2 gunboats and 2 armed steamers having 22 officers and 162 sailors in their crews.

Commerce and Production.—The principal business in Uruguay is raising live stock. In 1898 there were 363,511 horses, 13,181 mules, 4,826,675 cattle, 15,536,889 sheep, 34,881 goats, and 3,972 hogs, the whole valued at \$73,038,000. The number of cattle slaughtered in 1899 was 821,600; in 1900, 707,700. The exports of wool in 1899 were 39,320 metric tons, against 41,010 tons in 1898; of wheat, 62,763 tons, against 77,230 tons in 1898; of wheat-flour, 20,726 tons, against 11,296 tons; of corn, 10,926 tons, against 125,758 tons. The crop of wheat in 1900 on 377,988 hectares sown was estimated at 187,553 metric tons. There were 824 vineyards in 1898 with 15,243,268

vines planted. Agriculture has been extended by immigrant settlers who obtain land on easy terms from land companies. There were 21,045 farmers in 1900, of whom 10,853 owned their farms. In the northern departments of Uruguay gold-mines are worked, chiefly in Rivera, where 74,708 grams of gold were obtained in 1898, and an average of 95,447 grams since 1885.

The value of imports of merchandise in 1899 was \$25,551,788, and of exports \$36,574,164. The imports of articles of food and drink were \$7,135,859 in value; of raw materials and machinery, \$6,875,652; of textile goods, \$5,042,176; of clothing, \$1,308,547; of tobacco, \$224,434; of other merchandise, \$4,965,120. The exports of live animals were valued at \$260,006; of animal products, \$35,539,134; of agricultural products, \$2,354,919; of other products, \$420,105. The exports of wool in 1898 were \$10,716,158 in value; of jerked beef, \$5,474,856; of hides and skins, \$6,300,344; of beef extract, \$1,447,185; of tallow, \$1,255,493. In 1898 the imports of merchandise were \$24,784,360, and of coin \$7,095,381; exports of merchandise were \$30,276,916, and of coin \$6,060,576. The special imports in 1900 were \$24,000,000 in value; special exports, \$29,400,000. The principal exports were hides and leather for \$8,174,000; wool, \$8,025,000; meat, \$6,005,000; tallow, \$1,662,000; wheat, \$1,546,000; meat extract, \$1,319,000; animals, \$534,000. The commerce was distributed among various countries as shown in the following table, giving the values of the imports from and the exports to each country:

COUNTRIES.	Imports.	Exports.
Great Britain.....	\$6,337,000	\$1,956,000
Brazil.....	1,269,000	7,598,000
France.....	1,982,000	4,791,000
Belgium.....	1,558,000	5,215,000
Germany.....	3,500,000	2,777,000
Argentine Republic.....	2,700,000	2,825,000
United States.....	2,183,000	1,672,000
Italy.....	2,212,000	725,000
Spain.....	1,824,000	588,000
Chili.....	111,000	490,000
Cuba.....	116,000	455,000
Paraguay.....	169,000
Portugal.....	14,000	153,000
Other countries.....	3,000	143,000
Total.....	\$23,978,000	\$29,388,000

Owing to the fall in the price of wool a considerable part of the wool produced in 1899, estimated at a quarter, was held back for higher prices. This caused a decrease of about \$3,000,000 in the Government receipts from export duties and made the total value of exports less than it would have been if this temporary cause of disturbance had not been in operation. In 1900 the wool-clip was promptly exported, though at lower prices, but a failure of the wheat-crop caused a great shrinkage in the exports of agricultural produce. The total trade was lower than in any year since 1897, which was a year of civil war. A depression has existed for several years, which has been attributed in a large measure to the system of excessive taxes and duties and to official regulation of commerce and industry. The high protective tariff has helped to build up some industries, but in general commercial activity there has been a decline. In 1901 the wool-clip was above the average and prices were better. Its value was estimated at \$12,000,000. The wheat-harvest promised to be abundant, and was estimated at \$10,000,000. The number of cattle slaughtered was almost double that of 1900.

Navigation.—The number of vessels entered at the port of Montevideo during 1899, including coasting and river vessels, was 3,974, of 4,105,102

tons; cleared, 4,048, of 4,167,617 tons; entered at other ports, 13,963, of 7,203,955 tons; cleared, 13,426, of 7,046,075 tons. In 1898 the number of vessels entered at Montevideo in the ocean trade was 969, of 1,945,884 tons; cleared, 911, of 1,888,325 tons.

Railroads and Telegraphs.—The railroads of Uruguay have a length of 1,080 miles, and there are 146 miles of street-railroads. A new line completed in 1901 passes through one of the richest parts of Uruguay and forms a new and shorter route to Buenos Ayres.

The post-office in 1899 forwarded 10,311,256 pieces of mail-matter in the internal and 8,176,255 pieces in the external service; receipts, 1,875,041 francs; expenses, 1,938,138 francs.

The length of telegraph-lines is 4,525 miles, including 995 miles belonging to railroads. The number of messages in 1898 was 346,359.

Political Affairs.—President Cuestas, a leader of the Colorado party, came into office after the assassination of Idiarte Borda on Aug. 25, 1897. The administration of government since the civil war, which cost the country \$13,000,000, is admitted to have been honest and economical. Civil rights have been respected, and the financial obligations of the nation have been met with punctuality. On the other hand, public indebtedness has increased and taxation has steadily risen. While incipient manufacturing industries have been encouraged, the pastoral and the rising agricultural industries of the country have suffered from a prolonged depression, which has produced a reaction against the Government. President Cuestas has refrained from official interference in elections, adhering to the promises made to the revolutionary leaders in 1897. In the elections to fill 6 vacancies in the Senate 5 members of the Blanco party were elected just before the beginning of 1901, placing the Colorados, who have controlled Uruguayan affairs since 1865, actually in the minority, since the 2 Constitucionales, who with 8 Blancos and 9 Colorados composed the Senate, voted usually with the Blancos. On taking the presidency Señor Cuestas assured the Blanco party that the administration would be neutral, and he has since had the support of that party as well as that of the majority of the Colorados, the only opposition coming from a section of the Colorado party composed of partisans of the former administrations of Borda and Herrera. When the Senate was convened Dr. Juan Carlos Blanco, a Colorado, was elected president as the administration candidate. The president of the Senate, who is elected for twelve months, is *ex-officio* Vice-President.

While customs declined in 1900, all the internal revenues showed an increased yield. The Government out of its previous surplus revenue contributed to the fund for the construction of the new port of Montevideo, which was begun by French engineers on July 18, 1901, when that fund had reached \$1,000,000. The work had been projected for sixty-eight years, and was at last undertaken with national resources alone, without an appeal to foreign capital, and also without imposing a burden on the people. A Latin-American Scientific Congress was held at Montevideo in March, at which a resolution was adopted in favor of compulsory arbitration between South American republics, Chile alone dissenting. In April the Government issued an order prohibiting the landing of Jesuit and other clerical immigrants from Europe. A commission was appointed by the Government to alter the customs tariff and to diminish and distribute more equally among the population the heavy taxes. A re-

form of the entire fiscal system of Uruguay is planned, and in this purpose the administration had the support of almost the entire nation. The harbor works are expected to regain for Montevideo its lost position as the chief port on the southeast coast of South America. After the first surveys were made nearly three-quarters of a century ago there came a period of internal struggles and conflicts which rendered impossible any continued effort to accomplish the work, which was beyond the limits of the commerce and revenue of the republic. Later administrations which studied the matter deemed it necessary to call in the assistance of foreign capital. This proved a stumbling-block, and at last the Cuestas Government conceived the idea of forming a fund from home capital, which was done with entire success. The port works will require from six to eight years for their completion. The price at which the French contractors undertake to build them is \$9,916,336 in gold, the Government furnishing dredging material to an amount not to exceed 4,900,000 francs. The funds are provided by special import and export duties, yielding about \$1,000,000 in gold per annum. On the guarantee of these duties port bonds are issued, which the French syndicate agrees to take at current rates.

A violent conflict between the two political par-

ties seemed likely to occur on the occasion of the general election in November. Negotiations were carried on to bring about an electoral agreement, such as was made in 1897, whereby each party sent to Congress a proportionate number of Deputies. These negotiations failed, and in September the situation was strained. On Oct. 24 the Minister of Industry and Commerce resigned. The Colorados and Blancos still strove to arrive at an accord which would avert disorders, and on the eve of the election an agreement was definitely arranged in accordance with which the composition of the Chambers was to remain substantially as it was, insuring the maintenance of the existing administration and averting the possibility of a renewal of the civil war. The election on Nov. 24 passed off in perfect tranquillity. Party contention having been suppressed by the electoral accord, the majority of the electors abstained from voting. Half of the Deputies were reelected, and the only alteration in the political situation was to add strength to the support given by Congress and the nation to President Cuestas and his administration. The new Chamber did not meet till Feb. 15, 1902. Meanwhile the old Chamber continued its deliberations, having been convened to an extraordinary session.

UTAH. (See under UNITED STATES.)

V

VENEZUELA, a federal republic in South America. The legislative power is vested in the Congress, consisting of a Senate of 27 members, 3 from each state and the federal district, elected for four years by the state legislatures, and a House of Representatives of 52 members, 1 to 35,000 of population, elected for the same period by popular vote. The President is elected for two years, and is ineligible for the succeeding term. Gen. Cipriano Castro was appointed provisional President on Oct. 23, 1899. The Cabinet appointed on July 30, 1900, was composed as follows: Minister of the Interior, Dr. Rafael Cabrera Malo; Minister of Foreign Affairs, Dr. Eduardo Blanco; Minister of War and Marine, Gen. J. Pulido; Minister of the Treasury, Tello Mendoza; Minister of Public Instruction, Dr. Felix Quintero; Minister of Fomento, Gen. Ramon Ayala; Minister of Public Works, Juan Otañez.

Area and Population.—The area of Venezuela is estimated at 593,943 square miles. The population according to the census of 1891 was 2,323,527. In 1900 it was estimated at 2,444,816. There were 326,000 Indians, of whom 240,000 were civilized. The number of foreigners was 44,129. Efforts have been made recently to settle foreign agriculturists on the unoccupied lands of the interior. The Federal Government will grant to settlers 2½ acres for each member of the family. Education was made compulsory in 1870, and in 1900 there were 1,450 federal elementary schools and 150 state schools. But at the last census only 399,986 persons, 205,277 males and 194,709 females, could read, and the total number of pupils in all the schools was but 54,553.

Finances.—The revenue in 1898 was 33,429,826 bolivars, or francs, and expenditure 45,542,524 bolivars. Under a contract made for five years in 1897 the Bank of Venezuela collects and disburses the revenue, receiving a commission of 2 per cent. on all collections and payments. In the budget for the financial year 1902 the amount of the revenue is calculated at 37,000,000 bolivars, of which 21,330,000 bolivars come from customs,

650,000 bolivars from stamps and patents, 65,822 bolivars from territorial revenue, 2,860,000 bolivars from salt, 130,000 bolivars from registration, 700,000 bolivars from consular fees, 400,000 bolivars from Caracas water-rates, 800,000 bolivars from Puerto Cabello, 4,560,178 bolivars from education, 2,159,791 bolivars from posts, telegraphs, and telephones, 3,312,200 bolivars from transit dues, and 32,000 bolivars from mines. The expenses are estimated at 15,239,332 bolivars for administration, 11,425,791 bolivars for costs of *régie* and collection, 2,484,108 bolivars for the internal debt, 1,067,601 bolivars for the external debt, 1,500,000 bolivars for the Venezuelan debt, 497,064 bolivars for foreign creditors, 541,895 bolivars for public works, and 4,244,209 bolivars for subsidies; total, 37,000,000 bolivars.

The foreign debt of Venezuela was inherited from the federal republic of Colombia that was dissolved in 1830. It was incurred in the war of independence, and on July 30, 1900, the amount outstanding was £2,638,200, not including £204,460 of unpaid interest. The internal debt at the beginning of 1899 was 79,783,511 bolivars. The total debt on July 1, 1901, was stated to be 194,202,343 bolivars, of which 11,119 bolivars were what remained of the former national consolidated 5-per-cent. debt and 13,092 bolivars the internal debt of 1894; 59,808,671 bolivars paying 6 per cent. were the internal debt of April 14, 1896; 3,544,342 bolivars were warrants paying 1 per cent. a month; 66,614,550 bolivars were the external 3-per-cent. debt; 47,200,000 bolivars were the Venezuelan loan of 1896 paying 5 per cent.; 6,713,029 bolivars were French, German, and Spanish debt at 3 per cent.; 10,175,199 bolivars the loan for the Caracas aqueduct; 115,638 bolivars debt from the revolution; and 6,703 bolivars floating debt.

Commerce and Production.—In the settled region near the coast and the Orinoco river sugar, coffee, cacao, and grain are cultivated; in the savannas farther back cattle are pastured in great herds; and from the forests of the interior

are brought down rubber, tonga-beans, copaiba, and vanilla. Nearly 200,000 acres are planted to coffee, and about 52,000 tons are annually exported. The sugar plantations are not so prosperous as when the importation of sugar was prohibited, but efforts have been made to introduce modern methods and machinery in this and other branches of agriculture. In the gold-fields of the Yuruari territory 42,315 ounces were produced in 1899, against 39,500 ounces in 1898, 43,500 ounces in 1897, and 60,674 ounces in 1896. In 1884, when the alluvial deposits were first opened, 233,935 ounces were produced; in 1885, 172,037 ounces; in 1886, 217,135 ounces. Gold-mines at Callio were formerly very productive. The district was deserted after great amounts of French, American, and German capital were invested there, the revolution by which Guzman Blanco fell having made the property insecure. Silver ore is abundant in the states of Los Andes, Lara, and Bermudez. Copper exists in great quantities, and asphalt, sulfur, and coal are mined and petroleum, lead, and tin are found. The Government works salt-mines in different localities. Iron is mined by an American company at Imataca. Natives dive for pearls in the waters off the coast surrounding Margarita and other small islands, and the annual production is valued at \$100,000. In 1900 a concession was granted of the exclusive right to fish for pearls, sponges, and tortoise-shell on a commercial scale without prejudice to the rights of the native fishermen, the Government to receive 10 per cent. of the profits. Coal exists in great deposits, but it is not mined. Petroleum also is to be found in large quantities.

The trade of the United States with Venezuela has grown faster than the French or German trade. In 1899 the exports from Venezuela to the United States were \$5,669,900; to France, \$7,604,000; to Germany, \$2,237,200; to Great Britain, \$222,000. The imports from the United States were \$2,641,400; from Great Britain, \$2,407,200; from Germany, \$952,000; from France, \$636,900.

The total value of imports in 1898 was 42,797,500 bolivars, and of exports 74,497,550 bolivars. Coffee is exported to France, the United States, and Germany; cacao to France, Spain, and Germany; hides to the United States. The export of cacao from La Guayra, Puerto Cabello, Ciudad Bolivar, and Maracaibo in 1899 was 5,828,784 kilograms; of hides, 6,956,285 kilograms; of coffee, 50,931,233 kilograms; of goat and deer skins, 256,802 kilograms; of rubber from Ciudad Bolivar, 826,471 kilograms; of copra from Puerto Cabello, 202,685 kilograms; of tobacco from Ciudad Bolivar, 99,612 kilograms; of cattle from that port, 9,860 head; and from Maracaibo 6,506,217 kilograms of fustic, 1,766,180 kilograms of divi-divi, 12,778 kilograms of cinchona, 42,732 kilograms of copaiba, 39,261 kilograms of fish-sounds, 396,548 kilograms of sugar, and 79,330 kilograms of asphalt. The principal imports are textile goods, hardware, machinery, provisions, flour, coal, kerosene, and timber. Manufactures are imported from Great Britain, the United States, and Germany, articles of food from the United States and South American countries.

Navigation.—In 1899 there visited Puerto Cabello 291 vessels; at La Guayra 217 were entered and 371 cleared with cargoes; at Ciudad Bolivar 80, of 25,973 tons, were entered and 83, of 27,734 tons, cleared; at Maracaibo 356, of 25,306 tons, were entered.

The merchant marine in 1900 was composed of 18 sailing vessels, of 50 tons and over, having a tonnage of 2,836, and 12 steamers, of 2,567 tons.

Railroads and Telegraphs.—There were 529 miles of railroad completed in 1899. A contract was made for the construction of a line between Puerto Cabello and Yaritagua. A company in accordance with an agreement made in 1896 has placed steamboats on Lake Valencia in connection with branch railroads and tramways.

The telegraphs had a length of 3,882 miles in 1899.

The Army.—The regular army in 1900 numbered 3,600 men garrisoned in 20 towns and in the Government vessels, of which there are 3 steamers, 2 sailing vessels, and some small gunboats. Every Venezuelan belongs to the militia, and in the late civil war about 60,000 men were under arms.

Political Affairs.—In the early months of 1901 a dispute over the rights of rival American companies to an asphalt lake near the mouth of the Orinoco river led to a controversy between the Venezuelan Government and the American minister at Caracas, Frank B. Loomis, who was recalled to explain the misunderstanding and was eventually succeeded by Herbert W. Bowen. The company which had been working the pitch lake was informed by the Venezuelan Government that its concession did not include the lake, which had been leased to another company. The older company refused to give up the property, and the United States minister defended its claims, which were only faulty through a false description and an erroneous Government survey, as the concession which had been sought, and obtained from the Venezuelan Government was intended to cover the lake. A similar false description has been the ground on which concessions have been annulled before by the Venezuelan Government, as in the case of the Orinoco Trading Company. The valuable Imataca iron-mine was for a long time closed because the survey was at fault. President Castro before proceeding to dispossess the older asphalt company for the benefit of the younger one laid the matter before the Venezuelan courts. Mr. Loomis, however, insisted on the equities in the case, and the rich and powerful asphalt company armed its employees, declaring that it would defend its property by force, and appealed not only to the United States Government, but to President Castro's political enemies in Venezuela. Revolutionary disturbances occurred in the vicinity of the pitch lake. American gunboats were sent to the coast to protect American lives and property, if necessary. When the Venezuelan authorities threatened to seize the arms of the asphalt company the United States Government requested that no arbitrary action be taken pending a judicial decision. The court to which the New York and Bermudez Company had gone decided against it and in favor of the new claimants, the Warner and Quinlan Company. It was to carry out this decree that the Venezuelan Government intended to oust the parties in possession in spite of their threatened armed resistance. At the request of the American Government, President Castro agreed to wait till the matter could be adjudicated by a higher court; but he requested the recall of Minister Loomis.

The Venezuelan Government endeavored to float a loan in the United States for the purpose of consolidating the public debt. A loan of \$30,000,000 was desired, of which \$5,000,000 would be deposited in the treasury and \$25,000,000 be employed in redeeming all Venezuelan debts, the new debt to bear 6 per cent. interest and to be secured on the customs receipts of some of the ports. Negotiations were first opened with Ger-

man capitalists, who demanded the receipts of certain of the principal ports, to which the Venezuelan Government would not agree. American bankers also wanted ample security, and they too declined when President Castro offered the receipts of 3 small custom-houses which would not amount to more than half of the interest on the loan. On April 9 a new Cabinet was appointed, as follows: Minister of the Interior, J. A. Velutimi; Minister of Foreign Affairs, Dr. Eduardo Blanco; Minister of Finance, Ramon Mello Mendoza; Minister of War, Gen. Pulido; Minister of Public Instruction, Dr. Felix Quintero; Minister of Public Works, Juan Otañez; Minister of Fomento, Felipe Arrocha Gallegos.

Revolutionary troubles in the early part of the year took place at Carupano, which was held for a time by insurgents, and they threatened Ciudad Bolívar, but were defeated before the end of January. President Castro, like all his predecessors, has had to contend with political aspirants who would resort to rebellion to gain supreme power. He himself was a successful revolutionist. The insurrection in Colombia involved Venezuela in a serious civil war. Venezuelans who were in sympathy with the Colombian Liberals, including officials and men of high rank in the army, not only allowed the Colombian revolutionists to use the border districts and ports of Venezuela as a base, but aided them actively and joined in the invasion of Colombia. Venezuelan Conservatives were in like manner aided by Colombians to start a rebellion against the Government of Gen. Castro. Dr. Rangel Gardiras and other Venezuelan exiles from Colombia with a force of several thousand armed men appeared before the end of July in the neighborhood of the frontier town of San Antonio de Tachira. President Castro proclaimed martial law throughout Venezuela, and despatched a large force of troops to the border. He resolved to treat the violation of the frontier as the act of the Colombian Government, as in like manner the Colombian President was inclined to hold him responsible for the invasion of Colombia from Venezuelan territory. At a Cabinet meeting it was decided to hand Dr. Rico, the Colombian minister, his passports, but he took his departure without waiting for notice. Gen. Pulido, the Minister of War, who was the leader of an important party, disapproved this procedure. He wanted to treat the disturbers, not as Colombian invaders, but as Venezuelan insurgents, as they were led by Venezuelan revolutionists and joined by a great many Venezuelans. Gen. Pulido resigned his portfolio, and on Aug. 1 Gen. Ramon Guerra was appointed Minister of War. When the Government troops were defeated in the first encounter at Cristobal risings followed at various points in the interior. Subsequently reinforcements were brought up, and a defeat was inflicted on the revolutionists and Colombians in San Cristobal. President Castro announced that he did not regard the invasion by Colombian troops as an international attack by the people of Colombia, but as the work of the Conservative Government of Colombia against the majesty of the Venezuelan people. The first invading force numbered about 6,000 men with the revolutionists who joined it on Venezuelan soil. After it was driven over the border a second force numbering 2,000 men crossed the frontier, but was easily routed. The Venezuelan Government massed 10,000 men on the frontier, and the Colombian Government collected a large force on its side of the boundary. For many weeks these large bodies of troops faced each other in an attitude of observation. President Castro sent out a memoran-

dum explaining the position that Venezuela took which was nothing less than a threat of war.

President Castro's Government became involved in difficulties with several governments besides that of the United States. An attempt was made to arrange a long-standing difference with France. Diplomatic relations with that country were broken off in consequence of the action of the Government of Venezuela in 1895 in consequence of a confidential memorandum which the French *chargé d'affaires* had presented to his colleagues proposing the combined diplomatic action of all their governments to exact from Venezuela the payment of the claims of all foreigners who had suffered losses in Venezuelan revolutions. When this document came to light in an Italian greenbook the Venezuelan Government handed his passports to the French representative and dismissed the Belgian representative at the same time, as he also was involved in the plan to use minatory diplomatic pressure to supersede the action of Venezuelan courts of justice. In 1896 Gen. Juan Pietri was sent on a special mission to Paris to restore diplomatic relations, the French Government having, instead of sending another representative to Caracas, given his passports to the Venezuelan representative in Paris. A protocol was drawn up in 1897, but the conditions were rejected by the Venezuelan Congress. Emilio Castro was sent later, and he could obtain no better conditions than the immediate settlement of all the French claims or at least the submission of them to arbitration. In September, 1901, Cecilio Castro was sent to Paris on a third mission to induce France to resume diplomatic relations. Smuggling in the Gulf of Paria between the British island of Trinidad and the Venezuelan coast has become more frequent since the duties on cigars and other articles have been raised to such high figures as to make it exceedingly profitable. The island of Patos, which the Venezuelan Government regards as its own territory, is claimed as British by some of the colonials of Trinidad. In January a Venezuelan armed force landed on the island and arrested and carried off to a Venezuelan port a party of British subjects who were accused of being engaged in a filibustering expedition. The British claim that Patos was a part of the property of the Church which was transferred with the island by Spain. On Aug. 23 a Venezuelan gunboat seized a British vessel lying at Patos and a quantity of goods that had been landed, which were sold as contraband. Germany has from time to time pressed private claims arising out of Venezuelan revolutions. In April a German war-vessel cruising about the island of Margarita and making surveys gave rise to the rumor that Germany was seeking a coaling-station in the Caribbean Sea. The German Government semiofficially disclaimed any such intention. Italy has some old claims which have been put forward diplomatically at various times without result. The German claims are the largest, and new ones arose out of the action of the authorities toward German merchants in the parts of Venezuela that were the principal theater of the disturbances of 1901. The bulk of the coffee trade of Maracaibo is carried on by large German houses, and there are many German as well as French traders in all the Venezuelan cities. In October the crew of a German war-vessel became involved in a street fight in Porto Cabello, and the populace of the town joined the police in attacking the strangers, who received many wounds and bruises before they found safety on board their vessel. A German merchant was reported to have been subjected to duress and extortion

by officials in Caracas, and for this Germany demanded reparation, which was given by President Castro. Other cases occurred. Finally Germany decided to send cruisers to the coast of Venezuela to emphasize the demands of the German *chargé d'affaires* for the settlement of all claims and questions in dispute. The threatened alternative was the seizure of a Venezuelan custom-house to be held until the amount of the claims had been collected in duties. Before carrying out the demonstration the German ambassador at Washington gave assurances that his Government had no intention of acquiring dominion over any Venezuelan territory. On Sept. 4 two expeditions, largely composed of Venezuelans, were allowed to go out from Maracaibo against the Colombian port of Rio Hacha, on the peninsula of Goajira. One, consisting of 1,000 men, sailed in a transport steamer under command of Gen. Davila and was escorted by the 4 gunboats of the Venezuelan navy under Gen. Echeverría. The other, 500 strong, marched overland. While the Colombian forces were engaged with the insurgents at Boca del Toro, on the border of Panama, the revolutionists who planned to make this stroke on the opposite frontier with the aid of their Venezuelan allies hoped to win at once by dividing the Colombian army. The Venezuelan gunboats began the attack with a cannonade, and the troops made a successful landing. The more seasoned Government troops of Colombia, although smaller in number, gained the ultimate victory (see COLOMBIA). The Venezuelans who were not captured with Echeverría retreated with Davila, and suffered severe privations and losses among the unfriendly Indian population of Goajira. President Castro threatened to avenge the insult to the honor of Venezuela implied in the invasion of the country by an alleged Colombian force, and President Marroquin in equally menacing tones demanded an explanation of the open assistance given by the Venezuelan authorities to Colombian revolutionists. When Venezuela posted 10,000 and Colombia 16,000 troops on the frontier the United States Government offered to mediate. The Colombian Government accepted, but President Castro declared that it would be against the dignity of Venezuela to accept the offices of a mediator unless Colombia first gave a satisfactory explanation of the invasion of Tachira. The president of the Pan-American Congress at Mexico proposed that the difference be settled by arbitration, and this proposition Colombia accepted unconditionally. President Castro accepted with the condition that Colombia make reparation and pay damages for the invasion of Tachira. Chile offered to mediate, and this offer was accepted by Colombia, but Venezuela insisted on the conditions laid down in the answer to the Congress at the city of Mexico.

The Nationalist party planned no general revolutionary movement against Castro until the unpopularity of his attitude toward Colombia, which was likely to involve the country in a war, became apparent. When an insurrection in Venezuela was seen to be imminent President Castro not only proceeded to arrest the leaders of the hostile factions who did not flee to foreign soil, but ordered a general conscription for the army, as if in preparation for the war with Colombia, although he could not legally make war without the consent of Congress, which would not meet till February, 1902. Forced war contributions were exacted also from bankers and merchants, for the treasury was empty. These acts strengthened the resolve of his enemies to undertake a revolutionary enterprise for his overthrow and

alienated prominent politicians and members of his Government who had acted with him until his course toward Colombia compelled them to resume their independence. In the western districts all laborers between the ages of sixteen and sixty were impressed into the army. The Rotunda prison at Caracas was crowded with prominent citizens who were arrested as enemies of the country. Some belonged to the revolutionary Nationalist party, many to the Conservative Opposition, and not a few to the Liberal party which had placed Cipriano Castro in power. Most of the newspaper editors, except those of the Government organs, were thrown into prison. The President announced that the country was tranquil, but the murmurs of impending rebellion were heard in all the provinces. He continued to send arms and ammunition in Venezuelan gunboats to the Colombian insurgents. His friends, who were few outside of officeholders, asserted that he was bound to assist the Colombian Liberals in return for the aid they had given him in 1899 in his rebellion against President Ignacio Andrade. On Oct. 29 Gen. Castro, who for two successive years had acted as provisional President, was declared to have been definitively elected as President of the republic, and his election was officially proclaimed by the Venezuelan Congress. In October Gen. Juan Pietri headed an armed rebellion against Castro's Government in the state of Carabobo. Important expeditions were prepared in Trinidad and Curaçao. Manuel A. Matos, who was Minister of the Treasury under Presidents Joaquin Crespo and Ignacio Andrade and had fled to Europe after being imprisoned by Castro for refusing to give up money for the support of the Government, fitted out in Antwerp an expedition with a great quantity of arms and ammunition and set out for Venezuela in an armed steamer for the purpose of starting a great uprising. Ex-President Andrade and many other exiles assembled from all parts of America and from Europe in Curaçao and other ports adjacent to Venezuela. In the eastern part of the country, where the rebellious rising took place at the beginning of the year, insurgents who had landed from Trinidad captured Maturin, in the state of Bermudez, after a sanguinary battle with the Government troops. In the state of Bolívar occurred a simultaneous rising. Gen. Montilla collected 600 revolutionists near Barquisimeto, Gen. Castillo another force at Coro. A battle with insurgents was fought near Barcelona. On the river Guarapiche the Government troops were victorious in their operations against insurgents led by Gen. Rivas and Gen. Canas. Gen. Pietri besieged the city of Calaboso. Gen. Pablo Guzman attacked Aragua and captured a quantity of arms, then defeated successively the force of Gen. Meijas and the command of President Marcamos of the state of Bermudez. Gen. Zoila Vidal surprised the Government troops at San Felix.

When the revolutionary movement broke out President Castro no longer knew whom to trust among his political friends. Dr. Blanco left the Cabinet in consequence of the truculent answer that the President insisted on giving to the proposal of the Pan-American Congress to arbitrate. Castro lost confidence in Señor Velutini and compelled him to resign. The post of Minister of Foreign Affairs was given to Regino Pachano, and that of Minister of the Interior to Calixto Escalante. A few days later Gen. Ramon Guerra, the Minister of War, was thrown into prison on the charge of conspiring against President Castro, and Gen. Gorrida was appointed to the vacant post.

Gen. Luciano Mendoza, who had just been elected president of the state of Carabobo, with Gen. Antonio Fernandez and Gen. Lutowsky, former Ministers of War under Crespo and Andrade, raised a revolutionary force at Villa de Cura. An uprising also took place near Valencia, and others were started in various parts of the country, even in the vicinity of Caracas. War-ships of the United States, Germany, Great Britain, France, and Italy were ordered to Venezuelan ports. The *Ban Righ*, renamed the *Libertador*, landed the expedition of Señor Matos near Guzman Blanco, the port of Barcelona. All the vessels of the Venezuelan fleet had been on the watch for this vessel, which Castro threatened to treat as a pirate. The adherents of Gen. José Manuel Hernandez, called *El Mocho* because of a crippled arm, who headed a revolt against Gen. Castro in the autumn of 1899 and has since been kept in prison, acted independently of the main revolutionary organization supported by Matos, which was working ostensibly for the restoration of President Andrade. The army generally remained faithful to President Castro, although discipline and fidelity among the rank and file were impaired owing to their not having received their pay regularly. The partizans of Gen. Hernandez made an attempt to take the city of Maracaibo, and were worsted, although they inflicted considerable losses on the Government troops. In other places the Government troops were successful when pitched battles took place. Nevertheless the revolution gained ground, and new bodies of insurgents continued to be formed all over the country and to be supplied with a sufficiency of arms and ammunition.

VOLUNTEERS OF AMERICA. An account of the division in the Salvation Army in the United States and the formation of the society of the Volunteers of America, in 1896, was given

in the Annual Cyclopædia for that year. Like the Salvation Army, the organization of the Volunteers is military, but it is wholly American, and all the officers are elective. Its object is to carry on religious work among classes of population who are outside of the influence of the churches, cooperating with the churches, teaching the doctrines of those of them which are designated as evangelical, and observing their sacraments. The Volunteers of America in 1901 had expanded, as it is expressed in their reports, to national proportions, had about 100 self-supporting posts, were recognized in nearly 150 cities and towns, and returned \$42,500 of assets, with \$20,000 of liabilities, while they had raised during the year \$81,012 for their own support. It was estimated that during the past nine months they had reached 1,864,951 persons through their outdoor agencies and 1,241,567 through their indoor gatherings, making aggregate congregations for the year of more than 3,100,000 people. The Volunteers have 5 branches for philanthropic work, including 8 shelters for men, food distribution, "slum work," homes of mercy for women, through which 348 women were helped and cared for, and Volunteer tenement work, by means of which 1,583 families had been visited, and more than 4,500 had been helped with food and clothing. Through the Volunteer Prison League, which was established in 13 prisons (at Sing Sing, Auburn, and Clinton Prisons, N. Y.; Charlestown, Mass.; Trenton, N. J.; Joliet, Ill.; Columbus, Ohio; Cañon City, Colo.; Baltimore, Md.; and Folsom and San Quentin, Cal.), 12,000 members had been enrolled. About 1,300 men had been passed through the "Hope Halls" that have been established for ex-prisoners in New York and Chicago, 75 per cent. of whom were represented as known to be doing well. Through their sociological branches the Volunteers had received 234,814 men and fed about 371,297 at a nominal cost.

WASHINGTON. (See under UNITED STATES.)

WEST AFRICA. The main part of the west coast of Africa between Morocco and the Congo State and the regions of the interior as far as the Egyptian province of Bahr el Ghazal have in recent times been divided by mutual agreement between France, Great Britain, and Germany, the largest share falling to France, whose sphere south of Algeria has an extent of 3,314,000 square miles, while the British colonies and protectorates have a combined area of about 500,000 square miles, and that of the German protectorates is 225,930 square miles. Spain has a sphere on the coast of the Sahara desert about 100,000 square miles in extent, and in the south an insignificant station at Cape Nun, enclosed in British territory, and a strip of coast between the Muni and Campo rivers, containing about 15,000 square miles, but surrounded on the land side by French territory. Portuguese Guinea, 1,480 square miles in extent, is also enclosed in French possessions. The salubrious Cape Verde Islands remain to Portugal, and St. Thomas and Prince's island in the Bight of Biafra, where Spain has Fernando Po, Annobon, and the small islands opposite the Rio Campo district recently recognized as Spanish by France. The independent republic of Liberia has an area estimated at 35,000 square miles. Two incidents which have been the occasion of controversy and recrimination for years were by a con-

vention concluded on April 5, 1901, between the French and British governments in 1901 referred to the arbitration of Baron Lambermont, Minister of State of Belgium. One was the seizure of Lieut. Mizon's river steamer on the Binue river by the officials of the British Niger Company, for which the British Government admitted in principle that an indemnity ought to be paid, and only questioned the amount. The other was the frontier collision at Waima, which turned out to be in British territory, the British victims of which or their families the French Government was willing to indemnify, but the complicated circumstances of the affair made it impossible to fix valuations that were acceptable to both governments.

French Possessions.—The French had a settlement in Senegal in the seventeenth century, asserted dominion where they had factories in Guinea and on the Ivory Coast before the middle of the nineteenth century, and in 1884, after Germany had roused the rivalry of the old colonizing powers by asserting a protectorate over Cameroons and Togo, started out to acquire a vast empire in Africa, beginning in the Ogowe valley on the border of the territories of the Congo Association, the reversion of which to France if the King of the Belgians should ever part with them, was at that time secured by treaty. When the Germans turned their attention to the Niger valley, and when afterward the British Royal Niger Com-

pany, ousting them, developed its political plans in this region, the French, who had sent out expeditions from Senegal in 1860 and 1878, and maintained a military force there from 1880, entered upon a vigorous course of military expansion in the bend of the Niger, setting out from the colony of Senegambia, and also behind their possessions on the Slave Coast and the Ivory Coast. Long years of costly warfare resulted in the conquest of Dahomey and the overthrow of Ahmadou, Samory, and other military chieftains who opposed their progress to Timbuktu and Lake Chad. An agreement with Germany permitted the French to expand in the direction of Lake Chad from the French Congo. The Anglo-French agreement of 1890 recognized as within the French sphere all the region north of a line drawn from Say, on the middle Niger, to Barua, on Lake Chad. The Anglo-French agreement of 1898 gives to France a free hand in the countries of the Soudan east of Lake Chad, and confirms France in the possession of a Hinterland joining French Guinea and the Slave Coast to the French Soudan and Senegambia and these to the French Congo in the south and to Algeria and Tunis in the north, but it shuts France out from political possessions on the maritime Niger, though not from commercial access to it, for Great Britain agreed to lease to France for purposes of commerce a piece of ground on the right bank of the Niger between its confluence with the Moussa and Lealaba, and another on one of the mouths of the Niger, the leases to run thirty years, within which time British and French shall have the same treatment as regards person and merchandise in matters of river navigation, commerce, tariffs, and taxes of every description. Capt. Lenfant in the spring of 1901 proceeded to the lower Niger to take possession of the two enclaves, each of about 200 acres, the location of which was settled in the summer of 1900 by Col. Lugard and Major Toutée. One is between Liaba and the river Moussa and the other in the delta of the Niger.

The Governor-General of French West Africa and Governor of Senegal is N. E. Ballay.

The colony of *Senegal* proper has an area of 80,000 square miles, with 1,180,000 inhabitants. St. Louis, the seat of administration, has 20,000 inhabitants; Dakar, 12,000; Rufisque, 8,000. About 80,000 of the population of the old colony and all those of the annexed region of the western Soudan are ruled by their own chiefs. The annexed region, added to Senegal in January, 1900, extends 900 miles into the interior, having an area of 120,000 square miles and a population of 2,020,000. The military force in 1900 was 2,600 men, of whom 1,180 were natives. The French Government expended 1,154,960 francs in the new territory in 1901. The original colony in 1900 paid its way, raising a revenue of 4,454,611 francs. Millet, rice, corn, and plantains are grown by the natives, and earthnuts, gums, rubber, coconuts, cola, castor-beans, and gums are exported. All the imports, valued at 52,425,000 francs in 1899, came from France, and of the exports, 23,725,000 francs in value, three-fourths went to France. There have long been in existence 163 miles of railroad connecting Dakar, St. Louis, and Rufisque, and 83 miles from Kayes, the head of navigation on the Senegal, to Bafulabe, to be extended to Bammuko, on the Niger. The line was completed as far as Badugu, nearly half the distance of 350 miles between the rivers, in the summer of 1901. The people of Senegal are represented by a Deputy in the French Chamber. There are schools in the towns with 67 teachers and 1,986 pupils. The making of cloth,

pottery, and jewelry are native industries. There are about 90,000 cattle, 50,000 sheep, 40,000 goats, and 3,000 camels. Gold is found in places, and also silver, copper, and mercury.

The present boundaries of Senegal extend eastward to Lake Debu in the bend of the Niger. Beyond that are the military territories and Mauritanian protectorates, embracing all the regions south of the Algerian Sahara and north of the Ivory Coast, the British Gold Coast, German Togoland, Dahomey, and British Nigeria. French military power has penetrated to the shores of Lake Chad, beyond which the French sphere, according to the Anglo-French agreement of June 14, 1898, includes the semicivilized states of the middle Soudan and the Libyan desert, ending at the confines of Egypt and the Egyptian Soudan. The expenditure of France in the military territories in 1901 was 13,650,446 francs. The military force was 8,400 men, of whom 4,760 were natives. Gum and rubber are exported from the bend of the Niger, and the people cultivate millet, rice, wheat, and earthnuts. The chief town is Timbuktu, the ancient center of the caravan trade, which has at present about 12,000 inhabitants. In the Shari region a regular military administration has been established, and the population, consisting of the pagan Banda, Mandsha, and Sara tribes, enjoys security of life and property such as has never before been known. They have always been the prey of the slave-hunting and predatory raids of their Mohammedan neighbors, especially from Bagirmi. The French have not yet introduced the hut tax or the tithes collected in the territories of the French Congo. The Bandas have good military qualities and will furnish recruits for the French colonial forces. The country is productive, although the people stand low in the scale of civilization. Cotton, rubber, and ivory are the chief products. Since the overthrow of Rabah in the spring of 1900 the western half of his empire of Bornu has accepted French military rule with content. The people of Bornu are the most civilized, though the least warlike, of the races of the central Soudan. Their former feudal system was upset and destroyed by Rabah, and he devastated and ruined the country so thoroughly that many years of peaceful development are necessary for its renovation. The French recognized as Sultan of Bornu after the death of Rabah a descendant of the old reigning family named Ahmasinda. Bornu is not in the French sphere as defined in the Anglo-French agreement of 1898. In the agreement of 1890 Socoto and Bornu were expressly acknowledged to be English on the ground of treaties which the British Niger Company pretended to have with their rulers. In the agreement of 1898 the line from Say to Barua dividing the French from the English sphere was changed for a line starting on the Niger at the Dallul Mauri watercourse, which is 100 miles below Say. This it follows up to a point 100 miles from the city of Socoto. It circles on that radius till it strikes the parallel of 14° to the east of Socoto, and follows that to Lake Chad, with a large indentation to the southward which is 250 miles long and 40 or 50 miles broad, so as to include in the French sphere the town and district of Zinder. West of the Niger the frontier between the British and French spheres was delimited by Col. Lang and Commandant Toutée. Starting at the intersection of the Okpara river by the parallel 9° of north latitude, at the boundary between Dahomey and Lagos, it runs northerly, with an eastern deflection so as to leave Nikki and other districts to France, and strikes the Niger 10 miles above Gere, the port

of Ilo, from which point the river Niger is the boundary up to the Dallul Mauri. The British did practically nothing to establish their power in northern Nigeria after taking over the country from the British Niger Company. The native soldiery that was recruited and trained for the purpose was called off to the Ashantee war, and the Government had to face a general movement of rebellion among the coast tribes. The Anglo-French boundary, according to the terms of the convention, should have been laid down within two years, but no steps were taken to carry out this provision, and in that region nothing was done to develop English authority or influence, unless, as the French suspected, the English made a secret alliance with Rabah, the Arab slave-raiding conqueror who laid waste one country after another in the Central Soudan and was holding sway over Bagirmi and Bornu when the French routed his army near the Shari. Fadelallah, Rabah's son, was able to hold together the chiefs who followed the fortunes of his father and still defied the French in the Shari province until Capt. Robillot, in February, 1901, defeated him and his brother Niebe, killing a great many of his men and capturing his camp. The French lost 2 killed and 25 wounded. Fadelallah, pursued by the French column, fled 300 miles into Bornu. He rallied a considerable force, and entered into communications with the British. Major McClintock with a small force proceeded from Ibi, on the Binue, and negotiated a treaty by which Fadelallah was to be recognized as Emir of Bornu under British protection. The absence of Sir Frederick Lugard in England prevented the consummation of any arrangement at this time. While another expedition under the command of Capt. McCarthy Morrourh was preparing to visit him again at Bergama and formally install him as ruler of Bornu, a company of spahis and infantry under Capt. Dangerville once more crossed German territory west of the Shari, and penetrated into Bornu, and on Aug. 23 attacked Fadelallah in his camp, routed his forces, and killed him. Two days later his brother and the rest of the chiefs surrendered to the French. The actual ruler of Bornu, whose seat was Begra on Lake Chad, Kuka, the former capital, which had 100,000 inhabitants, having been destroyed by Rabah, paid tribute to the French. While British power was unknown, the French were exceedingly active in the region about Lake Chad. The Foureau expedition and the one under Capt. Joalland and Lieut. Meynier passed through Bornu and were aided by the hereditary sultan, whom the French had enabled to gain the throne by their overthrow of Rabah. On Dec. 20, 1900, the third military district in French West Africa was constituted, and the Chamber voted 550,000 francs for the occupation of this district between the Niger and Lake Chad and the establishment of military posts at Say, Zinder, Maradi, and Koni, although the two latter places are within the British sphere. Col. Peroz, who went out as commandant of the new territory, was instructed to reach his post without traversing British territory. He succeeded in reaching Zinder by following the circumference of the Socoto circle, and his experience demonstrated the impracticability of this route between Say and Zinder, since it crosses two desert tracts infested by Tuareg robbers. The French desire a revision of the convention of 1898, which will give them not only a better route, but which, in return for adequate compensation elsewhere, will transfer to their sphere the whole of Bornu, which they have redeemed from oppression and where their effective influence has been

developed as a result of their establishing their power in the Shari delta at the cost of heavy sacrifices. Gauranga, the Sultan of Bagirmi, although he was rescued from Rabah's oppressions by the French, who have made their rule light, exacting only a nominal tribute, is not altogether pleased with the exchange of a Mohammedan for an infidel overlord, and still less with the loss of the rich Shari delta, which he was obliged to cede formally to France and which is covered with French military posts. The tract between the Shari and the Logon he has to give up to the Germans, and this loss he ascribes likewise to the French, since in the Soudan all Europeans are regarded as Frenchmen.

In Kanem, a country tributary to Wadai, situated on the northeast shore of Lake Chad, Capt. Joalland set up a sultan, Alifa Serab, who was devoted to the French. He had soon to defend his *protégé* against the Aulad Sulimans and Tubbus, Bedouin tribes that were adherents of El Senussi, the mahdi of the central Soudan, which immediately rose against the friend of unbelievers. Mohammed es Senussi, another vassal of Wadai, received a French mission in Ndele, his capital, and signed a treaty of commerce and protection, but did not attempt to throw off his allegiance to the Sultan of Wadai, to whom he pays tribute in slaves and ivory. Ibrahim, who succeeded his father Yussuf as Sultan of Wadai in 1898 through the influence of the Vizier Djerma, the elder brother Abdelasiz being thrown into prison, where his eyes were put out, tried afterward to remove the vizier. The latter thereupon entered into a conspiracy to put Achmed, Yussuf's brother, upon the throne. Some of the chief men of the country were won over, among them the Aghib el Mohammed, the commander-in-chief, through whom Achmed obtained possession of a large quantity of war material stored three days' journey from Abesha. Two of Ibrahim's generals, Yassin and Satty, were murdered. The members of the sect of the Sheik Senussi were hostile to Ibrahim, who was not on as good terms with its head as his father had been. El Senussi sent envoys to the Sultan Ibrahim to induce him to enter into a league to oppose with force the advance of the Europeans to Lake Chad. The proposed alliance was not effected. The Sheik Senussi showed secret activity and assembled a great number of his nomadic adherents in the Guru oases. Ibrahim was a weak and unpopular ruler whose officials oppressed the people of the country and plundered the merchants from Tripoli. The result of the civil war was his downfall. In May he was reported to have fallen into the hands of Achmed and to have been either killed or deprived of sight. Wadai is still the most populous and powerful of the states of the central Soudan. Before it was overrun by Rabah's horde Bagirmi as well as Kanem sent tribute to Abesha. The area of Wadai is 172,000 square miles, and the population was estimated by Nachtigal at 2,600,000. The Arab traders of Wadai exchanged salt and manufactured goods for ivory, slaves, ostrich-feathers, and copper, sending their caravans as far south as Dar Banda and as far west as Bornu. There is an active trade with Tripoli. The political power is in the hands of the negro Mabas, who dwell in the northeastern part of Wadai. The Sultan had an army of 7,000 men, which he employed in collecting tribute in slaves, horses, cattle, honey, and grain from the provinces and vassal states. Kanem has an area of 30,000 square miles and a population of about 100,000. The Aulad Suliman Arabs, who muster 1,000 fighting men, have kept the Kanem people in sub-

jection. The Sultan of Ndele has a fighting force of 1,000 rifles and 3,000 spearmen. Bagirmi formerly covered 66,000 square miles, with a population of 1,500,000. The Sheik Senussi has hitherto made no effort to develop a military power, although he has been indefatigable as a religious prophet in extending his teachings and his religious influence. In Hedjaz the majority of the Beduins have been converted to his doctrine. While the civil war in Wadai was going on he interfered no more than he had in the conflict of the Egyptian mahdi with the British or that of Rabah with the French. He remained in the desert northwest of Wadai, where he dug wells in the desert and established settlements of the order, and where the Mohammed, Tubbu, Aulad Suliman, and even the Tuareg tribes were devoted to him. The Sultan of Wadai sent him presents of slaves and grain. If the French established their power in Wadai he intended to migrate far to the west and seek in the desert south of Morocco the conditions under which the pure theocracy and the religious life of Mohammed's time can be revived. The Turkish Government has been hostile to Senussi in Fezzan, and has aided the rival organization of the Medaniyeh. Once an attempt was made to entice the Sheik Senussi to Stambul, where he would have been detained, and once a plot was formed to seize him in Djerbub, in consequence of which he sought a refuge in the oases of Kufra, whence he wandered farther south when the Turks tried to install a Kaimakam in that district.

French Guinea has an area of about 95,000 square miles and 2,200,000 population. The products are earthnuts, gum, and rubber, of which last 1,857 tons, valued at 6,993,577 francs, were exported in 1899. Rice and millet are grown for food. The total value of imports in 1899 was 15,441,710 francs, and of exports 9,461,496 francs. There were entered 5,072 vessels, of 312,391 tons; cleared, 5,002, of 308,523 tons. Of the imports only 3,980,004 francs came from France, and of the exports France took 747,373 francs, while 5,581,763 francs went to Great Britain. The revenue raised in 1900 was 2,870,000 francs. Wharves have been built at Conakry, and a railroad to the Niger is being constructed. The dependent protectorate of Futa Djallon, a country rich in cattle, extends to the border of the military territories.

The *Ivory Coast*, including the kingdom of Kong, also reaches to the military territories. The area is about 125,000 square miles and the population 125,000. The Governor, M. Robardeau, resides at Grand Bassam. The local revenue in 1900 was 1,403,000 francs. The chief exports are palm-oil, rubber, gold, which is mined near the capital, and coffee, which has been planted within a few years by Europeans. Valuable forest products are brought from the interior. Gen. Combes undertook a campaign in 1901 to pacify the Baule country in preparation for the building of a railroad from the coast. A gold-mine was discovered early in 1901.

Dahomey and its dependencies have an area of 60,000 square miles and about 1,000,000 inhabitants. The Governor, M. Liotard, resides at Porto Novo, which has 50,000 inhabitants. Abomey, the capital of the former kingdom of Dahomey, has 15,000. The natives of the coast district are good agriculturists, who raise corn, yams, and manioc. Oil and coconuts are obtained from the forests. The protectorate extends to Say, on the Niger, to which a railroad may be built from the port of Kotonu, which is connected by telegraph with the Niger and Senegal. The local revenue in

1900 was 2,200,000 francs. The value of imports in 1900 was 13,950,000 francs, and of exports 14,300,000 francs. In 1901 the railroad as far as Abomey was pushed forward with a great force of workmen. The railroad will be carried immediately to Tshaura, 190 miles north of Kotonu. The country was peaceful and contented and the harvest of palm-kernels abundant. The trade has increased 50 per cent. in three years. British cotton goods and German and French spirits are the chief imports, and the exports are palm-oil to England and palm-kernels to Germany by way of Lagos.

The *French Congo* extends northward behind the German Cameroons to Lake Chad and north-eastward to Bahr el Ghazal, being divided from the Congo Independent State by the Congo and the Ubangi. The Commissioner-General, A. Grodet, residing at Libreville, administers the former territory of Gabun-Congo, while the northern regions, where French troops have been active of late, are organized as the Military Territory of the Lands and Protectorates of the Chad, embracing the Shari and Kemo basins excepting the native kingdoms of Bagirmi, Kanem, and Wadai. The total area is estimated at 425,000 square miles and the population at 15,000,000. The local revenue in 1900 was 3,834,060 francs. The French budget for 1901 appropriated 2,078,000 francs for the colony. The forests abound in rubber and cabinet woods. The natives grow manioc and plantains. European planters raise coffee, vanilla, and cacao. Gold, copper, and iron are found. The total value of imports in 1899 was 6,690,263 francs, of which France supplied 2,500,000 francs. The total value of exports was 6,625,041 francs, of which 1,600,000 francs went to France. The export of rubber was 3,015,000 francs in value; of ivory, 1,878,000 francs; of woods, 1,150,000 francs. Other exports are palm-oil and kernels, coffee, cola-nuts, and piassava. The ports were visited in 1898 by 103 vessels, of 250,009 tons, of which 49, of 127,667 tons, were French. The chief port is Loango. River craft ascend to Libreville, which will be connected with the Congo by a railroad. There are 45 schools in the colony, with 2,654 pupils.

British Colonies.—The *Gold Coast* is a Crown colony having an Executive and a Legislative Council to advise the Governor, Major Matthew Nathan. The area is 40,000 square miles, with 1,473,882 inhabitants, not including the Adansi and Ashanti dependencies. The population of Cape Coast Castle is 11,614; of Accra, 16,267; of Elmina, 10,530. The number of Europeans in the colony does not exceed 500. There are about 11,000 pupils in the Government and the Wesleyan, Roman Catholic, and German Lutheran schools. The revenue in 1899 was £322,500; expenditure, £309,660. The value of imports was £1,323,220; of exports, £1,111,740. The tonnage entered and cleared was 1,250,410 tons. There are 100 miles of railroad from Sekondi, on the coast, toward Tarkwa, which will be continued to Kumassi, or one will be built from Appam. One from Accra to the Volta river is projected. There are 688 miles of telegraph-lines. The Anglo-German agreement of Nov. 14, 1899, makes the Daka river the boundary between the colony and Togoland up to 9° of north latitude, and beyond that a line running north which shall be so deflected as to leave Gambaga and Mamprusi on the English and Yendi and Chakosi on the German side of the boundary. Ashanti was conquered and annexed in 1896, and the King has since been held a prisoner in Sierra Leone. Gold is mined in many places with Euro-

pean capital, and the operations are being extended. There were 332 companies to work West African gold-mines in 1901, with a nominal capital of £27,000,000. The Colonial Secretary cautioned investors against being entrapped by speculators in worthless concessions. The gold-fields of Wassu and Ashanti can not be opened up until the railroads are built, and the Government has been blamed for its slowness in building them. Palm-oil and kernels and rubber are the principal products of the Gold Coast. Fine woods are also exported. In the northern territories Major A. H. Morris is commissioner under the Governor and commander of the forces.

The boundary between the British Gold Coast protectorate and the French Soudan was delimited in 1900 by Capt. Peltier and Capt. A. E. Watherson, who had to fight with the hostile Fra Fra tribe. French military posts were established at Leo and Tenkrodogo and British posts at Gambaga and Tumu. The portion of the line round Sapeliga, north of Gambaga, was not fixed and was made the subject of further negotiations between the two governments.

The soldiers who fought in the Ashanti campaign of 1900 were, with the exception of Sikhs, West Indian negro troops, and Askaris from Somaliland and Central Africa, all youthful recruits from various West African tribes, including Hausas from Bornu and Lake Chad, Yorubas, Nupes, and Mendis. The admirable courage and discipline they displayed determined the British Government to employ black soldiers in West Africa, as the French have done. The three Ashanti wars have cost £900,000. The last one was provoked by Sir Frederick Hodgson, the Governor, who on hearing a foolish tale that the golden throne and the buried treasure of the deposed King Prempeh had been found, went to Kumassi and, after telling the chiefs that their King would never be restored, demanded the golden stool and a heavy tribute, 4,000 ounces of gold to be paid every year. The Ashantis in general had only partially acquiesced in the banishment of King Prempeh in 1896, which they regarded as an act of treachery on the part of the British after obtaining his submission by negotiation. His own tribe, the Kumassis, felt most bitter. The fines imposed by the British for every offense and the impressment of carriers and laborers were further causes of dissatisfaction. Major Nathan almost precipitated a fresh outbreak in 1901 of the Bekwais who aided the British in the Ashanti campaign by demanding the payment of a war indemnity dating from 1874. There were still 500 men of the West African frontier force in the colony. Kumassi was garrisoned by a battalion of the West African regiment. These men should have been relieved in January, and in March 300 of them mutinied and started for Cape Coast Castle to demand passage back to Sierra Leone. Marines and the Central African regiment captured them after some fighting, and some were shot and the rest shipped home.

The Crown colony of *Gambia* has also an Executive and a Legislative Council, both composed of nominated members. The Administrator is Sir George C. Denton. The area of the colony proper is 69 square miles, and the population in 1899 was 15,000. The number of white residents was 62. Bathurst, the capital, has 6,000 inhabitants. The protected territory lying in the rear of the colony has an area of 2,700 square miles and 200,000 population. The principal exports are earthnuts, hides, wax, cotton, and rubber. Rice and corn are raised for food. The revenue in 1899 was £46,840, and expenditure £30,410. The value of

imports was £240,910, and of exports £241,340. The vessels entered and cleared had an aggregate tonnage of 284,635. At the beginning of 1901 a punitive expedition set out against two villages where two British commissioners were murdered in June, 1900. The troops employed were West Indians and a battalion of a Central African regiment that had arrived too late to take part in the Ashanti campaign. The natives of one of the villages fled into French territory; those of the other offered resistance, but were easily defeated. The columns marched through the country, seizing live stock and burning many villages. The British have never been able to assert their authority over the natives because these can go over into French territory. An arrangement was made with the French Governor-General for the cooperation of French and British troops, especially for the suppression of Fodi Kabba, who after leading a rebellion in Gambia in 1892 had settled on the French side of the border, and since then had made trouble for both the French and the English and was believed to have instigated the murder of the British commissioners. By command of M. Ballay the head chief on the upper Gambia, Mousa Mollah, whose capital is in French territory, agreed to help capture Fodi Kabba. Col. Brake stationed his troops along the frontier while on March 23 the French troops surrounded Fodi Kabba's town, Mandina. He was killed with 150 of his followers and his stronghold was destroyed by the French troops, consisting of 440 Senegalese tirailleurs and spahis under Commandant Rouvel. Mousa Mollah, whose levies assisted in capturing the stragglers, subsequently by direction of the French authorities acknowledged British jurisdiction in respect to his territories on both banks of the Gambia within the conventional boundaries of the British protectorate.

The colony of *Lagos* has an area of 985 square miles with 85,607 inhabitants. The Lagos Protectorate, bordering on Nigeria, has an area of 21,000 square miles and a population of 3,000,000. In the schools of the colony are 3,371 pupils. The exports are palm-oil and kernels, ivory, gum-copal, cotton, rubber, cacao, and coffee. A railroad, 60 miles in length, from the town of Lagos to Abeokuta has been continued 66 miles farther to Ibadan. A branch from Abeokuta leads to Aro. A continuation of the railroad to Ilorin and the Niger is planned. The Governor of the colony is Sir William MacGregor. The revenue in 1899 was £192,790, and expenditure £223,290. The value of imports was £966,600, and of exports £915,940. The tonnage entered and cleared was 968,823 tons. Gold has been discovered in the neighborhood of Ibadan and there are indications of diamonds and other precious stones.

Sierra Leone has an area of 4,000 square miles and 74,840 inhabitants. Freetown, the capital, has 30,033. The Governor, Sir Charles Anthony King-Harman, as in the other colonies, has a Legislative and an Executive Council. The white population is 224. Freetown is the headquarters of the British forces in West Africa, consisting of the West India and the West African regiments and engineers and artillery. There is an armed constabulary of 600 men. The revenue in 1899 was £168,380, and expenditure £145,090. The value of imports was £689,810; exports, £336,010. Ships entered and cleared had a total tonnage of 1,181,748. There are 60 miles of railroad connecting Freetown with Songotown and Rotofunk, which is being extended 80 miles to Bo. The average attendance in 65 schools was 5,583 in 1899. The chief products are palm-oil and ker-

nels, benni-seed, earthnuts, cola-nuts, rubber, gum-copal, and hides. The protected territory, extending to the French boundary, has an area of about 30,000 square miles and 375,000 inhabitants.

The British protectorate of Nigeria has an estimated area of 400,000 square miles, with over 30,000,000 inhabitants. In the delimitation of the Lagos protectorate from Nigeria the Yoruba country is included in the former, while all Borgu towns go to the latter. The prolongation of the boundary-line eastward across the Niger divides Northern Nigeria from Southern Nigeria. The northern territory was administered before 1900 by the Royal Niger Company, which collected heavy import and export duties, since abolished. The southern territory, a part of which constituted the Niger Coast Protectorate, included Benin. The revenue collected in the financial year 1900 was £164,108. The value of imports was £725,798; of exports, £888,954. In 1899 there were 379 vessels entered, of 559,912 tons; cleared, 375, of 551,555 tons.

Southern Nigeria is inhabited by pagan tribes, backward in civilization and addicted to fetishism and savage practises. The exports are palm-oil and kernels, ivory, rubber, camwood, indigo, ebony, gums, barwood, and hides. The High Commissioner is Sir R. D. R. Moor. The military force consists of 1,080 native troops. The revenue collected in the year ending March 31, 1901, was £164,108, and the expenditure was £176,140. Of the revenue £156,491 was from customs duties. The imports amounted to £725,798, and exports to £888,954. The imports of gin and rum were less than in the previous year, but were still very heavy. Exports showed a large increase, due to the growth of the trade in palm-kernels, palm-oil, rubber, and cacao. While British trade forms 69 per cent. of the total, trade with Germany is on the increase. A forestry department has been formed to secure the preservation of the rubber forests in Benin, and the natives seem disposed to conform to the regulations. The region of Ishan northeast of Benin City never having been brought under control, Major Heneker, who was attacked there in November, 1899, conducted an expedition into that country in the spring of 1901, as soon as a force was released from the Ashanti war and other expeditions in Southern Nigeria. The Ishan natives fought obstinately for the defense of their independence, and the occupying force, having met with severe losses, 32 casualties being reported in the first engagements, was strengthened to 500 men and remained till the rainy season set in. The Benin people seem to be thoroughly pacified and contented with British rule. The British have to subjugate thoroughly the tribes inhabiting successive zones between the coast and the interior in order to open the way for trade, because trade and the carrier service has been the monopoly of each tribe over its own strip of territory, and no whites or other strangers can interfere with their profitable privilege except by conquering them. In November, after the rains were over, a great expedition marched against the Aro tribes between the Cross river and the Niger. There were four columns, each 400 strong, composed of all the available forces of Southern Nigeria, 500 men from Northern Nigeria, and detachments from other colonies. The Aros are superior to other tribes in intellect and physique. They carry on the practises of slave-raiding and human sacrifices. Their country is exceedingly productive and is believed to be capable of yielding a revenue of £500,000. The first operations were against the villages on

the creeks, which were shelled by gunboats. The Aros were armed with Snider rifles and defended themselves from behind breastworks. While the British columns advanced into their country they fell upon the British posts behind them, and where these were not strongly garrisoned they burned the towns and killed the inhabitants.

Northern Nigeria embraces the Fula empire of Sokoto and its vassal states of Gandu, Kano, Bakundi, Takum, Zaria, Ilorin, Nupe, etc.; a great part of the kingdom of Bornu; the pagan confederation of Borgu; and the pagan tribes to the south of the Binue. There are populous cities where the native industries of weaving, tanning, and metal-working are carried on. Such places are Kano with 100,000 population, Bida with 90,000, Ilorin with 50,000, and Yakoba about as populous. Cotton and indigo are grown and used in the indigenous manufactures. The leather prepared by the natives is sought in Europe for ornamental applications. The Haussas, who form the bulk of the population, are an intelligent race, educated in Moslem learning, industrious agriculturists and handicraftsmen and adventurous traders. The Fulas constitute the ruling caste. The High Commissioner is Sir F. J. D. Lugard, and the commander of the troops is Col. Sir J. Willcocks, who has ordinarily a force of 2,500 trained native soldiers.

The action of the British since the appointment of Sir Frederick Lugard as Administrator of Nigeria at the beginning of 1900 was confined for a long time to organizing the administration of the more settled regions on the middle Niger and for a short distance up the Binue. The greater part of the West African frontier force was despatched to aid Sir Frederick Willcocks in the Ashanti campaign. All the rulers and people were hostile to the English and prepared to fight for their independence. Spurred by the activity of the French about Lake Chad and the Germans in the Cameroons Hinterland, Col. Morland, commandant of the West African frontier force, was sent up the Binue to Yola to reduce to subjection the Emir Zuberu of Adamawa, the most powerful of the Fulani rulers of the Socoto empire, who plundered traders and raided the country for slaves in defiance of warnings from the High Commissioner, finally sending back a letter from him unopened. The punitive force started from Lokoja on Aug. 26, picked up detachments at Ibi and intermediate stations, landed at Yola on Sept. 2, and formed in a square, the Emir Zuberu having given warning that he would attack unless the troops reembarked. His horsemen and foot attacked with much spirit, but were easily repelled with case-shot, Maxims, and volleys from magazine rifles. The troops, 380 in number, entered the town, and Col. Morland, Major McClintock, and 25 per cent. of the Haussa rank and file were wounded before they took the palace, which was defended by the emir's body-guard and 300 Arab and Bornuese deserters from Fadelallah's army, with rifles, bows and arrows, and two old French guns. The emir, whose losses amounted to 150 men, fled with a mounted escort, and the acting High Commissioner, William Wallace, set up Zuberu's brother, Bobo Amadu, as emir, appointed Capt. Ruxton English Resident, and established a fortified post commanding the town. The new emir promised not to engage in slave-raiding, while the English agreed not to interfere with domestic slavery.

The farthest point on the Binue occupied before this was Ibi, half-way between Lokoja and Yola. Beyond were the hostile Munshi people, whose poisoned arrows cause death in a few minutes.

Before the advance to Yola it was necessary to drive them from both banks of the river and to garrison several posts. In 1900 and the early part of 1901 an attempt was made to extend British authority up the Niger so as to render secure the chosen site of the new capital and establish the administrative headquarters in a more healthful place than Lokoja. The emirs of Kontagora and Bida, who were the most powerful chiefs south of Socoto, challenged the English when they first came to build their capital at Jebba, and made a combined attack on the advanced post at Wushishi. The garrison of the fort could do nothing to prevent them from ravaging the country, and when other posts were established the force was not strong enough to prevent their carrying off thousands of slaves and even plundering the canoes bringing up material for the new headquarters. On Jan. 19, 1901, Gen. Lugard despatched an expedition of 400 infantry, first against Kontagora, a walled city of 25,000 inhabitants, which was deserted after a pitched battle in which the emir's army of 5,000 cavalry and bowmen repeatedly charged the British square, hundreds falling under a murderous fire of Maxims, grape-shot, and rifles. Some approached within 30 yards, and every one of their wounded was carried away under heavy fire. Immense quantities of poisoned arrows fell inside of the square, but only a single man was killed on the British side. The emir's men were pursued for three days and a great many more were killed. Gen. Lugard, who had arrived with another battalion, conducted the advance to Bida. He summoned the emir and his chiefs to meet him at Wuyu, 12 miles from the capital. Only the makum came, the heir apparent or deputy, whom the British had installed as emir in 1895, and who had been supplanted by the real emir as soon as they departed. The emir did not now attempt to defend his city, but fled with his army, which was hotly pursued by mounted infantry who killed a great number. On Feb. 18 Sir Frederick Lugard formally installed the makum once more as emir and Capt. Cochrane was left British Resident with a strong garrison. Capt. Keyes led a small force against Raha, a slave-raiding chief who ravaged French as well as British territory. He fled, and a new chief was set up in his town. Jegga, where Sir Frederick Lugard first determined to fix the seat of administration, is a market town in a well-cultivated district. He afterward decided to transfer the administrative center 100 miles northeast to Mykonkila, a more healthful spot nearer to Socoto and Kano. It is intended to carry the railroad from Lagos to Ilorin through to Bida and Mykonkila, which is already connected with the coast by telegraph. Capt. C. V. Keyes was murdered by French traders and freebooters who with a band of native followers went about stealing cattle. The murderers were arrested by the French authorities and handed over to the British for trial.

German West Africa.—The German possessions on the Guinea coast were acquired in 1884. *Topoland* has an estimated area of 33,000 square miles and 2,500,000 population. The number of Europeans in 1900 was 114. The imports were 3,300,000 marks; exports, 2,600,000 marks. The revenue for 1901 was estimated at 750,000 marks, of which 270,000 marks are contributed by the Imperial Government. The exports are oil-fruits chiefly, and besides these rubber and live animals. Coconut-trees have been planted in the coast districts. There is an experimental agricultural station and school. Cotton and tobacco are raised experimentally. Cola-trees are being planted.

Cola-nuts are exchanged in the markets of the interior for cattle and horses and for native cloths, but the trade is with the Soudan. The rubber forests have been destroyed to such an extent that the export fell from 177 tons in 1900 to 82 tons in 1901. The roads extend but a short distance inland. A tax of 10 marks a head was imposed on emigrating laborers in 1899, but was removed in the following year. A light railroad from Lome to Little Popo was authorized in 1901. The territory of Salaga, in the interior, has been claimed by both England and Germany, and was long left as a neutral zone. On Nov. 14, 1899, they agreed to divide it so that the Daka river shall form the boundary up to 9° of north latitude, and beyond that point the line shall be fixed by a mixed commission in such a way that Yendi and Chakosi fall to Germany and Mamprusi and Gambaga to England. Negotiations for the partition of the northern part were carried on in March, 1901, but were suspended until more accurate geographical knowledge could be obtained. When the dry season of 1900 began expeditions were undertaken to subdue the Konkombas east of the Oti river and the tribes of the mountainous districts of Moba and Rotyabu. The district of Dagomba, which was assigned to Germany in the division of the neutral zone, was effectively occupied. After the death of the powerful Sultan Mohammed Andani the northern country lapsed into anarchy until the black troops under German officers restored order.

Cameroons has an area estimated at 191,130 square miles and a population of about 3,500,000. The Europeans numbered 528 in 1900. The officials and European officers of the protectorate troops numbered 81. There are German plantations of cacao, coffee, and tobacco near the coast, where the volcanic soil is exceedingly fertile. The main difficulty is lack of laborers. There are not half enough for the land already under cultivation, and until a supply can be found Gov. von Puttkamer will grant no more concessions. In the botanic garden cloves, rubber, vanilla, ginger, and pepper have been grown experimentally. German merchants carry on trade with the interior in palm oil and kernels, rubber, and ivory. The revenue in 1900 was 3,245,000 marks, of which the Imperial Government gave 2,063,000 marks. Gold and iron have been found. The imports in 1900 were 12,700,000 marks; exports, 5,100,000 marks. The northern territory was for a time closed to trade by the natives. Capt. von Besser led an expedition in 1900 and established a station. From the station at Yoko, Lieut. Ratke set up Jerima Abo as sultan in Tibati in accord with the Emir of Adamawa, who was afterward driven out of Yola by the British, and who was regarded as the religious head of the Mohammedan states in German Adamawa, and himself nominally tributary to the Sultan of Socoto. At the beginning of September, 1901, Lieut. Col. Dominik set out to plant a station at Garua on the Binue, where no German force had appeared for eight years. At the same time a scientific expedition to Lake Chad was fitted out. These enterprises indicate a change of policy on the part of the Government, which since a formidable uprising in the Soudanese territories has devoted its resources to the development of the coast regions, although colonial experts advised the opening of communications with the interior and the suppression of the trade monopoly of the coast tribes as the best means of extending commerce and procuring suitable labor for the plantations.

Portuguese West Africa.—*The Cape Verde Islands* are administered by a Governor residing

at Praia. The inhabitants are a mixed race descended from white settlers and Guinea negroes. Coffee, medicinal drugs, and millet are cultivated. On the coast of Senegambia is the territory of *Portuguese Guinea*, extending inland to the country of Futa Djallon. Rubber, beeswax, oil-seeds, ivory, and hides are exported. The revenue for 1900 was estimated at 56,655 milreis, and expenditure at 216,742 milreis. The value of imports in 1898 was 458,566 milreis; exports, 223,136 milreis. In the Gulf of Guinea are the fertile volcanic islands of St. Thomas and Principe (see PORTUGAL), and south of the Congo State the great colony of Angola (see SOUTH AFRICA).

Spanish West Africa.—The *Rio de Oro* territory has an area of about 100,000 square miles and 50,000 inhabitants. It is administered from the Canary Islands. Adrar, in the interior, formerly claimed by Spain, has been conceded to France. *Ifni*, near Cape Nun, is a settlement of 6,000 population. The area is 27 square miles. The island of *Fernando Po*, in the Bight of Biafra, is fertile and salubrious. With Annabon, Corisco, Elobey, and San Juan, it has an area of 850 square miles and 30,000 inhabitants. The Muni territory, on the mainland opposite Corisco, has an area of about 8,000 square miles south of the German protectorate of Cameroons and shut in by the French Congo in the interior.

Liberia.—The republic of Liberia, settled by American freedmen in 1822 and subsequent years and constituted an independent state in 1847 on the model of the United States of America, has an estimated area of 35,000 square miles and a population of 60,000 Afro-Americans and 2,000,000 natives. Monrovia, the capital, has about 5,000 inhabitants. The President is G. W. Gibson, who assumed office in December, 1900; Vice-President, J. J. Ross. There are many American missionaries, and schools are numerous in the coast settlements. The military force numbers 1,000 men, besides 500 militia. The revenue, derived mainly from customs, amounts to about \$160,000 a year. A foreign debt of £110,000 was contracted in 1871. In 1899, when the arrears of interest amounted to £178,000, an arrangement was made by which the debt and the rate of interest were reduced and provision was made for clearing off the unpaid arrears and the principal, the duties on rubber and other products being pledged for this purpose. The principal under this arrangement amounted in June, 1900, to £78,000 and arrears of interest to £18,720. There is also an internal debt on which no interest has been paid for a long time. The value of the foreign trade is estimated at £500,000, exports exceeding imports. The chief exports are coffee, palm oil and kernels, rubber, cacao, sugar, arrowroot, ivory, hides, and piassava. Foreign trade is restricted to the chief seaports, and whites are not permitted to acquire real estate. A concession for the export of rubber has been granted to a company, and one has been formed to mine gold, which is supposed to exist in certain localities, although no profitable mines have yet been developed.

WEST INDIES. The principal islands of the West Indian archipelago are now freed from European rule (see CUBA, HAITI, PORTO RICO, SANTO DOMINGO), while the less important ones are still colonies of European powers.

British Colonies.—The largest of the British islands is *Jamaica*, which has an area of 4,424 square miles, inclusive of Turks and Caicos Islands, the Caymans, and the Morant and Pedro Keys. The island of Jamaica, with Turks island, had 747,550 inhabitants in 1899. The Governor

is Sir Augustus Hemming. The white population in 1891 was 14,692, and there were 10,116 East Indians and 481 Chinese. The Government schools numbered 746 in 1900, with 98,598 pupils on the rolls and 61,219 in average attendance. Of a total area of 694,580 acres in 1899 the area tilled was 177,664 acres. Of the total 26,121 acres were devoted to sugar, 25,902 to coffee, 25,184 to bananas, 12,174 to coconuts, 419 to corn, 1,721 to cacao, 85,747 to ground provisions, 127,574 to Guinea grass, 231 to pimento, 43,729 to pasture and pimento, and 345,382 to pasture. There are 8 railroad lines, having a length of 185 miles. The receipts in 1900 were £116,348; expenses, £96,486; number of passengers carried, 402,095. The telegraphs had a length of 698 miles. The number of messages in the year ending March 31, 1899, was 96,812; receipts, £5,630; expenses, £7,397. The number of letters and postal cards forwarded in the year was 5,073,350. The shipping of the colony consisted of 148 sailing vessels, of 8,843 tons. The revenue in 1899 was £773,610; expenditure, £719,959. The debt was £1,875,116. The revenue from customs was £358,501. Of the expenditures £107,315 were for the debt, £61,150 for police, and £64,366 for public works. The value of imports in 1899 was £1,844,332, and of exports £1,868,080. The imports of textile fabrics were £427,115; of fish, £159,565; of flour, £148,042; of rice, 35,777. The most important export is fruit to the United States, mainly bananas. Coffee of the highest grade can be raised in Jamaica, and is to some extent. Jamaica rum is unexcelled, but the spirit is less in demand than formerly. Jamaica oranges are good, but they have been supplanted in the American market. Jamaica ginger and pimento are unique and valuable products. The tonnage of vessels entered and cleared was 1,793,511 tons. A direct line of mail, passenger, and freight steamers between Kingston and the English port of Bristol began operations in the spring of 1901. It receives a subsidy of £40,000 a year paid by the colonial and the British governments in equal shares. The four steamers of the company were fitted with appliances for carrying tropical fruits to Europe. The voyage takes thirteen or fourteen days. Each vessel, according to contract, must take at least 20,000 branches of bananas purchased direct from planters. The bananas, pineapples, mangoes, and oranges arrived in good condition. The results were so satisfactory that the owners of the line decided to give a weekly instead of a fortnightly service. The Legislative Council, opened on Feb. 26, had to consider a deficit of £24,639 in spite of £100,000 of retrenchments accomplished in three years. The Government proposed to increase the taxes on property and real-estate holdings. The elected and official members declared their willingness to provide the necessary revenue. The Governor gave offense to the elected members by nominating additional members. The elected members by a formal resolution expressed their feeling that the presence of these nominated members was irritating and humiliating, and requested their withdrawal or the neutralization of their votes.

Turks and Caicos Islands, consisting of over 30 keys with a total area of 165 miles, have a population of 4,744. About 2,000,000 bushels of salt are raked and exported every year to the United States and British America. Sponges are exported also. The Commissioner is E. J. Cameron, who carries on the administration with the assistance of a Legislative Board of 5 members under the supervision of the Governor of Jamaica. The *Cayman Islands*, which are administered by

a commissioner directed from Jamaica, have a population of 4,322. Turtles, coconuts, and cattle are exported.

The *Bahamas* have an area of 5,450 square miles, with 54,180 inhabitants. The Governor is Sir Gilbert T. Carter. There is an Executive and a Legislative Council of 9 members each, and an Assembly of 29 members elected by limited suffrage. Nassau, the capital, situated on the island of New Providence, has 11,000 inhabitants. The Government schools had 5,772 pupils in 1899, aided schools 952, Episcopal schools 1,647, Roman Catholic schools 481, and private schools 456. The sponge fisheries yielded the value of £84,003 in 1899. Pearls, pearl and tortoise shell, and ambergris are other products of the sea. The export of sisal fiber was valued at £16,942; of pineapples in 1898, both fresh and preserved, 34,006. The post-office in 1899 carried 218,521 letters, 4,422 postal cards, and 118,018 newspapers. The revenue in 1899 was £83,055, of which £65,500 came from customs; expenditure, £69,251, of which £9,460 were for public works, £8,165 for the public debt, and 5,426 for police; public debt, £112,826. The value of imports was £329,197; exports, £169,148. The tonnage entered and cleared in the foreign trade was 979,819. The import of textiles was £60,961; of flour, £25,123.

The *Leeward Islands* have a Federal Executive Council, nominated by the Crown, and a Federal Legislative Council containing 8 nominated and 8 elected members. There were 5,070 whites on all the islands in 1891, amid 23,320 colored and 99,333 blacks. The Governor is Sir Francis Fleming. Antigua, with the dependent islands of Redonda and Barbuda, has an area of 170 square miles, with 36,819 inhabitants. Next to sugar the chief product is pineapples. The representative element in the Legislative Council was suppressed in 1898 when the Imperial Government came to the relief of the treasury. The Virgin Islands, with an area of 58 square miles and 4,639 inhabitants, have a population of negro cultivators who own the small patches of ground on which they raise sugar and cotton. Dominica, which prior to 1898 had elective members in the local Legislative Council, has an area of 291 square miles and 26,841 inhabitants. Liberian coffee is cultivated, and other products are limes and various fruits, cacao, and a comparatively small quantity of sugar. St. Kitts, with an area of 65 square miles and 30,876 inhabitants, Nevis, with an area of 50 square miles and 13,087 inhabitants, and Anguilla, with an area of 35 square miles and 3,699 inhabitants, form one presidency, having a Legislative Council of 10 official and 10 appointed members. Sugar and rum are produced in the larger islands and in Anguilla salt and vegetables. Montserrat has an area of 32 square miles and 11,762 inhabitants. Sugar, coffee, cacao, and arrowroot are produced, and there are 1,000 acres planted with lime-trees, the expressed juice of the fruit being bottled and shipped to England and other countries, as it is in constant demand, especially on shipboard. The revenue of the Virgin Islands in 1899 was £2,984, and expenditure £2,220; the revenue of St. Kitts, Nevis, and Anguilla was £42,809, and expenditure £47,415; the revenue of Antigua was £42,822, and expenditure £51,959; the revenue of Montserrat was £6,790, and expenditure £16,608; the revenue of Dominica was £26,156, and expenditure £25,083. Customs produced £732 of revenue in the Virgin Islands, £23,881 in St. Kitts, Nevis, and Anguilla, £24,174 in Antigua, £4,792 in Montserrat, and £13,700 in Dominica. St. Kitts, Nevis, and Anguilla have £74,450 of debt; Antigua, £137,271; Dominica, £70,900; Montserrat, £11,500. The

imports of the Virgin Islands in 1899 were £3,642 in value, and exports £3,867; imports of St. Kitts, Nevis, and Anguilla £148,384, and exports £159,854; imports of Antigua £115,908, and exports £128,095; imports of Montserrat £27,204, and exports £15,569; imports of Dominica £70,229, and exports £65,766. The imports of cotton goods into the Leeward Islands were £74,876; of flour, £48,549; of fish, £21,430; the exports of sugar, £230,029; of cacao, £20,372. The Imperial Department of Agriculture has conducted experiments with seedling varieties of sugar-cane in Antigua, St. Kitts, and Nevis, as well as in Barbados. The lime industry in Dominica and one or two other colonies has increased in value. Onions are successfully raised on a small scale in Antigua. An attempt is being made in several islands to raise early potatoes for the English market. Still no reliance is placed in Antigua, St. Kitts, Nevis, or even in Montserrat in alternative crops. Their hope of prosperity lies in the restoration of the sugar trade, and in these islands there is a strong desire to see established central sugar factories with modern appliances which would nearly double the quantity of sugar now extracted by old-fashioned machinery.

The *Windward Islands*, consisting of Grenada, St. Vincent, and St. Lucia, with the Grenadines, which are divided between Grenada and St. Vincent, have a common Governor, Sir Robert Baxter Llewellyn, but no common legislative body. Each island has an administrator. In Grenada, which has an area of 133 square miles and 64,098 inhabitants, the Legislative Council has 6 official and 7 nominated members. The number of children attending school in 1899 was 9,240. Cacao is the principal product, and next to that spices. Cotton and coffee have been introduced also, while the cultivation of sugar has decreased. The revenue in 1899 was £68,757, exclusive of a grant of £30,000 voted by the British Parliament; expenditure, £59,359; debt, £127,670; imports, £226,829; exports, £267,738, of which £234,611 represent cacao; tonnage entered and cleared, 464,048. St. Vincent has a Legislative Council of 4 official and 4 non-official members. Its area is 132 square miles, and its population 41,054, including 2,445 whites. Sugar and rum are still important products, but cacao, spices, and arrowroot are produced, and good timber is obtained from the forests. The cultivated land is divided between three great land owners. The revenue in 1899 was £32,210; expenditure, £48,119; debt, £10,710; imports, £103,627; exports, £33,510, including sugar for £415 and arrowroot for £22,457; tonnage entered and cleared, 245,588. St. Lucia has an area of 233 square miles and 48,650 inhabitants. The number of children in the schools in 1899 was 5,735. The revenue was £71,479, and expenditure £63,821 in 1899; debt, £187,180; imports, £282,963; exports, £98,574, including sugar for £56,793 and cacao for £25,734; tonnage entered and cleared, 1,279,353. St. Lucia in the year ending March 31, 1900, was more prosperous than at any period since sugar was supreme. The cacao-crop was the largest ever exported, and prices for this and for sugar were good. The revenue increased to £72,107, while expenditures were £64,750. The debt was reduced to £176,680. The imports were £403,592, more than half of them coming from Great Britain and a third from the United States, which has acquired the whole of the coal trade of Castries, the coaling station. The value of exports was £229,436, including £124,554 for coal.

Barbados has an area of 166 square miles, with 192,000 inhabitants. The Governor is Sir Frederic

Michael Hodgson. The Legislative Council has 9 nominated members, the House of Assembly 24 members elected by the people for each annual session. Bridgetown, the capital, has about 30,000 inhabitants. The Government schools had 14,978 pupils in attendance in 1899. The garrison in 1900 consisted of 32 officers and 815 men. Nearly the entire surface of the island is cultivated, one-third being planted to sugar, the yield of which has decreased from 66,262 hogsheads in 1894 to 43,907 in 1899. The annual produce of the fisheries is about £17,000. There were 42 sailing vessels and 3 steamers, having a total tonnage of 8,680 tons in 1899. There are 24 miles of railroad. The export of glance pitch in 1899 was 350 tons, valued at £3,500. The revenue collected in 1899 was £176,022, of which £95,687 came from customs; expenditure, £207,884, of which £22,800 were for police, £11,225 for debt, and £2,360 for public works. The total imports were £998,007; import of cotton goods, £133,424; of flour, £64,759; of rice, £45,450; of fish, £52,535. The total exports were £845,590; export of sugar, £474,009; of molasses, £109,252. In 1900 the revenue amounted to £185,474, and expenditure to £182,865. The imports amounted to £1,045,251, of which half came from Great Britain, and exports were £919,011, of which £694,038 represent products of the island. All the muscovado sugar, valued at £485,736, went to the United States. The Imperial Department of Agriculture has continued the experiments with seedling sugar-cane in Barbados. One variety which has been cultivated seven years yields 27.5 tons of cane and 3.31 tons of sugar per acre, and seems to withstand disease. Another variety from British Guiana produces in Antigua 25.6 tons of cane and 3.5 tons of available sugar. Dr. Morris, the Imperial Commissioner of Agriculture, in an agricultural conference held at Barbados in January, 1901, said that there was reasonable hope of obtaining cane that would yield 40 or 50 per cent. more cane than at present and be proof against the attacks of parasites and fungi. An improvement of 30 per cent. would place West Indian sugars on an equality with European beet-sugar in the English market. The experiments of Mr. Bovell, chief of the botanic station in Barbados, have, according to results obtained by Prof. D'Albuquerque, the head of the chemical department, already exhibited a yield 40 per cent. better than that of the favorite cane in general cultivation. The establishment of central factories is desired by the planters of the West Indies, and the British Government has considered the advisability of giving assistance by way of a guarantee or a subsidy. The experiments at the agricultural station have included trials of many kinds of manure and of leguminous crops for soiling with hopeful indications. So long as the present United States tariff remains in force the West Indian planters feel sure of a market for their sugar in the United States. Uncertainty as to the future commercial policy of the United States causes alarm. They are anxious, too, about the Canadian market, which is open now to muscovado sugar, but which may in the future receive refined sugar. The assistance which the British Imperial Government gave to the West India Islands in five years on the recommendation of the Royal Commission amounted to £320,000, not including the grants of £40,000 to Barbados, £25,000 to the Windward Islands, and £17,000 to the Leeward Islands to relieve distress caused by hurricanes.

Trinidad has an area of 1,754 square miles. The population in 1899 was estimated at 260,517.

The number of marriages was 1,243 in that year; of births, 8,922; of deaths, 6,129. The Governor is Sir Cornelius Alfred Maloney, who is assisted by an Executive Council of 7 members and a Legislative Council of 9 official and 11 nominated members. There were 24,866 pupils in 204 schools in 1899. The island contains 1,120,000 acres, of which 432,000 acres have passed into private ownership. There are 58,500 acres planted with sugar-cane, 149,800 acres with cacao, 3,980 acres with coffee, 33,100 acres with ground provisions, and 11,000 acres with coconut-trees. The quantity of asphalt exported in 1899 was 136,575 tons. There are 80 miles of railroad and 690 miles of telegraph. The revenue in 1899 was £651,135, including receipts in Tobago; expenditure, £650,750; debt, £923,416; imports of Trinidad and Tobago, £2,535,965; exports, £2,572,891; tonnage entered and cleared, 1,262,298 tons. The import of textiles was £350,453; of flour, £149,727; of rice, £104,453; export of cacao, £898,384; of sugar, £714,562; of molasses, £33,420. Tobago, now administratively incorporated in Trinidad, has an area of 114 square miles and 21,400 inhabitants. Cacao, cotton, and tobacco are cultivated, and the sugar plantations have decreased.

French Colonies.—The colony of *Guadeloupe* consists of two islands separated by a narrow channel and the dependencies of Marie Galante, Les Saintes, Désirade, St. Barthélemy, and St. Martin, the whole having an area of 688 square miles and 193,800 inhabitants, including about 15,000 East Indian coolies. The Governor is D. Moracchini. The Legislative Council is elected by the people, who are represented by a Senator and two Deputies in the French Chambers. The garrison consists of 170 French soldiers. There are 117 elementary schools, with 321 teachers and 10,979 pupils. The local revenue in 1900 was 4,968,324 francs. The expenditure of France in 1901 was 1,583,213 francs. The debt is 1,200,000 francs. The yield of sugar in 1898 was 44,840 tons; that of cacao in 1899 was 915,530 pounds, and of coffee 1,742,240 pounds. Bananas, yams, manioc, tobacco, and corn are raised for local consumption. The total value of imports in 1899 was 18,451,000 francs, and of exports 18,251,000 francs. Of the imports 13,286,000 francs came from France, and of the exports France took 11,032,000 francs. The number of vessels entered in 1899 was 438, of 221,303 tons.

The island of *Martinique* is represented by a Senator and 2 Deputies in the French Chambers and is administered by a Governor, G. Gabrié, with a Council-General to make local laws. The area is 381 square miles, and the fixed population in 1895 was 187,692, comprising 90,373 males and 97,319 females. There was a floating population of 1,907. Of the resident inhabitants 1,307 were born in France, 4,665 were East Indians, 5,371 were immigrants from Africa, and 432 were Chinese. The French garrison was 1,360 in number. There were 152 elementary schools in 1899, with 13,371 pupils. Sugar, coffee, cacao, tobacco, and cotton are grown for export. The value of the imports in 1899 was 27,004,526 francs, of which 13,230,726 francs came from France, and the value of the exports was 26,603,147 francs, of which 24,212,270 francs went to France. The tonnage entered was 315,509; cleared, 313,840 tons. The revenue collected on the island in 1900 was 5,729,793 francs; expenditure of France, 2,270,758 francs in 1901. The debt consists of an annuity of 95,000 francs and a loan of 1,460,000 francs.

Danish Colonies.—The islands of *Santa Cruz*, or *St. Croix*, *St. Thomas*, and *St. John* constitute the Danish Antilles. Their area is 138 square

miles, and their population is 32,786. Sugar and rum are the chief products. In 1899 the imports from Denmark amounted to 76,000 kroner, and exports to Denmark to 93,000 kroner. The imports from Great Britain were more than ten times as much, and the trade with the United States was large. The Danish Government, after negotiations extending over two years, decided to accept the offer of the United States of 12,000,000 kroner for the Danish Antilles. Copenhagen bankers and merchants desired to retain the islands for Denmark as a valuable commercial base in the event of the completion of the Nicaragua Canal. Their plans for a transatlantic steamship company and commercial enterprises on the islands did not come to maturity. A section of the population of the islands was strongly opposed to the transfer, but the most active business men and agriculturists were desirous of a commercial and political union with the United States.

Dutch Colony.—The island of Curaçao belongs to the Netherlands. It has an area of 210 square miles and the population on Dec. 31, 1898, was 29,558. The dependent island of Bonaire, area 95 square miles, had 4,829 inhabitants; Aruba, area 69 square miles, had 9,349; St. Eustache, area 7 square miles, had 1,432; Saba, area 5 square miles, had 2,779; and the Dutch part of St. Martin, area 17 square miles, had 3,577. The Governor is C. A. H. Barge. He is assisted by a Council of 1 official and 3 nominated members, to which 8 other members are appointed to form the Colonial Council. The revenue, derived from duties on imports, excise and indirect taxes, and the land tax, amounted in 1900 to 609,000 guilders according to the estimates, and expenditure to 686,000 guilders. The imports of Curaçao in 1898 were 1,960,070 guilders in value. The value of exports is not reported for Curaçao; for the other islands it was 284,954 guilders. There were 2,323 vessels, of 507,344 tons, entered at all the ports during 1898.

WEST VIRGINIA. (See under UNITED STATES.)

WIRE-MAKING. All changes in the wire-drawing industry in the year 1901 were in the way of advancement. Several new wire-mills have been built, and many of the old mills enlarged. The largest company, the American Steel and Wire Company, having a capitalization of \$90,000,000, has been absorbed into the United States Steel Corporation, but retains its name and continues business under the control of its president, W. P. Palmer, with the principal offices at 71 Broadway, New York city. The well-known Washburn & Moen wire-plant, at Worcester, Mass., one of the chief mills for specialties in steel wires, belongs to this concern. The company has built a new steel plant, a rod-mill, and a wire-mill at Phillipsdale, for the production of steel rods and wire; and has purchased the American Electrical Works, also at Phillipsdale, for manufacturing bare and insulated copper wire, and the R. H. Wolff & Co.'s plant, New York city, for flat wires and specialties in all steel wires.

The production of steel rods for wire three years in the United States was 279,769 tons in 1888; 536,607 tons in 1891; 791,130 tons in 1895; 970,000 tons in 1897; and since then more than 1,000,000 tons yearly. Great Britain now produces only 10,000 tons of steel rods and wire per annum.

In steel-wire making, manufacturers have given up the old ideas that the quality of round wire produced depended largely on the size of rod to begin with, and the number of light or heavy drafts made to reduce the wire to required sizes.

The tensile strength is found to depend mainly on the amount of reduction from the rod or annealing-point, and not on the number of light or heavy drafts, which make less difference. For fine sizes of wire the smallest size rod obtainable is the best to use, as it is the nearest to the finished size, and therefore costs the least for drawing. This size is No. 8 Washburn & Moen gage—the gage adopted as the standard for the American Steel and Wire Company's mills. Smaller gage rods can be rolled, but they are not exact enough as to size. For special wires, especially high-carbon steels, this small size, No. 8 rod, is much in use, but less frequently for the low-carbon steels used for fencing and market wires. The demand for rods is beyond the capacity of the rolling-mills, and the production, when using No. 8 rod, entirely inadequate. Most of the large mills making rods for fence, nail, and market wires, for this reason, roll No. 5 rods. Larger sizes are rolled when wanted, and rods or wire can be drawn through a die $1\frac{1}{4}$ inch diameter. Low-carbon basic or Bessemer steel rods $\frac{3}{4}$ or 1 inch diameter can be reduced to wire in one draft of $\frac{3}{8}$ inch, but a little harder steel, of 0.12 to 0.15 per cent. carbon, is reduced only $\frac{1}{16}$ inch in one draft, as a heavier draft would make it so hard it would not mill and turn freely for such uses as screw-making. For these large sizes a rod is used that can be finished in one or two drafts. Two drafts are often necessary to make the wire accurate in size, and to remove all pits, seams, slivers, and other surface defects. The amount of reduction at each draft is gradually lessened as wire becomes smaller. At Nos. 5 to 12 the reduction is not often more than two sizes for one draft, at Nos. 14 to 20 it may be $1\frac{1}{2}$ size, and for smaller wire one gage number at a draft, or for Nos. 20 to 30 there may be only six drafts altogether.

For low-carbon steel one annealing is considered sufficient in reducing wire from rods to No. 20, and this annealing may be from No. 12 to No. 18, according to the hardness wanted at finished size. For reducing to No. 30 one more annealing is often made. High-carbon tempering steels require more frequent annealing, steel 0.75 carbon and over being especially hard to reduce to medium and fine sizes of wire without frequent annealings.

The steels used for wire range from 0.05 carbon to 1.50 per cent., but there are really only two classes—first, the high-carbon steels, 0.40 carbon and over, which are all tempering steels, used for wires to be tempered after forming to shape, and also used untempered where great strength is wanted, as for rope and piano wires; second, the low-carbon steels, nearly all 0.08 to 0.12 carbon, which are used for fence, nail, and market wires, and are also by special processes made into particular wires, pin, hairpin, broom, mattress, bolt, nut, screw, bookbinder, weaving wire for screens, and a large variety of other wires for forming into wire goods, or any bending and twisting use, but not specially for high tensile strength.

The weight of the coil of rod used has been increased from 150 pounds, which the wire-drawer could conveniently lift, to 200 and 250 pounds, and occasionally 300 pounds. The latter are difficult to handle in transferring from annealing to wire-drawing room, except by machinery. They are, however, lifted off the wire-block by hand. For large sizes this coil can be drawn conveniently, but at No. 12 the length of wire becomes so great that it is cut into 100- or 50-pound coils, and by breakages in process the

weight is still further reduced; 50 to 200 pounds at No. 12 becomes 50 to 80 pound coils at No. 20, 30 pounds at No. 25, 20 pounds at No. 30, and 5 to 15 pounds at smaller sizes. Indications are that still larger coils of rods will be rolled in 1902, although it will necessitate larger and more powerful machinery in the rod and wire mill at all points where the rod or wire is coiled or lifted, in the wire-drawing, annealing, cleaning, and tempering rooms. For the users, the lengths are satisfactory except in special instances. For the fine steel wire used for kite-flying, and for deep-sea sounding, the United States Government service require an unbroken length of 5 miles, or 50-pound coils, while the factories seldom make more than 10- or 15-pound coils at the small sizes wanted. For the strong steel wire used for suspension bridges, an unbroken length of wire is required of 3,000 to 4,000 feet. No. 6 to No. 9 wire has been chiefly used, and a 250-pound coil of rods would make the lengths required. This the wire-makers could do. Suggestions have been made to use $\frac{1}{4}$ -inch wire of the same length, which would require a 600-pound coil of rod, making the usual allowance for waste and breakage in manu-

down to $\frac{1}{4}$ -inch diameter wire. For No. 4 and No. 5 rods the dies are 7 to 15 pounds in weight. For Nos. 5 to 10 wire a 5-pound die is strong enough, and for Nos. 12 to 20 a $2\frac{1}{2}$ - or 3-pound die. It is the custom in some mills to use cast-iron dies for larger sizes than No. 12, and steel dies for No. 12 and finer. For sizes smaller than No. 20 the dies weigh 1 or 2 pounds. Some of the 3-pound dies have as many as 16 holes. For fine wire special rectangular dies and flat draw-plates are also used.

For drawing wire on continuous machines it is possible to use an ordinary die for Nos. 20 to 30, but frequently a special die is made by cutting a section off a larger die, to make a square or round plate with but one hole. For sizes smaller than No. 30 a thin plate of steel may be used, $\frac{1}{4}$ inch or less in diameter, with one hole. For No. 32 and smaller diamnd, draw-plates are used. Steel dies can be made as fine as No. 36; but by the ordinary method of drilling the hole the slender drill at this size is apt to bend in drilling and spoil the exactness in the size of the hole. Steel wire can be drawn in diamonds as fine as 0.002 inch for commercial use. Smaller

Floor-space, 14 feet by 2 feet 6 inches.

facturing. To make such large coils of cable-wire would require the special large machinery referred to for handling.

The steel wires for a suspension-bridge cable must be one continuous length, without weld, splice, or joint. Copper wire is easily welded or brazed. So also are the low-carbon steel wires. The high-carbon steels, 0.40 to 0.75, are brazed and used successfully to make long lengths of wire for stranded wire-ropes, but would not be considered safe to use in a suspension-bridge cable, where the wires are laid parallel, and therefore each wire must be from an unbroken coil of rod.

Steel dies may be used for drawing all sizes of steel wire, but for large sizes cast-iron dies are commonly used. The largest dies weigh 30 pounds, are rectangular, and are pierced with 4 to 6 holes. These are used for drawing 1-inch

wire than this has been drawn only in very small quantities.

The diamonds used for draw-plates are not equal in value to those used for jewels. What is wanted for a draw-plate is a flat diamond $\frac{1}{8}$ inch thick, and $\frac{1}{4}$ to $\frac{3}{8}$ inch diameter, either round, square, or triangular, but any shape can be used than can be drilled without breaking. For this use the slabs, cleavages, and endings which are made by the diamond-cutter in shaping large diamonds make the best draw-plates. They can be used unpolished or polished, are of the right shape and size, and good in quality. African diamonds are used, although the Brazilian diamond, being harder, makes a better draw-plate; but Brazilian clippings are difficult to obtain. The natural stone is preferred if it can be obtained, and diamonds that are considered as blemished by reason of defective color, flaws, or foreign substances em-

bedded for jewels can be made very useful for draw-plates. Sometimes polished stones can be obtained for wire-drawing, the flaws not being discovered by the diamond-cutter before polishing. If the stone is too thick to drill and use economically, it is split in the direction of its cleavage, and made into two or three draw-plates. Thick, round stones are not preferred, as they are not broad enough in surface to split into slabs. The usefulness of the diamond for wire-drawing is more in the surface area than the thickness. To manufacture into draw-plates the diamonds are drilled, set in a soft metal setting, and encased in a holder made of brass, of the size of a half-dollar, but thicker.

They are very successfully used for drawing copper wire, and diamond dies will often last without wearing for three months, and sometimes for a year. They are used for drawing size No. 20 to 0.002-inch, the 0.002-inch being as fine as the hair of a man's head. They are less frequently used for drawing larger sizes, but a 5-

CONTINUOUS FINE-WIRE-DRAWING MACHINE.

carat die can be used for No. 16 wire, and when worn can be split to make other dies for finer wire. A 2-carat diamond may be used for drawing No. 20, 1-carat for No. 25, $\frac{1}{2}$ -carat for No. 30, and $\frac{1}{4}$ -carat for smaller sizes. This usefulness of the diamond die is equally true for platinum, brass, and other wires of soft metals or alloys.

Not so, however, with steel wire. A diamond can be used for drawing No. 32 (0.013-inch) and finer, but will last only two or three days before wearing off size or breaking. For soft steels a $\frac{3}{4}$ -carat diamond can be used where a $\frac{1}{2}$ -carat would do for copper, and for hard, high-carbon steel a 2-carat diamond is not too large for No. 32. At sizes a little larger than No. 32 the usefulness of the diamond for drawing steel wire ceases, as it is so much cheaper to draw in steel dies that the latter are always used, and the diamond would not be used even for drawing fine steel wires were it not for the great exactness in gage and roundness that is required for some wires.

One operator can draw from 10,000 pounds of $\frac{1}{2}$ -inch- to 1-inch-diameter steel wire. This is frequently drawn in straight lengths of 50 or 75 feet, on a long draw-bench, on account of the difficulty of coiling wire 1 inch in diameter or near that. A $\frac{3}{4}$ -inch rod is always drawn in coil, and an operator can take care of but one drawing-block, as there is but 266 feet to 100 pounds at this size, and this length being quickly drawn,

the time of the wire-drawer is taken up in caring for successive coils of rods and wire. At Nos. 8 to 12 wire three blocks can be cared for by one wire-drawer, as the lengths are longer, there being 3,369 feet of wire in 100 pounds at No. 12, but the production per operator is reduced to 5,000 pounds a day, owing to the increased length of wire per pound. The rods are in 24- or 36-inch coils, and the large-size wires in 22-inch coil. At No. 14 the diameter of the coil is reduced to 16 inches, and at No. 20 to 8 inches. With these 8-inch coils, at Nos. 20 to 32, one man can easily take care of 30 drawing-blocks, and in some mills more, but there is a great length of wire per pound, and the coil of wire on each block has to be changed only once or twice daily. The weight of the coil of wire by the time it has been drawn to No. 32 is reduced to 5 to 15 pounds, which is all that can be conveniently handled by present processes, as there is at No. 32 about 2,288 feet in 1 pound of wire.

For the small sizes there is another method of drawing known as continuous wire-drawing, by which the wire is drawn through 5 to 10 dies, with a roll or winding-block between each 2 dies, before being finally wound on the coiling-drum. Steel wires are successfully drawn on these machines at Nos. 30 and finer, and can be drawn as coarse as No. 20, or larger, but progress is being made very slowly in this direction. For softer metals, like copper, the continuous wire-drawing machine is a greater success, and not only fine sizes are drawn, but also sizes as large as $\frac{1}{4}$ inch to No. 12. Although the production of wire by one operator daily is larger than by the ordinary method, the difference is not so great as might at first appear. Where a wire-drawer takes care of 30 ordinary blocks for drawing fine steel wire, he will by the continuous method have the charge of 2 machines, with 5 to 10 blocks on each machine. For drawing special wires, like music-wire, where there is more care and expense in manufacturing, and the wire-drawer not allowed more than three or four blocks, if the continuous plan can be used, the difference in production is more in favor of the continuous wire-drawing, yet for such very hard steel as music-wire only the finest sizes, that are used for guitars and mandolins, are made in this way.

Progress in manufacturing is being made in all processes. The greatest necessity is felt for doing away with the sulfuric- and muriatic-acid cleaning processes for steel wire, and experiments are being made to attain this. The speed at which wire can be drawn appears for the present to have reached its limit for steel at 40 to 60 revolutions a minute for No. 12 to 20 wire, the large size in 22-inch diameter coil, and the small size in 8-inch coil, as at faster speed the wire is likely to have a scratched surface and to break; but for copper wire there is little doubt that much higher speeds can be obtained.

The demand for all descriptions of wire continues to increase. For trolley and telephone purposes, copper wire is always used where possible; but where greater tensile strength is required steel is used for telegraph and telephone lines. There is a demand for a stronger wire than copper that will have nearly the same electrical conductivity, but experiments to produce such a wire with alloyed copper have not been sufficiently successful to warrant its use in large quantities. Silicon bronze for the same use is much more popular in Europe than in the United States. In steel, barbed-wire fencing is not sold in the Western States so much to the exclusion of other fencing as was the case a few years ago, but there is a

continually increasing demand for field fencing without barbs. The field fencing is built from 20 to 55 inches in height, and may have as many as a dozen wires strung laterally, the top and bottom being frequently of two large wires twisted into a cable. Upright picket wires are used 6 to 12 inches apart, and the fencing can be manufactured the same as wire netting, with a large mesh. The demand for barbed wire for export is larger than ever. It has the same popularity for large ranches in Mexico, Brazil, and other parts of South America that it had in the United States for twenty-five years. It is also exported to Australia, Africa, and East India.

For resistance wire a very good nickel-steel is now being made in the United States. Other alloys are imported for the same use, but all are high-priced, and the large electrical manufacturing companies are still seeking for a good resistance wire that they can afford to use in apparatus sold at moderate prices. The same is true of the wire of which a small piece is used as a holder for the gas mantles that are now used everywhere. A wire is wanted for the gas mantle that, when

heated, will not oxidize and so in time wear away by corrosion, as would be the case were steel wire used. At first a pure nickel wire was used, and this was satisfactory, but with the large quantities now sold, and the lower prices prevailing, a cheaper wire is wanted, and different alloys are being used experimentally to meet the demand.

For special steel wires the ordinary tests are generally limited to the tensile strength or breaking weight, the elongation, and the number of twists, and the bends that can be given. The test for elastic limit is seldom made by practical wire makers, and then only when demanded by the buyer's specifications, and neither is the modulus of elasticity taken into consideration. Tests for compression or hardness are seldom asked for, and no testing-machines can be found in the wire-factories to make these tests. New testing-machinery, however, is being invented and used, but it is chiefly for wires that are cut to different lengths, and made up into finished articles used in large quantities, such as round and flat springs.

Y

YACHTING IN 1901. It is not to be denied that steam and electricity and the other artificial agencies gain in popularity every year among those who seek recreation upon the face of the waters, and who can command the wherewithal to pay expenses. Nevertheless, a certain charm belongs exclusively to sailing craft, be they large or small, and can never be wholly taken away from them by any merely mechanical device. Occasional items may appear in public print regarding elaborate social entertainments on board of the large steamers belonging to leaders of fashionable shore-going society, but the only yachting events worth mentioning and which really attract general attention are those that are confined to sailing craft. Now and again mention is made of some trial of speed between steam-yachts or gasoline launches or what not, but the only contests that really arouse popular interest are those where the free winds of heaven furnish the propelling power and where real sailormen, be they amateurs or professionals, do the work. To witness such contests luxuriously appointed pleasure craft assemble from the "seven seas," and huge excursion steamers packed with humanity jostle one another for vantage-points of observation. All this goes to show that the lavish luxury of the age has not yet eliminated the popular love for and admiration of the more daring and adventuresome features of yachting.

Of all the yachting events that command the most wide-spread interest the international contests for "the America's cup" easily hold the foremost place. The story of this famous trophy has been so often told and retold that to those who take an interest in such matters it seems superfluous ever to repeat it again, and yet every recurrence of a cup race brings to the front tens of thousands of readers who seemingly never heard of it before. For this reason and because an interesting series of races occurred in 1901, a brief review is appropriate at this time.

Half a century has now passed since Aug. 22, in 1851, when the schooner-yacht America won the silver cup that bears her name from a squadron of 18 vessels fairly representing the swiftest sailing craft of the British Isles—that is to say, of the Old World, for until that time British yachtsmen

acknowledged no rivals worth the name. The year was especially notable because of the World's Fair in London, the first great exposition of the kind ever undertaken upon a really comprehensive plan. At that time Britannia held practically the monopoly of yachting. Continental yachts and yacht-clubs were at that time very few, and though the American merchant marine was a formidable rival to that of Great Britain on the high seas, still American yachts were almost unknown beyond the seas, for only two of them had as yet crossed the ocean—namely, Cleopatra's Barge, a large brig owned and commanded by Capt. Crowninshield, of Salem, and the sloop Alice, of Boston. Neither of these was designed for racing, the first-named being something of a freak with sundry not altogether shipshape eccentricities of rig and equipment. She was fitted out with all the luxury attainable at that period, was a fast sailer, and attracted a deal of attention at the various European ports which she visited, counting kings, princes, nobles, and other distinguished personages among her visitors. The Alice was out merely for an unpretentious pleasure cruise, and fulfilled her mission so far as is known to the satisfaction of all concerned.

Americans had their private boats, sailing craft, and barges propelled by oars—the predecessors of naphtha launches of to-day—as soon as prosperity began to establish itself along the coast of the Western Continent. Southern planters along the Carolina sounds and on Chesapeake Bay, with shipping merchants of the Northern coast cities, were among the pioneers. In those days when roads were few and well-nigh impassable, and when only the rudest habitations existed a few miles back from navigable water, it was essential for travelers to have means of communication along the shore, and a large fleet of well-equipped pleasure boats existed in the colonial days. It is of record that yachts became privateers in the early wars, and it is even suspected that some of them were not above piracy and the slave-trade in times of peace. This is true not only of American, but of British yachts, a famous instance in point being that of Sir James Brooke, who no longer ago than 1840 went a-yachting in Eastern seas, landed on the coast of Borneo, and, seconded by

his numerous and well-armed crew, set up a principality at Sarawak, where his nephew, Sir Charles Brooke, still reigns in his stead, and is recognized by the world at large as the head of an independent state. This is probably the most distinguished incident of a yachtsman accomplishing the conquest of a foreign land, and, indeed, Sir James Brooke was at one time in danger of a parliamentary investigation, the charges against him bearing a very strong resemblance to charges of piracy on the high sea. He succeeded, however, and was largely instrumental in suppressing the Malayan pirates who in the middle of the last century were the terror of the Eastern Archipelago.

It is undeniable that a vast number of Americans look upon yachting with complete indifference, not to say disdain, as a phase of modern luxury interesting only to the very wealthiest classes, who alone can afford to engage in it. This view is not unnatural considering the extent of our inland territory, nor can it be denied that many persons calling themselves yachtsmen contribute by personal example to the cultivation of seamanship. It should in fairness be admitted, however, that the modern yacht squadron affords a most efficient training-school for a considerable army of seamen and engineers, and even in its luxurious features it is of direct advantage to a large class of workers.

It is within the memory of the generations now approaching middle age that the United States navy possessed not one single vessel capable of meeting on anything like equal terms any efficient member of the European squadrons then in commission. Prior to that time the predominant interests of the country were absolutely indifferent to our standing as a naval power, the coastwise States alone recognizing its importance.

It is not intended here to claim overmuch honor for yachting as a factor in the growth of the navy. Many other things contributed to it, notably the publication of Capt. Mahan's works on the development of sea power, as well as the limited but efficient influence of some few far-seeing statesmen. It is perhaps worth while to note that it became possible to secure adequate congressional appropriations for naval purposes only after yachting interests on the Pacific coast had shaken hands with those of the Atlantic across the continental divide. Interest in American seamanship spread at first along the line of the Great Lakes, and thence to the smaller ones that dot the middle West, until now almost every inland lake of navigable size and depth has its prosperous clubs of sailing yachts, and it is no uncommon thing for ambitious inland yachtsmen to send their fast boats by rail to the seacoast to try conclusions with their sisters of the salt ocean. Their records in these races are not by any means discreditible. They have not always been victorious, but have carried off many honors, and have certainly trained a large number of sailormen who, if not equal to the exigencies of ocean navigation, have at least taken the initial steps that should fit them to serve the country afloat in case of need. It is not too much to claim that the love of adventurous seamanship cultivated by this means had much to do with securing the legislation that gave us the nucleus of a navy when we found ourselves suddenly confronted by Spanish fleets of unknown powers in 1898. Since then there has been no question in the popular mind as to the necessity of a navy, and few will deny to the yacht-clubs such credit as may be their due as training-schools for the practise of seamanship.

And not only this, when the sudden call came for all vessels that could be made available for

war service the Government found between 20 and 30 large steam-yachts that could readily be converted into gunboats and despatch-boats, and which, in fact, did distinguished service in the war that followed, one of them, the Gloucester, commanded by Lieut. Richard Wainright, not hesitating to encounter single-handed two of the dreaded Spanish "destroyers," both of which were sent to the bottom of the sea, mainly if not altogether by her impetuous attack.

There were no organized yacht-clubs in this country until about 1842, when one was established at Hoboken, which subsequently developed into the New York Yacht-Club, and sailing races began to attract the attention of all people who were interested in nautical affairs. In the British Isles yachting had long been firmly established as a popular recreation among the aristocracy and the moneyed classes. In those days transatlantic travel was as nothing compared with its present volume, and to say that in 1850 a dozen British yachtsmen were aware that such a thing as a Yankee yacht was afloat would probably be in excess of the truth.

Certain it is, according to the testimony of Mr. George R. Schuyler, that no official invitation was sent to American yachtsmen to compete in any regattas, and it was not until the America was nearly ready to launch that the Royal Yacht Squadron, through its commodore, offered to the owners the hospitalities of their club-house, a vague rumor having reached England that a schooner was building with a view to visiting British waters.

Such invitations as were sent out to the few yachtsmen in the rest of the world to try conclusions with their British brethren were more like invitations to come up to the Solent and be beaten than like anything that contemplated the chances of an equal contest. The British yachtsman not unnaturally considered himself the only yachtsman in existence, for then even more positively than now the belief that Britannia ruled the wave by divine right was prevalent in England. During the year that elapsed before the opening of the exposition rumors reached the Royal Yacht-Club at Cowes to the effect that the schooner building in America was on the lines of the famous New York pilot-boats, with all the improvements that could be devised by her famous designer and builder, George Steers.

In due time she appeared, having made a swift passage across the North Atlantic, and anchored a few miles from the rest of the fleet off the Royal club-house at Cowes. A cutter was sent down to welcome her and offer the hospitalities of the club, and the next day Commodore Stevens, who was in command, made sail to go up to the anchorage. Most unfortunately for his purposes he did not hold his boat, as it were, in leash, and the result was that she simply ran away from everything that came near her, and when she dropped anchor in the downs all British experts who had watched her performance were so thoroughly astonished thereby that they would have nothing to do with her. No opportunity could be found to race until the day fixed beforehand for the great regatta, and although Commodore Stevens was very much annoyed by this lack of enterprise on the part of his antagonists, he decided at the last moment to enter the race. After all the rest of the fleet had got under way the America made sail with great smartness, and in the course of an hour or two had passed through the entire fleet, leaving everything behind her, and at one time was so far in advance of the squadron that not another vessel was in sight. After this she

YACHT RACE, NEW YORK BAY.

was becalmed for a while, but finished far in advance of the rest, and established beyond question her reputation as the fastest sailing vessel afloat.

If it had been difficult to secure a worthy antagonist before this it was impossible now. Commodore Stevens posted a notice in the Royal clubhouse at Cowes offering to race anything for any sum up to 10,000 guineas, but he was able to obtain only one chance, and that appeared to have

absolute impartiality and apparently at their own sweet will.

With such a reputation as she had gained, the America was easily sold to a British purchaser; her name was changed, and for several years she flew British colors, but never distinguished herself under alien management as she did when manned by a Yankee crew. Eventually she fell into the hands of the Confederates, was used early in the civil war for blockade-running, was captured

COLUMBIA AND SHAMROCK II.

been brought about only in consequence of the general howl of derision that went up from all over the United Kingdom at the expense of the champion yachtsmen of the world, who were apparently afraid to risk the reputations of their boats against the only worthy antagonist that had ever crossed seas with a view to giving them a contest.

So wide-spread was the indignation that a deputa-tion of local fishermen is said to have waited upon the yachting authorities and offered, if the gentlemen would put up the money, to take the best cutter that could be found and race her (the America) to Cape Clear and back, "and the harder it blows the better."

The nearest approach to such an ideal contest as this was found in the Titania (Robert Stephenson, Esq.), and the conditions were fairly favorable, for the course was laid 20 miles to sea in the face of what is described as "heavy weather." The America came out handsomely a winner, as, indeed, everybody expected she would do, considering her size and weatherly qualities. But other races were not forthcoming, and the Americans were obliged to content themselves with attending such regattas as they chose merely as spectators, sailing around victors and vanquished alike, with

by the Federals, and remained in the United States navy for some years. She was finally purchased by the late Gen. Benjamin F. Butler, and upon his death became the property of his son Paul, who takes pride in keeping her in seagoing trim, and who last summer entertained on board as a guest Sir Thomas Lipton, owner of Shamrock II, the last challenger for the cup. It speaks well for American builders of half a century ago that a vessel stigmatized in her day as unseaworthy owing to purposely light and flimsy construction should still be afloat and capable of giving a good account of herself, even when compared with the latest achievements of naval architects.

By tacit consent the handsome silver cup then won by the America was rated high above all similar trophies in the world, and at an early date came to be somewhat inappropriately termed "the blue ribbon of the seas." In 1857 the owners of the America executed a deed of gift whereby the cup was given over to the New York Yacht-Club, to be held as a perpetual challenge prize open to all nations under certain specified conditions.

Not until twenty years had passed was an attempt made to win back for England the coveted trophy, but since that time at irregular inter-

vals challenges have been received and races have been sailed, as shown by the following list, the victory in every case remaining with the American yacht or yachts, for in the earlier races the defenders very naturally claimed the right to sail under the conditions that were observed in the original race—that is, over the usual club course, and with practically their whole fleet in reserve.

These challenges and the contests which followed were not accomplished without much correspondence, several new deeds of gift, and the institution of various changes in the sailing conditions and in the general management of the races, which were in the interest of fair play. It is not necessary here to review these readjustments in detail, but some of them were very unpleasant, and threatened at the time to put an end permanently to all international contests of this character. In the end, however, a mutual agreement was reached, and where the challenger is of a fairly reasonable disposition, as has usually been the case, there is small danger of future misunderstandings.

The changes that have taken place since 1851

hoped that eventually some more rational method will be devised to meet the conditions for international racing. At present it is a contest of skill between the builders which shall come nearest to building a craft that is unseaworthy and yet sufficiently staunch to outlive the strains of a few sharply contested and possibly stormy events.

In the matter of models and rig, the designers of the two countries, starting with very different notions, now turn out boats so nearly alike that only an expert can see any essential difference when they are sailing side by side. The partisans of each country claim that the other has appropriated their ideas, but the controversy involves so many nice points that it can not be exhaustively considered here.

The races of 1901 are remarkable in several ways. The challenger was Sir Thomas W. Lipton, who had challenged and raced in 1899, when Shamrock I was defeated by the Columbia. It was therefore his second experience in racing on this side the water, and judging by the results of the races, which were very close, he may have profited by his earlier defeat.

DATE.	Course.	American yacht.	Min. and sec.	English yacht.	Min. and sec.	Result.

in the models, rig, and equipment of racing yachts have been largely influenced by the greatly increased scale of expenditure favored by the unprecedented accumulation of wealth. Until 1885 we Americans were content to entrust the defense of our championship to the best available yacht already afloat. The challenge of the Genesta, a large cutter (a single-masted vessel, that is), made it necessary to build something capable of meeting her on equal terms. The result was the Puritan, the first conspicuous success of the late Edward Burgess, of Boston. She was a comparatively shallow centerboard sloop, which won handsomely from the deep-draft cutter that had crossed the ocean to meet her. Since then every challenge has been followed by the construction of one or more 90-foot "single-stickers," as they are called—merely great racing-machines that have to be made over in framework and rig to be of use in ordinary cruising after their special mission in defending the cup has been fulfilled. It is

To meet Shamrock II, the challenger for 1901, a new boat was built by the Herreshoff Brothers, of Bristol, R. I., and named the Constitution. The two-year-old Columbia, winner of the last preceding of the national races, was put in commission to set the pace for the new boat, which was intended to be faster than her younger sister, and Capt. Urias Rhodes, a veteran Yankee skipper, was placed in command, partly out of deference to a popular demand. In point of fact, the Columbia played her part of pacemaker so effectively under her former sailing-master, Capt. Charles Barr, that she beat the Constitution to the satisfaction or the dissatisfaction of the committee having the matter in charge, and was chosen to defend the cup for the second time, as the new boat did not succeed in proving her superiority. An element of international interest was lent even to these preliminary trials, for Capt. Barr, though a naturalized citizen of the United States, is Scotch by birth, and won his

first laurels in British waters, while Capt. Rhodes, who commanded the Constitution, is a native-born American. There was wide-spread patriotic dissatisfaction over the selection of Capt. Barr to defend the cup in 1899, and many Americans still feel that they would rather suffer defeat with a Yankee skipper at the helm than win the day with a foreigner. The sentiment is not altogether to be deprecated, considering the peculiar international rivalries inseparable from the contest, but Capt. Barr has certainly justified the confidence that was placed in his professional skill, and a great many competent judges are disposed to rank him as really the most skilful sailing-master alive for craft of this particular character.

During their preliminary trial both the Shamrock and the Constitution were totally dismasted under weather conditions that should not have troubled vessels of their class, and the race had to be postponed in consequence. A further postponement followed the assassination of President McKinley out of consideration for the period of national mourning that followed. It was not until Sept. 28 that the first race was sailed. As has always been the case in cup races, there was but little wind on some of the specified days, so that the course could not be covered within the prescribed time. The conditions called for the best three races out of five, and the Columbia, as stated in the above table, won three of them. In the third and last race the Shamrock was actually in the lead at the finish, but by so narrow a margin that her rival, the Columbia, won on time allowance, a fact that can not but detract from the triumph of the victory in popular esteem, though the technical justice of the decision is unquestionable. It would certainly seem that in a contest of such importance modern science should be able so to match the boats that they might at least be in one class together, and might race on equal terms.

Upon the whole, the cup was retained in 1901 by a margin so very narrow that the anticipated repetition of the contest in 1903 is looked forward to with increased interest. Sir Thomas Lipton has formally challenged for the third time, and as a last resort has engaged the services of the two most brilliant and experienced builders in the British Islands—Messrs. Watson and Fife—who, though they are traditional rivals, are apparently on sufficiently good terms to work together where they consider that the honor of British yachting is at stake.

It was announced early in the summer that the Emperor of Germany had ordered designs for a large schooner-yacht from A. Cary Smith, a naval architect of proved ability and a painter of marine subjects, well known among the older generation of New York artists. In due time the plans received the Emperor's approval, and the order to build was placed with the Townsend-Downey Ship-Building Company, of Shooters Island, near Elizabethport, N. J. The Emperor has long been known as an enthusiastic sailing yachtsman, having owned several of the best English-built craft, and having taken part personally in many famous regattas. That he should have chosen American designers and builders is certainly a very high compliment, and shows that he has intelligently watched the performances of our cruising yachts. If he had wanted a racing-machine like the cup contestants, he might, not unnaturally, have placed his order in England, but he appears to have an innate love for true seamanship and cruising for its own sake. The reputation of American seagoing schooners was

well known to him, and is a sufficient explanation of his choice without seeking for an ulterior political motive. The Emperor's brother, Prince Henry, was present at the launching of the yacht, and at the Emperor's request President Roosevelt permitted his daughter Alice to name the vessel with due ceremony, following the traditional practise on such occasions.

YOUNG MEN'S CHRISTIAN ASSOCIATION. The English Year-Book, Of All the Nations, published by the National Council, contains a comprehensive survey of the Young Men's Christian Association in all countries. The returns for Great Britain show 1,471 centers of work, with 103,420 members, and property in buildings owned to the value of £626,495. In 1890 the numbers were: 609 centers, 76,161 members, and buildings valued at £326,746. The numbers for the whole world were 7,207 centers, 536,916 enrolled members, and buildings estimated at £5,000,000 in value. These figures show an increase since the publication of the last previous Year-Book of 509 centers and more than 30,000 members. For several years past more than 100 young men encouraged and primarily trained by the associations of the English union alone had each year entered the Christian ministry or the foreign mission field.

The International Convention of the Young Men's Christian Association, being the fiftieth or "Jubilee" convention for the United States, was held in Boston, Mass., June 11 to 17. The proceedings partook largely of the character of a review of the history of the association from its foundation in London by Mr., now Sir George, Williams, in 1844, and especially from its institution in the United States, and of its work to the present time. The first Young Men's Christian Associations in North America were organized in Montreal, Canada, Dec. 9, and in Boston, Mass., Dec. 29, 1851, independently and without the participants of either having knowledge of what the others were doing, upon the suggestion of information of the work of the association abroad. The idea was quickly taken up in other cities, and associations were rapidly formed in the United States as well as in foreign countries. The first International Conference of Associations of all lands was held in Paris, France, in 1855, when the basis of the organization was defined in the following terms: "The Young Men's Christian Associations seek to unite those young men who, regarding Jesus Christ as their God and Saviour, according to the Holy Scriptures, desire to be his disciples in their doctrine and in their life, and to associate their efforts for the extension of his kingdom among men." The work of the American associations was at first not well defined, and included much that was done by other well-organized societies, till at the convention held in Albany, N. Y., in June, 1866, the principle was laid down as governing their operations of work "by young men for young men"—primarily religious work, but to which other forms of work have been added from time to time as accessory to it. Of these are libraries and reading-rooms, social privileges, gymnasia, with provisions often for systematic physical culture, harmless games, and free instruction in various branches of learning, chiefly with practical ends in view; in short, the culture of the whole man with the main end always in sight of promoting his religious and moral development. The whole American work has now been placed under the supervision of an international committee, with State committees organized under the resolution of the Albany Convention of 1866, and district

committees of later institution. Another bond of united activity is furnished by the district, State, and international conventions. As the importance of the work of the associations increased, the voluntary helpers upon whom it was at first dependent gave way to trained secretaries who have made their work a life calling. Men were employed by the associations of Boston and New York to look after the details of their work as early as 1852 and 1853. In 1871 a conference of 13 of the officers thus employed under various designations was held, and an organization of general secretaries was formed, and general secretary has since been the title of the office. The number of these secretaries is now about 1,500. About 75 secretaries, including those laboring in foreign lands, are employed by the International Committee. A training-school for general secretaries and physical directors or trainers in physical culture was established in Springfield, Mass., in 1885, and afterward another one in Chicago, Ill. As the functions of the associations have been extended, it has been found expedient to institute several branches and departments, with the work specially adapted to the needs of men of different callings and spheres of life, the history and functions of which have been briefly set forth by the Rev. Edwin F. See in the Boston Congregationalist. In the beginning the chief and practically only work of the associations was with clerks and mechanics in the cities and towns, and a large proportion of the associations in the country are of that kind, and are cared for, as a whole, by the field secretary. In 1872 attention was called to the railroad men of the country as constituting a field calling for a special adaptation of work; and the railroad department was instituted. It has had a vigorous growth, and now includes, according to Mr. See, about 150 associations at railroad centers. According to the report of the International Committee to the present conference, "it alone has furnished over 50 per cent. of the growth during the past two years in the total number of associations of all kinds in North America and over 24 per cent. of the total increase in membership." The students' department was organized in 1877, largely through the instrumentality of Mr. Luther D. Wishard, and is represented in nearly 600 institutions, while the World's Student Christian Federation comprehends representatives from nearly all the countries of the globe. Special work for colored men was begun in 1888. Important work was done among the soldiers and sailors of the United States during the civil war, and was most prominently exemplified in the services of the Christian Commission. It assumed a more systematic and permanent form in 1898, and has been extended to military and naval posts and Government reservations at home and abroad. Two important centers of it are the building erected by Mr. William E. Dodge for the soldiers on Governors Island, New York harbor, and that built by Miss Helen M. Gould for the sailors near the entrance to the Brooklyn Navy-Yard. Twenty army branches have been established. The work with boys carried on for many years by the association had been put under the charge of an international representative during the past year. Special buildings have been set apart for boys in New York city and in Cleveland, Ohio. Work for young men in missionary lands, which has been carried on for about fifteen years, is represented by about 20 agents in Brazil, Ceylon, China, India, and Japan.

The international convention in Boston was attended by 2,101 fully accredited delegates and cor-

responding delegates, of whom 187 were from foreign countries, including, besides Great Britain, its colonies and India, Holland, Italy, France, Austria, Finland, Russia, Switzerland, Germany, Belgium, Norway, Sweden, Spain, Portugal, Brazil, China, Japan, Denmark, and Cuba; 94 from the Canadian provinces; and 1,921 from the United States. Mr. William E. Dodge, of New York, was chosen president of the convention. Congratulatory messages were read from the President of the United States, the King of Great Britain and Ireland and Emperor of India, the Emperor of Germany, the King of Italy, the Synod of Russia, Lord Roberts, and the German ambassador at Washington. The International Committee reported the following statistics for 1901: Number of associations, 1,404; of members reported, 268,477; of buildings owned, 391, valued at \$22,733,400; of general secretaries, 1,522; of volumes in libraries, 523,215; of educational classes, 2,060, with 26,906 students; of attendants on religious meetings, 2,720,221; of student associations, 577; of colored men's associations, 88; of Indian associations, 44; of boys' departments, 401; expense of home work, \$136,761; expense of army and navy work, \$36,298. It was represented in the report that the association was now more fully anchored in the confidence of the community and the churches than at any previous time. Its most important and aggressive work was in the cities, but the report set forth that, in strong contrast with this city association growth, an apparently opposite tendency was discovered to decline and loss in some of the smaller cities of 5,000 population and less, and in the country neighborhoods generally. In the smaller communities associations had from the beginning shown a tendency to decay and revival. Not less than 100 associations were organized each year and a somewhat larger number were out of existence, so that during the past five years associations in the small towns had shown a net loss of about 200. Measures had been adopted to counteract this tendency by the formation of local "sections" or "bands" under the direction of several of the State committees, whose names did not appear on the rolls of the associations, although they were really doing association work; and in the organization of county organizations. "The encouraging growth of the State organizations is, however, a strong factor tending to develop all parts of the American association movement." Among the addresses delivered at the meetings of the convention were those on Great Facts in the Half Century of Work of the Young Men's Christian Association in North America, by Col. John J. McCook, of the railroad department; The Contribution of the Association toward the Solution of the City Problem, by the Hon. Herbert B. Ames, of Montreal; The Contribution of the Young Men's Christian Association to the Welfare of the Commercial and Industrial Classes, by E. L. Stacy; its Contribution to the Physical Development of Young Men, by President G. Stanley Hall, of Clark University; its relations to the churches, by President W. H. P. Faunce, of Brown University, and President Francis E. Clark, of the United Society of Christian Endeavor; The Fundamental Principles of the Young Men's Christian Association, by the Hon. Cephas Brainerd; addresses on religious life, by the Rev. E. I. Bosworth, D.D., the Rev. W. W. White, D.D., Mr. W. D. Spear, and Principal Caven, D.D., of Knox College, Canada; The Need of a More Aggressive Warfare against the Forces which are Destroying Young Men, by the Rev. J. M. Buckley, D.D.; The Boy, by the Rev. Dr. J. H. Can-

field; The Seven Million Young Men of our Small Towns and Country Districts, by President W. F. Slocum, of Colorado College; and a Jubilee Address, by Mr. J. H. Eckels. On College Men's Night addresses were delivered by President F. L. Patton, of Princeton University, President Cyrus Northrup, of the University of Minnesota, and President Booker T. Washington, of Tuskegee Normal and Industrial Institute—all on the subject of The Contribution of the Association to the Moral and Religious Life of our Universities and Colleges. On Army and Navy Night, the addresses were by Gen. Curtis Guild, presiding, Major-Gen. Joseph Wheeler, Mrs. E. A. McAlpine, of the Woman's Auxiliary of the International Committee, Admiral Watson, Capts. A. V. Wadhams and Hobson, and Admiral Higginson. On Railroad Night, Col. J. J. McCook presided, and President Tuttle, of the Boston and Maine Railroad, made the address. Three Sioux Indians spoke of the work of the associations among their tribes, which was represented by 8 branches, with 1,700 Indian members. The foreign work was the main subject of the farewell meeting, at which addresses were made by delegates from Japan and India, and by Mr. J. R. Mott; a collection of \$15,000 was taken for the cause; and an engraving from Bouveret's painting of The Institution of the Lord's Supper was presented to the convention by M. Jules Siegfried, of the French associations. The work of the International Committee in all its departments was commended by the convention, and its continuance on the lines marked out in the report was directed. In the resolutions the Athletic League was cautioned to guard with especial care "against excessive competition and the evils which too often arise when a desire to win is substituted for earnest exercise and friendly rivalry"; and the advice of the convention was given "that all possible endeavors be made to foster and stimulate the work among boys, in recognition that there is no more important work before the association." More than half of a Jubilee fund of \$1,000,000, authorized by the previous International Convention, at Grand Rapids, Mich. (1899), had been secured. Estimates were made that not less than \$160,000 would be required annually hereafter for the association's work in the home field and \$60,000 in the foreign field, "with such other and further amounts as may be called for by the extension of the work on the lines already authorized." For the past year \$16,000 had been received from associations and \$120,000 from 4,500 individuals. A committee appointed at the Grand Rapids convention in 1899 to consider means by which the relation of the international, State, and local associations, and the functions of each supervising agency may be more clearly defined, was continued. An exhibit illustrating various aspects of the history and work of the associations was given in connection with the meeting of the convention. The final exercise of the jubilee was an excursion to Plymouth, with an oration by the Rev. Alexander McKenzie, D. D., on The Spirit of the Puritans the Spirit for the Young Men of the Twentieth Century.

YUKON, TERRITORY OF, a northwestern territory of the Dominion of Canada; population in 1901, about 20,000. Capital, Dawson City.

Government.—The first application of direct governing principles to the territory occurred after the first rush of miners to the scene, when, on Aug. 17, 1897, Mayor James M. Walsh was appointed Commissioner of the Yukon District. On June 13, 1898, the district was formally detached from the jurisdiction of the Northwest Ter-

ritories and established as a separate territory, with Mayor Walsh as the first Commissioner. A Council of six persons was appointed by the Dominion Government to assist and advise the Commissioner, of which the judge of the territorial court should be an *ex-officio* member. Ordinances for peace, order, and good government were to be made by the Commissioner and Council within the same limits as by the government of the Northwest Territories. A superior court of record was also constituted, with the same powers and jurisdiction as the Supreme Court of the Northwest Territories, except as expressly varied by the Dominion Parliament. The Commissioner, members of the Council, judges of the court, and officers of the mounted police were to be *ex-officio* justices of the peace, though others might be specially appointed. Jurymen were limited to British subjects. The first judge of the court was Calixte Aimé Dugas, appointed on Sept. 12, 1898.

On July 4 of the same year William Ogilvie was appointed Commissioner. He resigned his office early in 1901 and was succeeded by James Hamilton Ross. The latter arrived at Dawson City on April 8. Meanwhile, on Jan. 26, 1901, the Council forwarded a petition to the authorities at Ottawa, which asked that the local council should control local affairs; that a subsidy should be granted by the Dominion Government to the Yukon territory of not less than three times the subsidy allowed to the provinces per capita, because of the population being almost entirely adult and productive; that the territory be divided into electoral districts to be entitled to representation in the local council; that the Dominion Government should look as favorably as possible upon any suggestion made by the Yukon Council, as a body, with reference to mining regulations or other matters of territorial interest; that a third judge should be appointed in the territorial court, and a court of appeal also be established; that representation in the Dominion Parliament be conferred upon the territory under the same terms and conditions as upon other outlying parts of the Dominion.

Characteristics.—The extent of the Yukon territory, as constituted by Act of Parliament, is 251,300 square miles. The climate of the country in summer is all that can be desired. The winter is very cold, as the following figures, compiled by Alexander McBean, of Dawson City, from Nov. 19, 1900, to March 10, 1901, show: November—highest, 10° below zero; lowest, 42° below zero. December—highest, 10° below zero; lowest, 52° below zero. January—highest, zero; lowest, 68° below zero. February—highest, 8° above zero; lowest, 57° below zero. March—highest, 30° above zero; lowest, 30° below zero. The winter trail from Dawson City to White Horse, the other chief settlement in the Yukon, is 369 miles long, and there are about 50 road-houses on the route. The trail on the Lower Yukon, from Dawson to Tanana, is 700 miles, and there are only 40 road-houses. From Port Simpson, British Columbia, by way of the Main Stikine river to Testin Lake, the distance is 717 miles; from Port Simpson by way of the Clappan river and Deare Lake to Teslin it is 627 miles; from Port Simpson by way of Clappan river, the cañon of Stikine, and the Tahltan river it is 706 miles; from Edmonton, Northwest Territory, via Skeena and Clappan rivers and Deare Lake to Teslin it is, approximately, 1,137 miles. The Government report for 1900 shows 112 deaths from all causes during the year. Accidents and pneumonia were the most frequent causes of death. There were 73 marriages in the year.

Transportation.—In the development of the Yukon the question of transportation is the first consideration. Four different routes into the gold-fields over Canadian soil were surveyed. There is now a railway from Skagway across the White Pass down to White Horse Rapids—about 150 miles. More important in some ways than this line of road was the establishment of steamboat navigation to the headwaters of Lewis river. In 1898 it was experimental, difficult, and dangerous. To-day steamers come and go almost daily during the season of navigation. Winter travel between Dawson and the coast, which formerly was long and arduous, is now comparatively pleasant. The question of freight, however, remains a pressing one for merchant and miner alike, and strong protests have been made against the freight-carriers, the chief offender being the White Pass and Yukon Railway. Two-thirds of the business of the Yukon formerly went to Seattle and other United States points. Since the railway was finished two-thirds of the business had gone to British Columbia.

As time passed, agitation grew, until finally a gathering of Dawson business men met the officials of the road and told them that their profits made the payment of existing high rates impossible. The increased facilities for handling goods, the great saving of time over a year or two ago, the lowering of prices for labor and supplies, the practical monopoly of the trade of Dawson and the Klondike, were reasons advanced for consideration. Despite these improved conditions, it was pointed out, the rates charged were now higher than when the means of delivery were uncertain. President Graves, of the railway, refused to consider the demand for lower rates. In 1900 the holdings of the company appreciated 70 per cent. With net earnings of \$1,500,000, their net profit for 1900 amounted to \$1,000,000. They were now buying the boat lines, and had raised the average fare from Dawson to White Horse by \$25. In 1897 the rate for freight was \$325 a ton. Now it is from \$80 to \$125. A dredge that cost, laid down in San Francisco, \$20,000, will cost the owner \$100,000 laid down in Dawson, and \$125,000 before it is in operation. The greatest volume of freight ever brought into Dawson in a single season was that of 1901. It surpassed the previous year by 4,483 tons. By the Upper Yukon, according to Dawson customs office figures, 22,597 tons were received, and by the Lower Yukon 13,930 tons. This freight comprised an unusual quantity of goods of Canadian manufacture, and the estimate of those who could best form an opinion before the details were officially published was that more than 40 per cent. of the freight was Canadian.

Mining.—The exact value of the gold production in the Klondike, or British Yukon region, is not ascertainable. The Post Intelligencer of Seattle declared that in 1900, when the Canadian officers in the Yukon reported royalties on \$11,752,560 worth of gold, the records of Dawson Custom-House brought the total to \$14,000,000 and the Seattle figures to much more. "The fact now appears that the Seattle assay office received from Klondike \$16,946,437, and sufficient bullion is known to be now lying in safe deposit in this city to advance the total to more than \$20,000,000." The estimate for 1901 was \$25,000,000. This is all from the placer mines, but quartz mines have been discovered, and these, with the new creeks constantly opening and the new and cheaper processes of working the power claims, will tend to give Dawson permanency.

Early in January the Yukon council memorial-

ized the Dominion Government for various reforms. It asked for free mining-machinery and the repeal of the law forbidding Dominion officials from holding any interest in mining properties; for the extension of time to two years in which to begin operations on *bona fide* hydraulic claims; and for various changes in the law affecting mining operations. A reduction of the royalty to 5 per cent. on the gross output was demanded; or, if that were objectionable, the establishment of a local assay office; or else the imposition of an export duty on the gold and its treatment as an ordinary article of commerce for which the person carrying it would have to pay a tax.

On March 12 it was announced at Ottawa that the Yukon royalty on gold would be reduced to 5 per cent. The Crown claims, with specified exceptions, were thrown open, and Dominion orders in Council abolished the restrictions confining a miner to one claim—allowed him to stake a claim wherever he chose and to abandon those that did not suit him, whenever he felt inclined.

The total gold production upon which royalty was collected in 1898-'99 was \$5,882,626, and the exemptions \$1,699,657. In 1899-1900 the figures were respectively \$7,307,720 and \$2,501,744.

The Assay Question.—The Yukon shared in the agitation of British Columbia for the establishment of a mint in Canada and of assay offices in the mining provinces. It was urged that the mint should be in Victoria or Vancouver. Following this action came a frequently expressed wish that a branch mint or assay office should be established in Dawson. As one of the chief ends of such an office in one of the coast cities was to handle the gold and trade of the Klondike, the suggestion was naturally not popular there, and the Vancouver World of March 1 declared that such a policy would "absolutely destroy the object aimed at," and leave the miners free to trade as they pleased with American or Canadian cities. The Victoria Colonist of April 9 argued strongly for an assay office in Dawson. It recited the varying value of gold-dust, the chances of loss resulting from it, the necessity of the banks protecting themselves, the high charges for exchange, and other obstacles in the way of business. "The banks in Dawson must charge high for remittances to the outside, for they have to be at the expense of sending out the gold, which is considerable. This expense the Government would assume if it purchased the gold in Dawson, and the Government could do it more cheaply than the banks." Eventually one assay office was established in Vancouver, and the branch mint at Ottawa.

The Labor Problem.—In July a document was published in Dawson and issued to the press elsewhere, purporting to be an appeal to the "laboring wage-workers, and to the laboring people of the Pacific slope in the United States and Canada especially." It pointed out considerations said to affect seriously the working men's position in the territory. In the first place, the \$5 a day that had been established as the minimum payable in the Yukon was the lowest possible living wage. The very greatest length of time in each year when a man could hope for employment was nine months, and the average was much below that figure. During that period his board averaged \$25 a week. The cost of other necessities was excessive. Boots were from \$10 to \$12, overalls from \$2 to \$4, shirts from \$2.50 to \$4, tobacco from \$1.50 to \$2 a pound, beer or whisky 25 to 50 cents a glass, stage fare 50 cents a mile, laundry 25 to 50 cents a piece, picks \$4 and up, shovels \$5 and up. Wages were paid in gold-dust,

which ran from 50 cents to \$1.50 less per ounce than the \$16 which the banks gave for it. The only reason they stayed in the territory was the never-dying hope which characterizes all miners. An urgent appeal was made to keep Chinese from coming to the country, and all laborers were advised to stay away from it. The object of this pessimistic and exaggerated picture of conditions is difficult to understand from a distance. In a letter written on May 27, 1901, to the Charlotte-town Patriot, by a Prince Edward Islander who had gone to the Yukon, the following statement appears: "Labor is in good demand this year; mechanics get \$1 an hour and the ordinary laborer \$5 and \$6 a day and their board; and it looks as if it would hold good for the summer. A laboring man saves money if he is steady and economical." Eggs, which once sold for \$10 a dozen, now retail for 50 and 75 cents. Meat sells at from 40 to 60 cents a pound, butter 50 cents, while potatoes, onions, beets, cabbage, and vegetables generally are fairly cheap, as they are now grown on the spot. Barley, oats, and hay are also grown successfully, but wheat has not been tried. Canned goods are sold at reasonable prices. In the Christmas (1900) number of the Klondike Daily Nugget wages are described as having come down to about \$8 a day. To offset this, all food-stuffs and other necessities are described as much cheaper. "In 1897 flour was retailed at \$60 a sack. To-day it is to be had for \$6 a sack. Other commodities have decreased in price at about the same rate."

Finances.—The total revenue in the fiscal year 1895-'96 was \$18,516. In 1899-1900 there was received from royalties, miners' certificates, mining fees, land sales, rentals, timber dues, placer grants, and similar sources of local taxation the sum of \$1,130,965; from customs duties, \$613,191; from the post-office revenue, \$21,550; from public works, \$33,716; and from fisheries, \$4,601. The total revenue for 1899-1900 was \$1,804,026, and in the four years it amounted to \$4,376,673. The

mining royalties increased from \$287,423 in 1898 to \$575,812 in 1899, and to \$730,771 in 1900. For the first six months of the new fiscal year—to Dec. 31, 1900—they amounted to \$446,184. The expenditure increased from \$32,112 in 1896 to \$1,306,949 in 1899-1900. The latter sum included \$331,850 spent upon matters connected with the mines, \$112,368 upon the post-office, \$118,544 upon public works, \$4,492,427 upon the mounted police, \$173,266 upon the militia, \$22,673 upon justice, \$24,457 upon railways and canals, \$30,561 upon customs, etc.

Law and Order.—The mounted police maintained an excellent record of work during the year 1900, according to the annual report. Weekly patrols were maintained between Bennett and Dawson; day and night patrols were kept up in Dawson and White Horse; constant patrols passed along the trains, to and from the mining camps and up and down the creeks that were being worked. In April they took a census of the whole scattered population, which was found to be 16,107 whites and 350 Indians. They aided in the work of the Crown timber and mining departments, as well as of the customs. At White Horse alone they went through 20,000 tons of freight within four months, in search of contraband liquor. The settlement of this latter place caused a small outburst of crime, and five cases of murder and one of manslaughter occurred during the year in the territory. By Dec. 31, 1900, one of the murderers had paid the death penalty, one was under sentence of death, two were awaiting trial, and the man guilty of the lesser crime was undergoing his sentence.

In February, 1901, orders were received from the Minister of the Interior at Ottawa to close up all gambling and dance houses by March 15. These instructions involved about 300 persons, who, however, had been expecting something of the kind and were not taken by surprise. The time was subsequently extended to June 1, and on that date the persons concerned departed.

INDEX TO THE SIX VOLUMES OF THE THIRD SERIES.

1896—1901.
